In framing the concrete stories, Golding often draws on literary precedents, both specific works and genres. For *Lord of the Flies* Golding turns to the genre of boys' adventure stories and to R. M. Ballantyne's *The Coral Island* (1858), in particular. Where Ballantyne's boys, stranded on a desert island, have a jolly time and live harmoniously, Golding's boys become little savages. Golding turns the literary precedent on its head, using it only as a starting place for his own unique view.

Golding also draws on his interests and his biography in his works. For example, Golding grew up

near the sea, served in the navy, and has written essays on the pleasure and pain of sailing his own boat. Thus, in *A Sea Trilogy*, Golding is able to describe accurately the tensions of shipboard proximity, the moods of the ocean, and the nautical minutiae with which the crew must be concerned.

Golding once said that although he was, by nature, an optimist, he hoped that a defective logic made him a pessimist. This view in many ways sums up the themes that play in his novels. In other words, his logic and objective observation reveal the dark side of human nature that people prefer to deny or ignore. However, there may be hope and some reason for optimism if that dark side can be laid bare and acknowledged, for humankind has the potential for good as well as for evil.

The exploration of the dark side of humanity is a major thematic focus in virtually every novel, and Golding has been criticized as limiting himself to this one dimension. Even as he explores human depravity, however, Golding implies or asserts a second theme: the value of self-awareness and love as the means of coping with this inherent evil. In some works, such as *Lord of the Flies*, mostly depravity is shown. In *Darkness Visible*, however, the potential for good is explored more fully. The protagonist, Matty Windrave, devotes himself to the powers of good and saves one character from his evil impulses.

These two major themes in Golding's work are reinforced by some elements of his style and other characteristics of his novels. Often Golding creates remote or confined settings: a desert island in *Lord of the Flies*, a rock in the middle of the ocean in *Pincher Martin*, or the microcosm of the ship in *A Sea Trilogy*. In these settings, the characters may act out the evil that civilization keeps in bounds or be forced to look inside themselves to see the darkness lurking there. A restricted point of view forces readers to see from a particular, sometimes unfamiliar, perspective. In addition, Golding may suddenly change that perspective at the end of a novel, forcing the reader to see the situation anew.

Golding has been charged with obscurity, but whatever obscurity exists in his work serves a thematic purpose. He created a fictional world seen with new eyes from unusual perspectives. The degree to which readers experience a connection between the fictional world and the world they inhabit is the degree to which Golding succeeded as a mythmaker.

## LORD OF THE FLIES

**First published:** 1954

**Type of work:** Novel

*British schoolboys stranded on an island exhibit savagery that was suppressed in the supposedly civilized, war-torn world they left behind.*

*Lord of the Flies* opens with schoolboys wandering out of the jungle, into which their plane has crashed, and onto the beach of a remote island. In this isolated setting, the boys first try to maintain a veneer of civilization, but they soon shed it to exhibit the evil that is inborn. Golding tells the story from the boys' perspective until the final few pages, where he then alters the perspective to enlarge the context. Little boys are not the only ones who have savagery at their core; the grown-ups do as well.

The first two boys to emerge, Ralph, an easygoing but fairly responsible boy, and Piggy, a thinker who is fat and asthmatic, gather the rest of the boys by sounding a conch shell. At their first assembly, the boys recognize the need for some rules: "After all, we're not savages. We're English." They elect Ralph chief and make Jack the leader of the boys who will hunt for food and keep a signal fire going.

Before long, the boys' immaturity and irresponsibility are clear and are a source of frustration to Ralph and Piggy. After building a couple of shelters, the boys would rather swim and roll rocks than work. The hunters would rather hunt than follow through on their other job of keeping a signal fire going. As a result, they miss the chance to signal a passing ship.

Immaturity and irresponsibility soon give way to violence and fear-inspired frenzy as the last vestiges of the veneer of civilization disappear. For Jack the early fun of hunting becomes a compulsion to track down and kill. He teaches his hunters to circle and close in on their prey, and in the circle the boys become bloodthirsty savages.

Fear works to intensify the power of the mob.

Some of the little boys are afraid of a "beastie," and their fear spreads to all the boys. Only one boy, Simon, has the insight to know that the beast is inside them and the savagery they have always suppressed is what they should fear. Seeing something move among the rocks, the boys conclude that they have found the beast and are terrified. Only Simon has the courage to investigate. He finds a dead aviator, his parachute lines entangled in the rocks. Exhausted from his search and sick at what he has found, Simon crawls down the mountain, arriving on the beach to find himself in the middle of a circle of madly dancing, paint-smeared boys. In a blind frenzy, somehow thinking Simon is the beast crawling toward them, they kill him.

Although Piggy refers to Simon's death as an accident, Ralph knows it was murder and says he is scared "of us." Like Simon, Ralph knows the beast is within; he becomes the next scapegoat. The circle is closing on Ralph when the boys are rescued by officers from a cruiser. The perspective changes immediately. One officer remarks, "Fun and games." He asks Ralph jokingly, "Having a war or something? . . . Nobody killed, I hope? Any dead bodies?" The reader knows, as Ralph does, the awful truth of two dead bodies. The officer's naïveté reinforces the irony of the entire novel. The boys come out of a world at war. They land in an idyllic spot where their basic needs are met and where they can escape the carnage of the adult world. Since evil is within them, however, they, too, war on one another. They return, finally, to a world at war because escape from the island is not escape from evil. Evil is in the hearts of people.

## THE INHERITORS

**First published:** 1955

**Type of work:** Novel

*A group of Neanderthals comes into contact with a group of Homo sapiens and perishes in the encounter.*

Golding's second novel, *The Inheritors*, is set in a similarly exotic location as *Lord of the Flies*, and, like it, traces the process of civilization and its disintegration. Unlike *Lord of the Flies*, however, it is set in the distant past rather than the near future, and it describes forces of both progress and dissolution.

Taking as his subtext the popular social evolutionism in vogue at the turn of the twentieth century, as exemplified by the work of H. G. Wells, Golding traces the demise of Neanderthal man in the face of the advent of *Homo sapiens*. To both species of humans, life is, in the words of Thomas Hobbes, "nasty, brutish, and short," though in somewhat different ways. Golding questions whether *Homo sapiens* is the "fitter" of the two species.

The narrative is told from the viewpoint of a small group of Neanderthals, returning from their winter quarters in a coastal cave to their summer gathering grounds in a forest at the base of the mountains, by a lake and waterfall. The Neanderthals quickly discover a group of *Homo sapiens* encamped on an island by the waterfall. This is a species they have never encountered before. Instinctively, they seek their company as fellow humans. The Neanderthals are portrayed as simple, instinctive, intuitive, living in harmony with nature, and with a sense of the sacredness of life. They are afraid to kill any living being. They possess a language, though this is implemented by an almost telepathic communication. In the course of the novel, the main character, Lok, discovers the force of simile.

The humans of *Homo sapiens*, however, are terrified of these small, red-haired creatures who sometimes walk on all four limbs; they view the Neanderthals as wood-demons. In contrast to the Neanderthal group, the *Homo sapiens* group is portrayed as fearful, cannibalistic (they eat the Neanderthal girl, Liku, in their hunger), and orgiastic. They hunt and get drunk. They also propitiate the

dark forces by chopping off human limbs and clearly are prepared to make human sacrifice. Their rituals stand in great contrast to the Neanderthals' numinous reverence for the Earth Mother. The Neanderthals are finally destroyed by their attempted contact with the *Homo sapiens*, with only the group's baby surviving as a kidnap victim, for the purposes of being a trophy or pet.

Golding raises the question of evolutionary loss, as well as gain. Though technically more advanced, *Homo sapiens* has little reverence for earth, gaining only terror and panic from the inexplicable forces in the otherness of nature. Golding's point is that contemporary human beings are the inheritors of this tradition. To make this point more dramatically, the perspective of the narrative suddenly changes in the last chapter, where the terrified humans are in their dugout canoe, sailing away from the haunted forests. Readers suddenly see the last little, hairy Neanderthal from the perspective of *Homo sapiens*.

## PINCHER MARTIN

**First published:** 1956

**Type of work:** Novel

*A self-centered man, stranded alone on what seems to be a rock in the middle of the ocean, faces the dark center of his being as he struggles to evade the nothingness of death.*

*Pincher Martin* (first published in the United States as *The Two Deaths of Christopher Martin*) depicts one man's ferocious struggle against the nothingness, the loss of identity that death brings. Typically, Golding places the main character in a remote setting, where he is forced to take a long, hard look at himself. Also typically, what the character sees is a darkness at his core. A quintessentially self-centered person, Martin realizes that in his life he did whatever was necessary to come out on top or to have his own way. In death, however, he is fighting the one force that will erase all that he is and he has. Thus he fights death with all his strength.

Seemingly the only survivor of a torpedoed ship, Martin is in fact alive only inside his own head. That

is where his struggle takes place, but he imagines the battle raging on a rock in the middle of the ocean, a rock he has created from the memory of one of his own teeth.

Appropriate to the focus of the story, Golding tells virtually the whole story from Martin's perspective. Initially, Golding elicits sympathy for Martin by describing in detail the horror of his near drowning. Once Martin reaches the rock, he admonishes himself to think, to use his intellect and reason to survive. Admiration grows for this man who can keep his wits about him, devise shelter, and find water and food. Since the story is being told from inside Martin's mind, he also returns to memories that reveal a self-centeredness at the core of his being. Thus Golding moves to a familiar theme, the revelation of the darkness and depravity in the heart of humanity.

Using Martin's memories and repeated images of eating, Golding slowly paints a picture of an unscrupulous, cruel man who nevertheless once felt moved by a love that was his one chance to experience something other than self-satisfaction. Martin remembers all the people he "ate": a nameless woman and a young boy whom he used sexually and tossed aside and the producer whose wife he seduced. More specifically he remembers Nathaniel, whom Martin loved for some reason that he cannot understand. He also hated him because Nat, without apparent effort, had obtained what Pincher could not get by force: Nat had peace of mind and also had Mary. For Martin, hate was stronger than love, so he raped Mary and tried to kill Nat.

All the images of eating converge into one symbol, the Chinese box. Martin recounts that the Chinese bury a fish in a tin box. Maggots eat the fish first and then each other until there is one maggot left, a rare dish. The sound of a spade knocking on the side of the box as it is dug up is like the sound of thunder. Pincher Martin lives his whole life trying to be the last successful maggot. When he realizes that the rock is only his tooth, imagined out of his effort to hang onto his identity, the only thing he has, he hears thunder and knows that the black lightning of God is coming for him. When the black lightning comes, he will be eaten.

After the lightning takes Martin's center, the perspective must change, for Pincher Martin no longer exists, even in his own mind. The end of the

novel relates a conversation between the man who discovered Martin's body washed ashore and the officer who identifies and removes the body. The former wonders if Martin suffered; the latter tells him Martin never had time to kick his seaboots off. From Martin's perspective, however, the power of the imagination at the moment of death and his self-centeredness have extended his agony.

## DARKNESS VISIBLE

**First published:** 1979

**Type of work:** Novel

*A deformed and unlikely savior appears in the modern wasteland, bringing a message of spiritual power and love to its inhabitants.*

*Darkness Visible*, by its title, conveys Golding's central preoccupation, that of making the darkness within visible through fiction. This novel focuses on the spiritual darkness of the modern world and its accompanying loss of love. The urban wasteland is represented by Greenfield, an English village once aptly named but currently suffering all the ills of urbanization, such as pollution, noise, and overcrowding. Two overlapping tales show that the people who live there are also suffering. For them, love is either distorted or absent; the old rituals have either died or lost their power to put people in touch with the divine.

The story begins in war-ravaged London, where the central character, Matty Windrave, emerges in flames like a burning bush from one of the fires. This child survives but is extremely deformed and without any family. He is shuttled from place to place, his distorted features making people uncomfortable. They see only the outside and do not value his kindness, honesty, or hard work. Although Matty craves love, he is rebuffed or used at every turn.

His teacher, Mr. Pedigree, likes handsome

young boys and sits Matty almost behind a cabinet. Pedigree's perversity leads him to ask favorite boys to his rooms under the guise of helping them with their lessons. When he is warned by the headmaster about these meetings, Pedigree uses Matty to screen himself. Knowing that no one would think he had ulterior motives for inviting such an ugly child, he asks Matty to come to his rooms. The current favorite cannot deal with his rejection and falls to his death, which ultimately leads to Pedigree's imprisonment. Pedigree tells Matty it is all his fault. Matty believes him. He thinks Pedigree is a friend he betrayed and resolves to make amends.

To those who reject him, Matty looks inhuman, but he is perhaps more than human. Unlike others who have lost touch with the spiritual world, Matty communicates with angels who help him in his quest to answer questions about who he is and what his mission is. Matty knows that the old rituals have lost their power, so he creates his own or endures new versions of the old ones. He memorizes and recites Bible passages, walks in chains through a swamp in self-baptism, and suffers a mock crucifixion. He knows he may be perceived as mad but feels that he needs the rituals to cleanse himself of his perceived sin, ward off evil, and gain the more-than-human power he will need for his mission of salvation.

The second story focuses on Sophy Stanhope, one of twin girls who grow up in Greenfield. Unlike Matty, Sophy and her sister, Toni, are beautiful. They are objects of attention and affection for everyone except their father, from whom they want love. Sophy's frustration comes out in violent, destructive impulses. Like Matty, she is in touch with mysterious forces, but she taps into them for evil purposes. Her first experience involves sensing and acting on the synchronous moment when a small duck swimming by can be killed by a large stone thrown into the water. Also like Matty, Sophy craves love. She has a family, but in her part of the wasteland world, family love is a joke. Her mother has abandoned the family, and her father consorts with a series of "aunties." Sophy's own love life involves an undercurrent of risk, violence, or manipulation.

The paths of the characters converge after they are grown up or have grown old. Matty's mission is to guard the messianic child that his angels tell him

will be the new representative of divine power on earth. Sophy plots with others to kidnap the same child, the ransom and the evil adventure appealing to her. When Sophy's cohorts bomb the school where the child lives, Matty whirls through the fire to save him, becoming the burnt offering the angels have told him he must become.

Matty must also save Pedigree from himself. An old man who preys on children in the park, Pedigree knows that his compulsion will one day lead him to murder a child to keep him from telling. Nevertheless, he cannot stop himself. Pedigree is in the park waiting for his next boy to come close when he has a vision. The dead Matty approaches to take away the brightly colored ball that Pedigree uses to entice the boys. As Pedigree clutches the ball to his chest, it becomes his beating heart; when Matty pulls it from him, his heart stops and he dies. However, Pedigree dies with insight. It is he who realizes that Matty was the only person who loved him and that love is what all people are searching for, whether they call it sex, money, or power. Thus Matty is vindicated and evil thwarted at the end of the novel by the power of love and a higher, inexplicable power with which Matty was in tune.

## A SEA TRILOGY

**First published:** *Rites of Passage*, 1980; *Close Quarters*, 1987; *Fire Down Below*, 1989

**Type of work:** Novels

*In the journals chronicling his voyage to Australia, Edmund Talbot comments on fellow passengers, the crew, and shipboard events while revealing his own maturation.*

*Rites of Passage*, *Close Quarters*, and *Fire Down Below* constitute Golding's *A Sea Trilogy*. The focus of the trilogy, taken as a whole, is Edmund Talbot's maturation. Showing Talbot from his departure as a young upstart, sure of preferment and success, to his reflections as an old man, the novels allow Talbot to demonstrate his growth as a human being. Using the literary genre of the sea journal, Golding allows Talbot to speak for himself. Talbot's eighteenth century prose and his insistence on learning sailors' jargon lend authenticity to his record of

the physical journey, while the content and tone of his journals reveal the results of his psychological journey and growth. In particular, his maturity is revealed in his record of his relationships with the other passengers and the crew and in his comments about himself.

In *Rites of Passage*, Talbot is a snob, easily impressed by titles, fine clothing, or fancy manners. He holds himself aloof and seems quite self-satisfied, certain of his intellect, his talents, and his future success. Any insecurity is revealed in the obsequious tone he sometimes adopts in his journal, which is written for his benefactor and godfather in England. He is very much concerned with being witty and painting a favorable picture of himself on the voyage.

As part of his commentary, Talbot introduces the other people on board. The passengers include Zenobia Brocklebank, an older woman attempting to seem younger and more socially prominent than her condition warrants; her father, who resorts to drink; Mr. Prettiman, a rationalist; Miss Granham, a spinster dismissed by Talbot as cold and unattractive; and the Reverend Colley, an earnest but overzealous clergyman. The crew includes Captain Anderson, the chief officer, who is strongly anti-clergy; Billy Rogers, a handsome sailor who becomes Colley's shame; Mr. Summers, a lowborn officer with highborn qualities; and Wheeler, servant to Talbot.

The central event of this first novel is the death of Colley. Talbot finds Colley a ridiculous figure for much of the novel, and it is clear why Colley becomes the butt of jokes. A practical joke played by the sailors as part of the rites of crossing the equator is carried too far, however, and Colley simply wills himself to die of shame. After reading the letter that Colley left behind, Talbot must take a second look at the man. In addition, Talbot examines his own role in Colley's death, sensing that blaming the sailors is too easy. In this way, Talbot takes the first major step toward maturity. Examination of cruelty and blame—and the evil in human nature that prompts such tormenting—also allies *Rites of Passage* with earlier Golding novels.

With *Close Quarters*, Talbot begins a new journal. This one is to be written for himself rather than his patron, so he is freed from the necessity of banter and afforded the opportunity for introspection. In this novel, Talbot is less snobbish and displays an

improved sense of humor. Still bristly when teased by being called "Lord Talbot," he can sometimes laugh at himself. Primarily, though, he matures in his relationships and has his courage tested. With one exception, his focus shifts somewhat from the passengers to the crew as the decrepit condition of the ship becomes significant.

When the ship is becalmed beside the *Alcyone*, Talbot finds new interests. In particular he falls in love with Marion Chumley, the ward of the captain of the *Alcyone*. His infatuation at first seems ridiculous, but his intentions are honorable and he remains true through their subsequent separation. In addition, he has a new officer to observe. Lieutenant Benet is sent to Talbot's ship in order to end an affair on board the *Alcyone*.

A risk taker, Benet is soon in conflict with Mr. Summers, who conservatively calculates the odds before acting. Their disagreements with each other and with Captain Anderson about how to handle the ship's broken mast afford Talbot an opportunity to admire the discipline of the ship's social order, particularly the way Summers yields to it despite his frustration at having to carry out orders with which he disagrees. As Talbot becomes better acquainted with Summers, his admiration and their friendship develop. It is a mark of Talbot's maturity that their friendship can survive a falling out.

Once the mast breaks, all aboard are in grave danger, and Talbot records their ways of facing impending death. One drinks, another prefers a quick, self-inflicted gunshot to longer suffering, and some retain their dignity. Talbot is among the latter despite his very real fear. In *Close Quarters*, Talbot is tested in love, friendship, and courage and is not found wanting.

*Fire Down Below* further demonstrates Talbot's maturation as he continues to learn to look beneath surface appearances in order to find true worth. The novel also returns to the theme of accountability, touched on in *Rites of Passage*. As Talbot's friendship with Summers is renewed and grows, Talbot sees clearly the qualities that make Summers superior to an officer who trades solely on his good family ties. Talbot appreciates Summers's kindness and concern, even for little things like helping to relieve the itch of being salty all the time. He recognizes Summers's sensitivity, his allowing Talbot to stand the night watch to avoid be-

ing in the cabin where Wheeler, Talbot's servant, committed suicide. Talbot also reforms his opinion of Miss Granham, now Mrs. Prettiman, appreciating her strength and intelligence. Talbot is more willing to learn from others about the practicalities of what to wear to be comfortable for months at sea or about social philosophy, which he discusses with the Prettimans.

If Talbot's character is in better shape in *Fire Down Below*, the ship is in worse shape. It survives a terrible storm and an encounter with an iceberg, but the foremast is shifting, slowing the ship's progress. Benet proposes running a hot metal bolt through the foremast, and Anderson agrees. The ship moves faster, but Summers alone acknowledges the danger that the mast will be smoldering on the inside. The ship safely reaches port, and Summers's loyalty seems to be rewarded when he is given command of the ship. In fact, Anderson and Benet have simply walked away from the responsibility for what they have done. When the ship catches fire and sinks, it is Summers who dies on board.

Events move swiftly once the ship reaches Sydney. Talbot's fortunes are reversed and then reversed again. When his patron dies, he must adjust to being penniless. However, he later learns that he has been left a seat in Parliament, enabling him to marry Marion and return to England. It is to Talbot's credit that he can accept his misfortune and

rejoice in his good fortune. He has developed an equanimity he lacked when he first set out.

At the end of *Fire Down Below* Talbot speaks not to himself in his journal but, as an old man, to an audience of "dear readers." Looking back over his life, Talbot has some regrets that he turned down the adventure of setting off with the Prettimans to build a new world in Australia and instead chose the safer path of life as a member of Parliament. His final assessment, however, is that while his life has not been without disappointment or sorrow, it has been a good one. The self-satisfied narrator of *Rites of Passage* has become, by the end of the trilogy, simply satisfied.

## SUMMARY

As a mythmaker, William Golding writes stories that illuminate a truth about human nature. He sometimes creates those stories by presenting literary precedents in new ways and sometimes supplies the concrete details by drawing on his own experiences and interests. The truth he most often reveals is the existence of a depravity most humans would like to ignore or deny. The pessimism of such a focus is sometimes balanced by the possibility that self-awareness empowers goodness in people. In those novels that present both the darkness and the potential light, Golding's pessimistic logic and optimistic nature merge.

## DISCUSSION TOPICS

- Discuss why the norms of civilization break down so quickly in William Golding's novel *Lord of the Flies*. What are the individual steps of the breakdown?
- What is the "price" of erecting the spire in *The Spire*? Is it worth the price?
- Discuss the symbolism of the sea voyage to Australia in *The Sea Trilogy*. What are the symbols that seem to typify Golding's view of human nature?
- Discuss which of Golding's novels seem to best exemplify modern society's search for spirituality and which novels most mark its absence.
- Golding frequently talks of The Fall. What does he mean by this idea, and how does he show that its effects may be overcome, if at all?
- Which novels seem to best show Golding as a writer of hope and which as a deeply pessimistic writer?
- Discuss Golding's use of fire in his novels. What is its function?
- What does the word "epiphany" mean, and what is the importance of epiphanies in Golding's novels?

Library of Congress

## OLIVER GOLDSMITH

**Born:** Pallas, County Longford (?), Ireland  
November 10, 1728 or 1730

**Died:** London, England  
April 4, 1774

*Goldsmith was a superb and highly versatile author. His humorous writings exhibited grace and charm with an awareness of the blessings and sorrows of life.*

### BIOGRAPHY

Oliver Goldsmith's life divides into almost equal segments. The first half is poorly understood. The second, beginning in 1756 with his arrival in London, is well documented. Goldsmith's birth is shrouded in some mystery. It is believed that he was born on November 10, 1728 or 1730, at his parents' home at Pallas, County Longford, Ireland. The uncertainty arises because the year next to Goldsmith's recorded birth was ripped out of the family Bible. He was the fourth child and second son of Charles Goldsmith, a leisure-loving curate who rose slowly in the Anglican Church, and Ann Jones Goldsmith. Shortly after Oliver's birth, the family moved to Lissoy, where Charles became curate-in-charge of the parish at Kilkenny West.

At school, Goldsmith was a careless student, but never an unintelligent one. He was good in Latin and translated some of Vergil into English verse. This early taste for versification deepened in his youth, when he had the opportunity to hear professional storytellers and entertainers. Their lively tales increased his interest in romantic writing. Goldsmith's mother recognized his interest in, and devotion to, poetry and music from his early childhood. When he was older, she insisted, in spite of a grave financial condition, that he be educated as had his father and older brother. With financial backing from an adoring uncle, the decision was

made for Goldsmith to attend Trinity College at Dublin in 1745. He was to enter as a sizar, or "poor scholar." Sizar swept the floors, were subjected to an embarrassing dress code requirement, and waited on others in return for room, board, and tuition fees. Goldsmith disliked his situation, wanting to quit school. Fortunately, his uncle encouraged him to continue, pointing out that Sir Isaac Newton had once been a sizar at Trinity.

Goldsmith was graduated from Trinity College in 1750 with a B.A. degree. Over the next two years, he worked as a tutor, failed in his efforts to be ordained in the Anglican Church because of his age, and seriously considered emigrating to America or studying law in Dublin. He finally did neither, entering the University of Edinburgh in 1752 to study medicine. After two years, he still had not received a degree. In 1754, Goldsmith traveled to the University of Leyden in Holland to continue his medical studies. He then spent a year or so traveling throughout Europe. He arrived in Dover, England, on February 1, 1756. For several years, he worked at a variety of positions, including apothecary's assistant, physician, proofreader at a printing house, and usher at a boys' school. He also launched his literary career in 1757 by contributing articles to the *Monthly Review*, a practice that continued until his death. In the next few years, he continued writing and published *An Enquiry into the Present State of Polite Learning in Europe* (1759). He also translated French works into English and published essays in *Critical Review*, *Bee*, *Busy Body*, *Weekly Magazine*, *Royal Magazine*, *British Magazine*, and *Lady's Magazine*. For the next two years, 1760 to 1761, he wrote his fa-

mous “Chinese Letters” for *The Public Ledger*, which were published in book form in *The Citizen of the World* (1762). He became known as “Dr. Goldsmith” at this time and became friends with such writers as Thomas Percy, Tobias Smollett, Edmund Burke, and, most important, Samuel Johnson.

Goldsmith became a prolific writer during the last fifteen years of his life. Hardly a year passed when he did not publish several works. Also, his versatility was, and still is, astonishing. Goldsmith wrote essays, translations, plays, novels, and poems. He also contributed paid hack work for publisher John Newbery. Goldsmith was always plagued by poverty. He was also jealous by nature, particularly of other writers. His most successful works were often spurred by others’ success. Some good examples are the novel *The Vicar of Wakefield* (1766), in a genre that he normally despised, and two plays for the theater, including his masterpiece *She Stoops to Conquer: Or, The Mistakes of a Night* (pr., pb. 1773).

In 1772, he became seriously ill with a bladder infection. Ailments would continue to haunt him until his death. Remarkably, his literary output did not decrease but remained constant. In fact, his productivity increased in the months preceding his demise. It was as if he knew that the end was near. A number of his works were unfinished, or published posthumously. On March 25, 1774, he became sick with kidney trouble. At the time, he was staying at the Temple in London. Ignoring the advice of several doctors, Goldsmith insisted on medicating himself by taking Dr. James’s Fever Powders. The patent medicine had brought him relief in the past, but this time it induced severe fits of diarrhea and vomiting. Goldsmith refused to stop the medication. The symptoms worsened. In London on Monday, April 4, 1774, he went into violent convulsions and, after ninety minutes of agony, died. Five days later, Goldsmith was buried in an unmarked grave at the Temple Churchyard. The eulogies on his passing were effusive. Johnson wrote a Latin epitaph that was placed in the Poets’ Corner at Westminster Abbey.

## ANALYSIS

Washington Irving wrote of Goldsmith that his genius “flowered early, but was late in bringing its fruit to maturity.” However, an abundance poured forth during the last fifteen years of Goldsmith’s life. Numerous studies have examined his separate

contributions as essayist, novelist, dramatist, biographer, philosopher, and poet.

Goldsmith’s literary career was launched in the April, 1757, issue of the *Monthly Review*, but his first important work did not appear until two years later with the publication of his first book, *An Enquiry into the Present State of Polite Learning in Europe*. The author published it anonymously, and for good reason, since he was aiming at the decline of learning in general. Goldsmith’s work was self-serving. It allowed him to attack his enemies, particularly the pedantic critics who judged English literature by classic Greek or Latin standards. Needless to say, he raised a hornet’s nest of criticism and received the serious literary attention that he craved.

Goldsmith is difficult to categorize as a writer because he wrote so well on so many topics and in so many genres. William Hazlitt said of him:

Goldsmith, both in verse and prose, was one of the most delightful writers in the language. His verse flows like a limpid stream. His ease is quite unconscious. Everything in him is spontaneous, unstudied, yet elegant, harmonious, graceful, nearly faultless.

Goldsmith was not a radical thinker like Jean-Jacques Rousseau, but he infused his work with moderation, sensibility, and irony. In his essays, he denounced the evils of capital punishment, cruelty to animals, and excessive gambling; he noted the stupidity of revenge and the negative effects of luxurious living; and he made sensible suggestions about children’s education. He had strong feelings about the prevalence of sentimental comedy, which he despised and tried to destroy by bringing back boisterous humor to the English stage.

In verse, Goldsmith was certainly skilled. He could pen poetical epistles, prologues, epilogues, and ballads, as well as more conventional poems. His versifying was always spontaneous and humorous, and it reflected dignity. Goldsmith’s poetry could demonstrate strength, as well. In *The Traveler: Or, A Prospect of Society* (1764) and *The Deserted Village* (1770), he employed the similar theme of a man isolated from others, longing for his home. Goldsmith’s use of a narrator in these poems also appears in *The Vicar of Wakefield*. He engaged the device of speaking directly to the reader so that the vicar could comment on the criminal code and pe-

nal system. Such is his artistry, however, that the character always remains a true literary creation.

Poverty fueled Goldsmith's genius. All his life, he struggled to survive. It was only his writing that kept him out of the poorhouse or debtors' prison. The lack of financial resources helps explain why he was so prolific. To be blunt, Goldsmith was also a hack writer. Samuel Johnson says of Goldsmith that he was always able to adorn the most menial labor. Publishers often requested certain types of work, which may explain his versatility and why he never stayed with one genre for long. It was not uncommon for him to write in several genres at the same time. In 1766, he published his novel, *The Vicar of Wakefield*, and began his first comedic play, *The Good-Natured Man* (pr., pb. 1768).

A worse criticism of Goldsmith, besides the serious charge of hack writer, is that he often plagiarized others. The accusation was first leveled at him in 1759, when he became sole contributor to the *Bee*, a weekly magazine whose pages he had to fill. Week after week, he wrote a number of essays, many of which were lifted from volume 5 of the French *Encyclopédie*. Goldsmith never defended his practice, justifying it as hack work, not literature. Even his famous series of "Chinese Letters" was lifted or adapted from several other sources, particularly *Lettres Chinoises* (1739-1740) by Jean Baptiste de Boyer, marquis d'Argens. In his lengthy two-volume *An History of England in a Series of Letters from a Nobleman to His Son* (1764), Goldsmith borrowed heavily from Voltaire, Paul Rapin de Thoyras, Tobias Smollett, and Edmund Burke. He freely admitted "borrowing" the character Croaker in his play *The Good-Natured Man* from Johnson's periodical, *The Rambler*. He stole ideas, characters, words, and paragraphs from others throughout his career.

Goldsmith was no saint. He was highly irritable, possessing a mercurial temperament, envied other writers, gambled heavily, drank too much, borrowed money that he could not repay, lied to his friends and relatives, was often dishonest in his business dealings, and demonstrated a parasitic dependence on other writers. Goldsmith recognized his shortcomings and his absurd behavior. In the end, he triumphed over his imperfections. He became a warmhearted individual who gave freely of himself, always kept his integrity when it mattered, refused to write or dedicate work for people whom he did not respect, and always made his plagiarized

borrowings more distinguished than the original. In short, he was a genius whose work revealed wisdom, seasoned judgment, and good humor. These attributes are best exemplified in two of his most famous works: *The Vicar of Wakefield* and *She Stoops to Conquer*.

## THE VICAR OF WAKEFIELD

**First published:** 1766

**Type of work:** Novel

*This charming, comical, romantic tale features a pastoral setting and is about a simple vicar experiencing a series of family misfortunes.*

*The Vicar of Wakefield*, although published in March, 1766, was actually written years earlier. Scholarly evidence suggests that Goldsmith began writing the novel in 1760 and probably finished it in 1765. Mysterious stories surround the composition, sale, and publication of the work. One such tale concerns the venerable Samuel Johnson. According to his biographer, James Boswell, Johnson was summoned for immediate assistance by Goldsmith. It seems that Goldsmith was behind in his rent, and his landlady had him arrested. Johnson quieted the much disturbed writer, learned of an unpublished novel, and sold a one-third share to a bookseller. Goldsmith discharged the debts and eventually sold the remaining shares.

The work in question is strongly believed to be *The Vicar of Wakefield*. Why did he write it? Speculation suggests that Goldsmith wrote the novel because he was consumed with envy by the publication, in January, 1760, of *The Life and Opinions of Tristram Shandy, Gent.* (1759-1767) by Laurence Sterne. Though Goldsmith professed a long dislike for the novel, the celebrity status enjoyed by Sterne may have motivated the still little-known Goldsmith to match his rival's success. Much has been made of the autobiographical portions to be found in *The Vicar of Wakefield*, including its faulty plot structure, the narrative technique employed, and the sentimental reversal-of-fortune conclusion. Goldsmith uses the vicar, the delightful creation of Dr. Charles Primrose, as the novel's narrator and through the character voices many of his own ideas and experiences.

*The Vicar of Wakefield* falls neatly into two equal segments. The first is humorous, a comically ironic idyll. The second is romantic, underscored by a series of unrelieved disasters that befall the Primroses. Most critics believe that the second section is superior. The novel's central theme, that innocence can become contemptible in the face of evil or worldly wisdom, while never fully articulated by Goldsmith, supports the whole work. The vicar and his family are simple, innocent folk enjoying a pleasant, pastoral existence until they come into contact with reality. Their very virtues are turned on them as they suffer one disaster after another. Goldsmith reveals that the overthrow of their innocence is replaced by wisdom and compassion.

Perhaps that is why *The Vicar of Wakefield* achieved immediate popularity that increased substantially following Goldsmith's death. During the nineteenth century, for example, the novel enjoyed at least two editions a year. It has been translated into many languages. The reason for its success may be that the novel can be interpreted in many different ways. It exudes irresistible charm and ebullience, demonstrating Goldsmith's genius and absurdity. *The Vicar of Wakefield* remains one of the most popular books from the eighteenth century. The only other work by Goldsmith to match it in continuing popularity is his play *She Stoops to Conquer*.

## SHE STOOPS TO CONQUER

**First produced:** 1773 (first published, 1773)

**Type of work:** Play

*This delightful comedy revolves around two youthful couples pursuing romantic intrigue against a background of deception, error, and the machinations of several eccentric characters.*

*She Stoops to Conquer: Or, The Mistakes of a Night* was an immediate success for Goldsmith, his last literary triumph. The opening night audience at Covent Garden on March 15, 1773, roared its continued approval. Five days following the premiere, every copy of the published version of the play was sold. Yet the circumstances surrounding the production of the play were marked by enormous difficulty for Goldsmith because the theater manager anticipated certain failure. Goldsmith finished writing the comedy in September, 1771. He took it to George Colman, manager of the Covent Garden, who repeatedly postponed producing it. It was only through the firm intervention of Samuel Johnson that Colman reluctantly agreed to stage it. (Goldsmith inscribed the published work to Johnson.) The script was much revised and altered during the weeks of rehearsal. Several of the leading actors refused to appear in it and were replaced. The play's approval was such a complete success that Colman was severely criticized for his delay.

Looking back, it is difficult to comprehend Colman's reluctance to stage the comedy. *She Stoops to Conquer* was Goldsmith's second play. (Five years earlier at Covent Garden, Colman produced Goldsmith's first effort, *The Good-Natured Man*, also well received by the public.) The problem stemmed from the fact that Goldsmith's views on comedy were different from prevailing taste. He had taken aim at the whole genre. In a piece published early in 1773 entitled "Essay on the Theatre: Or, A Comparison Between Sentimental and Laughing Comedy," he had bemoaned the prevailing taste of audiences for "sentimental comedy," which he called a bastard form of tragedy. In its place, Goldsmith proposed a new comic genre to be called "laughing comedy." The new form of comedy, as his two plays aptly demonstrated, eliminated moralizing, false appeals to sentimentality, and extraneous song and dance and concentrated instead on mirth, the ex-

posure of human follies, and using characters from the middle and lower classes and dialogue that was easy and natural. The general aim was laughter.

*She Stoops to Conquer* is a perfect example of Goldsmith's theories. The play opens with two gentlemen from London looking for the home of Mr. Hardcastle. They are tricked into thinking that the home is an inn and conduct themselves accordingly. One of the young men is there to woo young Kate Hardcastle. Kate pretends to be a barmaid until

the hero declares his love for her. The Londoners behave boorishly to all concerned, and the nonstop frolic escalates rapidly. *She Stoops to Conquer* contains vital energy, many farcical elements, and amusing irony. Goldsmith's major theme is exploring the follies of blindness that all humans commit. After poking fun at all the characters, the playwright ends the comedy on a note of discovery. The hero, for example, finds himself and discovers the meaning of true love, marrying the perfect woman for him.

until the hero declares his love for her. The Londoners behave boorishly to all concerned, and the nonstop frolic escalates rapidly. *She Stoops to Conquer* contains vital energy, many farcical elements, and amusing irony. Goldsmith's major theme is exploring the follies of blindness that all humans commit. After poking fun at all the characters, the playwright ends the comedy on a note of discovery. The hero, for example, finds himself and discovers the meaning of true love, marrying the perfect woman for him.

About a year after its premiere, Goldsmith died. *She Stoops to Conquer* endured, however, to become one of the most frequently produced plays of the English repertoire. Hardly a year passes in the United States that it is not staged by some professional, community, or university theater company. It has also been produced several times for television.

## SUMMARY

Oliver Goldsmith is one of the great writers of the eighteenth century, ranking with Jonathan Swift, Alexander Pope, and Samuel Johnson. He was certainly the master comedian of his age. His versatility in producing important poems, dramas, novels, and essays is without peer.

Goldsmith always remained a puzzle to his contemporaries. He was a difficult personality for them to comprehend. After his death, however, he assumed legendary proportions. Over the centuries, many anecdotes and recollections of the man have been offered, including countless books and shorter works. Perhaps Johnson wrote it best in his Latin inscription on Goldsmith's memorial in the Poets' Corner in Westminster Abbey: "in genius lofty, lively, versatile; in style weighty, clear, engaging."

Terry Theodore

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

*The Vicar of Wakefield*, 1766

#### SHORT FICTION:

*The Citizen of the World*, 1762 (collection of fictional letters first published in *The Public Ledger*, 1760-1761)

#### POETRY:

"The Logicians Refuted," 1759

"An Elegy on the Glory of Her Sex: Mrs. Mary Blaize," 1759

*The Traveller: Or, A Prospect of Society*, 1764

"The Captivity: An Oratoria," wr. 1764, pb. 1820

"Edwin and Angelina," 1765

"An Elegy on the Death of a Mad Dog," 1766

*The Deserted Village*, 1770

"Threnodia Augustalis," 1772

"Retaliation," 1774

*The Haunch of Venison: A Poetical Epistle to Lord Clare*, 1776

DRAMA:

*The Good-Natured Man*, pr., pb. 1768  
*She Stoops to Conquer; Or, The Mistakes of a Night*, pr., pb. 1773

NONFICTION:

*An Enquiry into the Present State of Polite Learning in Europe*, 1759  
*The Bee*, 1759 (essays)  
*The Life of Richard Nash of Bath*, 1762  
*An History of England in a Series of Letters from a Nobleman to His Son*, 1764 (2 volumes)  
*Life of Thomas Parnell*, 1770  
*Life of Henry St. John, Lord Viscount Bolingbroke*, 1770  
*An History of the Earth, and Animated Nature*, 1774 (8 volumes; unfinished)

MISCELLANEOUS:

*The Collected Works of Oliver Goldsmith*, 1966 (5 volumes; Arthur Friedman, editor)

## DISCUSSION TOPICS

- Oliver Goldsmith seems to have been a writer who had one good novel in him. What qualities other than his skillful application of autobiographical elements contribute to the success of *The Vicar of Wakefield*?
- Develop the theme of moral blindness in *She Stoops to Conquer*.
- What saves Goldsmith's *The Deserted Village* from being merely nostalgic verse for a way of life that has passed?
- Discuss writer James Boswell's unfair depiction of Goldsmith as a kind of second-rate Samuel Johnson.
- It is difficult to find writers as versatile as Goldsmith. What aspects of his artistry characterize all or most of the genres in which he wrote?

## NADINE GORDIMER

**Born:** Springs, Transvaal, South Africa  
November 20, 1923

*Recipient of the 1991 Nobel Prize in Literature, Gordimer is noted for her vivid portrayals of human lives under apartheid.*

### BIOGRAPHY

Nadine Gordimer (GAWR-duh-mur) was born in Springs, a small gold mining town in South Africa, on November 20, 1923. Her maternal grandfather emigrated from Europe to South Africa in the 1890's in order to prospect for diamonds. Her Lithuanian-born Jewish father, who was also a part of the white colonial expansion in the early 1900's, started out as a watch repairer for mine workers and eventually owned a jeweler's shop. The circumstances of Gordimer's white middle-class upbringing provoked her understanding of the racial stratification in South African society.

One of two daughters, Gordimer had little formal education. As a very young girl, she took great pleasure in dancing until the age of ten, when she had persistent fainting spells. The condition was diagnosed as a rapid heartbeat caused by an enlarged thyroid gland. Forced to forgo dancing and participate in less strenuous activities, Gordimer recalls feeling considerably deprived during her childhood. She learned to channel her energies into reading and writing.

Gordimer had begun writing at the age of nine, and at the age of thirteen she published her first literary effort in the children's section of a Johannesburg newspaper. Because of the medical diagnosis, her mother was able to take young Nadine out of school, an act that later caused Gordimer to resent

her mother. For an entire year, at the age of eleven, Gordimer stayed at home and read. Among her readings, Upton Sinclair's *The Jungle* (1906) affected her nascent social and political sensibilities. Her education was resumed with the hiring of private tutors. Most of her formative years, then, were isolated from other children and spent largely in the company of adults. From observing and listening to others, Gordimer was already collecting an arsenal of material for her writing.

By the age of fifteen, Gordimer had her first short story published in a magazine. At the age of twenty-one, she attended the University of Witwatersrand but left after a year. Nevertheless, this brief period at the university left a deep impression on her developing political consciousness. It was the first time she had mixed with blacks and was able to observe for herself their terrible plight in South Africa. At the university, Gordimer mingled with blacks as "equals," as people engaged with the world of ideas. Still, from her early reading of Sinclair's novel about America's unjust labor practices, she was able to consider the situation of blacks in South Africa. She perceived that they were denied an education, exploited economically, and summarily dehumanized by a white minority government.

Gordimer's assessment of her hometown, especially in the light of her time at the university, is particularly harsh. Growing up in the Transvaal region of South Africa, she was frequently bored by what she perceived as trivial or practical matters of existence. She believes that her life changed completely in her early twenties, when she became intellectually stimulated by the events in the world and in her country. Although she did not participate actively in politics, she began to take what she

considered a liberal humanist approach to the injustices visited upon the black population. In the 1940's, leftist movements, communist discussion groups, and black national movements were not yet banned by the white government, and the flurry of political activities attracted Gordimer's interest and attention. She was concentrating intensely on her writing at this time and had not yet incorporated these political observations into her work.

In 1949—the same year the White National Party officially came into power—Gordimer published a book of short stories, *Face to Face*, in Johannesburg, South Africa. She was twenty-six at the time. That was followed by a collection entitled *The Soft Voice of the Serpent, and Other Stories* (1952), which was published in New York and London. Her stories also began appearing in *The New Yorker* and journals such as *The Virginia Quarterly Review* and *The Yale Review*. She observes that politics and the devastating effects of apartheid on all South Africans have played a significant role in her development as a writer, but that “I was writing before politics impinged itself upon my consciousness.”

Her first novel, *The Lying Days*, appeared in 1953 and contained specific autobiographical overtones. The main character, Helen Shaw, also undergoes a transformation in her political awareness at the university. Helen leaves her sheltered home life to discover a world populated with whites and blacks. Her first confrontation with issues of life and death occurs after she befriends several students who are committed to social change. Unlike Gordimer, however, who has stayed in South Africa to confront the conflicts directly, Helen departs from the country at the end of the novel. Although Helen grows wiser and more sensitive to the turmoil in her country, her decision to leave contrasts sharply with the author's determination to produce change by staying.

In the next forty years of her writing career, Gordimer's many novels and short stories focused increasingly on the effects of apartheid. The kinds of changes her different characters experience reflect the modifications of her country. Like people in real life, her characters endure the joys and hardships that social and political changes bring. Her fifth novel, *A Guest of Honour* (1970), won the James Tait Black Memorial Prize, and her sixth novel, *The Conservationist* (1974), was awarded the

Man Booker Prize, a CNA Literary Award, and the Grand Aigle d'Or, a French international award. Gordimer's fictional work is substantially supplemented by her many pieces of nonfictional writing and her public interviews. In 1988, Stephen Clingman collected and published several from this wide array of writings in *The Essential Gesture: Writing, Politics, and Places*.

In 1990, Gordimer joined the African National Congress (ANC), an organization led by Nelson Mandela that opposed the rule of a white minority government. That same year, South Africa began the process of dismantling apartheid. After more than fifty years of literary production, Gordimer was awarded the Nobel Prize in Literature in 1991. The Nobel Foundation praised *The Conservationist*, *Burger's Daughter* (1979), and *July's People* (1981) as the masterpieces of her career. Only years before, several of her novels had been officially banned in South Africa for their political content.

In the years following the fall of apartheid, Gordimer continued writing about her culture in novels, short stories, and nonfiction. Her novels published after the dismantling of apartheid—*None to Accompany Me* (1994), *The House Gun* (1998), *The Pickup* (2001), and *Get a Life* (2005)—deal with issues relevant to the new South Africa: land reclamation, violence and reconciliation, immigration, and the environment.

Gordimer is active in supporting South African culture, particularly writing. An active member of the international writing community, she served as a vice president of PEN International and as a judge for the Man Booker International Prize for 2007.

## ANALYSIS

Gordimer is often praised for her unsentimental portrayals of human lives under apartheid. Her postapartheid fiction continues to chronicle how personal lives are impacted by politics in the new South Africa. She has emphasized repeatedly that “the real influence of politics on my writing is the influence of politics on people.” As Gordimer herself becomes increasingly aware of and indignant about the political apparatus of her country, each character in her novels experiences a transformation that reflects the changes in South Africa. Until the dismantling of apartheid in the early 1990's, Gordimer's characters were situated in the con-

text of a political system where the nation's economic and judicial power was concentrated in and exercised by a minority racial group. She portrays the entire spectrum of lives—black and white—oppressed by a racist regime.

In her fiction, Gordimer begins to hold South Africa accountable for the suppression and eradication of a majority of its people. Even those characters who strive to be as apolitical as possible are directly affected. As an example, Rebecca, a character in *A Guest of Honour*, proclaims her general ignorance in matters of politics. In the novel Rebecca falls in love with Colonel Bray, a white administrator who supports black liberation and who dies violently; the remainder of the novel expresses Rebecca's disorientation and her feelings of dispossession as she wanders in London, unable to forget the politically motivated events leading to her lover's death.

Sometimes her characters openly express an apathetic stance, but even they are deeply affected at a personal level. In her second novel, *A World of Strangers* (1958), the main character is young, white, and upper-crust. Toby Hood moves from one social circle to another without much concern for social or political causes. Toby's lack of care for the politics in South Africa comes to an abrupt halt when his black friend, Steven Sitole, is hunted down by the police in a fatal car chase. Only then does Toby begin to recognize the inequities created by the color of someone's skin. After identifying Steven's body—much to the surprise of the white policemen, who view the friendship as an anomaly in South Africa—Toby begins to confront his own relationship to the country. Shortly after another friend, Anna, is arrested for subversive activity against the government, Toby makes the decision to leave South Africa.

Like the character Helen in *The Lying Days*, Toby realizes the shallowness of his own life and begins to find the terms for his own existence. Because the characters are so entrenched in their personal situations, it is difficult for them to be openly or even deeply concerned about the lives of other people. Like her early characters, who start to take a humanist approach to the atrocities of apartheid, Gordimer herself observed that the relationship of politics to people was not so apparent to her when she began writing, and that the realization came to her slowly. Having grown up in an insular, white,

middle-class household, Gordimer began to shape her own awareness about the conflicts in South Africa only through reading about other people's pain in a variety of literature.

Her third novel, *Occasion for Loving* (1963), shows several characters who live without social consciousness and responsibility. The lives of the Stillwell family and their friends are empty and without much virtue; they move carelessly in and out of relationships and appear unmoved by the catastrophes that occur in the background. This novel ends a decisive phase in Gordimer's work, where she begins to move away from issues such as ignorance and indifference and toward events that require the individual to take some form of direct action against apartheid.

In *The Late Bourgeois World* (1966), Gordimer begins to experiment with different narrative strategies in order to capture as fully as possible the complexities of human lives in the grip of an oppressive regime. In this brief first-person narration, the main character, Liz Van Den Sandt, seems to begin where Helen Shaw might have continued years later had she returned to South Africa. In a novel that encompasses the events of a single day, Liz first learns of her former husband's death as the story opens. In the course of the day, which includes her breaking the news to their son at his boarding school, Liz memorializes the death of her politically active former husband. In untangling some mysteries of life and death, she decides that the meaning of life in South Africa includes becoming active and responsible. At the end Liz meets with a former ally of "the cause" and is incited to take subversive political action against apartheid.

*The Late Bourgeois World* marks a definite turning point in the way that Gordimer writes about the influence of politics on people. Until then, and in the short stories of the 1950's and 1960's, Gordimer emphasized the course of individual human lives, focusing on people's personal joys and pains. As Gordimer's own political consciousness grew, she found the novel form more difficult to write because her worldview had grown considerably.

One complaint that uninitiated readers have about Gordimer's later novels concerns the difficulty of identifying who is narrating or speaking about the events. The later novels use dashes instead of quotation marks to indicate speech, making the shift from external narration to dialogue or

from characters' thoughts to speech a bit more difficult to note. Ambiguity, at times, reflects the dangers involved in speaking the truth; shifts in narrative perspective emphasize the variety of views. As in the various forces that make up and affect the political situation in South Africa, Gordimer's narrative strategies reflect the complexities of human relationships. Gordimer's novels mirror the political and social reality without oversimplifying the devastating consequences.

In *A Guest of Honour*, the former administrator (who is white) has been invited to return to a liberated Africa in order to reform its educational system. Colonel Bray's observations of the effects of revolution reveal his sensitivity to the injustices that apartheid has inflicted upon the country. As the novel progresses, the reader experiences Bray's split allegiance to the two new black leaders as well as to white South Africa. In *The Conservationist*, the white landowner treats his help with great indifference and arrogance; after all, he is the boss. Although Mehring owns the land (the veld, as the landscape in South Africa is called), he does not understand it in the way the black natives do. Through a series of unusual events and natural catastrophes, Mehring slowly loses first the control of the land and then the land itself. By the novel's end, Mehring may be dead, and the ambiguity of this event is displaced by the one that closes the novel: The blacks are burying one of their own in their land.

Like *The Conservationist*, *Burger's Daughter* employs a multiperspective narration. At times, the reader appears to be inside the head of the main character and at other times to be watching that character involved in some objective situation. At times, the narrative perspective appears to be in the first person while at other times it appears omniscient. While these approaches may appear unusual, they are in fact consistent with the complicated situations that Gordimer represents in her fiction. For example, when Rosa Burger remembers the past, she thinks of herself as "another" person, one who used to do or say certain things. When she is seen waiting outside the prison at the age of fourteen, the narrative must capture the fact that "she" is being watched by someone else. Later, when her activities are directly under police surveillance, it is reasonable to expect the narrative to tell what was observed about her. If Rosa remem-

bers a conversation she had with a former lover, she indicates that it was "I" who said or felt these things.

Gordimer begins to take greater liberties at finding different forms to capture the essence of the vastness and complexities of those living under apartheid and to express precisely the events that are private and public. In both *July's People* and *A Sport of Nature* (1987), she casts the events in the future, after a revolution might already have occurred.

Her three novels of the 1990's chart the period of change from apartheid to democracy in South Africa. In these Gordimer continues chronicling how personal lives are impacted by politics. *My Son's Story* (1990) focuses on a family that becomes involved in the struggle for freedom. Although Gordimer had previously used minority characters as narrators in her short fiction, this is her first novel narrated by a mixed-race character, Will, the son named for William Shakespeare. In *My Son's Story* the method of narration seems dual—alternating between Will's first-person account and a seemingly external voice. However, at the end of the novel, Will claims both voices, having spoken in the first person as the son—whose father, sister, and mother all become involved in fighting for freedom—and in the third person as a writer who has imagined what he could not know as an individual. Together the voices create the story, not only of his family but also of the turmoil that is South Africa.

The action of *None to Accompany Me* covers the end of apartheid and the beginnings of democracy. Vera Stark, true to her name, whittles her interests and activities to what she sees as essential. Ultimately, her work satisfies her more than marriage, family, and her home. A lawyer, she works to minimize the movement of blacks to inferior sections of South Africa and, when it becomes possible, works to reclaim land for their use. *The House Gun* echoes a major concern of the new South Africa—how to come to terms with past violence. An adult son of two liberal South Africans has killed a man—a personal, not a political, act. The novel traces how these three characters need to find a way to reconcile themselves to the truth of the murder before their lives can move forward. The parents must also face how they feel about depending upon a respected black lawyer to handle Duncan's case.

*The Pickup* and *Get a Life* continue meshing the

political and the personal. Gordimer has often said that she believes politics and sex are the strongest forces affecting individuals. These dual concerns govern the complex relationship between Julie Summers, a white privileged South African, and Ibrahim ibn Musa, an illegal Arab immigrant, in *The Pickup*. In *Get a Life* the personal and political are metaphorically embodied in Paul Bannerman. At thirty-five, diagnosed with thyroid cancer, he receives radioactive iodine treatment. To avoid possibly contaminating his wife and son, he moves back with his parents, who care for him as he recuperates. As an ecologist working to see that the inevitable progress in South Africa is not destructive to the environment, Paul has been concerned with a proposed nuclear reactor. In Paul and in the environment, the dangers of contamination are juxtaposed with the human ability to thwart the danger and maintain life. The novel deals with the relationships in the two marriages, Paul's and his parents'. On a personal and political level accommodations must be made between the real and the ideal: How much disparity in values and actions can marriages survive? How much interference by industrial man can nature withstand?

## THE CONSERVATIONIST

**First published:** 1974

**Type of work:** Novel

*In the wake of political change and natural catastrophes in South Africa, a white landowner loses everything.*

*The Conservationist* was held by the South African Censorship Board for ten weeks before it was finally released to the public. The novel, which tells the story of a white landowner named Mehring whose farm is run by black natives, begins with the discovery of a dead African found on Mehring's land. At the end, after a careless burial by white policemen exposes the body, the native is given a proper burial by the blacks who work Mehring's farm. The story's final sentences summarize the spirit of the novel: "They had put him away to rest, at last; he had come back. He took possession of this earth, theirs; one of them." In an interview in

the *Paris Review* in 1983, Gordimer explained that the African battle cry, *mayibuye*, means "Africa, come back"; it is also the slogan of the ANC. The "coming back" refers to the return of the dead in the novel as well as to the theme that blacks will someday reclaim Africa as their own.

In combining the resurrection theme with a political one, Gordimer conveys a larger message that deals with life and death under apartheid. The image of the dead African permeates the other events in the novel and serves as a constant reminder of the shallowness of Mehring, who owns and rules a piece of Africa without understanding the land or the natives who inhabit it. In this respect, Mehring is like the living dead who unnaturally impose their values on those who are forced to exist under apartheid.

Mehring's actions are completely detached from those of the Africans in the novel. His activities include driving his Mercedes into town to attend parties or other social gatherings, where he is seen in a variety of situations that reveal his dissatisfaction with his life. By contrast, the Africans are represented in ritual events that strengthen their tie to the land: dances, the community's slaughter of a calf, a kind of Christmas party, and, most important, the burial of the dead African at the novel's end. While Mehring appears bored or has unpropitious sexual encounters, the Africans are actively engaged with their work, even with the menial tasks that will keep the farm running. Mehring's personal relationships are also disparate ones. He has lost contact with his son, and his mistress Antonia becomes increasingly disconnected from him. Meanwhile the Africans are portrayed in situations that suggest the strength of their community. Jacobus, the farm's foreman, is the mediator between Mehring and the land and is the first to inform the owner of the dead body. It is also Jacobus who brings the Africans together to bury the dead and call for the return of Africa.

If Mehring is to symbolize the decline of the white ruling class, Gordimer achieves this message

with the amazing storm that literally sweeps Mehrling off his land. In his last scene in the novel, Mehrling is fleeing from the farm, after the African's dead body is washed up by the storm, when he spots and picks up a colored woman hitchhiker; they drive to a deserted cyanide mine dump. The scene ends ambiguously with the presence of a third person who may be a coconspirator with the colored woman, and the culmination of the encounter appears as a prelude to Mehrling's demise.

The novel frequently shifts perspectives to achieve the full effects of the events. Sometimes Mehrling is speaking of events in the present; at other times he is reflecting upon or remembering some other event. At still other times in the novel, there appears to be a completely detached observer who is recounting events. The shifts set a swift pace to events that are otherwise stagnant in development. They also capture the distinct events as they occur. For example, in the scenes where the Africans are involved in communal or ritual activities, it would be unrealistic for Mehrling to narrate the fullness of the events, since he is never present at any of their affairs. Similarly, it is impossible for any of the Africans to narrate Mehrling's activities and thoughts, since these people do not seem to possess the language skills to do so convincingly.

*The Conservationist* contains the author's vision that blacks will someday reclaim Africa. In the 1970's, when the novel appeared, the Black Power movement had been gaining momentum. Blacks argued that they must speak their cause on their own behalf and must first return to the traditions and roots of Africa in order to do so. Furthermore, in the liberation of Africa from white rule, it was unfortunate but essential that whites become fully dispossessed. Only in an ultimate and absolute return of the land to those who first inhabited it could liberation be complete. When the novel closes, Mehrling's fate is unspecified but nevertheless certain, and the Africans are totally engaged with the forces that constitute life and death.

## BURGER'S DAUGHTER

**First published:** 1979

**Type of work:** Novel

*A young woman comes to personal and political terms with the meaning of the life and the death of her father.*

*Burger's Daughter* expresses well the author's contention that "fiction is a way of exploring possibilities present but undreamt of in the living of a single life." The novel is the evolution of Rosa Burger's awareness and understanding of the forces that make up the life of her politically active family. It also chronicles the fictitious life of Lionel Burger, a white member of the Communist Party, and the activities that reflect the historical development of South African politics from the 1920's to the 1970's. Through the lives of the father and the daughter, Gordimer explores the possibilities present to the Burger family and shows the choices that they make.

One of the novel's main themes concerns the degree to which an individual is expected to make a political commitment to the life of the republic. Initially, in Rosa's case, the choice to go against apartheid is in fact the legacy from her family rather than from anything resembling a personal decision. In the course of the novel, Rosa retraces the steps of her family's past, as she also understands the real and devastating effects of a segregated society. She makes a series of difficult choices that land her in a South African prison at the novel's end.

The novel begins with Rosa at the age of fourteen, as she waits alongside others who have come to bring supplies and messages to imprisoned loved ones. She is seen in a schoolgirl's uniform carrying a quilt and a hot-water bottle for her mother, who is in prison. The narrative shifts from this third-person perspective to the voice of Rosa herself as she recounts that event from girlhood, as well as the many others that shape her life.

The tone of the first-person perspective is self-analytical, as it reflects upon Rosa's personal experiences. She recounts her brother's death by drowning; her mother's death by multiple sclerosis; the intense love relationship with a man named Conrad; the imprisonment and death of her father; the

first time she leaves South Africa and politics to spend a yearlong respite in Paris with Madame Bagnelli (Katya), her father's first wife; and finally, the events that lead to her own decision to be involved with politics after all.

Against the background of her family's history lies that of South Africa. Two major events are reported in *Burger's Daughter* that lend factual veracity to the fictional story: the Sharpeville Massacre of 1960, preceding Lionel's final arrest, and the Soweto Riots of 1976. In her remembrances of the events, Rosa addresses her thoughts to her past lover Conrad as well as to Madame Bagnelli. Only at the end of the novel does Rosa address her dead father, admonishing him as well as herself for the choices made in their lifetimes.

Among Rosa's many encounters and experiences, perhaps the most striking one is the phone call she receives one night from Baasie, years after they played together as children in the Burger household. He reproaches her for what he perceives as her capitalizing on her father's name without understanding the real plight of blacks in South Africa. As a dispossessed black, Baasie refers to a political rally at which he spotted her and condemns her patronage of the black cause. Rosa is literally sickened by the encounter with this disembodied voice from her past, but it nevertheless encourages her to take some form of political action.

Like *The Conservationist*, *Burger's Daughter* is told with multiple points of view in the narrative. Although the bulk of the novel is told from Rosa's perspective, other perspectives are operating in the novel as well. There is an objective voice that fills in the gaps of the Burger family's history as well as South Africa's political history, and there appears to be another objective perspective told by someone who is particularly familiar with Rosa's life and compassionately reports the facts. When Rosa is under surveillance, reports of her activities appear in an "official" capacity.

All of these combined narrative strategies produce a full presentation of Rosa's life as it is constituted by her family and her country. The novel also addresses the issue of individual identity in two contexts: Can the individual be truly autonomous, or is the individual always the object of historical forces over which he or she has very little final control? Rosa is not unduly oppressed by these con-

cerns, and her narrative is particularly balanced in the way it presents the possibilities available to her under the circumstances.

Thrust at birth into the hotbed of political concerns, Rosa discovers that her father's legacy does not necessarily preclude her individual actions and choices. In the end, she determines that being Burger's daughter means respecting her father's choices as well as finding the terms for her own existence.

## JULY'S PEOPLE

**First published:** 1981

**Type of work:** Novel

*This work focuses on the plight of a white family during a successful period of black liberation.*

*July's People* is set in a time and place when the African effort to liberate blacks from white rule has successfully taken place. The entire country has become a battleground; the novel focuses on the plight of the Smaleses, an enlightened white middle-class family.

Bamford and Maureen Smales are "rescued" from deterioration by their servant, July, who takes them and their children into his native village. On the way there, July is seen literally caring for them, and it is obvious to the reader that he has not entirely abandoned his socialized role as a servant to white people. The Smaleses are uncomfortable with the shifting situation as they discover their increasing dependence on July. The novel's epigraph is an emblem of what the reader might expect in the course of events. Gordimer quotes from *Quaderni del carcere* (1948-1951; partial translation as *Selections from the Prison Notebooks of Antonio Gramsci*, 1971): "The old is dying and the new cannot be born; in this interregnum there arises a great diversity of morbid symptoms." Africa is experiencing a change, and both blacks and whites are caught in the "interregnum," in the midst of change itself.

Gordimer, however, does not simplify the political implications. In other words, she does not advocate a view that white liberals such as the Smaleses

must necessarily be excluded from black liberation. Neither does she cast an approving eye on the transition to black South African rule. Both groups experience pains in the transition; the new cannot yet be born in the middle of all the changes. Everyone is thrust into chaos and uncertainty; all social roles are shifting and changing.

If the lack of a concrete political agenda is a major issue in the novel, it also turns everything upside down for all the characters. For one thing, sexual roles are confused. Bamford, who had been the head of the household, is emasculated by relying on his former servant to save him and his family. Subsequently, he becomes figuratively, then literally, impotent, since he progressively loses his ability to relate to Maureen in any marital way. Much of the perspective of events is seen through Maureen's experiences. She comes to see more clearly the lines drawn to differentiate race, class, and gender. More specifically, she understands that the lines allow for cultural oppression at many levels. Like many white South Africans who inherited their place in the country from generations of black oppression, however, Maureen does not know how to make a radical change in her own daily way of being.

July himself responds to the changes by acting in the most pragmatic way: He takes care of the white people as he has always done and, given the situation, takes the logical step of bringing them to his village. There, July has them meet the chief, whose main concern is to solicit Bamford's aid in combating the Russians and Cubans, whom the chief considers to be worse enemies than the white South Africans. The old relationship between July and the Smaleses takes on a new, but hardly radical, dimension as the white family becomes divested of their former "authority." Because July has always lived in the city and taken care of the Smaleses, the transposition to the village does not in fact change his role very much—July is still taking care of the family—only now, July answers to the authority of the chief.

The novel raises the question of who should properly rule Africa—the whites who have profited from the suppression of blacks, or the blacks who have failed to adapt to the industrial growth of the country? Gordimer projects a vision of the future, one that is filled with many complex consider-

ations, and appears uneasy about making a prophetic statement. In essence, South Africa is always undergoing political and social turmoil, since its policy of apartheid displaces all people at all levels.

July's people, then, are both the blacks and the whites who constitute Africa. In this novel, however, there do not appear to be any heroes who will rescue the entire nation.

## "CITY LOVERS" AND "COUNTRY LOVERS"

**First published:** 1956 (collected in *Six Feet of the Country*, 1956)

**Type of work:** Short stories

*Two pairs of lovers suffer the consequences of opposing South African law.*

Originally published as "Town and Country Lovers," the two short stories "City Lovers" and "Country Lovers" are paired stories that reveal the devastating personal effects of racial segregation. The Prohibition of Mixed Marriages Act of 1949 and the Immorality Act of 1950 were laws passed by the white government to prevent miscegenation in any form. In "City Lovers," Dr. Franz-Josef von Leinsdorf is a foreign geologist who becomes sexually involved with a colored shopgirl. The girl, who is appropriately unnamed to indicate her lack of social status, becomes little more than the object of the doctor's sexual and domestic needs. The two are arrested, and their transgression is made public. In "Country Lovers," a white boy and a black girl grow up together and become teenage lovers. Although the girl, Thebedi, marries a black man, she soon gives birth to a child that was no doubt fathered by Paulus, her white lover. At the story's end, the child is dead and the parents stand trial, but insufficient evidence fails to convict either parent for violating the law.

Both stories are told in a straightforward manner and tone, but the emotional impact of the events is strongly suggested. In the compact form of a short story, Gordimer effectively captures the impact of South African laws upon individual lives.

## THE PICKUP

**First published:** 2001

**Type of work:** Novel

*A car malfunction leads to an unexpected and problematic relationship between Julie Summers, a privileged white South African, and Abdu, an illegal Arab immigrant.*

Julie Summers picks up a mechanic, who uses the name Abdu while working illegally in South Africa. Although she initiates the relationship, he, too, may be implicated in the pickup. In Julie, Abdu sees someone who has access to what he hopes to achieve: citizenship and a position of worth in a meaningful society.

Ironically, the characters' contrasting values, needs, and desires sometimes become clear to the reader before they are evident to Abdu and Julie. Abdu insists Julie introduce him to her family; Julie sees no reason for this, as she has separated herself from her divorced parents and their privileged lifestyles. During the visit to her father, Julie is embarrassed by the lavish house and hospitality, but Abdu respects the success of her father and his friends. A reversal happens weeks later, after Abdu has been deported and Julie travels with him to his country. Julie is surprised that Abdu insists upon their marriage before he brings her to his family home; she

has no respect for a marriage certificate issued by a government deporting him. Abdu is embarrassed by his dirty, impoverished North African village, but Julie becomes entranced living with his large, extended family on the edge of a desert that she, but not Abdu, sees as spiritual.

Several times the narrator intrudes, addressing the readers directly.

In the second and third paragraphs of the novel, the narrator makes clear that the novel mainly investigates Julie's story. The novel imagines what might happen when a young, privileged South African woman, who is open to experience and wants

to reject her privileges gained through a racist society, meets her opposite. The narrator more often gives Julie's thoughts rather than Abdu's; the narrator follows her much more often than him. Therefore, Julie's love for Abdu is clear long before readers can be sure of Abdu's feelings for her. Despite early suggestions that Julie's love for Abdu might be met with his use of her—as a person who has access to wealth and power—late in the novel it becomes apparent that Abdu does love Julie and respects her freedom to choose and her independence. He believes his country has curtailed his life choices.

The method of narration is appropriate for the novel, although it may cause readers difficulty. It shifts from an omniscient voice to the characters' thoughts and dialogue without clear markers. Readers must come to understand the characters in order to know when words signify thoughts or dialogue and to whom they belong. The ambiguity and uncertainty readers experience parallels the feelings the characters have as they continue their unexpected and difficult relationship. The novel ends with both characters holding true to their desires: Ibrahim ibn Musa (Abdu) flying to the United States to find a better life, and Julie staying in his village with the solace of family and the desert and her newfound ability to teach English.

## SUMMARY

In illuminating the horror and devastation of South African politics, Nadine Gordimer's writings are brilliant expositions of the way that human lives endure in the face of adversity. Her writing about post-apartheid South Africa continues to deal with both the personal and the political as she treats topics relevant to a country struggling to make itself anew. As Stephen Clingman writes in his introduction to a collection of her essays, Gordimer is the interpreter par excellence of her country. Significantly, Gordimer has lived in South Africa all of her life and has accumulated a lifetime of observations and experiences that help her literature present life under apartheid and after it has been replaced with majority rule. For a writer whose work is filled with political situations, Gordimer strives to represent as fully, honestly, and intelligently as possible the entire spectrum of experiences.

## DISCUSSION TOPICS

- Many of Nadine Gordimer's young adult characters experience an epiphany, a sudden understanding of a core truth. Choose a few examples, and discuss whether the epiphanies are related to race or personal relationships or to something else.
- Gordimer often includes historical references in her fiction. Choose a few examples, such as references to historic people or to events or to laws, and discuss how effective their inclusion is in the work.
- Compare or contrast the husband-wife relationships in several of Gordimer's stories or novels.
- Gordimer's method of narration sometimes proves difficult. Discuss why the method of narration in *The House Gun* might be appropriate for Gordimer's aims.
- Do you envision Julie Summers and Ibrahim ibn Musa in *The Pickup* as living separately for the rest of their lives? Why or why not?
- Discuss how Gordimer relies on irony to suggest her themes. Begin by considering some of her titles.

## GÜNTER GRASS

**Born:** Danzig (now Gdańsk), Poland  
October 16, 1927

*Considered one of the most important figures in post-World War II German literature, Grass provocatively combines art and politics in his fiction, poetry, and autobiographical writings.*

### BIOGRAPHY

Günter Wilhelm Grass (gros) was born a Catholic in Danzig (now Gdańsk), Poland, on October 16, 1927, the son of a German shopkeeper and his wife, who was Kashubian, or Slavic. Grass's racially mixed ancestry appears frequently in his written work. From 1933 to 1944, Grass attended school in Danzig and became a member of the Hitler Youth movement. In 1944, when he was seventeen, he was drafted into the German army, was wounded in the Russian advance, and was taken prisoner by the Americans. In his novel *Kopfgeburt: Oder, Die Deutschen sterben aus* (1980; *Headbirths: Or, The Germans Are Dying Out*, 1982), Grass himself acknowledges that had he been born ten years earlier, he would have "developed unswervingly into a convinced National Socialist" (Nazi). Grass did not question the Nazi philosophy until he was taken, as a reeducation measure after the war, to visit the concentration camp at Dachau. After his release in 1946, Grass held many jobs: farmworker, potash miner, and stonemason's apprentice. In 1947, he moved to Düsseldorf to study art, painting, and sculpture. He also was a drummer in jazz bands. The details of these various occupations and enterprises frequently occur in his work.

His desire to be an artist emerged early in his youth. As a child, he collected albums of picture cards of great European masterpieces printed on

coupons from his mother's cigarette packs. In his memoir, *Beim Häuten der Zwiebel* (2006; *Peeling the Onion*, 2007), Grass recalls that at the age of ten he was able to readily distinguish Hans Baldung from Matthias Grünewald and Frans Hals from Rembrandt. When he was not leafing through these albums of paintings, he was curled up with one of the books from his mother's bookshelves: Fyodor Dostoevski's *Besy* (1871-1872; *The Possessed*, 1913), Knut Hamsun's *Sult* (1890; *Hunger*, 1899), or Wilhelm Raabe's *Der Hungerpastor* (1864; *The Hunger-Pastor*, 1885), among them. Grass derived great pleasure from reading Vicki Baum's *Stud. Chem. Helene Willfüer* (1928; *Helene Willfüer*, chemistry student), a book blacklisted by the Catholic Church because of its heroine's teenage pregnancy and her attempts to end it by abortion. Because of his early encounters with art and writing, Grass knew even as a teenager that he wanted to become a famous artist.

In 1951 and 1952, Grass toured Italy and France. In 1954, he married the Swiss ballerina Anna Schwarz. In 1955, after moving to Berlin, Grass joined the literary organization Gruppe 47 (Group 47), whose authors read aloud and criticized one another's works-in-progress. In 1957, Grass read from his first novel *Die Blechtrommel* (1959; *The Tin Drum*, 1961). The members of Gruppe 47 saw great artistic promise in Grass; in 1958, he was awarded the Gruppe 47 Prize, the stipend of which helped finance a trip to Poland to complete research for *The Tin Drum*. Grass, now the father of twin boys, Franz and Raoul, born in 1957, became famous with the publication of his first novel. The Bremen Senate refused to award its literary prize for the novel, but the book received the Berlin Critics'

Prize. Praised as innovative and daring, condemned as blasphemous and obscene, *The Tin Drum* set the stage for critical reception of Grass's future novels. In 1979, director Volker Schlöndorff's film of *The Tin Drum* appeared, winning Grass new fans. The film won the Golden Palm Award at the Cannes Film Festival and the Academy Award for Best Foreign Film in 1979.

For the next four years, Grass continued to write lyric poetry and drama, in addition to beginning work on his next novels. In 1961, the year of his daughter Laura's birth, the novel *Katz und Maus* (1961; *Cat and Mouse*, 1963) appeared, followed in 1963 by the novel *Hundejahre* (1963; *Dog Years*, 1965). These two works were later published, along with *The Tin Drum*, as the *Danziger Trilogie* (1980; *Danzig Trilogy*, 1987), since all three take place in Grass's birthplace of Danzig. At this time, he developed tuberculosis; he also became actively involved in politics, which penetrates his fictional work. In 1963, he was elected to the Berlin Academy of Art.

Grass began to travel extensively in 1964, making several trips to the United States, while continuing to produce drama, ballets, essays, and poetry. His son Bruno was born in 1965. The novel *Örtlich betäubt* (1969; *Local Anesthetic*, 1969) was a success in the United States. Grass and the novel were featured in *Time* magazine on April 13, 1970. He became increasingly politically active from 1969 to 1972, giving numerous campaign speeches, and in 1972 he published *Aus dem Tagebuch einer Schnecke* (1972; *From the Diary of a Snail*, 1973). Though fictional and supposedly his diary as a political campaigner, *From the Diary of a Snail* is addressed to his children as a lesson in history and gives Grass's political views as well as a private picture of Grass and his family.

In 1974, though he continued to travel abroad and to write numerous editorials, speeches, poems, and essays, Grass returned more of his attention to fictional art, producing *Der Butt* (1977; *The Flounder*, 1978), dedicated to his daughter, Helena. *The Flounder* was so widely acclaimed that in 1978 he was able to endow a literary award in the name of one of his admired teachers, administered by the Berlin Academy of Art. Though he had earlier dismissed friends' concerns about the state of his marriage, he and his wife Anna were divorced in 1978. The following year he married Berlin organist Ute Ehrhardt Grunert.

In 1979, Grass also published *Das Treffen in Telgte* (1979; *The Meeting at Telgte*, 1981), which, like *The Flounder*, joins history and fiction; autobiography and fiction are joined in *Headbirths*. In *The Meeting at Telgte*, as in *From the Diary of a Snail*, Grass allows more glimpses into his personal life, detailing his travels with Grunert and the Schlöndorffs, while also detailing the travels of fictional characters. In 1986, he published *Die Rättin* (1986; *The Rat*, 1987), in which his earlier fictional characters are reunited.

Although Grass continued to weave his political commentary into his fiction, his articles on politics and on the nature of writing began to appear in magazines such as *The Nation*. In 1985, a collection of these essays, *On Writing and Politics: 1967-1983*, appeared. The writings range from his retrospective look at writing *The Tin Drum* to an endorsement of writers and trade unions, the right to resist, and the artist's right to speak freely in society.

As much as the Nazi regime, the Holocaust, and the German loss of military pride play a role in Grass's early fiction, the fall of the Berlin Wall and the idea of a reunified Germany occupy much of his later writing. After the fall of the Berlin Wall on November 9, 1989, Grass pondered the identity of the New Germany in *Deutscher Lastenausgleich: Wider das dumpfe Einheitsgebot* (1990; *Two States—One Nation?*, 1990), a collection of speeches and interviews that attempt to reconcile the German past with its future. Two years later, Grass used the metaphor of German-Polish reconciliation in *Unkenrufe* (1992; *The Call of the Toad*, 1992) to examine the dangers of German reunification. Grass's fascination with German history and identity and the future of the new Germany figures prominently again in *Ein weites Feld* (1995; *Too Far Afield*, 2000), which centers on the life and work of German novelist Theodor Fontane. In *Mein Jahrhundert* (1999; *My Century*, 1999), Grass weaves fictional accounts of German history with autobiographical recollections as he recounts the one hundred years of German history from 1900 through 1999.

In 1999, Grass was awarded the Nobel Prize in Literature. In awarding him the prize, the Nobel Academy praised his novels for returning the forgotten face of history to his readers. In his acceptance speech, Grass emphasized the importance of storytelling in a world in which history has come to an end.

In 2002, Grass once again used a historical event—the Russian sinking of the German refugee carrier the *Wilhelm Gustloff* in 1945—as a way of examining the roots of German anti-Semitism and its existence in a new Germany in *Im Krebsgang* (2002; *Crabwalk*, 2003). In 2006, Grass found himself at the center of heated controversy when he admitted being a member of the Waffen-SS as a young man in World War II in his provocative and multilayered memoir, *Peeling the Onion*. While many critics called for him to return his Nobel Prize, other defended him and his work, pointing to its rich and complex interweaving of history and art.

### ANALYSIS

History and objects are almost an obsession with Grass. Most of his fiction is driven by the momentous events of history, and Grass employs objects, and extended metaphors with these objects, until they become symbols of that history. He is both praised and condemned for his use of minute details in his novels, and this mass of detail contributes to the bulk of most of his works. When he employs less detail, as in *Cat and Mouse* and *Headbirths*, the works are significantly shorter.

World War II is the overwhelming background in many of Grass's works, such as *The Tin Drum*, *Cat and Mouse*, and *Dog Years*, while *The Flounder* tackles the entire history of the human race, especially the history of males and females. The tin drum, in the novel of the same name, serves as the symbol of Germany's military aggression, as well as other human violence. In *Cat and Mouse*, the character Mahlke has an Adam's apple "like a mouse," and the narrator is "the cat" intent on (and successful at) destroying Mahlke the mouse. Other historical symbols of destruction abound in this novel, including a sunken minesweeper and a stolen Iron Cross. In *Dog Years*, scarecrows, dogs, and ballerinas are only a few of the objects that become symbols of destruction, violence, and (at times) rebirth. In *The Flounder*, a talking fish becomes the guiding intelligence throughout humankind's violent history and continual rebirth.

Another hallmark of Grass's fiction is its point of

view: shifting, unpredictable, self-aware. Many of his narrators are unreliable, shifting between the first and the third person in telling their own tales, changing their minds, and telling different versions of the same events. Oskar of *The Tin Drum* begins his story with the line, "Granted: I am an inmate of a mental hospital," and he shifts constantly between "I" and "he, Oskar," sometimes within the same sentence. The three narrators in *Dog Years* contradict one another. The first-person narrator of *The Flounder* is a different male during each period of history, as well as the contemporary man in the tale; the "I" in this novel is a different version of each of his male predecessors while, at the same time, encompassing all of these ancestors. In his later works *The Call of the Toad*, *Too Far Afield*, and *Crabwalk*, Grass uses multiple points of view to examine the German past, its present, and its future.

Many of Grass's narrators are highly self-aware artists and storytellers. *The Tin Drum*'s Oskar says, "I have just reread the last paragraph. . . . Oskar's pen . . . has managed . . . to lie." *Local Anesthetic* opens with, "I told my dentist all this." Grass's narrators know that they are creating art: They debate the merits of doing so, mock their audience, and despair of their ability to create the best art possible. The journalist narrator of *Crabwalk* questions his ability to tell the story his mother wants him to tell.

Religious and political themes dominate Grass's work. Indeed, religion and politics are inseparable from his fiction. After a visit to the Church of the Sacred Heart in *The Tin Drum*, Oskar insists that he is more Jesus than Jesus because the plaster statue is unable to play Oskar's tin drum. Mahlke of *Cat and Mouse* worships the Virgin Mary and builds shrines to her. The historical politics of World War II are pervasive in *The Danzig Trilogy*, *Call of the Toad*, and *Crabwalk*. The politics of religion throughout history are woven into the structure of *The Flounder*, and contemporary politics appear when the flounder is put on trial for giving men, and not women, advice. *From the Diary of a Snail*, *Headbirths*, and *Too Far Afield* continue this discursive weaving of art, politics, and religion.

## THE TIN DRUM

**First published:** *Die Blechtrommel*, 1959  
(English translation, 1961)

**Type of work:** Novel

*Against the backdrop of the rise of Nazism, World War II, and Germany's collapse, the self-made dwarf Oskar Matzerath narrates his life story.*

*The Tin Drum* opens with the line, "Granted: I am an inmate of a mental hospital," thus setting the stage for its unreliable narrator, Oskar Matzerath, who tells varying versions of his story throughout the book. Oskar begins his life story with his Kashubian grandmother Anna Bronski and her improbable impregnation by Joseph Koljaiczek, who eludes police by hiding under Anna's four skirts as she sits in a potato field. This fantastic conception is only one of the "miraculous" events that occur in the novel. The importance of history is evident in Oskar's concern with the ancestry details.

Anna's daughter Agnes grows up into a lovely woman, falls in love with her beautiful cousin Jan Bronski, but marries the German Alfred Matzerath, whom she nurses during the war. Throughout the first part of the novel, Agnes is torn between these two men, just as the Poles are torn between Germany and Poland, and Oskar continually speculates on the true nature of his parentage, unable to decide which of the two men is his real father. When Oskar is born, clairaudient and with his mental development completed at birth, Alfred Matzerath promises that Oskar shall inherit the grocery when he grows up. Preferring his mother's promise of a tin drum on his third birthday, and entranced by the sound of a moth beating its wings against a sixty-watt light bulb, Oskar decides to stay: "Besides, the midwife had already cut my umbilical cord." That is a pattern with Oskar: Whenever possible, Oskar chooses childhood pursuits over adult responsibilities; whenever possible, he claims responsibility for actions that have already occurred or that he could not have controlled.

On his third birthday, Oskar does indeed receive his drum, and, disgusted with the world of adults, with its deception and sordidness, including his mother's ongoing affair with her cousin Jan,

Oskar decides that he will not become an adult: He throws himself down the cellar stairs in order to have an explanation for his having stopped growing at the age of three. Throughout book 1, Oskar drums his way through the increasingly sordid Danzig environs, paralleling the rise of National Socialism. Germany's increasing aggression mirrors the deteriorating personal moral standards of the characters. Oskar's tin drum serves as an extended metaphor not only for Germany's military aggression but also for all human violence, as well as for Oskar's refusal to grow up.

Book 2 parallels World War II. The attack on the Polish post office makes a partisan martyr out of Oskar's "presumptive father" Jan Bronski. In this book, Oskar's association with violence and immorality increases, though he does not actually commit the crimes himself (a defense that, historically, has often been claimed by accused Nazi war criminals). Oskar travels with the dwarf Bebra, whom he met in book 1, who is now part of Joseph Goebbels's Nazi propaganda machine. In Nazi uniform, Oskar tours Paris and other occupied territories, playing his drum and breaking glass for the German soldiers with his voice. Oskar's disillusionment with the church in general, and with Catholicism in particular, which began in book 1, continues until Oskar decides that he himself is Jesus. Oskar/Jesus leads a gang of juvenile delinquents, called the Dusters, inspiring them to commit ever greater crimes. After the gang is betrayed, Oskar/Jesus is put on trial but found innocent because of his age. This trial foreshadows the trial in book 3, in which Oskar is found guilty and placed in a mental institution. The violence and destruction of book 2 increases, resulting in Alfred Matzerath's death. At Matzerath's funeral, Oskar is hit in the head by a rock, throws himself into Matzerath's grave, and decides to grow, to begin a responsible, adult life.

Book 3 is the reconstruction of Oskar's life, just as it is the rebuilding of Poland, Germany, and Eu-

rope after the war. Oskar's fascination with women continues. In book 1, his mother was the object of his interest. In book 2 he was interested in Maria, until she was unfaithful; then he turned to the midget Roswitha. In book 3, Oskar is fascinated with Sister Dorothea, whom he never sees and with whose murder he is charged. The details of Grass's various postwar occupations appear here: Oskar becomes an apprentice stonemason and a jazz drummer. Oskar also becomes a wealthy recording star by taking old people, through his drumming, back to their childhoods. Oskar spends most of book 3 ruminating about the events in books 1 and 2. Book 3 is considered, almost unanimously by the critics, to be less effective than the earlier parts of the novel, perhaps because Grass tries, unsuccessfully, to show Oskar's (Germany's) survival despite his having become deformed during his growth spurt, or perhaps because Grass lacked the necessary distance to present his material objectively. The film version of *The Tin Drum* did not include book 3, ending with Oskar's beginning to grow and leaving his birthplace of Danzig. The novel ends with a children's rhyme about the Black Witch, a line to which Oskar has repeatedly referred throughout the novel: "Here's the black, wicked Witch./ Ha! ha! ha!"

## HEADBIRTHS

**First published:** *Kopfgeburten*, 1980 (English translation, 1982)

**Type of work:** Novel/autobiography

*Grass's own political thoughts are interwoven with the travels of Harm and Dörte Peters, who are indecisive about having a child.*

In *Headbirths*, Grass becomes the narrator of his own novel, a technique that he used in *From the Diary of a Snail*. Though not a novel in the traditional sense, *Headbirths* presents the story of a German couple, Harm and Dörte Peters, who, even as they travel through Asia, are unable to get away from the political upheavals at home and who are unable to decide whether to have a baby of their own. This decision is the source of the title: The only births are "head births," and at this rate, writes Grass, the

German race will die out. Grass also ponders a world populated with as many Germans as there are Chinese, for example, and at the end of the novel Grass puts Harm and Dörte in their old Volkswagen in the midst of a huge crowd of Turkish, Indian, Chinese, and African children, still unable to decide on a child of their own.

*Headbirths* explores one of Grass's major interests: the making of art and the relationship of artist, art, and audience. In this novel, Grass writes that Harm and Dörte disagree with him on certain issues, so that Grass is "forced" to change his original ideas. His other major interest, politics, also is an integral part of this book. Grass presents not only his own political views but also Harm and Dörte arguments about the upcoming political election at home. Sometimes Grass and Dörte "agree" with each other, and Grass writes that he and Dörte attend press conferences together, a plot point that blurs the line between art and reality. Though Grass actually did travel to Asia, *Headbirths* is more about his political and theoretical ruminations than about the actual travels. Harm and Dörte, though sometimes shown visiting fertility temples, or indirectly presented arguing about politics or the "Yes-to-baby/No-to-baby" question, are never fully developed as characters. Rather, they serve as a springboard for Grass to present his political views and concerns.

## CRABWALK

**First published:** *Im Krebsgang*, 2002 (English translation, 2003)

**Type of work:** Novel

*This multilayered novel examines the Russian sinking of a German refugee ship from the perspectives of three different characters, each of whom represents some facet of political opinion about the event.*

In *Crabwalk*, Grass uses the Russian sinking of the German refugee carrier *Wilhelm Gustloff* as a tool to examine the German past, present, and future. In 1945, a Soviet submarine launched an attack on the German ship, sinking it and sending nine thousand people to their deaths in the icy Baltic.

The narrator, a middle-aged journalist, was born on that night to an unwed mother who was in one of the ship's lifeboats. Hounding him to uncover the events that transpired that night, she serves as the voice of the proud German past and its wartime glories.

In his research, the journalist uncovers that the man for whom the ship was named was a hero to the Third Reich. An organizer for the Nazi Party, Wilhelm Gustloff established new troops for the Hitler Youth and the League of German Girls. Gustloff became a hero and a martyr when he was assassinated by a Jew, David Frankfurter. The ship was named after Gustloff as a memorial to honor his service to the Third Reich. When it sinks, the proud image of German military glory and might is called into question.

The journalist's research also carries him into the small corners of the Internet, where conversations on a right-wing chat room catch his attention. The chats not only reveal pride in the Nazi past but also glorify the sinking of the *Wilhelm Gustloff* as a symbol of Germany's sufferings in the war. The organizer of the chat room calls for revenge for the death of Wilhelm Gustloff. As he searches more deeply, the journalist discovers that his own son is the organizing voice on the chat room of neo-Nazis.

Family history collides with the history of Germany as the journalist, his mother, and the journalist's son scuttle crablike from left to right in their search for clues about the history and identity of Germany.

## PEELING THE ONION

**First published:** *Beim Häuten der Zwiebel*, 2006 (English translation, 2007)

**Type of work:** Autobiography

*In his first true memoir, Grass reveals his feelings about his involvement in the Nazi youth movement, his hunger to be an artist, his first love, and the demands of the writing life.*

In August, 2006, Grass aroused emotions across the literary world when he revealed in his memoir *Peeling the Onion* that he had been a member of the

Waffen-SS as a teenager. Reaction to the news was swift, with many calling for him to return the Nobel Prize he received in 1999. Others were more supportive of Grass, pointing out that he had already paid the price of his youthful actions by living all those years with his guilt over having served in the SS.

In *Peeling the Onion*, Grass recalls his involvement with the Waffen-SS. He admits that as a teenager he became a part of this military operation, and he offers a quite stark portrait of life in the Nazi youth movement. He also admits honestly and poignantly, though, that he never fired a shot and that the guilt and shame of his involvement have gnawed ceaselessly at him since then.

*Peeling the Onion* does not stop with his youthful military involvement. Grass recalls the tortures of his youthful life: his flirtations with religion, his lustful hunger for various young women, his consuming desire for art, and his earliest forays into the writing life. *Peeling the Onion* records Grass's life from his birth up until the publication of *The Tin Drum* (1959).

In *Peeling the Onion*, Grass uses the image of hunger to describe the stages of his life. Literally, after the war he could not get enough to eat. Another hunger—the lustful desire of a young man for a young woman—soon began to compete with his physical hunger. The hunger that most motivated his life, however, was his hunger for art. As a young boy, he had collected coupons from cigarette boxes that reproduced classic works of art. He also read voraciously, seeing books as his entry into other worlds. In the late 1940's, he apprenticed himself to a tombstone maker in order to become a sculptor. During those years he began writing poetry and discovered the way that words could satisfy this new hunger. From then on, Grass lived in the world of his characters and from the writing of one book until the next.

## SUMMARY

Günter Grass's writings are a fantastic blend of minute (often grotesque) details, incisive satire,

macabre humor, and political commentary. Grass attempts in all of his works to address questions dealing with German history and identity, and he often writes from his personal involvement in political issues. The multiple points of view in his novels, the magical elements that mark his style, and his focus on the themes of alienation and the outsider place him in the company of other contemporary writers, such as Salman Rushdie and W. G. Sebald. Grass's body of work, however, presents one of the most powerful visions of post-World War II Europe and Germany. His style and meticulous attention to detail make him a unique and vital representative of German literature.

*Sherri Szeman; updated by Henry L. Carrigan, Jr.*

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

*Die Blechtrommel*, 1959 (*The Tin Drum*, 1961)  
*Katz und Maus*, 1961 (*Cat and Mouse*, 1963)  
*Hundejahre*, 1963 (*Dog Years*, 1965)  
*Örtlich betäubt*, 1969 (*Local Anesthetic*, 1969)  
*Aus dem Tagebuch einer Schnecke*, 1972 (*From the Diary of a Snail*, 1973)  
*Der Butt*, 1977 (*The Flounder*, 1978)  
*Das Treffen in Telgte*, 1979 (*The Meeting at Telgte*, 1981)  
*Kopfgeburten: Oder, Die Deutschen sterben aus*, 1980 (*Headbirths: Or, The Germans Are Dying Out*, 1982)  
*Danziger Trilogie*, 1980 (*Danzig Trilogy*, 1987; includes *The Tin Drum*, *Cat and Mouse*, and *Dog Years*)  
*Die Rättin*, 1986 (*The Rat*, 1987)  
*Unkenrufe*, 1992 (*The Call of the Toad*, 1992)  
*Ein weites Feld*, 1995 (*Too Far Afield*, 2000)  
*Mein Jahrhundert*, 1999 (*My Century*, 1999)

#### POETRY:

*Die Vorzüge der Windhühner*, 1956  
*Gleisdreieck*, 1960  
*Selected Poems*, 1966 (includes poems from *Die Vorzüge der Windhühner* and *Gleisdreieck*)  
*Ausgefragt*, 1967 (*New Poems*, 1968)  
*Poems of Günter Grass*, 1969 (includes *Selected Poems* and *New Poems*; also in a bilingual edition as *In the Egg, and Other Poems*, 1977)  
*Gesammelte Gedichte*, 1971 (includes *Die Vorzüge der Windhühner* and *Gleisdreieck*)  
*Mariazuehren, Hommage à Marie, In Marypraise*, 1973 (trilingual edition)

## DISCUSSION TOPICS

- Many of Günter Grass's novels contain autobiographical elements. In what ways do the narrators of *The Tin Drum*, *Cat and Mouse*, *Dog Years*, *The Flounder*, *Call of the Toad*, and *Crabwalk* resemble Grass?
- In his youth, Grass wanted to be a sculptor and painter. How do Grass's artistic instincts control the structure of his books? Are his novels simply word paintings?
- In what ways do Grass's novels resemble novels by Franz Kafka and Theodor Fontane, two of his mentors in German literature?
- Discuss the themes of hunger, guilt, and shame in *The Tin Drum*, *The Flounder*, *Headbirths*, *Crabwalk*, and *Peeling the Onion*.
- Discuss Grass's treatment of religion in *The Tin Drum*, *Cat and Mouse*, *Dog Years*, and *Crabwalk*.
- What is Grass's view of women? Are they important characters in his novels? Which women in his novels are strong characters?
- Does Grass's view of the history and identity of the German people change from *The Tin Drum* to *Crabwalk*? If so, in what ways? If not, why not?

## ROBERT GRAVES

**Born:** Wimbledon, Surrey, England

July 24, 1895

**Died:** Deyá, Majorca, Spain

December 7, 1985

*Recognized as one of the technical masters of English verse, Graves believed that true poetry must be literally inspired by the Muse of ancient myth.*

### BIOGRAPHY

Robert Ranke Graves was born July 24, 1895, at Wimbledon, near London, England. His father, Alfred Percival Graves, a minor poet and Gaelic scholar, had remarried late in life to Amalie von Ranke; through his mother, Robert Graves was related to the distinguished German historian Leopold von Ranke. There were eventually nine children in the Graves family, including Robert, and the household was a fairly typical, late-Victorian establishment, dedicated to maintaining the conventions of society, especially those of religion. Until his teenage years, Robert, in particular, was a devoutly religious boy with a particular fastidiousness about sexual matters and an aversion to any rituals or beliefs that deviated from the strictest tenets of reformed Protestantism.

From 1910 until 1914, Graves attended Charterhouse, one of the famous English public schools. His stay at Charterhouse was generally unpleasant for several reasons. He was repulsed by the general air of homosexual affections that permeated the place but, at the same time, inadvertently encouraged such interests, as Graves himself later recognized and admitted in his autobiography, *Goodbye to All That: An Autobiography* (1929).

Graves was also a scholarship student, which exposed him to the cruel and snobbish mockery of his classmates. As the relationship between Great

Britain and Germany steadily deteriorated during this time, Graves was further tormented because of his German middle name. Finally, he was ridiculed because of his desire to write poetry. It was practicing this talent, however, that helped make Charterhouse bearable for Graves and attracted the notice of Edward Marsh, a patron of the prevailing Georgian School of English poetry. Marsh encouraged Graves in his efforts and introduced him to other writers, helping to prepare the way for Graves's first book of poems, *Over the Brazier* (1916).

Before this appeared, however, Graves had embarked on the most traumatic experience of his life, service in the trenches during World War I. Intensely patriotic, Graves had enlisted in 1914 at the outbreak of the war, joining the Royal Welch Fusiliers, one of the most notable units in the British army. Sent to France as an officer when only nineteen years old, Graves experienced the horrors, frustrations, and insanity of modern warfare. In 1916, he was severely wounded and listed as dead. His unexpected return to his family was, at least for Graves, a literal resurrection that forever marked his thinking and poetry. The war wounded Graves psychologically as well as physically. He found himself unable to face strangers, incapable of holding a regular job, and a victim of nightmares and unexplainable fears. His poetry, which had been light and lyrical, took on deeper and more brooding tones; throughout his career, he would return in various fashions to his experience in battle, in particular his wounding and "death."

After a long period of recuperation, Graves was married in January, 1918, to Nancy Nicholson.

Only eighteen, Nicholson had strongly held feminist convictions; she demanded that the marriage vows be rewritten to excise references to obedience and that any daughters take her surname. Graves agreed to these requests, an early sign of what was to become first a recognition and then an exaltation of the role of the female in human life and artistic creation. Eventually the Graves-Nicholson marriage would produce four children.

After living in a cottage on the estate of the poet John Masefield, failing as a shopkeeper, and experiencing great financial want, Graves returned to school, taking his degree at St. John's College, Oxford. He continued to write poetry all during this time and between 1920 and 1925 published a volume of poems each year. He also met a number of prominent persons, among them T. E. Lawrence, better known as Lawrence of Arabia, the philosopher Bertrand Russell, and the poet and novelist Thomas Hardy.

In 1926, these friends helped Graves obtain the post of professor of English literature at the new Egyptian University at Cairo. Accompanying Graves and his wife was their new friend, the American poet Laura Riding, who was to exert a powerful influence on Graves's personal and poetic life. After only one year, the trio returned to England as severe domestic disputes strained the Graves's marriage; in 1929, Graves left his wife for Riding and moved to Deyá, Majorca, a small island off the coast of Spain. Graves would make Majorca his home for the rest of his life, leaving it only for brief periods or when forced away by war.

During the next ten years, Graves was deeply influenced by Riding's theories of composition and inspiration, especially the belief in the essentially feminine nature of creativity. Graves would later personify this principle as the White Goddess, whom he identified with the Muse of classical mythology. In 1939, however, while he was in the United States because of World War II, the Graves-Riding relationship dissolved, and each of them found another companion. Graves married Beryl Hodge, the former wife of one of his best friends. In 1946, the couple moved to Majorca.

After that, Graves's personal life remained fairly settled, and the controversies and excitements he caused were artistic and intellectual. He had already scored one of his few truly popular successes with his novel *I, Claudius* (1934), a fictional ac-

count of the early Roman emperors. While researching Greek myths for another historical novel, *The Golden Fleece* (1944; also known as *Hercules, My Shipmate*, 1945), Graves was struck by a new and radically different view of these ancient stories. Rejecting the traditional interpretations, Graves saw the myths as distorted but still decipherable links to an older, more universal religion that worshiped an all-powerful moon goddess. This figure, the White Goddess, was also present, Graves maintained, in Celtic and northern European folklore and poetry. Graves claimed additional evidence for his theories from the works of anthropologists, such as *The Golden Bough* (1890-1915), by Sir James Frazer. The presence of the White Goddess, the only true Muse of poetry and for whom Graves claimed a literal existence, remained Graves's central theme for the rest of his life.

Graves's theories were not without critics, and later works also drew attacks, especially those that challenged traditional Christianity, such as *The Nazarene Gospel Restored* (1953), or disputed ancient Jewish beliefs, as did *Hebrew Myths: The Book of Genesis* (1964). Graves defended his iconoclastic theories with skill and learning in numerous books and in his lectures at schools and colleges throughout the world, from the Massachusetts Institute of Technology to Trinity College, Dublin. From 1961 through 1966, he was professor of poetry at Oxford.

It was as an original poet, however, that Graves made his most individual and lasting mark. The body of his poetic work is unmatched among twentieth century writers for lyrical intensity and technical skill. Avoiding obscurity for its own sake, forsaking experimentation for traditional disciplines of meter and rhyme, Graves pursued the craft of poetry more as a sacred calling than as a career. When he died in Dejá, Majorca, Spain, on December 7, 1985, he left behind achievements that made him one of the truly indispensable writers of his time.

## ANALYSIS

Graves is best known as one of the most accomplished lyric poets of the twentieth century, but his highly individualistic and often controversial scholarship won for him almost equal, and certainly more fiercely contested, notice. He was also an excellent author of historical fiction, and his short stories and essays rank among the best pro-

duced in his time; several works, such as *I, Claudius* and the story "The Shout," have been recognized as modern classics.

Graves's poetry was part of the grand procession of English verse, emphasizing the use of rhyme, regular meter, and definite, often traditional structure. Although his career overlapped those of poets such as T. S. Eliot and Ezra Pound, Graves disdained their innovative, nonconventional forms and techniques. Graves believed, as did Edgar Allan Poe, that a long poem was impossible because inspiration could not sustain itself for more than brief stretches; therefore, he never attempted anything on the order of Eliot's *The Waste Land* (1922) or Pound's *Cantos* (1925-1972). Graves further thought that deliberate obscurity in poetry was a fault, so his verse does not have the enigmatic complexity of some of Eliot's lines or the recondite cultural references that Pound sometimes inserted into his lines. In short, Graves believed in and practiced clarity, technical mastery, and an absolute devotion to what he considered the true themes of poetry.

These themes inevitably revolved around the love of man and woman, and Graves is rightly regarded as one of the twentieth century's greatest love poets. Because of his peculiar beliefs about the nature of his inspiration, however, Graves's love poetry contains dimensions that are lacking in other authors. For Graves, the relationship between the poet and his lover echoed a more ancient and enduring situation, that between the White Goddess and the sacrificial king who died only to be reborn with the onset of spring. This goddess was symbolized, if not actually embodied, in a mortal woman, thus inspiring poets. What their poems celebrated, however, was greater than a single woman or individual love affairs; it was the universal and immortal goddess herself. All true poems, Graves insisted, told some aspect of this ancient tale. It was in this sense that he wrote, in "To Juan at the Winter Solstice," that "there is one story and one story only."

A Graves poem, then, is generally a brief vision of an aspect of this immortal and recurring story, peopled by contemporary characters, perhaps, but always referring, even if implicitly, to the underlying myth. In this sense, Graves's personal system of

philosophy-mythology invites comparison with that erected by William Butler Yeats, whose book *A Vision* (1925, 1937) provided the scaffolding and explanation for the themes, symbols, and meanings of Yeats's poetry. In both cases readers can, and often have, rejected the theories behind the poetry in favor of the poems themselves. So great are the powers of these two poets, and so enduring are their poems, that this is possible.

Still, in both cases the reader can find more to appreciate and consider by knowing the theories and, in the case of Graves, can find considerable enjoyment in the way those theories are presented. *The White Goddess: A Historical Grammar of Poetic Myth* (1948), his lengthy and polemical presentation of his ideas, is a remarkable book. Rejecting much of traditional historical, literary, and anthropological writings, Graves boldly turns Greek myths upside down, rewrites the development of Western poetry, and scorches his opponents with fierce and learned sarcasm. The Greek god Apollo, for example, was not for Graves the true patron of the arts but only an impostor who had ousted the goddess by fraud, force, and deceit. That was a typical Graves's interpretation, delightful to read, and, because of Graves's learning, impossible to dismiss out of hand.

Had Graves been only a poet, he would have commanded his place in literary history. If mythology and cultural studies had been his main thrust, he would still have to be reckoned with as a quirky but important figure. Should he be considered solely for his autobiography, *Goodbye to All That*, he would rank among the foremost of modern writers to tell his own story and that of his entire generation. He was a far more versatile talent, however, as his many outstanding novels, stories, essays, and occasional pieces demonstrate. The list of Graves's works is long, and there seems to be no genre that he did not attempt, and few in which he did not excel.

In his own eyes, however, Graves was always a poet. In the religious sense, poetry was his vocation, his calling. It was a mystery to which he had been summoned by the goddess, to whom he owed all of his allegiance and dedicated all of his talents. Never was a goddess better served.

## GOODBYE TO ALL THAT

**First published:** 1929

**Type of work:** Autobiography

*Graves recounts his childhood and youth and his devastating experiences as a soldier in World War I.*

As Graves recalls in *Goodbye to All That*, he grew up in a household that stressed the time-honored virtues of Christianity, patriotism, and progress. Along with millions of other young Englishmen, he found that these virtues were severely shaken, if not totally destroyed, by the nightmare of World War I. Unlike most of his contemporaries, however, Graves was a brilliant writer, and his classic autobiography is an account of both his own personal experiences and the end of innocence for an entire generation and nation.

Although the book covers all Graves's life up to the time he wrote it, the work is primarily a memoir of his service in the Royal Welch Fusiliers, one of the most respected regiments in the British army. After a brief account of his family life and a rapid but thorough review of his education at Charterhouse, Graves thrusts the reader directly into the experiences of modern warfare. These are by turns stirring, boring, horrifying, heroic in brief moments, and brutal for long stretches. The battlefield of World War I was not a glamorous place or an arena for storybook heroism; it was a nasty, death-filled place. The Western Front was a morass of death and mud where huge armies grappled without seeming purpose or hope of victory.

As a young lieutenant being sent into battle, Graves had a life expectancy on the front lines of just about three months; he lasted for two years. He was then severely wounded and reported as dead. For more than a week, his friends and family back in England believed that Graves had, in fact, died. His unexpected recovery and the delayed notification to his family constitute the "resurrection," which is one of the central passages of *Goodbye to All That*. The experience clearly had a deep and lasting influence on Graves both as a man and as a poet.

The war scarred Graves and nearly broke his spirit. That this should be so is hardly remarkable, and the reader of *Goodbye to All That* will find exam-

ple after example of stupidity and callousness from higher officers, government officials, the popular press, and even the general public. On one hand, Graves was rightly proud of his unit, the Royal Welch Fusiliers, and its men. Without false sentiment or vainglory, he presents an affectionate and moving portrait of a distinguished and honored regiment, skilled at its tasks and as brave as modern soldiers can be. On the other hand, Graves felt nothing but contempt for the commanders who wasted such brave men in criminally stupid fashion. Frontal attacks on entrenched positions, pointlessly enduring endless bombardments that blasted men into bloody fragments, repeated encounters with the horrors of gas warfare and trench combat—these were inflicted on the Fusiliers by the Allied high command, not the German enemy. Graves never got over that fact. Had he not been wounded, he might have gone totally insane; as it was, he suffered a severe mental setback and did not recover for many years after the war. In one sense, in his hatred for British hypocrisy, Graves never did recover, nor did he ever wish to recover.

*Goodbye to All That*, then, is more than an autobiography. It is also an explanation of Graves as a man and as a poet, setting forth what he believes and why he believes it. Having been transformed by his wartime experiences, Graves felt compelled to chart those changes and present them. His book, as the title implies, is also a farewell to England and English life. In one sense, it is literally a farewell, for when *Goodbye to All That* was published, Graves left England for Majorca with Laura Riding. Although he and Riding would separate in 1939, Graves would remain in Majorca for the rest of his life; he made occasional visits to Great Britain but never again considered it his home.

In another sense, Graves was saying good-bye to a way of life that had been destroyed by war and time. His childhood and youth had been spent in another age, a time when the world seemed certain, the future was bright, and men and women

lived orderly, confident lives. Nothing of that remained after the war. Uncertainty, fear, and doubt reigned, and all the promises of religion and politics had been revealed as nothing more than hollow, cynical words to fool the masses. Not without a sense of regret at lost innocence, Graves also said good-bye to all that he had known in his youth.

## THE WHITE GODDESS

**First published:** 1948

**Type of work:** Literary and mythological criticism

*Graves traces all true poetry back to an ancient religion of the three-part moon goddess, the truths of which have now largely been lost.*

*The White Goddess* eventually had its source in Graves's first popular success in fiction with the novel *I, Claudius*, an account of the first four Roman emperors. He followed this with a sequel, *Claudius the God and His Wife Messalina* (1934). While researching material for another novel set in ancient times, *The Golden Fleece*, Graves was seized by a revelation of what he believed to have been the true structure and nature of all ancient poetry and, indeed, of all real poetry to modern times. This vision was expanded, with recondite references to Celtic, northern European, and Mediterranean myths and prehistory, to form the basis for his most notable and controversial work of criticism, *The White Goddess*.

The book is subtitled *A Historical Grammar of Poetic Myth*, and in it Graves presents a highly detailed account of what true poetry is, what constitutes its unvarying themes, and how these themes have been used by all real poets for thousands of years. Although Graves indulges in numerous digressions, his main points can be briefly summarized.

Until the end of the Bronze Age, roughly 1000 B.C.E., a single religion had held sway in most of the world from northern India to Britain; that is, in those areas where the Indo-European language was established. This religion consisted of worship of the three-part, or tripartite, goddess, who, because of her mutable nature, was most commonly associated with the moon; her phases were those of

Maiden, Wife and Mother, and Crone. In these three guises, the universal goddess presided over all birth, growth, and death. Two gods attended the goddess: the god of the spring, or waxing year, who was ritually slain at midsummer and supplanted by his rival, the god of the waning year, who ruled until the winter solstice. At that time, the god of the waxing year was resurrected through the power of the goddess, and the cycle began once more. This cosmic story was repeated in human society and individual human lives, and it was the task of the true poet to celebrate this mystery; the poet succeeded only to the extent that he accepted the power of the goddess and was granted her inspiration.

Graves maintained that this goddess worship, which formed the essential basis for all real property, was violently disrupted and then displaced by invaders from the Middle East, worshipers of a supreme male god, who usurped the rightful place of the goddess. This process occurred in several stages, beginning with the advent of the classical Greek pantheon of gods dominated by Zeus and culminating with the spread of patriarchal Christianity throughout

Europe. The worship of the goddess, and therefore the practice of true poetry, was effectively outlawed. Where it persisted, it did so either under hidden forms, such as those practiced by the Welsh bards, or as a debased and only partially correct memory. Modern poets still manage to exist, Graves maintained, and to be inspired by the White Goddess as a muse, but they do so largely unconsciously and often in defiance of accepted social and critical conventions.

*The White Goddess* is a work packed with references to a wide range of historical, anthropological, and mythological studies, including Sir James Frazer's *The Golden Bough*. Drawing upon Frazer's illuminating study of the truths behind myths, Graves added his own interpretations of traditions ranging from the obscure, such as the ancient Welsh poem "The Battle of the Trees," to the familiar, as in the book of Revelation from the Bible. All

of these provide evidence, Graves insists, to support his thesis.

Such arguments by Graves are one reason *The White Goddess* has been so controversial since its publication. By positing a single, unified goddess worship that extended through Indo-European culture, Graves is inverting or contradicting much of traditional scholarship. His interpretation of Greek myths in support of his theory has been attacked as idiosyncratic at best, simply wrong at worst, and his subsequent account of these stories, *The Greek Myths* (1955), was attacked by many critics on these grounds.

A second reason for the controversy surrounding *The White Goddess* was that Graves presented his work not simply as a historical or critical study but as a literal and truthful account of the continuing source of true poetry. Graves does not use the triple goddess as a metaphor; rather, she is an actual deity. Worshipped before the coming of the patriarchal invaders, she inspired poets; known only dimly and by chance inspiration now, she is still the only real Muse of true poems in the contemporary world. Such a belief seems to many in the modern world perverse, yet it is the position that Graves forcefully and learnedly argued in *The White Goddess* and which he maintained in the body of his poetic work.

*The White Goddess* thus joins the ranks of those works of English literature that cannot be satisfactorily classified. Along with William Butler Yeats's *A Vision*, Robert Burton's *The Anatomy of Melancholy* (1621), Thomas Carlyle's *Sartor Resartus* (1833-1834), and James Joyce's *Finnegans Wake* (1939), it is an achievement that has inspired admiration, condemnation, and continued debate among its readers.

## "ULYSSES"

**First published:** 1933 (collected in *The Complete Poems in One Volume*, 2000)

**Type of work:** Poem

*The wandering Greek hero of Homeric legend must always be with a woman because of his devotion to the eternal goddess.*

As Graves demonstrates in "Ulysses," he was, above all else, one of the greatest poets of the twentieth century. His lyrical gifts were extraordinary, and his technical mastery of verse form, rhyme, and rhythm was unrivaled. Unlike many other poets of the modern era, Graves did not engage in free verse, idiosyncratic form, or unusual styles. He worked within the traditions of English poetry, almost always using a specific pattern of rhyme and a regular meter to frame his message. This message varies, but more often than not it is a variant of his central theme, the concept of the three-part goddess and the true poet's devotion to her. Since the goddess often appears in the guise of a mortal woman, Graves is predominantly a love poet, and his lyrics celebrate the possibility of enduring affection between man and woman. Graves was not, however, without his sardonic side. The gulf between deity and daily life was all too obvious for Graves, and even the most heroic of men, such as Ulysses, could be blind to the truths offered by the goddess. Such is the case in this poem that has the hero's name.

Ulysses is fated to need women but never truly understand them; at the same time, he is secretly terrified by the changeable nature of women. He comprehends enough to recognize the mutable nature of the goddess who appears sometimes as a virgin, a loving wife, a seductive temptress, and even as an implacable, natural force. The mythological Ulysses encountered all of these in his return from the Trojan War, and Graves's poem is a compressed litany of this journey. Ulysses meets the goddess as the sorceress Circe, in the form of the Symplegades, or clashing rocks, and as the Sirens, destroyers of ships and men. The goddess also takes her form in Ulysses's chaste wife, Penelope, who waits for him for twenty years while he is fighting on the plains of Asia and then trying to return home. What Ulysses senses, without consciously realizing it, is that all of these women are the same

and are versions, avatars, of the White Goddess. What he does accept is that he needs them and that without them he is incomplete.

### **“TO JUAN AT THE WINTER SOLSTICE”**

**First published:** 1945 (collected in *The Complete Poems in One Volume*, 2000)

**Type of work:** Poem

*The only true theme for an authentic poet is the recurring myth of the White Goddess and her powers.*

The rule of the triple goddess, which Graves explains in his book *The White Goddess*, finds its most trenchant and beautiful exposition in “To Juan at the Winter Solstice.” The Juan of the poem may be the poet’s own son or it may equally well be Don Juan, the famous lover of many beautiful women and thus a worshiper of the goddess in her many aspects. To whomever it is addressed, the poem is both an invocation of the Muse of true poetry and an example of the mysteries she performs.

“There is one story and one story only,” Graves says in his opening line, and by the time the poem concludes he has shown that the various aspects of the myth of the goddess encompass all the truths that humankind can know or poets can relate. In doing this, Graves recapitulates his arguments from *The White Goddess*, showing how the Welsh tree poems, the myth of the Zodiac, and the recurring legends of sacrificial kings are part of this single, powerful tale, the story of the goddess.

Graves moves, methodically but poetically, through these mutations. These are the subjects, he says, for a true poet: verses about the Zodiac, which is a representation of the goddess in her heavenly, seasonal aspect; and poems about the god of the waxing year, who rules only to be sacrificed at midsummer, as “Royally then he barter life for life.” On the other hand, the poet may turn inward, but still, if he is a true poet, his personal story will reflect the universal one.

In the end, Graves maintains, the one story that can be told is that of the goddess, her beauty, and her power:

Her brow was creamy as the crested wave,  
Her sea-grey eyes were wild  
But nothing promised that was not performed.

### **“THE PERSIAN VERSION”**

**First published:** 1945 (collected in *The Complete Poems in One Volume*, 2000)

**Type of work:** Poem

*This poem is an account of the battle of Marathon from the losing side.*

Graves admitted that “at times the satiric left hand of poetry displaces the lyric right hand,” and “The Persian Version” is a poem written with his left hand but one that also contains a hint of the real pain and suffering he endured in World War I, when so many pointless and useless Allied defeats and deaths were reported to the gullible public as great victories or examples of British fortitude. As he showed in *Goodbye to All That*, Graves understood that the German public had been fed the same lies. Why should it have been different in ancient times?

This is the premise for “The Persian Version,” where the famous battle of Marathon is put into its true—that is, Persian—perspective. For European history, Marathon was the first and perhaps greatest struggle of democracy against tyranny, the prototype of all subsequent battles for freedom. For the Persians, Graves’s poem says, the event was only a minor event, a “trifling skirmish” upon which “truth-loving Persians” do not like to dwell; the implication here is that the Greeks have lied about the battle, an accusation often levied in wartime. Using terminology from the military, Graves calls Marathon “a mere reconnaissance in force” and notes, as any well-trained military spokesperson would be sure to add, that the ships involved were only “light craft detached from the main Persian fleet.” In other words, Marathon was essentially a local, almost unnoticed event, not the world-shaking clash of legend.

“The Persian Version” is an ironic, even savage poem, which underscores the futility of warfare and the endless idiocies to which governments will go to wrest some shred of spurious victory from even the most obvious defeat, just as the Persians

claim to be the victors in this encounter because, despite the losses and deaths, “All arms combined magnificently together.” That is exactly the sort of bombast Graves read while his friends were being killed beside him in the trenches. In “The Persian Version,” he made it a joke, but it is a joke with a serious, bitter center.

### SUMMARY

Robert Graves considered himself a poet. His other work, while done to the best of his ability, was either to support himself while he wrote his poems or to explain them. He felt chosen to compose relatively short poems of praise to a universal goddess

whose existence almost all others denied and in a style that many had ceased to practice. Graves was thus a strange combination of Georgian English poet and Bronze Age Greek.

He accepted that largely self-created role and prospered artistically in it, writing some of the most beautiful and enduring poetry of the twentieth century. In his verse forms and patterns, Graves is often entirely conventional, while in his underlying themes he is enduringly ancient. Above all, he remains Robert Graves, and his poems are a lasting combination of all of these elements.

*Michael Witkoski*

## DISCUSSION TOPICS

- To what extent can negative criticism of Robert Graves be regarded as disapproval of him as a maverick poet scornful of the principles that guided his contemporaries?
- What is the relationship between the war and its warriors in *Goodbye to All That*?
- Contrast Graves's interpretation of Ulysses with Alfred, Lord Tennyson's.
- Can it be argued that the power of the poem “To Juan at the Winter Solstice” does not depend on its underlying mythology?
- Consider Graves's historical novels as the source for his later interpretation of the ancient classics.
- Graves wanted his poems to be concentrated and lucid. Did the literary forms he used promote this aim? Did he succeed in fulfilling it?

## GRAHAM GREENE

**Born:** Berkhamsted, Hertfordshire, England  
October 2, 1904

**Died:** Vevey, Switzerland  
April 3, 1991

*Greene, a twentieth century writer best known for his novels, also distinguished himself as the author of numerous short stories, plays, travel books, and film criticism.*

### BIOGRAPHY

Graham Greene, born in Berkhamsted, England, on October 2, 1904, was the fourth of six children. His father, Charles Henry Greene, was a history and classics master who, in 1910, became headmaster of Berkhamsted School.

As a highly sensitive, imaginative youth from a respected upper-middle-class family, Greene had the opportunity to develop more exotic emotional problems than are characteristic of children of the lower classes. When he first discovered that he could read, he hid this fact from his parents out of fear that they would then make him enter preparatory school. He began to live a covert life, secretly reading books about adventure and mystery of which his parents would not approve. As a child, Greene also developed inordinate fears of the dark, of birds and bats, of drowning, and of the footsteps of strangers. He developed recurrent nightmares about a witch who would lurk at night in the nursery at the linen cupboard.

In 1912, as he approached his eighth birthday, Graham Greene enrolled in Berkhamsted School. He was to spend the next ten years there, the last five of which proved to be a hellish confinement for him. Being the headmaster's son, he felt himself alienated from the other boys and was bewildered by his sense of divided loyalties. His filial devotion was constantly challenged by his desire to be accepted. He was never able to resolve these con-

flicting loyalties, and, to make matters worse, two schoolboys, Carter and Wheeler, sadistically exploited Greene's anxiety with cruel psychological precision. While Greene never disclosed the specific details of their actions, Norman Sherry, in his biography of Greene, has shown that these two boys exercised a powerful control over Greene during a critical time in his development. Being more experienced in worldly matters, they took pleasure in attacking Greene's naïveté and trust. Carter not only tormented Greene for being the headmaster's son but also, after winning his confidence and discovering his secret dreams and desires, disabused Greene of many of his romantic and chivalric ideals. As the murderer of Greene's childhood and his arch betrayer, Carter would appear in many forms throughout Greene's stories and novels and become one of the powerful demons that Greene would spend his literary life attempting to exorcise. Years later Greene was to observe that every creative writer worth consideration is a victim, a man given over to an obsession.

By 1920, Greene had developed manic-depressive and suicidal behavior that led his parents to send him to a psychoanalyst for treatment. The experience proved beneficial, and Greene began self-consciously to record and analyze his dreams and feelings. It was also during this period that he began to write short stories, the act of which served, perhaps unwittingly, to shape and to help control his fears and depressions.

In 1922, Greene entered Balliol College, Oxford, to study history. His academic career was not especially distinguished. He edited the Oxford

*Outlook* and during his last year at the school published a volume of verse entitled *Babbling April: Poems* (1925), a work derivative of the style of Edna St. Vincent Millay.

In the autumn of the following year, in a confused state of intolerable boredom and sexual frustration, Greene took his older brother's revolver, slipped a bullet into the chamber, spun the barrel, placed the muzzle against his right ear, and pulled the trigger. The excitement of gambling with his own life rejuvenated him. During the next few months he played this dangerous game several more times. These adrenaline ecstasies soon abated, but his acute fear of boredom, and his penchant for dangerous acts that he hoped would curb that fear, remained with him for life. His later excursions into Africa, Mexico, and Vietnam during periods of bloody revolutions, for example, were largely motivated by the same dreadful feeling of emptiness in his life and became for him a new form of Russian roulette.

After he was graduated from Balliol, he began a career in journalism, working for the *Nottingham Journal* and then *The Times* in London. It was during this time that he met and proposed marriage to Vivien Dayrell-Browning, a Roman Catholic. In order to understand and appreciate better the religion of his future wife, Greene took instructions in the faith and became a Catholic in 1926. Having agreed to a monastic marriage, Greene married her the next year and apparently abided by this unusual agreement until his separation from her several decades later. In his spare time, he wrote his first novel, *The Man Within*, published in 1929. Stirred by its success, he devoted full time to writing novels, short stories, and book reviews. In 1930, he published *The Name of Action* and, in 1931, *Rumour at Nightfall*, two action novels. He finally achieved the notice he was seeking with the publication of *Stamboul Train: An Entertainment* (1932; published in the United States as *Orient Express: An Entertainment*, 1933). Based upon a rugged trip to Liberia during 1934-1935, Greene's travel book, *Journey Without Maps* (1936), reveals his attempt to return to a pure and innocent landscape. Significantly, Greene had long conceptualized Africa as being roughly the shape of the human heart.

During the next few years, Greene was sued by representatives of Shirley Temple over a caustic review that he wrote of her film *Wee Willie Winkie*

(1937). He also produced a thriller entitled *A Gun for Sale: An Entertainment* (1936; published in the United States as *This Gun for Hire: An Entertainment*). With the publication of *Brighton Rock* in 1938, critics discovered that Greene was a writer whose work contained explicitly Catholic themes. His most popular and most explicitly Catholic novel was *The Power and the Glory* (1940; reissued as *The Labyrinthine Ways*), published two years after he visited Mexico to report on the religious persecution in that country. Recruited into the Secret Service in 1941, Greene was sent to West Africa, where he wrote *The Ministry of Fear: An Entertainment* (1943), a melodrama filled with bizarre twists of plot. After World War II, in 1946, he began work on another major novel, *The Heart of the Matter* (1948), set in the West Africa he came to know so well. When motion-picture producer Alexander Korda wanted to make a film about the four-power occupation of Vienna, he sent Greene to that city to research the subject. The result was the film script for *The Third Man*, released in 1949. Starring Orson Welles and Joseph Cotton, the film has become a classic.

During the next ten years, Greene produced three more novels: *The End of the Affair* (1951), *The Quiet American* (1955), and *Our Man in Havana: An Entertainment* (1958), all of which were made into motion pictures. *The Quiet American* was especially upsetting to American reviewers because of its damning analysis of the United States' involvement in Vietnam during the early 1950's. Greene also wrote three plays during this period: *The Living Room* (pr., pb. 1953), *The Potting Shed* (pr. pb. 1957), and *The Complaisant Lover* (pr., pb. 1959). The first two plays focused heavily upon Catholic themes, including the unfashionable belief in miracles.

In 1961, he published *A Burnt-Out Case*. Ostensibly about an architect who comes to an African leprosarium to escape the mindless adulation he has received in Europe, the novel is very autobiographical and suggests Greene's growing uneasiness with his faith. *The Comedians* (1966), his next novel, is set in Haiti during the bloody reign of Papa Doc Duvalier. The motion picture based on the novel is distinguished by its two stars: Richard Burton and Elizabeth Taylor. Greene also published two collections of short fiction during this time: *A Sense of Reality* (1963) and *May We Borrow Your Husband? and Other Comedies of the Sexual Life*

(1967). Although overshadowed by his novels, his short stories are nevertheless quite powerful and worthy of careful attention.

In 1971, Greene published the first volume of his autobiography, *A Sort of Life*, which extends only to the 1930's. His 1980 *Ways of Escape* brings his life up to date. The focus in both books is upon his literary, rather than his personal, life. *The Honorary Consul*, published in 1973, was one of Greene's favorite novels, though critics have never ranked it among his very best works. *The Human Factor* (1978) is based upon the sensational defection to the Soviet Union of Kim Philby, Greene's former boss in the Secret Service.

With the publication of *Monsignor Quixote* in 1982, Greene compared Catholicism and Marxism by having the principals of the novel, a Spanish priest and a Communist former mayor, debate the relative merits of their beliefs. *Getting to Know the General: The Story of an Involvement* (1984) is Greene's reportorial hymn to his friend General Omar Torrijos of Panama. In 1985, *The Tenth Man* appeared. This novel is based upon an old manuscript by Greene that was discovered in the vaults of a Hollywood motion-picture company. Greene apparently had forgotten he had ever written it, but after it was discovered, he allowed it to be published. His last published novel, *The Captain and the Enemy*, published in 1988, is a slim work that lacks the fire and the complexity of his earlier fiction.

Having lived in Antibes for the last twenty-five years of his life, Greene managed from this outpost to remain a liberal gadfly, attacking in newsprint any and all countries that compromised his sense of justice and humanity. Many believed that he was never awarded the Nobel Prize in Literature because of his radical political views. He died on April 3, 1991, of an undisclosed blood disease, in a hospital in Vevey, Switzerland. His last publication, a collection of short stories uncannily entitled *The Last Word, and Other Stories* (1990), appeared a few months before his death.

## ANALYSIS

Greene's exciting, fast-paced narratives have an illusive transparency about them, as if one can see and hear the characters and visualize their surroundings without the distractions of the author's presence or stylistic mannerisms. This authorial invisibility may derive from Greene's experience in

writing film scripts and from the many years he spent in reviewing motion pictures. It is interesting to note, in this connection, how few of his novels are written from the first-person point of view, a perspective clearly unsuited to a screenplay.

Although many of his novels are based on topical events—whether in England, Mexico, Vietnam, or Haiti—Greene's personal involvement in those events as a reporter and as a student of human nature allows him the perspective of an insider. It is almost as if he would not ask his characters to do or think something that he himself had not done or thought. Life, to Greene, is a series of risks and moral choices; the dangers are betrayal, corruption, and failure. The central quest of his obsessed heroes is for the peace and innocence of their lost childhood, an adventure that is characterized by great tension and suffering, and one that often ends only in death.

Greene's fiction offers a unique vision of the world, a vision derived from his obsession with certain themes, characters, and events. Feeling that his childhood innocence was savaged at Berkhamsted School by the psychological bullies Carter and Wheeler, Greene became obsessed with the theme of lost childhood, a theme that dominates most of his novels and short fiction. Greene is like Samuel Taylor Coleridge's Ancient Mariner, who burns with a constant passion to tell the passerby his story; like the Mariner, he can hold his audience with the hypnotic eye of a true believer and weave his obsession into a compelling fiction. In fact, Greene acknowledged that his writing was a form of therapy that enabled him to escape the madness, melancholy, and panic inherent in the human condition.

Greene's obsessions and fascinations are many and evolve into themes focused on innocence, evil, pity, hatred, the isolated and hunted individual, betrayal, suicide, dreams, seedy and decadent surroundings ("Greeneland," as some critics call it), violence, carnal sexuality, and failure. His characters fall into four categories: the sinner, the innocent, the pious, and the humanist.

All of these obsessive figures, themes, and subjects are circumscribed by Greene's fatalistic and pessimistic vision of the world. There is little healthy humor or laughter in most of his novels, but rather a sense of inevitable failure, pain, and suffering. There may be a God in Greene's world,

but the focus is almost always on the twisted world itself: its nightmarish oppression, its squalor, and its seeming hopelessness.

Greene's Catholicism and his obsessions supply much of the strength of his novels. They are the muscles that make the body of his fiction work, but they should not be viewed in isolation from the total performance, which concerns itself with the human condition and the fundamental theme of much great literature: the struggle of innocence against evil and the hope of redemption. Greene's fiction appeals to the reader's profound urge to avenge an imperfect world that has betrayed his or her own youthful fantasies and ideals.

## BRIGHTON ROCK

**First published:** 1938

**Type of work:** Novel

*The young leader of a gang of racetrack hoodlums finds his world disintegrating as he is relentlessly pursued by a self-righteous avenger.*

*Brighton Rock* is the story of a seventeen-year-old brutal criminal named Pinkie Brown, who has recently assumed the leadership of a gang of race-track hoodlums working out of Brighton, an English seaside resort. A man named Hale, an advertising agent who is in Brighton to promote his newspaper, has betrayed Kite, the former leader of the gang now run by Pinkie. Hale knows that Pinkie has recognized him and is planning revenge. The pursuit and murder of Hale are set against a background of fun-seeking holiday crowds, band music, flower gardens in bloom, and a warm summer sun.

While seeking refuge from his would-be killers, Hale takes up with a vulgar, sensual woman named Ida Arnold. After Hale is murdered, Ida takes it upon herself to seek revenge. In the meantime, Pinkie befriends a young waitress named Rose, whose knowledge of his gang's involvement in Hale's murder makes her a threat to his safety. He then marries her because he knows that a wife cannot testify against her husband in court. Ida, delighting in her role as detective and avenger, begins to focus more clearly on her suspects, harasses

Rose, and begins to frighten Pinkie with her constant inquiries about Hale.

Pinkie panics and kills one of his fellow gang members whom he feels he can no longer trust. Then, in a desperate attempt to rid himself of Rose, who in his mind has come to represent the horrors of sexuality and entrapment, he lures her into a suicide pact with him. His plan is to let Rose take her own life, which, out of reckless love for Pinkie, she is willing to do, and then escape. After they drive to the coast to consummate the pact, Dallow, a member of Pinkie's gang, arrives to inform him that the police know who killed Hale and that there is no hope for any of them now. As Pinkie reaches for the bottle of vitriol, which he always carries with him, to hurl at Dallow, the acid flies back into his face. He runs screaming over the edge of an embankment and plunges to his death in the water below.

The novel ends on a note of terrible irony. Rose's only consolations are the possibility that she will have Pinkie's baby and will enjoy playing for the first time a gramophone recording that he had made for her earlier on the Brighton pier. He had told her that he had put something "loving" on the record; what he had actually said was, "God damn you, you little bitch, why can't you go back home forever and let me be?" The novel ends with Rose walking toward her room in the hope that Pinkie's love for her will be expressed and confirmed on the recording.

Pinkie Brown is the embodiment of deprived innocence. Greene visualizes Pinkie in realistic detail, but his metaphorical language elevates the young killer's character almost to the level of a morality play or a parable. On one level Pinkie may be a common thug from Brighton in the 1930's, but on another level he is a fallen angel, a tragicomic hero who, on an irrevocable course of self-destruction, transcends time and space.

The theme of lost or betrayed innocence is central to this novel. The neighborhood in which Pinkie was born and reared is called Paradise Piece

and is now reduced to rubble. Pinkie's fear of sexuality is directly related to the theme of lost innocence. When he believes that he will soon be inextricably bound to Rose as her husband, he feels as if he were shut out from an Eden of ignorance.

Pinkie's only real choice in life is suicide. That is his only way of escape from human contacts and other people's emotions. Other people make Pinkie's world a hell, but at least he understands hell, whereas heaven is just a word to him. When they christened him, he asserts, the holy water did not work, and he never howled the devil out. His faith is in Satan, not in God.

## THE POWER AND THE GLORY

**First published:** 1940

**Type of work:** Novel

*During the persecution of Catholics in Mexico, a hunted, alcoholic Catholic priest overcomes his human failings to achieve martyrdom.*

The setting of *The Power and the Glory* is Mexico during the late 1930's, when President Plutarco Elias Calles, in the name of revolution, was closing down the churches and murdering or exiling priests and practicing Catholics. The hero is an unnamed whiskey priest who is pursued through the countryside by an unnamed lieutenant. The fact that the protagonists are not named gives the novel the form of a parable. The priest represents a human, Christlike figure persecuted by the lieutenant, who embodies the ruthless, secular ideals of socialism.

In his continuous search for safety and food, the priest takes refuge in a barn owned by Captain Fellows, an English banana planter. His thirteen-year-old daughter, Coral, risks her and her family's safety in attending to the priest's needs during his stay. She stands in vivid contrast to the priest's own illegitimate daughter, Brigita. Coral is still an innocent and later appears to the priest in a comforting dream moments before he is executed. Brigita, on the other hand, despite her youth, has lost her innocence amid her squalid poverty. The priest is overcome by his guilt for having brought a hopeless child into the world and prays that God will

take his faith and life in exchange for the salvation of his daughter. Along his travels the priest meets up with a mestizo, a grotesque Judas figure who leads the priest to his capture by the lieutenant. Awaiting execution in prison, the priest reveals a profound contrition for his sins, especially for the damage he has done to his child, and in his final moments selflessly prays for her redemption.

One of the little boys in the town, Luis, who earlier had admired the machismo of the lieutenant, now spits on him, the spittle landing on the lieutenant's revolver. Through this scene Greene suggests that the execution of the whiskey priest thus has a moral impact on the next generation. The novel concludes with a mysterious stranger knocking at the door of Luis's home. He identifies himself as a priest and Luis kisses his hand. The fugitive church, the reader is reassured, is still a vital presence and will survive the violence of socialist oppression.

The theme of the hunted man establishes an exciting and nightmarish atmosphere that makes this novel a first-class thriller. There is much more here, however, than a simple manhunt. Greene has created characters that are at once human and symbolic. The priest and the lieutenant embody the extreme dualism of the human spirit: godliness versus godlessness, love versus hatred, spirituality versus materialism, concern for the individual versus concern for the state. The symbiotic relationship between the two men is brought out after the priest's death, when the lieutenant feels that his vitality has been drained from him and that he no longer has a clear purpose in life.

## THE MINISTRY OF FEAR

**First published:** 1943

**Type of work:** Novel

*In war-torn London, an innocent man unwittingly finds himself hunted down by a network of spies.*

Set in London during the height of the German Blitzkrieg, *The Ministry of Fear: An Entertainment* develops the theme of pity as an isolating and self-destructive force. The hero, Arthur Rowe, has poi-

soned his wife because he could not bear to watch her suffer from an incurable disease. Although the court finds him innocent of any crime, he nurses a powerful sense of guilt for his actions and continues to be driven by a disproportionate sense of responsibility for the suffering of those around him.

The novel opens with Rowe entering a local fair. He is drawn to the fair because it reminds him of his lost innocence. Despite the war raging around him, the fair affords him lush gardens and sweet smells from his childhood. Ironically, his attendance at the fair leads to his becoming a hunted man. He wins a cake that, unknown to him, contains a microfilm of secret naval plans placed there by a spy ring. When he returns home, one of the Nazi agents who constitute the Ministry of Fear visits him in an attempt to poison him. Recognizing the smell of the poison (the same one he used for his wife), Rowe realizes that someone wants to kill him for no apparent reason, turning his sense of reality into a Kafkaesque nightmare. Later, while Rowe is attending a séance, one of the guests is murdered with Rowe's knife and Willi Hilfe, a young Austrian relief worker (who pretends to be Rowe's friend but who actually masterminds the Nazi spy ring) advises Rowe to go underground. The murder, however, is merely a contrivance to drive Rowe into hiding. He is seriously injured when, upon opening a case supposedly containing books, a bomb goes off.

The second part of the novel finds Rowe a victim of amnesia from the bomb blast and a patient in a nursing home run by Dr. Forester, one of the spies. Through an act of crippling violence, Rowe, remembering nothing from his past, is ironically returned to a more innocent world. His amnesia allows him to enjoy an Arcadian existence for a time, unaware of the war in London, his murder trial, and his fugitive past.

When Rowe challenges Dr. Forester for his cruelty to one of the patients at the home, the doctor retaliates by revealing Rowe's real name and showing him a newspaper clipping of his murder trial. This sudden illumination marks the beginning of Rowe's rebirth and return to the sordid, complex world from which he enjoyed only a temporary retreat. He gradually puts the bits and pieces of his past back together again and moves closer to becoming a whole man. He still, however, does not know the details of his murder trial.

The novel ends with Rowe's confrontation of Willi Hilfe. After Rowe disarms him, Willi offers Rowe a deal: He will complete Rowe's memory about the death of his wife and turn over the microfilm in exchange for Rowe's revolver and a single bullet with which to commit suicide. Rowe refuses but Willi insists on revealing the details of Rowe's trial anyway. His curiosity satiated, Rowe feels himself a whole man once again and, in still another act of pity, allows Willi to commit suicide.

Rowe's anguish over the suffering of others leads him to become a sinister force of violence himself. His sense of pity leads to the murder of his wife and to the suicide of Willi Hilfe. He is hunted by the Ministry of Fear, the reader is told, because he loved, but Rowe misleads one here. His selfishness and quiet arrogance are the forces that actually motivate his most important actions and shape his emotional commitments to others. Thus the victim of the Ministry of Fear is actually the victim of his own pity, the most terrible passion Greene allows his characters.

## THE HEART OF THE MATTER

**First published:** 1948

**Type of work:** Novel

*A middle-aged police officer in British West Africa is driven to suicide in order to protect his wife and his mistress from suffering.*

Major Scobie, the hero of *The Heart of the Matter*, is a middle-aged police officer in British West Africa. During his fifteen years of service he has acquired a reputation for unfailing integrity. His wife, Louise, is a nagging and restless woman who plans a holiday trip to South Africa to escape the languid, oppressive atmosphere of Sierra Leone and the embarrassment caused by her husband's failure to be promoted to commissioner. Scobie, whose love for her has long been replaced by an obsessive sense of pity and responsibility, borrows the money for her vacation from a Syrian smuggler and usurer named Yusef.

During his wife's absence Scobie falls in love with a nineteen-year-old girl named Helen Rolt, who has been widowed in a shipwreck off the coast.

When Louise returns, Scobie still feels morally bound to live up to his private vow to see to it that she is always happy. Complicating matters further, Scobie writes Helen a letter reassuring her of his love for her. This letter winds up in the hands of Yusef, who blackmails Scobie into helping him smuggle some diamonds out of the country.

Shortly after her return home, Louise asks Scobie to go to Holy Communion with her. He goes to confession but cannot promise the priest that he will not see Helen again and so cannot be absolved of his sin. In order to ward off any suspicion of his adultery, however, he receives Communion in the state of mortal sin. He willingly risks his eternal damnation rather than inflict pain on Louise. At the same time, his love and sense of responsibility for Helen are so strong that he cannot bring himself to end the affair. He thus tells God that he will accept eternal damnation in exchange for the happiness of these two women.

Tormented by his religious hypocrisy and by the certain knowledge that his dilemma will lead him to inflict unnecessary pain on Louise or Helen, Scobie decides to commit suicide. Both women, he reasons, will forget him after his death and will regain their happiness. He studies the symptoms of angina pectoris so that his death may appear to be natural then poisons himself with tablets prescribed by his doctor for the pretended illness.

Scobie is a sympathetic figure, demanding the reader's pity and respect. His sense of pity and responsibility for the happiness of others, however, is excessive and demonstrates an almost monstrous pride that leads to his self-destruction. The reader feels sorry for Scobie because he cannot help himself. Watching his fall from grace is like watching the hero of a drama who, flawed by a critical blindness in his character, seeks peace and happiness but ironically and irrevocably brings upon himself and others pain, suffering, and death. The novel

conveys a strong sense of fatalism as a chain of interlocking events that combines with Scobie's obsessive personality to diminish his freedom and finally makes suicide the only means by which he can resolve his overwhelming dilemma.

During Scobie's last moments he begins a prayer to God that he fails to finish. The reader is inclined to believe that this tragic man, who has suffered deeply, will at last be awarded the peace of God, but Greene characteristically denies the reader the restful certainty of that conclusion. Strictly speaking, suicide is a mortal sin that cannot be repented, and thus, according to Catholic doctrine, Scobie's soul is damned to Hell. Afterward, Scobie's priest, Father Rank, points out that the Church does not know what goes on in a single human heart, thereby leaving the door open to the possibility that Scobie's final state of mind might have made his salvation possible.

## SUMMARY

Despite the variety of literary forms that Graham Greene explored, his greatness clearly lies in his fiction. Unlike writers of the 1920's and 1930's, he practically ignored the experimental novel. Rather, he followed the loose tradition of such diverse writers as Charles Dickens, Wilkie Collins, Robert Louis Stevenson, H. Rider Haggard, Joseph Conrad, and Marjorie Bowen.

Greene's main achievements in the novel are twofold. First, he is a master storyteller, one of the chief reasons for his popular success. Second, he has created a unique vision of the world, having turned his personal obsessions into universal works of art. Greene both lived and wrote on the dangerous edge of things, and in the world of his novels he has re-created the bittersweet conflict between the fascination of innocence and the hell-haunted drama of human existence. It is a surprising, suspenseful, frightening, and dark world that he has created, but it is above all a human place, peopled with sad and suffering men and women with a profound longing for peace, some of whom occasionally startle the reader with their compassion and love and childlike simplicity.

*Richard Kelly*

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

*The Man Within*, 1929

*The Name of Action*, 1930

*Rumour at Nightfall*, 1931

*Stamboul Train: An Entertainment*, 1932 (pb. in U.S. as *Orient Express: An Entertainment*, 1933)

*It's a Battlefield*, 1934

*England Made Me*, 1935

*A Gun for Sale: An Entertainment*, 1936 (pb. in U.S. as *This Gun for Hire: An Entertainment*, 1936)

*Brighton Rock*, 1938

*The Confidential Agent*, 1939

*The Power and the Glory*, 1940 (reissued as *The Labyrinthine Ways*)

*The Ministry of Fear: An Entertainment*, 1943

*The Heart of the Matter*, 1948

*The Third Man: An Entertainment*, 1950

*The Third Man and The Fallen Idol*, 1950

*The End of the Affair*, 1951

*The Quiet American*, 1955

*Loser Takes All: An Entertainment*, 1955

## DISCUSSION TOPICS

- How did Graham Greene's recollection of the boys who tormented him when he was young serve him as a writer? Did this obsession damage as well as contribute to his fiction?
- How does Greene's depiction of foreign places differ in his travel books and his novels?
- Catholicism is important in many Greene novels, but his books are also "fatalistic and pessimistic." How can these two elements be compounded?
- Were Joseph Conrad's novels a major influence on Greene?
- Consider the theme of self-destructiveness in Greene's fiction.
- Can Greene, or any writer, be his own therapist?

## THE BROTHERS GRIMM

### Jacob Grimm

**Born:** Hanau, near Kassel, Hesse-Kassel (now in Germany)

January 4, 1785

**Died:** Berlin, Prussia (now in Germany)

September 20, 1863

### Wilhelm Grimm

**Born:** Hanau, near Kassel, Hesse-Kassel (now in Germany)

February 24, 1786

**Died:** Berlin, Prussia (now in Germany)

December 16, 1859

*Accomplished scholars of Teutonic folklore, linguistics, and philology, the Brothers Grimm gained literary immortality with their collection of German fairy tales.*

### BIOGRAPHY

Jacob Ludwig Carl Grimm was born on January 4, 1785, in Hanau, Hesse-Kassel, in what is now Germany. His brother, Wilhelm Carl Grimm, was born a year later on February 24, also in Hanau. Their parents were Philipp Wilhelm Grimm, a German official, and Dorothea Zimmer Grimm. Jacob and Wilhelm were close all of their lives, lived together, worked as a team on certain projects, held professorships at the same universities, and contributed enormously to Germanic studies. Jacob was the dominant force, disciplined, with an appetite for tedious research. Wilhelm was frailer, warmer, more sociable, drawn to music and literature. Yet each had the generous, even temper needed to sustain a lifetime of collaboration.

As law students at the University of Marburg, they were influenced by Professor Friedrich Karl von Savigny. At a time when Napoleon I was conquering all of Europe, Jacob had a revelation of his and Wilhelm's life work while browsing in Savigny's library. From that time forward, the Grimms devoted themselves to resurrecting the German past in scholarship. They were inspired by patriotism, but a kind that looks back wistfully.

The brothers began editing medieval manuscripts. Jacob Grimm's first publication of note, *Über den altdeutschen Meistergesang* (1811), was a series of essays on medieval German poetry. At the same time, Jacob and Wilhelm began collecting folktales from friends and neighbors. Their joint publication, a large assortment of these folktales, eventually put the Grimms on the literary map for good. It was *Kinder- und Hausmärchen* (1812, 1815; *German Popular Stories*, 1823-1826), published in two volumes. These stories became known and loved in English as *Grimm's Fairy Tales*. Its publication was a landmark of the German Romantic movement, for within it was the voice of the common people given literary expression in enchanting stories. The book began a new era in folklore collecting, a respect for the story as told. Reviewers found it boorish, but it gained immediate public acceptance and was promptly translated. The book saw several editions in the Grimms' lifetimes alone.

After the Napoleonic Wars, Jacob found work in Cassel in the same library that employed Wilhelm. The output of the Grimms was enormous. Among their notable achievements was an exhaustive two-

volume study of German legends, *Deutsche Sagen* (1816-1818; *The German Legends of the Brothers Grimm*, 1981) and Jacob's encyclopedic study of Teutonic mythology, *Deutsche Mythologie* (1835-1837; *Teutonic Mythology*, 1880-1888). In 1819, Jacob Grimm published his German grammar, *Deutsche Grammatik* (1819-1837), a work that, in its second edition of four volumes, amazed the scholarly world. Jacob amassed a huge body of evidence to codify the consonant shifts in the Germanic family of languages from earliest times to the nineteenth century. The exact relationship of those shifts is called Grimm's law, and it established linguistics as a science. Jacob followed that in 1828 with *Deutsche Rechtsaltertümer*, an account of proverbs as the basis of German law.

When Wilhelm married Dorothea Wild in 1825, Jacob continued to live in the household amiably. Both brothers found positions at the University of Göttingen, with Jacob becoming head librarian and full professor in 1830 and Wilhelm receiving a professorship in 1835. When the Grimms signed a protest over the king of Hanover abolishing the constitution, they were fired. Both returned to Cassel. Then in 1840 they received professorships at the University of Berlin, which they held until their deaths. Their last great labor was on the first volume of a colossal thirty-two-volume German dictionary, the *Deutsches Wörterbuch* (1854-1960), which took four generations of scholars and more than one hundred years to finish. Wilhelm died in Berlin on December 16, 1859. Jacob died there on September 20, 1863.

## ANALYSIS

*Grimm's Fairy Tales* has a distinctive German flavor even in English translation. The settings are German: forests, castles, mountains, quaint villages, inns, and huts. The characters are old-fashioned German types: merchants, cobblers, tailors, millers, huntsmen, tramps, robbers, woodcutters, parsons, peasants, kings, queens, princes, and princesses. Even the supernatural beings have a Germanic coloring: witches, dwarves, giants, elves, nixies, and the devil. Yet this very seventeenth century German quality adds to the magic of the stories. If these stories were not so firmly grounded in their time and place, they would lose their essence, their ability to reveal the universals of human experience.

Stories that satirize stupidity and laziness are common to every culture that values practical intelligence and hard work. Tales such as "Die kluge Else" ("Clever Elsie"), "Der Frieder und das Katherlieschen" ("Frederick and Catherine"), "Die klugen Leute" ("Wise Folks"), and "Der faule Heinz" ("Lazy Harry") show with some wit the folly of the stupid and the idle. Ridicule is a tool to make misfits conform, but when it is directed at characters in an amusing story, the point is made without the sting of personal venom.

There are many animal tales in *Grimm's Fairy Tales*, some of which are fables, tales with a moral. In "Der Wolf und der Fuchs" ("The Wolf and the Fox"), the wolf's rampant gluttony leads to its destruction, while foresight saves the fox. In "Katze und Maus in Gesellschaft" ("The Cat and Mouse in Partnership"), gluttony is symbolic of the greedy and powerful, who swallow the weak under the guise of benevolence. There are realistic stories, too, and these deal with cruelty to the helpless, which is always condemned. Tales such as "Der Nagel" ("The Nail"), "Der alte Grossvater und der Enkel" ("The Old Man and His Grandson"), "Der arme Junge im Grab" ("The Poor Boy in the Grave"), "Lieb und Leid teilen" ("Sharing Joy and Sorrow"), and "Die klare Sonne bringt's an den Tag" ("The Bright Sun Brings It to Light") depict the hard, evil side of human nature unsoftened by fantasy. In fact, "The Bright Sun Brings It to Light" eerily foreshadows the Holocaust in a small way. Religious stories also form an important part of *Grimm's Fairy Tales*; "Marienkind" ("Mary's Child") is an outstanding example. There is a whole section devoted to these stories under the heading "The Children's Legends." Finally, there are nonsense tales, brief bits of humor told for sheer exuberance. "Das Hausgesinde" ("My Household") has cumulative nonsense, "Läuschen und Flöhchen" ("The Louse and the Flea") contains nonsense on the theme of getting carried away, "Das dietmarsische Lügenmärchen" ("The Ditmars Tale of Wonders") displays the nonsense of obvious absurdities, and "Die schöne Katrinelje und Pif Paf Poltrie" ("Fair Katrinelje and Pif-Paf-Poltrie") reveals the nonsense of the proposal ritual.

It is for the fairy tales, however, that the Grimms are remembered. In them, poetic fantasy and realistic detail blend in startling ways, as in dreams. Yet if these tales resemble dreams with their magic and

wish fulfillment, they are consciously crafted stories that follow the rules of the genre.

Fairy tales are meant to be recited or read aloud to children. One thing that a child wants is a good story. The plot must therefore be the main attraction. The story needs dramatic contrast: good versus evil, kindness versus cruelty, loyalty versus treachery. Further, the hero or heroine must have some purpose, such as winning a royal mate, helping others, undoing a spell. The plot also needs suspense, things that hinder the hero or heroine from achieving the goal. That is the reason for the pattern of three so common in fairy tales—three nights in a haunted castle, three riddles to be solved, three magic tasks. Three is the ideal number for building suspense: Four is too long, and two is too short, to hold a child's interest.

Magic is significant in fairy tales. There are magic helpers who assist the kindhearted to reach their goals. Old women and gnomes furnish magic objects and advice. Talking animals, fish, birds, and insects perform the tasks that the hero or heroine finds impossible. Magic objects enable the hero to do specific feats that would otherwise be beyond him. Besides helpful magic, there is evil magic in fairy tales—spells that turn a human into a beast, spells that petrify a place, and spells used to dupe the trusting. To overcome evil magic, it takes patience and love.

Since everything in a fairy tale is subordinate to the plot, the characters are revealed by their acts and speech. The heroes and heroines lack complexity and often a name. Yet they usually have the qualities necessary to heroism, whether heroism in story or in real life. These are courage, generosity of spirit, and the persistence needed to overcome adversity. The wicked people in fairy tales and in life are proud, unhappy, envious, and mean. They cannot stand adversity and take nasty shortcuts to get what they want. Sooner or later, their treachery is exposed. Fairy tales are grounded in the basic qualities of human experience.

## “THE WATER OF LIFE”

**First published:** “Das Wasser des Lebens,” 1815 (collected in *The Complete Fairy Tales of the Brothers Grimm*, 2002)

**Type of work:** Folklore

*In seeking a cure for his father, the third of three sons finds his future wife and suffers the treachery of his older brothers.*

“The Water of Life” is storytelling pared to the bone. The tale is so lucid and simple that it almost defies analysis. Situation, speech, and action blend in one flowing narrative. A king is dying. His three sons learn from an old man that the only way to save their father is to bring him the water of life. The dying king reluctantly gives one son after the other permission to seek the water.

When the two proud older brothers meet a dwarf who asks where they are going, they answer rudely, so the dwarf sends them up a ravine, where they become trapped. Arrogance itself is a trap, and the ravines are symbolic of the older brothers' hard pride that keeps them from progressing. When the third prince meets the dwarf, he answers politely and confesses that he does not know where the water of life is. The dwarf then tells him that the water is in an enchanted castle, and he gives the prince the three things that he needs to enter the castle: a wand to open the gate and two small loaves of bread to feed the guardian lions. The dwarf also warns him to leave the castle by midnight. The prince thanks him and leaves. The amount of information conveyed in a few sentences is amazing: The hero is revealed as courteous, humbly honest, and grateful.

Once inside the castle, the prince acts on his own initiative. He finds a hall with spellbound princes and removes their rings. He finds a sword and a loaf of bread that he takes. He finds a lovely princess, who wakes and kisses him. She says that they will be wed in a year and that her kingdom will be his. She also tells him where the water is and warns him that he will be imprisoned in the castle if he stays past midnight. He falls asleep, however, and barely awakens in time to fetch the water and escape, losing part of his heel as the gate slams shut. The events in the enchanted castle are vivid,

mysterious, and dreamlike. Yet they work a change in the hero. He becomes both more affectionate and more effective. His one blind spot, however, is that he trusts his brothers.

Again he meets the dwarf, who tells him that the sword (the wand, magically transformed) can defeat many armies and that the supply of bread will never end. The prince asks about his brothers, and the dwarf releases them, warning the prince about their evil hearts. The brothers are joyfully reunited and travel home together, with the youngest telling of all that befell him. On the way, they find three successive kingdoms ravaged by war and famine. The prince saves each with his sword and bread. Before arriving home, the brothers undergo a sea journey in which the older brothers switch the water of life for sea water while the youngest sleeps. Sleep is a real danger in this tale.

The youngest son is accused of attempted poisoning after giving his father the salt water, while his brothers get the credit for rejuvenating the king. The king then orders his huntsman to execute his third son on a hunting trip. Yet the prince is so considerate of the huntsman's feelings that the huntsman tells him of the king's orders and, instead of killing him, exchanges clothes with the prince. The prince hides in the forest for a year. Meanwhile, the king repents his hasty act when three wagons of gold and jewels come for his third son from the three kingdoms that he had saved. When the huntsman tells the truth, the king grants his lost son amnesty.

The princess orders a golden road built to her castle and tells her servants to send away all who ride up by the side of the road, but to admit the one who rides down the middle. The older brothers ride to the side when they notice that the road is gold. The prince, however, never notices, his mind being full of the princess; he rides down the center to his bride, her kingdom, and his father's love. His wicked brothers set forth on the sea and are never heard from again.

The main symbols in the story almost speak for themselves. The wand and two small loaves of bread that admit the prince into the castle become, magically, the sword and loaf by which he saves three kingdoms. The water of life is balanced by the water of death (sea water). The golden road that leads to success must not be approached gingerly; it must be ridden down the center with all of one's being focused on the goal.

## **"MARY'S CHILD"**

**First published:** "Marienkind," 1812

(collected in *The Complete Fairy Tales of the Brothers Grimm*, 2002)

**Type of work:** Folklore

*A young woman is cast out of heaven for her sins and must suffer repeated losses until she repents and confesses.*

"Mary's Child" has three levels operating in perfect harmony. One is the story surface, the actual events and language; another is symbolic, with parallels in everyone's life; and the third is the spiritual level, eternity revealed through time.

Mary takes a starving woodcutter's baby girl to heaven to rear as her own. The infant is given the best of care and has angels for playmates. When the girl is fourteen, Mary goes on a long trip and leaves the keys to thirteen rooms in heaven with the girl, telling her that she may open every door but the thirteenth, which is forbidden. The girl opens a new door every day to find an apostle. On the thirteenth day, devoured by curiosity, she opens the forbidden door and sees the Trinity blazing in fire and glory. She gazes in awe and puts out her finger, which turns to gold. Suddenly, she is seized by panic, closes the door, and rushes to Mary, who knows immediately what has happened. Three times Mary asks the girl if she opened the forbidden door, and three times the girl denies it. Mary has no choice but to send her to earth. It is Original Sin repeated, but it is also the way that adolescence is experienced, as a loss of innocence and being cared for by adults. It marks the beginning of suffering as a constant part of the human makeup and the point at which one must accept the consequences of one's actions.

The girl is isolated from all human contact in a part of the forest surrounded by thorns. She tries to cry out but finds that she is mute. She must fend for herself, eating roots, nuts, and berries, and having

only a hollow tree for shelter. She looks back on her life in heaven with longing. That is how things are out in the cold, harsh world of adolescence, where pain isolates one from everyone else.

The girl becomes a woman. Her clothes have dissolved in shreds, but she is covered by her long, golden hair. One spring, a king chases a roe into her area of forest and must hack through the thorns. He finds a beautiful, mute young woman, whom he takes home and marries. At this point, the courtship rite is stripped to its basics. A man chases a sleek, healthy animal into cover. If he persists in his hunt through the thorns of misunderstanding, jealousy, female contrariness, and pain, he will behold the one woman in the world for him, exactly as she is, naked and splendid. She, in turn, will behold a king.

In the following three years of marriage, the queen has two sons and a daughter. After the birth of each, Mary visits the queen and asks if she opened the forbidden door, and each time the queen denies it. Thereupon Mary takes the child to heaven, again leaving the queen mute. After the disappearance of each child, the king's councillors and subjects accuse the queen of cannibalism until the king can no longer ignore them. The queen is

tried, convicted, and sentenced to burn at the stake. Her one sin, compounded by six lies, leads to death. Yet as the flames rise, her icy heart melts, and she cries out, "Yes, Mary, I did it." Mary then quenches the fire with rain, fully restores the queen's speech and three children, and blesses her with happiness. Mary herself points out the moral that forgiveness is gained only by repentance and confession. The real miracle is that God is humble enough to accept last-minute repentance.

## SUMMARY

The style of the Brothers Grimm's tales is simple, appropriate for a child. The language is serious, dignified, and poetic. There is little description, a lot of action, and enough speech to make the narrative interesting. In some stories, a person or an animal will resort to verse at a crucial point. The openings and closings of the Grimms' fairy tales are ritualistic, pungent, and much more inventive than the stale "once upon a time" and "they lived happily ever after."

In selecting and arranging their folktales, the Grimms, and Wilhelm especially, showed balance, taste, and love. The result was wonderful.

James Weigel, Jr.

## BIBLIOGRAPHY

### By the Authors

#### SHORT FICTION:

*Kinder- und Hausmärchen*, 1812, 1815 (revised 1819-1822; *German Popular Stories*, 1823-1826; 2 volumes; better known as *Grimm's Fairy Tales*)

*Dear Mili*, wr. 1816, pb. 1988 (by Wilhelm Grimm alone)

#### NONFICTION:

*Über den altdeutschen Meistergesang*, 1811 (by Jacob Grimm alone)

*Deutsche Sagen*, 1816-1818 (2 volumes; *German Legends of the Brothers Grimm*, 1981)

### DISCUSSION TOPICS

- Explain how the differing talents of the Brothers Grimm enabled them to work together effectively.
- Offer an explanation of the Grimms' successful admixture of linguistic study and the creation of fairy tales.
- What besides gathering interesting folk material did the Grimms have to do to create fairy tales?
- Implausibility does not seem to be a defect in fairy tales. Why not?
- Examine the beginnings of several Grimm fairy tales to determine how they avoid clichés.
- Do fairy tales need to have morals attached to them? If not, why not?

© Ander Gunn/Courtesy, Farrar, Straus and Giroux

## THOM GUNN

**Born:** Gravesend, Kent, England  
August 29, 1929

**Died:** San Francisco, California  
April 25, 2004

*Gunn displayed poetic skill of a high order and successfully explored a number of subjects that were new to poetry.*

### BIOGRAPHY

Thomson William Gunn was born on August 29, 1929, at Gravesend, a small town in Kent on the Thames. His father, Herbert Gunn, was a successful journalist, and Thom Gunn had a privileged middle-class upbringing that was marred by the divorce of his parents and the death of his mother, Ann Charlotte Thomson Gunn, when Thom was twelve. The family had moved earlier to fashionable Hampstead, nearer London, and Gunn attended University College preparatory school. Gunn did not go immediately to a university after completing secondary school because he was drafted into the British army, in which he served for the required two years. He then entered Cambridge University in 1950, where he read English literature and began writing the poems that would make his reputation. The dominant figure at Cambridge during that period was F. R. Leavis, a critic who stressed the necessity of following tradition; he may have had some influence upon Gunn, but the rule of tradition was alien to Gunn's exploratory and innovative poetry. Gunn consistently broke away from the mainstream of received critical opinion.

After Cambridge, Gunn went to Stanford University on a creative writing fellowship. At Stanford, he studied under the American poet and critic Yvor Winters. Winters had a great influence upon

Gunn, especially in his belief that poetry is made up of logical propositions and moral judgments rather than emotional outpourings. Winters was a traditionalist in matters of poetic meter and form, and he encouraged Gunn to retain and perfect traditional poetic elements in his poetry.

Winters encouraged Gunn to study for a Ph.D. in English, but after two years of study Gunn became bored with the work and did not complete the degree. He did, however, accept a teaching position at the University of California at Berkeley in 1958 and remained a resident of the San Francisco Bay area. He abandoned his tenured position as a professor at Berkeley in 1966, but he continued to teach there part-time.

Gunn's first book, *Fighting Terms*, was published in 1954, the year that he graduated from Cambridge. The poems are written in strict, traditional meter and form, but they deal with untraditional themes of violence and the control of the will. In 1957, Gunn published his second book of poems, *The Sense of Movement*. The subject was still violence and the will, but Gunn had found more appropriate and effective means to discuss it. The literary allusions in these poems were not drawn from his reading but from motorcycle gangs in California with whom he had spent some time. The reception of this book was far better than that of his first book. Critics recognized a new voice and a new subject area for English poetry.

*My Sad Captains, and Other Poems* (1961) was Gunn's next book of poems, and it marks a significant change in style. The first part of the book is written in the strict meter that characterizes Gunn's style. The second part of the book, how-

ever, is in syllabics. Gunn was not yet a free verse poet, since the syllabics did follow a regular pattern, but he was straying from the traditional metrics that were so much a part of his poetry.

In 1966, Gunn published a book of poems, *Positives*, that were paired with photographs by his brother, Ander Gunn. What was noteworthy in addition to the experiment in poetry and photography was that the poems were in free verse. Gunn's progression from traditional meters and forms to free verse is representative of that of many English poets.

*Touch* was published in 1967, and it shows a thematic change in Gunn's poetry. The emphasis in *Touch* is on the necessity of human intercourse, which directly contrasts to the solitary exercise of the will that is so prominent in Gunn's earlier books.

*Moly* (1971) was the next milestone book for Gunn. The subject is the liberating LSD experiences that Gunn had. Gunn uses meter in order to give structure to what is by its nature an unstructured experience. Gunn believed that LSD had the potential to liberate a person from his or her divided condition and to free one from human limitations, but he still insisted that the description of such a liberation occur within the traditional framework of measured poetry.

Gunn's *The Man with Night Sweats* (1992) deals with the acquired immunodeficiency syndrome (AIDS) epidemic that devastated the San Francisco area. Many of the poems are precise descriptions of the suffering and courage of those afflicted with the AIDS virus. Gunn was a homosexual, but that aspect of his identity was hidden behind the various invented speakers in his earlier poems. In Gunn's later poems, there is a directness and emotion that is not prominent in his earlier poetry.

In 1979, Gunn published *Selected Poems: 1950-1975* and in 1993, *Collected Poems*. The first volume is a group of Gunn's best and best-known poems. *Collected Poems*, however, shows the full range and achievement of one of the most important post-World War II poets writing in English.

Gunn died in his sleep in San Francisco on April 25, 2004.

## ANALYSIS

Thom Gunn once described himself as a "derivative poet. I learn what I can from whom I can." He

tried out a number of poetic styles and was influenced by a number of poetic traditions. As a result, his poetry encompassed a very wide range of subjects, and the poems reflected the influence of many important figures in modern poetry. The influence of Yvor Winters led Gunn to read, write about, and to some extent imitate such Renaissance poets as Ben Jonson and Fulke Greville. By the middle of his career, however, he began to read and be influenced by such different poets as Ezra Pound, William Carlos Williams, and Gary Snyder. The essays he wrote on these poets and the changes in his style clearly show his change in affiliation.

Gunn's poetic style is unusual in its clarity of diction. His use of classical models and references, especially in the early poems, is clearly a reason for his exactness in choosing words. The influence of Winters may be another factor in Gunn's unusually clear poems. Winters stressed the poetry of statement, and Gunn seems to have adopted that mode in his poetry.

Nearly all of Gunn's early poetry was written in traditional meters and very often in traditional stanzaic forms. The meter of most of his early poems is the most traditional of all meters in English, iambic pentameter. A few poems are written in iambic tetrameter and even fewer in iambic trimeter, but Gunn tended to stick to pentameter, which he polished and refined. Gunn also consistently used rhyme in his poems, especially alternating rhyme, and occasionally, as in "Moly," he used the heroic couplet.

Gunn was impressed by T. S. Eliot's dictum that a poet does not express his personality but escapes from it. As a result, many of his poems have invented speakers, such as the warrior from the Trojan War in "The Wound" or the motorcycle riders in *The Sense of Movement*. It is only in *The Man with Night Sweats* that he speaks in his own voice.

The themes of Gunn's poems are various, but in the early poems the major focus is on the will. This theme can be seen in the warrior of "The Wound" and the soldier of "Incident upon a Journey," who has "no regrets" about his violent actions. The exercise of the will can be seen as a mode of life in "On the Move" and "Innocence." In "On the Move" the motorcyclists "dare a future" by their movement. Whether there is any meaning in their actions is not dealt with; it is the keeping in motion, a metaphor for the will, that matters. In "Innocence" the

soldier has made himself or been made into an “instrument.” Military allusions and metaphors are common in Gunn’s poetry, even in a love poem, such as “The Beach Head,” where the stages of seduction are described as an invasion. Another love poem, “Carnal Knowledge,” portrays the act of love as one of shared deception rather than union. It is interesting that Gunn wrote few poems on the two eternal subjects of English poetry, nature and love. He was a traditional poet, but he avoided nearly all the traditional subjects of poetry.

Along with will and its accompanying violence, Gunn focused on choice. He read the works of Jean-Paul Sartre while he was a student, and many of the French philosopher’s ideas can be found in Gunn’s poetry. “Vox Humana” is a good example of his writing on the theme of choice. The speaker in this poem feels urged on by some force within him to choose what will become the pattern of his life. Without choice, life and existence remain a “blur,” but with choice comes a fixed design that is often destructive.

The focus on will and action led Gunn to write poems about such unlikely figures as Elvis Presley and Claus von Stauffenberg. Presley turns “revolt into style.” Whether he merely adopts a pose or not does not matter; he becomes an icon who leads others to liberation. Presley is similar to one of the motorcycle riders of *The Sense of Movement*, but von Stauffenberg is a more conventional heroic personage. He was the leader of the plot to kill Hitler and died in great pain for that act. He is “honor personified,” although he exists in a time when “honor cannot grow.”

Another interesting theme in Gunn’s poetry is the city. He celebrated the city with sexual metaphors and wrote few poems dealing with nature. The city solicits the speakers in his poems and holds them in an embrace. In “The Map of the City,” he describes the city above all as a place of “chances” and “endless potentiality”; it is a place where liberation is possible.

In *Moly*, Gunn stresses the liberating elements of the LSD experience, since it can take one beyond the agony of choice and the will. “Rites of Passage” shows something of the change LSD brings to the speaker. He has become an animal, specifically a horse, and that transformation brings “completion” rather than regret. Now he can challenge the father who has dominated him. He has become the

Oedipal son who is ready to displace the father with his “horns” and send a message to his mother. The change is a liberating one; the speaker is freed from moral inhibition and can come into his own.

In *The Man with Night Sweats*, Gunn displays a sympathy and feeling for others that had not been prominent in his earlier poetry. He describes the heroism and grace of a group of people who have endured great suffering. Gunn becomes the bard who will record these moments of suffering and courage.

When near your death a friend  
Asked you what he could do,  
‘Remember me,’ you said.  
We will remember you.

Gunn has distilled his poetry into naked clarity and feeling.

## “ON THE MOVE”

**First published:** 1955 (collected in *The Sense of Movement*, 1957)

**Type of work:** Poem

*“On the Move” describes and celebrates the “created will,” which is exemplified in the freedom of a California motorcycle gang.*

“On the Move” is perhaps Gunn’s best-known poem. It perfectly and sympathetically captures the ethos of motorcycle gangs. The poem opens with images of birds following “instinct” and “some hidden purpose.” They have a secure place, since they are “nested.” This, of course, contrasts them to human nature; people are racked with uncertainty and have only a “baffled sense” because they lack instinct and defined purpose. The poem is the fullest exploration of a theme that has obsessed Gunn from the start of his poetic career.

In contrast to the ordinary person, who remains baffled, the motorcycle gangs “strap in doubt—by hiding it, robust—/ And almost hear a meaning in their noise.” They have escaped from the plight of the divided and approach—even if they never reach—the instinct of animals. Gunn describes them as “flies,” metaphorically connecting them to

animals. Where they travel is a matter of chance rather than logic or even moral choice. For Gunn, a life that is open to chance, even if it is dangerous or destructive, is preferable to the intellectual paralysis to which modern people are prone.

The motorcycle gang is portrayed, however, as scaring “a flight of birds across the field.” They are antagonists to the birds of the first stanza. The birds must yield to the will. The actions of the motorcycle gangs, even if destructive, are a solution, if only a partial one. They escape “discord” and damnation by moving “always toward, toward.” In continual flux, they avoid the anxiety of thought to which many are prone.

The last stanza resolves the contrasts. The motorcyclists pass through towns on an endless quest. They find a solution in joining “the movement in a valueless world.” They are neither “birds” nor “saints,” however, since both “complete their purposes.” They are, instead, an alternative. By staying in motion, they may reach no “absolute” or completion, but “One is always nearer by not keeping still.” They are precisely between the given purpose of animals and saints and the sense of meaninglessness and lack of definition that people are constantly condemned to experience.

“On the Move” is a philosophical poem. It confronts the condition of humanity in a world without God or values. How in such a world is one to find a direction or purpose? Gunn’s qualified answer is the “willed” action of a band of motorcycle riders who refuse to submit to the anxieties and dislocations of modern life. Gunn discovers freedom in a group of people who have rejected conventional social mores.

## “MOLY”

**First published:** 1971 (collected in *Moly*, 1971)

**Type of work:** Poem

*“Moly” dramatizes the early stages of a man’s transformation from a lower, bestial nature to a higher, spiritual state.*

“Moly” is written in heroic couplets that have the incantatory effect of a spell or a charm. The re-

peated rhymes mirror the subject perfectly. The poem deals with states of transformation, specifically the effects of LSD upon the human brain. Even with such an unusual subject, Gunn uses conventional metrics and an allusion to one of the best-known works in the Western tradition, Homer’s *Odyssey* (c. 725 B.C.E.; English translation, 1614).

The poem begins with the speaker awaking to find he has been transformed into a beast. He attempts to find out exactly what type of animal he has become: “Parrot, moth, shark, wolf, crocodile, ass, flea./ What germs, what jostling mobs there were in me.” He finally recognizes that he is a pig. He has “bristles” and is “snouted.” “She,” presumably Circe, has brought on this unwelcome change, but, other than acknowledging her role, he says nothing more of her.

The speaker recognizes that the only human elements that remain within him are the eyes; other than this he is “buried in swine.” So, human perception is still there, but his mind and soul are bestial. He would “eat a man,” but he is afraid. There is an animal cunning and a predatory fear about him. These animal qualities, however, are not celebrated as they are in other poems. Now they define a lower condition.

The pig-man is rooting, but this is described as seeking his lost humanity rather than acting in piglike fashion. In addition, he prays to the gods to help him find the plant, “moly,” that will restore his humanity. Prayer is, of course, a sign of a yearning for and acknowledgment of a higher state. The “moly” is described in images of coolness, although it has a “black forked root.” Above all, it possesses “magic” in each of its parts.

The view of the animal state as preferable in “On the Move” is reversed in “Moly.” In commenting on the poem, Gunn has said that one may become a pig, but that is not one’s true state. Apparently, Gunn now favors a search for one’s higher, perhaps spiritual, conditions, rather than celebrating one’s animal, instinc-

tual states. The speaker in “Moly” asks for change, a key concept in Gunn’s poetry. The changes brought by the gods and the moly “are all holy.” Gunn’s positive view of change is now focused on spiritual yearning rather than the exercise of the will.

The poem ends with the search for change rather than change itself. “Moly” and “On the Move” share the theme of incompleteness. The plant, and LSD, hold out the promise of change, but Gunn does not present it in the poem. It remains a dream and a direction in which one is compelled to go. People cannot be satisfied with a bestial condition; they must seek some higher state.

### “LAMENT”

**First published:** 1992 (collected in *The Man with Night Sweats*, 1992)

**Type of work:** Poem

*“Lament” is a detailed description of the effects of the AIDS virus upon a victim.*

“Lament” is a descriptive and narrative poem. It traces the stages of AIDS upon a nameless victim, recording the mental and physical changes in that person. The poem is written in a loose iambic pentameter, and uses rhyming couplets. The couplets do not call attention to themselves, since they are rarely end-stopped. Only by rereading the poem can one become aware of its hidden craft.

The first line announces the subject: “Your dying was a difficult enterprise.” In the early stages, the sufferer is primarily concerned with “petty things.” There is little change in the character of the infected one. He retains “hope” and is “courteous still.” The pain soon brings “nightmare” and an unaccustomed “outrage” to the afflicted one. The “outrage” comes from being excluded from the rituals of ordinary life. He cannot feel “summer on the skin.” Instead, he is imprisoned in the “Canada of a hospital room.” Gunn has described the change in images of distance that perfectly capture the nature of the alteration.

The “distance” that the disease brings becomes more apparent as he becomes “thin”; however, while his body is decaying, his mind remains active

and alert. He writes messages to his friends and is reconciled with his “grey father” after four years of alienation. Gunn then attempts to define the character of the victim, to sum up his essence. He describes him as he was in the past when he displayed wit and humor. “I was so tickled by your mind’s light touch/ I couldn’t sleep, you made me laugh too much.” The images of “lightness” and “laughter” that define the person’s essence are effective contrasts with his later state.

The AIDS sufferer must now confront death. He does this simply but heroically, “equally, without complaint,/ unwhimpering.” He also retains a “lack of self-love” that kept him from worldly success but endeared him to his friends. He does not accept the death that has come upon him. As a result, there is something “uncompleted” about him.

The final stage is the collapse of the body; machines take over, and he drowns in his own “fluids.” The death is rendered memorably and simply by Gunn: “And so you slept, and died, your skin gone grey,/ Achieving your completeness, in a way.” “Completeness” is defined as enduring the inevitable death; it is, therefore, an accomplishment and not a defeat. In the last section of the poem, the speaker assesses his feelings about the person and the event. He speaks about the body of the victim, who did not feel that it was attractive, which finally betrayed him. Gunn describes the AIDS virus as a “guest,” a metaphor which suggests an intimate relation between the victim and the disease.

The last line of the poem completes the “enterprise” of the first line. The AIDS victim has completed “This difficult, tedious, painful enterprise.” Dying is an “enterprise,” an adventurous activity. Gunn brings together the stages of the disease in three contrasting adjectives: “difficult, tedious, painful.” Together they sum up the experience.

### SUMMARY

The publication of *Collected Poems* established Thom Gunn as a major English poet. He wrote with great skill and precision in traditional and experimental styles. Moreover, he refused to be fixed in one poetic mode or subject. He constantly explored and found new styles and subjects for his poetry. His unique accomplishment was to retain the grace and force of tradition while transcending its thematic confines.

James Sullivan

## MARK HADDON

**Born:** Northampton, England  
September 26, 1962

*With the publication of *The Curious Incident of the Dog in the Night-Time*, Haddon bridged the gap between children's fiction and fiction for adults by offering a narrative in the voice of a fifteen-year-old boy with Asperger's syndrome.*

### BIOGRAPHY

Mark Haddon was born on September 26, 1962, in Northampton, a populous area of England's East Midlands region. Although the author has been reserved about offering information about his early years, he has noted in interviews that in writing fiction for children—the literary genre in which he had his first success—he sensed that he was always writing for the child he once was. He has also said that he read little fiction as a child; instead, he read books about science, particularly chemistry and archeology. His favorite book was *Origins of the Universe* (1972) by Albert Hinkelbein. He imagined that he would become a paleontologist. In his adolescence, he discovered poetry, another of his adult writing interests.

Haddon attended Uppingham School and received a B.A. in English from Merton College, Oxford, in 1981. In 1984, he received an M.A. from Edinburgh University. He married Sos Eltis, a fellow of Brasenose College, Oxford. The couple had two children and settled in Oxford.

In his earlier life, Haddon worked at a variety of jobs, which may have influenced his view of the world as it appears in his fiction, as well as in his works for children. His early part-time job as a caregiver to patients with multiple sclerosis and autism surely helped his understanding of learning-disabled people, such as Christopher in *The Curious Incident of the Dog in the Night-Time* (2003), and his work as an illustrator and cartoonist must have readied him to produce his illustrated books for children.

Haddon began publishing books for children in the late 1980's; he has noted ironically that he once imagined such writing would be easier than writing

for adults. From the start, his children's books incorporated humor and mystery and often demonstrated a powerful empathy with his characters, qualities which also have been praised in his adult fiction. In 1994, Haddon published four books in the Baby Dinosaurs series. In the mid-1990's, he wrote and illustrated the first of the popular Agent Z series books, which chronicled the adventures of three friends who form a club and find themselves involved in a variety of humorous escapades.

Two of Haddon's books for young people have been praised for exemplifying his gift for empathy. In *The Real Porky Philips* (1994), the central character is an overweight boy who finds a way to validate his identity with his school world; the novel was short-listed for the Smarties Prize. In *Titch Johnson, Almost World Champion* (1993), the central character is able to overcome his self-image as a loser. Another of Haddon's works for children, *The Sea of Tranquility* (1996), has roots in his youthful interest in space travel and the first moon landing. Haddon has also written for children's television.

Despite his success as a children's author, Haddon has had an ongoing interest in writing adult fiction, an interest which ultimately led to *The Curious Incident of the Dog in the Night-Time*. He has told interviewers that his earlier work included not only the seventeen published children's books but also five unpublished novels, some of which he has called "breathhtakingly bad." One of them, he has jokingly suggested, should be published as a "dreadful warning to young writers who want to be the next James Joyce."

Publication of *The Curious Incident of the Dog in the Night-Time* became a surprising route into adult fiction because in England, at his agent's arrange-

ment, it was published simultaneously by two publishing houses, one for adult literature and another for children's literature. The two versions were identical except for their covers; even the "adult" language was maintained in the young people's version. (Haddon has pointed out that all children know that adults swear, and in the novel, only the adults use swear words.) The novel's double success was a surprise to Haddon, although he has expressed interest in continuing to write for adults, as well as in pursuing his interest in poetry.

### ANALYSIS

Haddon once noted in a newspaper essay that Jane Austen's novels focus on ordinary people, going about ordinary lives at the end of the eighteenth century. What makes readers admire her work, he claimed, is the sympathy she exhibits for those ordinary young men and women who populate her novels. One might say much the same about Haddon's first two adult novels, which, like Austen's, are populated by ordinary people whom Haddon invites the reader to feel for and even to like. Superficially, the characters of these novels are quite different.

The adolescent Christopher Boone, the narrator of *The Curious Incident of the Dog in the Night-Time*, tells his story with the affectless voice of a person with Asperger's syndrome. He is incapable of analyzing the emotions of the people around him or of interpreting their motives in his dizzying world, where he always teeters on the edge of sensory overload. The four characters who provide the point of view in *A Spot of Bother* (2006), on the other hand, spend a great deal of time analyzing themselves and others. All of them, however, are part of a very ordinary world. Christopher is trying to understand who killed the poodle of one of his neighbors, and in the process he comes to learn the secret of his mother's death and his family's breakdown. The four members of the middle-class Hall family in *A Spot of Bother* are grappling with the usual materials of comedy—three love affairs, which look likely to disintegrate, a family wedding, and, the salt in the comic froth, a grand-scale mid-life crisis.

The last decades have increased public understanding of what the medical world calls "the autism spectrum," so that Christopher Boone's particular personality traits in *The Curious Incident of the*

*Dog in the Night-Time* may remind readers of what countless magazine articles and television specials have often described. The person with Asperger's syndrome, a high functioning variety of autism, may have difficulty empathizing with others and with understanding the significance of others' gestures and facial expressions. Such persons may dislike being touched, may insist on rigid routines for activities and even for foods, and may find loud noises frightening and painful. They may find figurative language and jokes baffling, and they may have their own idiosyncratic passions and monomanias and their own curious means for comforting themselves, such as rocking or hand flapping, when the world frightens them with incursions of noise or other sensory impressions. Haddon's success lies in creating a voice for Christopher that rings true but still allows the reader to care about him. Part of the novel's humor rises from Christopher's misinterpretation of events around him, but because those events are described through Christopher's eyes, the reader inevitably identifies with him as well. His fear of people he does not know forces him into a complicated mental gymnastic in order to find a railroad station; he is more comfortable making mental maps than asking directions. His solution is funny, but it also establishes his intelligence.

Haddon accomplishes the same effect in portraying George Hall's mental breakdown in *A Spot of Bother*. Like Christopher, George imagines that even his most irrational actions are perfectly logical, an effect of stress. Haddon is particularly skilled at creating lifelike descriptions of disintegrating mental states, the state which makes Christopher sit immobilized on a bench in a subway station for six hours or which leads George to attempt do-it-yourself surgery on what he believes to be a tumor on his hip.

It may seem superficial to note that communication is an important theme in Haddon's work; after all, communication is a key to most human relationships. Some critics faulted *A Spot of Bother* for offering situation-comedy situations and solutions, last-minute epiphanies that some readers found too pat for comfort. However, even truisms can be meaningful. In *The Curious Incident of the Dog in the Night-Time*, most of the novel's action results from Christopher's inability to communicate with others, and one of his father's most appealing qualities

is his effort to make his son understand his love for him. Tellingly, father and son's estrangement arises from his father's attempt to hide the fact that Christopher's mother has left them by telling Christopher that his mother has died. Christopher's terrifying journey from Swindon to London is precipitated by his finding a packet of the letters that his mother has faithfully written to him.

In *A Spot of Bother*, the whole Hall family is paralyzed by the members' failure to talk to one another or to look much beyond themselves. George and Jean are in late middle age, and their marriage has faded into wordless routines that have sent each of them in different directions. Jean is involved in a love affair, while George, whose focus is even more inward than hers, concludes that he is dying of cancer. Their grown daughter Katie seems about to make a second bad marriage, though neither of her parents is able to tell her their concerns, particularly because ever since her explosive adolescence, talking with her has been a bit like walking through a minefield. George and Jean have also been unable to talk honestly with their son Jamie, who has told them that he is gay but who has never brought his partner, Tony, to meet them. Now Jamie's relationship with Tony seems to have ruptured, in part because Jamie has been unable to articulate—or even to admit to himself—the depth of his feelings for Tony. Haddon's particular gift is his ability to make his readers care about these people, even while he describes the world as it is viewed through their very limited vision. “Only connect” is the motto the English novelist E. M. Forster provided for his characters in *Howards End* (1910); it would carry equal weight in Haddon's work.

## THE CURIOUS INCIDENT OF THE DOG IN THE NIGHT-TIME

**First published:** 2003

**Type of work:** Novel

*When fifteen-year-old Christopher discovers that his mother is alive in London, he sets off on a journey to find her, despite the many ways in which he is limited by Asperger's syndrome.*

*The Curious Incident of the Dog in the Night-Time* established Mark Haddon as a writer of adult fiction. It won the Whitbread Book of the Year prize, *The Guardian* Children's Fiction Prize, and the Booktrust award for teenage fiction. The novel's main appeal is the character of its narrator, fifteen-year-old Christopher Boone, whose counselor in his special-needs school has suggested that he write a book, and so he does. Although the words “autism” and “Asperger's syndrome” are never mentioned in the novel, it soon becomes clear that Christopher has a high functioning form of autism. Because of the particular way his brain is wired, fiction is unappealing to him; he cannot tell lies or understand most made-up stories. As he tells his narrative, the list of his quirks grows ever larger. He cannot eat things colored yellow or brown. He cannot be touched. Seeing three red cars in a row on the way to school means that it will be a good day.

Christopher, however, is a very bright child. In mathematics, his abilities are far beyond his age. He is intensely observant of the world around him, even though its human inhabitants are mostly a mystery to him. He loves puzzles and is very good at them, so it is no surprise that he likes the Sherlock Holmes mysteries of Sir Arthur Conan Doyle; Holmes's dispassionate analysis of clues is especially appealing to him. Thus he has decided to write a mystery to address his counselor's assignment.

From the opening pages, Christopher's special gifts, as well as his special limitations, are apparent. He numbers his chapters using only prime numbers (2, 3, 5, 7, 11, and so forth). He always knows the precise time, and he notices that one of his teachers wears brown shoes with approximately sixty small circular holes in them. When Christopher finds a dead poodle, he is sad; he likes dogs, whose moods are much less puzzling than human moods, and he resolves to discover its killer.

Christopher's discovery of the dog leads to a skirmish with the dog's owner, who calls the police. When the policeman asks too many questions too fast, Christopher employs his usual method of coping with overload—he lies down and begins groaning. When the policeman tries to force him to get up, he becomes frantic and hits the man because of his intolerance for being touched. When his father comes to get him out of jail, the two fan out their fingers and touch their hands together; this gesture, created by his father, means "I love you" and substitutes for the hug that Christopher cannot bear. Throughout the novel, Christopher's father seems to be a man who is doing his best in a nearly impossible circumstance, raising his difficult son alone. However, here his father testily tells Christopher to give up the idea of investigating the poodle's death.

Christopher does not stop the investigation, however. It is the subject of his book, and he begins interviewing some of the more approachable neighbors, but timidly, because he is fearful of strangers. When his father learns of the book, he throws it away, with the inevitable result that Christopher searches until he finds it in his father's closet, along with a packet of letters his mother has written him every week since his father told him she died of a heart attack. Now he learns that she is alive, living in London with the husband of the neighbor who owned the dog. She confesses that she thinks Christopher is better off with his father, who has more patience than she did; nevertheless, she loves Christopher and is puzzled that he has never written her.

The letters occupy the exact center of the novel and form a turning point for what happens to Christopher, for when his father discovers him reading the letters, he tries to explain his terrible lie, talks about his liaison with the dog-owning neighbor after his wife's departure, and finally con-

fesses that he himself killed the dog in a bout of anger. Christopher is left with only one possible conclusion: His father is a dangerous man who may also try to kill him.

That conclusion leads Christopher to start his bold trip to London. He surmounts all the obstacles, although sometimes he does so awkwardly, hiding in a luggage compartment for most of the train trip, sitting terrified in the subway station for six hours, and risking his life among the subway rails to rescue his pet rat Toby. When at last he arrives at his mother's apartment, he is met with the awkward fact that her partner is not at all glad to share the flat with someone whose needs are as complicated as Christopher's. In the end, his mother moves back to Swindon with Christopher, although she does not return to his father. In the novel's last chapters, it is clear that his father is willing to make a herculean effort to regain Christopher's trust. He takes the first step by buying him a dog, to Christopher's pleasure. Christopher passes his A-level mathematics exam with an "A," adding to the novel's hopeful conclusion.

## A SPOT OF BOTHER

**First published:** 2006

**Type of work:** Novel

*George Hall is thrust into a deep depression when he concludes that he has cancer; meanwhile, his wife, daughter, and son all face crises of their own.*

The domestic comedy of *A Spot of Bother* is presented from four viewpoints. It begins as George Hall, a retired playground equipment manufacturer, decides that an odd spot on his hip is cancerous. In "his" chapters, he grapples with growing terror at the thought that he is about to die. Despite his doctor's reassurance, he sinks ever deeper into angst, finally attempting to remove the spot himself. A hospital stay and a prescription for Valium give him some respite, but soon his despair reemerges, leaving him nearly incapacitated.

His wife, Jean, is little help. Over the years, their marriage has staled, and she is involved in a love affair with David, one of George's former coworkers.

At the time of George's crisis, she is upset that their daughter, Katie, is about to marry Ray, a man the family has called "unsuitable." Her concern for Katie and her interest in David leave her little time for George's eccentric behavior, and anyway, George is unable to tell her about his fears, especially after he observes her and David making love in their bed.

Katie herself is unsure of her motives for marrying Ray. He seems much better than her first husband, and he is unfailingly kind to her little boy, Jacob. Moreover, he has a nice house and plenty of money. What he lacks is Katie's intellectual achievement, and she fears that she is about to marry for security, not love.

Her brother Jamie, a successful real estate agent, also has love problems. He and his boyfriend Tony have just split, and Jamie must come to terms with his guilt in spoiling their relationship, as well as with his concern for his sister's welfare. He dreads the upcoming wedding, knowing that his parents are hypersensitive to what others may think of his homosexuality. His unwillingness to invite Tony to the wedding was the precipitating factor in their breakup.

The novel's many short chapters circle through these characters' concerns and the various crises that arise from the on-again, off-again wedding and George's erratic behavior; at one point, he

crouches behind a chair and moos softly. Because this is a comedy, the errors multiply on the day of the wedding, but each character arrives at last at an understanding of the importance of true love. Everyone realizes what a sterling fellow Ray is; Jamie manages to patch things up with Tony; Jean knows that she belongs with George, who in turn realizes that the spot on his hip is just what the doctor diagnosed—eczema. Among all these rather neat epiphanies, all the characters come to understand that human attachments are more significant than what others may think about them. None of them says "Only connect," but they all know it.

## SUMMARY

Mark Haddon's work is essentially comic. His skill is in creating voices for his comic characters, in making their breakdowns both funny and moving, and reminding his readers that human connections make life bearable.

Ann D. Garbett

## DISCUSSION TOPICS

- In Mark Haddon's *The Curious Incident of the Dog in the Night-Time*, what evidence do you see that Christopher's parents love him?
- What about Christopher would make it difficult to care for him?
- How well (or badly) does Christopher manage his trip to London? Is he brave or foolish?
- Why does Christopher include all the math problems and puzzles in the novel?
- What makes the Hall family reevaluate Ray in *A Spot of Bother*?
- What does Jamie learn about love in the course of trying to get Tony to return to him?
- What future do you see for George and Jean at the end of *A Spot of Bother*? Will they be able to make a new start?

## KNUT HAMSun

**Born:** Lom, Norway

August 4, 1859

**Died:** Nørholm, Norway

February 19, 1952

*In addition to writing poetry and drama, Hamsun is recognized as an originator and skilled practitioner of the modern psychological novel, as well as one of the pioneers of literary modernism.*

### BIOGRAPHY

Knut Hamsun (HAHM-suhn) was born Knut Pedersen on August 4, 1859, at the farm Garmotræet in the district of Lom, Norway. His father, Peder Pedersen, and mother, Tora Pedersen, were both of peasant stock. In 1863, Pedersen and his family moved to Hamarøy in Nordland, Norway, where they settled on a farm called Hamsund, from which Hamsun later took the name by which he is known. Hamsun's early childhood was a happy time. At the age of nine, however, he was sent to live with his uncle, who owned Hamsund and to whom his parents were indebted. The boy worked hard and was harshly treated, but at the age of fourteen he was released and began working odd jobs.

The young Hamsun was familiar with both the popular writing of his time and some of its more valuable literature. Dreaming about becoming a writer, he published two short books while yet in his teens and was able to obtain the support of a wealthy merchant. He produced another manuscript and traveled to Copenhagen but was unable to find a publisher. He spent a difficult winter in the city of Christiania (now Oslo), Norway, and later spent several years in the United States, where he worked in a variety of jobs, read widely, and lectured to his compatriots on cultural and literary topics.

Hamsun's difficult times provided him with the material for his novel *Sult* (1890; *Hunger*, 1899), the work that was his literary breakthrough. Some lectures on the state of literature, delivered in 1891, further contributed to his fame; Hamsun argued in favor of the new psychological novel, of which *Hunger* was a groundbreaking example.

The 1890's were very productive years for Hamsun. He wrote such significant novels as *Mysterier* (1892; *Mysteries*, 1927), *Pan* (1894; English translation, 1920), and *Victoria* (1898; English translation, 1929), enjoyed an increasing reputation, and traveled much. He also wrote poetry and drama. In 1898, he married Bergljot Bech, whom he had met the previous year and who inspired the beautiful love story *Victoria*. The couple divorced in 1906.

During the next few years, Hamsun wrote a number of other novels that are not considered among his best. After his marriage to Marie Andersen in 1909, however, he turned away from focusing on the solitary and exceptional mind and increased his attention to social relationships. One of these novels, a celebration of rural life entitled *Markens grøde* (1917; *Growth of the Soil*, 1920), helped earn him the Nobel Prize in Literature in 1920. The book, in which the author argues in favor of traditional values, tells about a man who goes into the woods of northern Norway, clears land for a farm, and rears a family in close contact with nature.

*Growth of the Soil* was inspired by Hamsun's life on his farm, Skogheim, in Hamarøy, northern Nor-

way. He found himself too isolated there, however, and purchased the farm Nørholm in the far south, where he settled in the 1920's. Fearing that his creativity was failing, he began psychotherapy in 1926. The following year, he published his novel *Landstrykere* (1927; *Vagabonds*, 1930; also as *Wayfarers*), which is universally regarded as the finest book from the second half of his career. The first volume in a trilogy, it was followed by *August* (1930; English translation, 1931) and *Men livet lever* (1933; *The Road Leads On*, 1934). The trilogy tells about a dreamer and eccentric named August, who is both admired and criticized by the author. August possesses a priceless creative imagination, but he uses it mostly for schemes that bring trouble to those who know him.

By the time he concluded the August trilogy, Hamsun was well into his seventies. He was not as intellectually keen and physically strong as he had been, and his hearing was failing. He published what was expected to be his final book, *Ringens sluttet* (1936; *The Ring Is Closed*, 1937), and he would probably have remained silent were it not for the political developments of the time. Hamsun had always admired Germany and German culture and had been rather contemptuous of the British. He now allowed himself to be seduced by the rhetoric of Adolf Hitler and, when Germany invaded Norway, he supported the collaborationists and urged Norwegian soldiers not to fight. After the war, he was brought to trial, convicted of treason, and heavily fined. As a defense, he published the moving memoir *På gjengrodd stier* (1949; *On Overgrown Paths*, 1967), lived quietly, and died on his farm in Nørholm, Norway, on February 19, 1952.

## ANALYSIS

As a young man, Hamsun keenly felt the difference between himself and those who possessed wealth and power in society. An outsider, he wanted to achieve social and material success, but he also valued the freedom of not having to fulfill the expectations of others. Many of his early protagonists have been placed in a similar position, in that they have to choose between, on one hand, freedom and powerlessness, and, on the other, power and its accompanying ties.

Another characteristic of the young Hamsun was that he believed himself to be talented but unappreciated. This characteristic is also found in his

heroes, many of whom are afflicted with an extreme self-absorption stemming from a lack of recognition.

Hamsun's early novels, such as *Hunger* and *Pan*, are inquiries into the minds of hypersensitive, gifted, and lonely individuals. In order to facilitate the exploration of the mind, these books make use of first-person narrators through whose narration the reader is given the illusion of having direct access to the psyches of the narrator-protagonists. These characters often seem to confirm or even celebrate their independence by outrageous acts, such as when the hero of *Hunger* deliberately eats until he vomits, when Nagel in *Mysteries* frightens the lowly character called the Midget, and when Glahn in *Pan* spits into the ear of the Finnish baron. Yet the same characters also strive to fit into their society, pursuing art, women of a higher social standing, or both. Each of these men also tries to climb socially through love. The ties of artistic success and respectability are definitely felt to be ties that bind, and so are the bonds of matrimony, but each of these outsider-protagonists is nevertheless in pursuit of them.

Hamsun's literary style changed dramatically as he moved into the second half of his career, and so did his thematic concerns. After achieving success, he was not as interested in the character of the lonely outsider as before, and he turned his attention to portraying the workings of social life. He also abandoned the first-person perspective in favor of third-person narration, employing omniscient narrators through which he could have access to the minds of all of his characters. He retained some interest in the exceptional individual, but his concern largely shifted to the social group. At the same time, the author became highly critical of many of the features of modern life, such as industrial production, women's liberation, and the labor movement.

These objections to modernity first came to the fore in the two novels *Børn av tiden* (1913; *Children of the Age*, 1924) and *Segelfoss by* (1915; *Segelfoss Town*, 1925), both of which have as their setting the town of Segelfoss in northern Norway. Through a portrayal of the gradual industrialization and modernization of the community, which grows from a few houses scattered around a flour mill into a small town, Hamsun analyzes the process by which the old and semifeudal social order vanishes and is re-

placed by the social and economic reality of the twentieth century. The author distrusts modern life with its lack of respect for authority, its money-based economy, and its system of education through which talented young people are reduced to clergymen, doctors, and lawyers. Both of the novels have an engaging story line, interesting characters, and several humorous episodes, but the general tone is one of pessimism.

Hamsun's critique of modern life continues in *Growth of the Soil*, in which he creates a positive counterpart to the decaying society at Segelfoss. Isak Sellanraa, the protagonist, is a man not only without a past but also without the cultural baggage of contemporary life. The novel relates how he conquers the wilderness of northern Norway and builds a farm, rears a family, and passes on his farm to one of his sons. Isak (his name is the Norwegian form of the name Isaac) is named for an Old Testament patriarch; his values are hard work, patriotism, and the simple life. His is not an entirely paradisiacal existence, however, for civilization closes in on him in the form of a mining operation that goes bankrupt, and he loses part of his family to modern thinking. An important motif in the book is the author's anti-Americanism. Hamsun placed his story in northern Norway in order to show that there was no need for enterprising people to immigrate to the United States; however, at the end of the book, Isak's oldest son has no way out but emigration, constituting a powerful indictment of the way of life that Hamsun had come to know while in America.

In the trilogy that consists of *Vagabonds*, *August*, and *The Road Leads On*, many of the themes of *Growth of the Soil* are continued. A tragic character named Edevart, who does not have the strength to resist the allure of the modern world, is corrupted and leaves Norway for the United States, where he does not feel at home. Returning home he feels equally out of place, and his lack of a sense of belonging extends to his relationship with women. His counterpart, August, is unsettled from the beginning; his ideology is completely in line with that of high capitalist industrialism, although his acts are those of a parasite. Other characters exemplify Hamsun's positive values but are given comparatively little space. The anti-American theme is continued in Hamsun's final novel, *The Ring Is Closed*, which is a dark and pessimistic book.

## HUNGER

**First published:** *Sult*, 1890 (English translation, 1899)

**Type of work:** Novel

*A budding writer starves in the capital city of Christiania (now Oslo), Norway.*

*Hunger*, which was based on Hamsun's many unhappy experiences in Norway's capital city of Christiania, was one of the first modern psychological novels in world literature. Told in the first person, it is the story of a young writer of exceptional sensibility, who, stripped of all of his property and without any reliable means of support, is about to perish from extreme hunger. The book contains little action in the traditional sense. With the exception of the story of a few attempts to secure employment and the account of a brief encounter with a lady of the middle class, the text consists almost exclusively of reports of the narrator's mental life during periods of starvation.

The experience of hunger was surely not uncommon among artists at the time and the social

consequences of hunger figure prominently in the naturalistic literature of the Scandinavian countries. The importance of *Hunger* lies not in its subject matter but rather in the manner in which the author deals with it, for his focus is on a portrayal of the strange workings of the mind while in an altered state resulting from the lack of nourishment. To this end, Ham-

sun uses a stream-of-consciousness technique through which the reader is given access both to the perceptions, moods, and strange ideas of the narrator and to his reflections on his own state of mind.

The narrator views himself as a completely committed artist, and his concern is both to prevent his hunger from negatively affecting the sensibilities that make him capable of producing art and to use his unpleasant experiences in his art. The narra-

tor's tendency toward self-observation can be viewed both as a part of his artistic project, the gathering of material for a novel that he wants to write, and as a means of making certain that the needs of his body do not overcome his mental or artistic needs.

Little is learned about the narrator's past throughout the book, and only a few details concerning his identity are provided. These details do not even include the mention of his name, but it is clear that he is an individual who, in the past, has been somewhat better off economically; it is possible to deduce that he, like Hamsun himself, worked in other occupations before devoting his life entirely to writing. The novel shows, however, that he is not exclusively concerned with examining his own mind for the purpose of his art.

A mysterious young middle-class woman named Ylajali, to whom he is attracted, appears to have little artistic significance to him; his interest in her seems to originate in a concern for social position. The narrator's pursuit of Ylajali can be read as an alternative means to the kind of success that, so far, he has not been able to achieve through his art. That makes the narrator-protagonist of *Hunger* appear to be a practical man, who, perhaps like his creator Hamsun, views art as a means of social advancement at least as much as an end in itself.

## PAN

**First published:** *Pan*, 1894 (English translation, 1920)

**Type of work:** Novel

*A young lieutenant experiences love and the dynamics of power during a summer in northern Norway.*

*Pan* has a rather complex narrative structure. It is a first-person novel in which the main part of the story is told by the narrator-protagonist, Glahn, two years after the events that are being narrated took place. The main part is followed by an epilogue, also in the first person, in which the story of Glahn's death is told by an unnamed hunting companion.

The main story takes place in northern Norway during the summer months of the year 1855. Glahn, a lieutenant who has obtained leave from his commission, is living a rather primitive life as a hunter and fisherman in a forest cabin near the trading post Sirilund. He is tired of civilization, he says, and has left behind the norms of cultured society, being unable to get along well with cultivated people. In narrating his story, Glahn tells both about the external events of his life out in the wilderness and about his reflections on existence, and it is clear that he is trying to become an artist.

During visits to the trading post, Glahn becomes acquainted with Edvarda, the daughter of the trader Mack. Being attracted to her both because of her social position and for her own sake, he tries to win her, but Edvarda is emotionally unpredictable, and a love-hate relationship, in which they take turns torturing each other, develops. Glahn also enters into a sexual relationship with Eva, who, despite her marriage to the local blacksmith, is the mistress of Edvarda's father, Mack, whom Glahn displaces. Attempting to play the role of the Greek god Pan, Glahn also seduces a young goatherd named Henriette.

Much of the story deals with the battle between Glahn and Mack over Eva, as well as with Glahn's attempts to get rid of two rivals in his relationship to Edvarda—the local doctor and a Finnish baron who is conducting scientific research in the area. Glahn, while present at a party and slightly inebriated, deliberately offends the baron by spitting into his ear. He also offends the doctor by treating him like a dog, whistling to him and coaxing him to jump over his gun as if it were a stick. Neither the doctor nor the baron is willing to lower himself to Glahn's level, but Mack, who has been accustomed to holding unchallenged power in the area, is not afraid of facing him. Shrewd and manipulative, Mack decides to show Glahn that he is the more intelligent of the two by forcing him to abandon a project. Glahn has been planning to blast some rock out of a seaside cliff as a final salute to the

baron, who is leaving by ship, but Mack orders Eva to tar a boat below the cliff, thinking that Glahn will not risk hurting her. Glahn, however, has less regard for Eva's life than for his own pride, and the result is that Eva dies in the explosion.

Glahn behaves erratically on other occasions also. One of the most disturbing instances is found in the book's epilogue, which relates how he goads a hunting companion into shooting and killing him while in India. Not necessarily a happy story, *Pan* clearly sets forth Hamsun's view of the relationship between love, power, and the temperament of the artist.

## GROWTH OF THE SOIL

**First published:** *Markens grøde*, 1917  
(English translation, 1920)

**Type of work:** Novel

*A homesteader carves out a farm from raw nature in northern Norway but later finds his work overtaken by civilization.*

Starting with the novels *Children of the Age* and *Segelfoss Town*, Hamsun severely criticized the decline of traditional society and the problems associated with modernization. This critique was continued in *Growth of the Soil*, in which Hamsun both wanted to show the full extent of the evils of the modern age and to offer his portrait of modernity against the backdrop of the story of a heroic homesteader, Isak Sellanraa.

Like some of the outsiders in Hamsun's novels from the 1890's, Isak has no history when he appears in the wilderness, looking for a place to settle. Hamsun emphasizes that his presence is as natural as that of the wild animals of the area, and shows that his premodern approach to living is both healthier and more natural than a life based on a monetary economy. Isak works hard, clearing land and building shelter for himself and his farm animals with simple hand tools, and his work is portrayed as more authentic than the mechanized and highly capitalized alternative.

As Isak's farm grows and prospers, he is able to attract a woman, Inger, whose harelip makes her willing to settle for the strong but physically un-

attractive homesteader. Inger bears two healthy sons, Elseus and Sivert, but her third child is a girl with a harelip. Worried that the child will have a miserable life, Inger gives birth to her in secret and kills her before anyone sees her. While she is generally unsentimental, Inger deeply mourns her daughter.

Inger's criminal act is discovered and she is sentenced to six years in prison in the city of Trondheim. While Inger is basically a good person, another mother and child murderess in the novel, a servant named Barbro, is not. Barbro lacks the sound instincts that could have allowed her to bond with Axel, the homesteader who wants her as his wife.

When Inger returns from prison after completing her sentence, she brings many new ideas that she learned while she was away from home. She also encourages Elseus, her first-born son and heir to the Sellanraa farm, to get a job in town. This experience makes Elseus unfit for farm life and he eventually has no choice but to leave Norway for the United States.

The biggest threat to the rural values depicted by Hamsun, however, comes from the discovery of copper ore on Isak's land. The local sheriff, Geisler, helps Isak obtain title to his homestead and is a generally helpful adviser to him, but he is also the agent through which the copper mine is developed, and modernity invades Isak's paradise. Ultimately, however, the mine fails, while Isak's farm continues to prosper and is taken over by his son Sivert, who represents the next generation of the family.

## SUMMARY

The literary career of Knut Hamsun is marked by the contrast between the great artistic quality of his works, which are almost universally admired, and the questionable, even bizarre, behavior of many of his central characters. While social themes became the focus in Hamsun's later novels, resulting in a subordination of character portrayal to the author's ideological concerns, his early works were explorations of highly unusual minds. Artists or artists in the making, his early protagonists are always memorable, although not always to be admired, and their tortured lives are made intelligible to the reader through their occasionally outrageous actions. Through it all, the reader is made

acutely aware of the price that must be paid for creating art. Such later characters as Isak in *Growth of the Soil* exhibit a similar degree of commitment to their own particular projects.

## PETER HANDKE

**Born:** Griffen, Austria  
December 6, 1942

*Handke is best known for his novels and plays, which are characterized by their innovative use of language and their radical departure from established literary and theatrical traditions.*

### BIOGRAPHY

Peter Handke (HAHNT-kuh) was born on December 6, 1942, in Griffen, Austria, a village in the province of Carinthia near the Yugoslavian border. As a child he lived in the country, except for four years spent in Berlin between 1944 and 1948. He studied law at the University of Graz from 1961 to 1965, which may have influenced his writing style; his attention to detail, precision, and complex sentence structure are all characteristic of legal language.

Handke's first published work appeared in the magazine *Manuskripte* in the mid-1960's; his first novel, *Die Hornissen* (the hornets), appeared in 1966. This novel was favorably received by critics, but Handke did not achieve true recognition until later that year, when he launched a dramatic public attack on German writing and criticism that, he believed, unduly favored traditional descriptive prose and rejected new, experimental techniques. The setting for this attack was a writers' conference in Princeton, New Jersey; the audience (and targets) were the members of Gruppe 47 (Group 47), an influential organization of German writers. Ironically, the writers Handke criticized responded enthusiastically to his remarks, and the incident led to his recognition in the prestigious magazine *Der Spiegel*. The Princeton meeting was a major turning point in Handke's career, bringing international

attention to both his work and his controversial and innovative ideas about writing.

Handke's rejection of tradition and interest in artistic experimentation received their first major expression the same year in *Publikumsbeschimpfung* (pr., pb. 1966; *Offending the Audience*, 1969), a short play whose title is indicative of its content. Instead of a typical play with scenes, characters, costumes, and sets, *Offending the Audience* consists of four actors in ordinary clothes on a bare stage. Instead of speaking lines of dialogue to one another, the actors directly address the audience, telling them that they are not going to see a play at all, then going on to discuss various ideas about the theater, audiences, illusion, and reality. The title has a double meaning: First, the expectations of the audience are mocked by the bizarre nature of the play; in addition, the audience is subjected to a barrage of insults from the actors before the play ends. For obvious reasons, some critics called this work an "antiplay" or "antitheater"; Handke prefers the term *Sprechstucke*, or "speaking piece." First performed in Frankfurt as part of a weeklong theater festival called Experimenta I, *Offending the Audience* was as startling and intriguing as Handke's Princeton speech; it ensured Handke's status as a major figure in experimental theater in the 1960's.

Other "speaking pieces" followed: *Weissagung* (pr., pb. 1966; *Prophecy*, 1976), *Selbstbezeichnung* (pr., pb. 1966; *Self-Accusation*, 1969), and *Hilferufe* (pr. 1967; *Calling for Help*, 1970). Like *Offending the Audience*, these short dramatic pieces lack the traditional elements of scene, character, and plot and are highly experimental in nature. The year 1968 saw the production of *Kaspar* (English translation, 1969), Handke's first full-length drama,

based on the true story of a young man who grew up in isolation and did not learn to talk until late adolescence. Compared by some critics to Samuel Beckett's *En attendant Godot* (pr. 1952, pb. 1953; *Waiting for Godot*, 1954), *Kaspar* represents Handke's greatest theatrical success. Other notable plays by Handke include *Das Mündel will Vormund sein* (pr., pb. 1969; *My Foot My Tutor*, 1970), *Quodlibet* (pr. 1970; English translation, 1976), and *Der Ritt über den Bodensee* (pr., pb. 1971; *The Ride Across Lake Constance*, 1972).

Handke's literary reputation is based as much on his fiction as on his dramatic works. His first novel to achieve notable success was *Die Angst des Tormanns beim Elfmeter* (1970; *The Goalie's Anxiety at the Penalty Kick*, 1972). The novel deals with the mental breakdown of a working-class man, a former soccer player whose psychological deterioration culminates in murder. Murder and mental illness also figure prominently in *Die Stunde der wahren Empfindung* (1975; *A Moment of True Feeling*, 1977). Handke offers a more personal treatment of death in *Wunschloses Unglück* (1972; *A Sorrow Beyond Dreams*, 1974). While classified as fiction in most Handke bibliographies, this work is actually an account of his mother's life and suicide. Other novels include *Die linkshändige Frau* (1976; *The Left-Handed Woman*, 1978) and a collection of short novels published under the English title *Slow Homecoming* (1985). The central character in *Mein Jahr in der Niemandsbucht: Ein Märchen aus den neuen Zeiten* (1994, *My Year in the No-Man's Bay*, 1998), Gregor K., is simultaneously an allusion to Franz Kafka's famous character Josef K. and a representation of Handke himself.

In addition to novels and plays, Handke collaborated on the screenplay to *Der Himmel über Berlin* (*Wings of Desire*, 1987) with director Wim Wenders, and he has published a number of poems and essays, many of which have been collected and translated in several volumes. One of his better-known collections of poems is *Die Innenwelt der Aussenwelt der Innenwelt* (1969; *The Innerworld of the Outerworld of the Innerworld*, 1974). In 1969, Handke, along with ten other writers, established a cooperative publishing company called Verlag der Autoren. He has lectured at universities in the United States and has adapted several of his works to radio and film. He has lived in Austria, France, Germany, and the United States.

Handke has come under scrutiny for his political views. As early as 1966 he gained notoriety by criticizing Heinrich Boll and Günter Grass for employing the novel as a means of social criticism. In 1999, he gave back the prize money associated with the Georg Brückner Award, which he won in 1973, and left the Catholic Church because of his opposition to NATO (North Atlantic Treaty Organization) attacks on Belgrade. In 2006, he was announced as the winner of the Heinrich Heine Prize, only to have the prize revoked by the city of Düsseldorf primarily because of the author's remarks at the funeral of Yugoslavian president Slobodan Milošević.

## ANALYSIS

Because of their nontraditional form and style and often bizarre subject matter, Handke's works may seem intimidating to readers approaching them for the first time. A play such as *Prophecy*, for example, which consists entirely of statements such as "The chickens will scurry like chickens" and "The weasel will be weasel-faced," resists the kind of straightforward interpretation that more conventional literary works allow. A consideration of some recurring themes in Handke's work, however, can help clarify his often obscure material. Among Handke's most important themes are the uses and significance of language, the analysis of abnormal psychological states, and the nature of the writing process itself.

Handke's writing is filled with strange, innovative, and often playful uses of language. Moreover, language itself is frequently the subject of his writing, as in *Calling for Help*, which consists of a series of sentences and phrases spoken by two or more people on stage, each relating in some way to a need for help: "someone has escaped from death row," "workers at that time were living in inhuman conditions," "in case of emergency." Each sentence or phrase is followed by the response "no," as in a children's guessing game, until the required word, "help," is tried, leading to a "yes!" Handke explains:

the speakers' objective is to show the way to the sought-after word HELP, a way that leads across many sentences and words. . . . while the speakers are seeking the *word* help they are in need of *help*; once having found the *word* help they no longer

need any help. before they find the word they ask *for* help, whereas once they have found the word help they only speak *help* without needing to ask *for* help any longer. once able to shout help, they no longer need to shout *for* help; they are relieved that they can shout help. the word HELP has lost its meaning.

*Calling for Help* uses irony and wit to examine a fundamental paradox of human relationships: People often find it most difficult to communicate their most urgent needs to others. When communication is finally established, Handke suggests, it may lose its original purpose and value. (Note that Handke, like the poet E. E. Cummings, ignores traditional capitalization rules in this work—probably to emphasize its verbal, rather than written, nature.)

If Handke's use of language is sometimes playful, his subject matter is often just the opposite, frequently centering on mental breakdowns or other psychological disturbances. The protagonists of *The Goalie's Anxiety at the Penalty Kick*, *A Moment of True Feeling*, *Kaspar*, and *A Sorrow Beyond Dreams* all exhibit some kind of emotional problem: psychosis, neurosis, childhood trauma, or depression. This emphasis on mental illness might seem morbid at first. Handke is not, however, interested in depicting the sensational or the bizarre for its own sake; his treatment of these subjects is typically low-key and objective. Rather, Handke uses the concepts of mental health and mental illness to examine and comment on the nature of reality, perception, and the place of the individual in society. For example, Joseph Bloch in *The Goalie's Anxiety at the Penalty Kick* walks away from his job, assuming that he is fired because only one of his coworkers looks at him when he arrives at work one day. An obviously neurotic behavior, Bloch's action demonstrates the frightening power of individual perception: His reality has, in a real sense, been altered solely because of the way he views that reality. A similar situation is found in *Der kurze Brief zum langen Abschied* (1972; *Short Letter, Long Farewell*, 1974). The narrator of this novel, an Austrian such

as Handke himself, declares, "As far back as I can remember, I seem to have been born for horror and fear." As he travels across America after receiving a letter from his estranged wife ("I am in New York. Please do not look for me, it would not be nice for you to find me"), his troubled perceptions of life are used to shed light on personal interactions, the relationship of Europe to America (the "old world" and the new), and the connections between personal experience and the "real world."

A final element that defines Handke's writing is his treatment of the writing process as a subject in itself, a characteristic of much contemporary, or postmodern, literature. While authors of more conventional literature tend to tell their stories without referring to themselves or to their audience, Handke often interjects into his plays and fiction explicit commentary about himself, his thoughts about what he is writing, and his audience. Obvious examples are seen in *Offending the Audience*, where the relationship of the audience to the presentation on stage is the central concern of the play, and in *Calling for Help*, where audience reaction is crucial to the meaning of the material. Awareness and acknowledgment of the writing process are also found in *A Sorrow Beyond Dreams*, in which Handke repeatedly comments on his motivation for and approach to writing:

My mother has been dead for almost seven weeks; I had better get to work before the need to write about her, which I felt so strongly at her funeral, dies away and I fall back into the dull speechlessness with which I reacted to the news of her suicide.

Through his direct commentary on the creative process, Handke continually reminds his readers that literature is the end product of a conscious intellectual endeavor, and that writing does not exist in a vacuum but has full meaning only in the context of the relationship between the writer and his audience. While analyzing the psychology of his characters, Handke does not shy away from examining his own as well.

## A SORROW BEYOND DREAMS

**First published:** *Wunschloses Unglück*, 1972  
(English translation, 1974)

**Type of work:** Novella

*Handke reacts to his mother's suicide by telling her life story, examining the forces that shaped her life and that ultimately led to her death.*

*A Sorrow Beyond Dreams* is considered by critics to be one of Handke's finest works. Like so much of his writing, it defies pigeonholing in a traditional scheme of literary classification: Is it fiction, is it biography, or is it a personal meditation? Perhaps it is most accurate to say that Handke applies the techniques of fiction—imagination, reconstruction of events, dialogue, thoughts, emotions, and descriptions of characters and scenes—to an account of actual events, much like current historical fiction and television docudramas.

Handke's mother's story begins in a small Austrian village, the site of her eventual death. (Interestingly, the mother is never named—probably to emphasize the conformity and anonymity imposed upon the women in her society.) For most of the villagers, life is full of poverty and desperation—especially for the women. In his mother's day, Handke says, "a girl's future was a joke." This observation is borne out by the mother's subsequent experiences: a loveless marriage, shattered dreams, and life in a society that coerces her into denying her true feelings and personality. While she courageously makes repeated attempts to break free from repression and persecution—leaving home to pursue a career at age fifteen, illegally crossing borders in postwar Europe to escape from Germany and return to Austria, reading literature and involving herself in politics—she eventually succumbs to the negative forces at work in her life, saying, "I'm not human anymore." Following a debilitating illness, probably psychological in origin, she calmly and deliberately ends her own life.

*A Sorrow Beyond Dreams* is interesting for several reasons. First, it illustrates the cause-and-effect relationship between pressures in society and individual psychological disturbance. The mother's emotional problems—including fear, rigidity, self-blame, and depression—are founded in political and social pressures. Furthermore, by omitting her name and by repeatedly referring to her life's events as "the old story," Handke stresses the universality of her plight: She is not simply an individual but a "type," symbolic of millions of women throughout history.

Second, the book provides a good example of Handke's use of a new, alternative mode of expression, one that places the act of writing at the heart of its narrative. Handke continually interrupts his mother's story to interject comments about his approach to it. Just before describing the suicide, he pauses to inform the reader that "From this point on, I shall have to be careful to keep my story from telling itself." After her death he says, "All

at once, in my impotent rage, I felt the need of writing something about my mother." The act of writing does not produce the desired catharsis, however, for he later observes, "It is not true that writing has helped me." By alternating the story of his mother with an account of his telling of her story, giving each equal prominence, Handke allows the reader to gain vivid insight into the creative process.

He also demonstrates that the process of writing is just as important and interesting—perhaps more so—as its end product. Appropriately, Handke recognizes that it is an open-ended process as well, ending *A Sorrow Beyond Dreams* with the statement, "Someday I shall write about all this in greater detail."

## SLOW HOMECOMING

**First published:** *Langsame Heimkehr*, 1979  
(*The Long Way Around*, 1985); *Die Lehre  
der Sainte-Victoire*, 1980 (*The Lesson of  
Mont-Sainte-Victoire*, 1985);  
*Kindergeschichte*, 1981 (*Child Story*, 1985)

**Type of work:** Novellas

*A scientist, an artist, and a child reveal  
insights about the relationship of people to the  
world and to each other.*

*Slow Homecoming* is the English title of a collection of three of Handke's short novels, whose individual titles may be translated as *The Long Way Around*, *The Lesson of Mont-Sainte-Victoire*, and *Child Story*. The three works feature separate plots and characters and different styles. Taken as a group, however, they represent variations on a common theme: the ways in which people view themselves and their place in the world around them.

*The Long Way Around* tells the story of Sorger, a geologist whose physical journey from Alaska, California, and New York to his home in Europe parallels an inner journey of discovery and self-awareness. At the beginning of the novel, Sorger is a loner who "had done no work expressly useful to anyone" and who "would not have been fit company for anyone"; he tries to comprehend the meaning of existence by obsessively describing the physical world. This approach fails, and Sorger nears a psychological collapse, but eventually he realizes that it is relationships with other people, not his science, that give life its significance. He leaves for home full of confidence and optimism.

*The Lesson of Mont-Sainte-Victoire* deals with art rather than science, relating the visual art of French painter Paul Cézanne to the literary art of Handke himself. Handke describes his visit to a spot in the Sainte-Victoire mountain range where Cézanne found particular inspiration and the effects that the experience has had on his own creativity. The "lesson" is that true understanding and insight can be achieved only through the synthesis of form and object, subjective perception and objective reality, the specific and the universal. Handke applies this knowledge in the concluding section, a description of the woods near Salzburg.

*Child Story*, the final novella in the collection, is Handke's autobiographical account of his relationship with his daughter from her birth through age ten. For Handke, being a parent is both magically fulfilling and horribly trying, and he describes both feelings with equal clarity: His primitive urge to protect and defend his newborn child contrasts starkly with the anger and frustration that, years later, cause him to strike her nearly "hard enough to kill her." Throughout *Child Story*, however, Handke shows the importance of the interaction of parent and child, as his daughter provides him with the same kinds of insights that science and art offered in the two previous novellas.

*Slow Homecoming* is one of Handke's most complex and difficult works. Often abandoning narrative in favor of meditations on life, knowledge, and nature, the three short novels owe as much to philosophy as to fiction. In their unusual blend of fiction and fact, description and explanation, investigation and revelation, the three sections of *Slow Homecoming* represent some of Handke's most creative, fully developed, and innovative work.

## ON A DARK NIGHT I LEFT MY SILENT HOUSE

**First published:** *In einer dunklen Nacht ging  
ich aus meinem stillen Haus*, 1997 (English  
translation, 2000)

**Type of work:** Novel

*A suburban Austrian pharmacist embarks on  
a journey with two once-famous companions,  
culminating in a phantasmagoric adventure on  
the Spanish steppe.*

*On a Dark Night I Left My Silent House* employs, in essence, two narrators—one telling the story to the reader, and the central character, an alienated pharmacist from the Salzburg suburb of Taxham. The strategy allows Handke to provide himself with ironic distance from the story even as he tells it. For example, the book's narrator will occasionally interject an explanation from the protagonist, but the mere fact that information is presented to the reader in this form calls attention to the subjectivity of the perspective. Handke thus combines con-

tent that often seems absurd or surreal with a narrative form that calls into question the nature of "truth." The reader is never completely certain whether the events being narrated actually occurred, if they are subjective interpretations of events that another observer might have described differently, if they represent the subconscious of the central character, or if indeed they are altogether hallucinatory.

The tale begins prosaically enough. The pharmacist leads a mundane existence in a nondescript suburban town. He has his distinguishing characteristics—he is an aficionado of mushrooms, for example—but he remains an unremarkable figure. Estranged from his wife, although they continue to share the same house, he leads an alienated but not altogether lonely existence. The first real event of the novel is an apparently random act of violence perpetrated against the pharmacist. He is rendered mute by a blow to the head, although it is never entirely clear whether the cause of his speechlessness is physical or psychological.

At an unimposing restaurant the pharmacist meets a former Olympic skier and a once-famous poet, and, without saying a word, becomes their driver for a vacation trip which takes the trio to an encounter with a widow, who attacks the pharmacist and becomes an object of fascination, and to meetings with the daughter of the poet (intentional) and the son of the pharmacist (completely random). After some time, the pharmacist ventures forth on his own into a dreamlike land described as Spain but bearing little resemblance to any geographical locale. Ultimately, he returns

home, his life changed in apparently profound but nonetheless unspecified ways.

This is a difficult book: While it clearly touches on themes of alienation, longing, and impermanence, these readily identified motifs are not entirely fleshed out. The circumstances surrounding the long-ago departure of the pharmacist's son, for example, are hinted at but never fully articulated. Similarly, the exact nature of the relationship between the protagonist and the widow lies tantalizingly just out of reach.

Handke has expressed his preference for art works that "almost move" the observer rather than works that actually do so; *On a Dark Night I Left My Silent House* is an example of that type of art. This work appeals more to the mind than to the heart; the structure and language of the book are at least as important as any empathetic characterization. Still, the psychology of the characters, especially of the pharmacist, remains key, and the reader is compelled to provide answers that the author does not.

## SUMMARY

Peter Handke's works stand on the cutting edge of contemporary literature. Whether playing linguistic games to explore human communication, depicting disturbed characters to reveal the inner workings of the mind, or casting a spotlight on his own creative processes, Handke's literary works are as fascinating as they are unusual. Although Handke's fame has waned in recent years outside the German-speaking world, he remains one of the world's most innovative and creative writers of drama, fiction, and poetry.

*Die Stunde da wir nichts voneinander wussten*, pr., pb. 1992 (*The Hour We Knew Nothing of Each Other*, 1996)

*Zurüstungen zur Unsterblichkeit: Ein Königsdrama*, pr., pb. 1997

*Die Fahrt im Einbaum: Oder, Das Stück zum Film von Krieg*, pr., pb. 1999

*La Cuisine*, pr. 2001, pb. 2001 (as *Pourquoi la cuisine?*, with Mladen Materic)

*Untertagblues: Ein Stationendrama*, pb. 2003

#### SCREENPLAYS:

*Chronik der laufenden Ereignisse*, 1971

*Der Himmel über Berlin*, 1987 (*Wings of Desire*, with Wim Wenders)

## DISCUSSION TOPICS

- To what extent are Peter Handke's political views, or his expression of them, relevant to a consideration of his writing?
- Handke's plays provide little in the way of stage directions, apparently leaving staging considerations up to individual directors. What elements of his plays are necessary? What elements are legitimately open to interpretation?
- Handke often seems to ask more questions than he answers. What are the effects of this technique on the reader?
- As a poet, novelist, essayist, and playwright, Handke engages in a wide variety of literary pursuits. Where does he fit in a discussion of writers who pursue multiple genres?
- Some of Handke's work is overtly autobiographical, some partially so. How important is it to understand the author if we are to understand his writing?
- Handke is known for the precision of his language, even as he discusses inarticulateness. Discuss this apparent anomaly. How, if at all, is it relevant that English-language readers will encounter his work only in translation?

Peter Handke

## THOMAS HARDY

**Born:** Higher Bockhampton, Dorset, England  
June 2, 1840

**Died:** Dorchester, Dorset, England  
January 11, 1928

*Because of the modernity of vision of both his fiction and his poetry, Hardy is a key transitional figure between the Victorian period and the twentieth century.*

### BIOGRAPHY

Thomas Hardy was born in the small village of Higher Bockhampton, Dorset, England, on June 2, 1840. Although his father, a mason, was satisfied with his rural life, his mother encouraged Hardy to get an education and raise his social status. Hardy's first effort to do so was to become the student of Dorchester architect John Hicks. In a fateful accident, the kind of accident that Hardy would later make part of the cornerstone of his fiction, the well-known poet William Barnes had a school next door to Hicks's office. The older poet and the young apprentice became friends, and Barnes became one of the strongest influences on Hardy. Another important influence on Hardy's early life was his friendship with Horace Moule, a classical scholar, essayist, and reviewer. Particularly important was Moule's introduction of Hardy to the works of philosopher John Stuart Mill and the Bible-challenging collection *Essays and Reviews* (1860), both of which served to make Hardy doubt his simple religious faith.

At age twenty-one, Hardy went to London to continue his study of architecture. Once there, however, the publication of Algernon Charles Swinburne's *Poems and Ballads* in 1866 so influenced Hardy that he began writing poems and trying to get them published. After almost two years of being rebuffed by the London publishers, he re-

turned to Bockhampton and decided to try his hand at writing fiction. His first effort, "The Poor Man and the Lady," was based on a contrast between the rural life of his childhood and the urban life he had experienced in London. Although he did receive some favorable response from publishers, he decided not to publish the work. Instead, based on the advice of the novelist George Meredith, Hardy looked to a popular genre of the time, the detective story, and wrote *Desperate Remedies* (1871). Later, because of the favorable response that editors had made to the rural scenes in his unpublished novel "The Poor Man and the Lady," Hardy wrote his pastoral idyll *Under the Greenwood Tree* (1872). Although the book did not sell well, critics liked it and Hardy was encouraged to continue. At the time, the most favorable publishing outlet for authors was serial publication in weekly and monthly periodicals. Hardy began writing such a serial, *A Pair of Blue Eyes* (1872-1873), on the advice of a periodical editor and thus launched his full-time career as an author, having given up architecture forever.

In 1874, Hardy married Emma Lavinia Gifford, who, like his mother, was socially ambitious. After *A Pair of Blue Eyes*, Hardy went back to the rural world for his inspiration and wrote *Far from the Madding Crowd* (1874). The book received many favorable reviews, and Hardy's reputation started growing. Publishers and editors began to solicit work from him. Hardy's next successful work, *The Return of the Native* (1878), was composed while he and his wife were living in a small cottage at Sturminster Newton, although shortly afterward the couple moved

to London for the social life that his wife desired. When Hardy became ill, they moved back to Dorset, where he wrote *The Mayor of Casterbridge* (1886) while he was having his home, Max Gate, built. For the next several years, Hardy continued his writing, traveled with his wife, and studied German philosophy.

Although Hardy was well established by the last decade of the nineteenth century, one of the best-known and most widely read authors in England, his last two novels were not well received. First, *Tess of the D'Urbervilles* (1891) was rejected by two publishers, who feared offending the public, before finally being accepted for serial publication. Indeed, many readers did respond with shock and hostility to the book, especially because of the sexuality suggested in the novel. The publication of Hardy's novel *Jude the Obscure* (1895) raised an even greater outcry, with a number of thinkers challenging the book on the grounds of its being a threat to public decency and morality. Hardy decided that he had had enough and would write no more novels, a popular literary form that left him open to public criticism.

He thus returned to his first love, poetry, reasoning that because of poetry's subtle indirection and its limitation to a relatively small and select audience, he could say things that would not receive such a hostile response. Indeed, Hardy, who lived to an old age, still had time to create an enviable career as a poet, publishing more than one thousand poems in many volumes of verse. He also published an epic poem/drama titled *The Dynasts: A Drama of the Napoleonic Wars* (pb. 1903, 1906, 1908, 1910, pr. 1914 [abridged by Harley Granville-Barker]).

During Hardy's final years of life, he enjoyed the respect of his colleagues and readers, receiving several honors and being hailed as one of the last great authors of Victorian letters. Hardy's wife died in 1912, and four years later he married Florence Dugdale, who had worked for him as a secretary and who cared for him for the rest of his life. Hardy continued to write poetry regularly. His collection of poems *Winter Words in Various Moods and Metres* (1928) was ready to be published when he died on January 11, 1928, in Dorchester, Dorset, England. His ashes were placed in Westminster Abbey.

## ANALYSIS

Most commentators on the intellectual and artistic life of the nineteenth century are in agreement that the most important event during that period was the so-called death of God, that is, the loss of a unified ground of being, based on Christian faith. These thinkers argue that what is now referred to as the modernist temperament in art and thought actually began with the breakup of a value-ordered universe in the Romantic period. Hardy was one of the most important artists of the period who were powerfully influenced by this loss. Many critics have pointed out that the most significant influence on what has been called Hardy's philosophy was his loss of a notion of a universe governed by a divine power. Indeed, what has often been analyzed as Hardy's philosophy can be summed up in one of his earliest notebook entries: "The world does not despise us; it only neglects us." In his autobiographical notes, Hardy presents a picture of himself as a sensitive young man who attended church regularly and believed in a personal God who ruled the universe. When Hardy came to London in his early twenties and discovered such intellectual ferment as caused by Charles Darwin's *On the Origin of Species by Means of Natural Selection* (1859) and the *Essays and Reviews*, he lost his faith and never recovered it.

Many other nineteenth century writers experienced a similar loss, but few felt it so profoundly as Hardy. Furthermore, whereas some nineteenth century writers and thinkers, such as William Wordsworth and Thomas Carlyle, were able to make a leap of faith to an organic concept of nature knowable by the human imagination, Hardy felt the loss of God as a loss with no consequent gain. As one of his most famous poems, "The Darkling Thrush," makes clear, Hardy was unable to ascertain any unity of meaning in the world outside him. He was more like Samuel Taylor Coleridge's Ancient Mariner, who, having experienced the nightmarish chaos of a world without meaning or value, can never really believe in a unified and meaningful world again, but must spend the rest of his life telling and retelling his one story of loss and resultant despair. An understanding of any of Hardy's novels and poems must begin with this basic assumption.

Although Hardy refused to give in to any sense of an external value, he was not content to remain

in such an isolated state but was continually trying to find some basis for a ground of being other than that of transcendence. Hardy's ultimate intellectual and creative challenge to this loss was what might now be called humanistic existentialism. For Hardy, as it was later for such thinkers as Jean-Paul Sartre and Albert Camus, if any value was to be found in the world for humankind, it lay in not giving in to hope for transcendence but facing the emptiness in the universe—what Hardy called “facing the worst”—and, like the Ancient Mariner, playing this back over and over again in all of his works. Consequently, Hardy's art can be seen as a series of variations in form on this one barren theme of loss.

Hardy's most basic artistic and technical problem in dealing with his loss of God was the incompatibility of the lack of a unified ground of being with the novel form he felt compelled to develop, for the novel as a form depends on some unified social or mythic structure to hold it together. Hardy thus searched for older forms to imitate to establish a structure for his novels, even though the grafting of his humanistic existential view onto old forms resulted in grotesque distortions. Hardy imitated the detective form and the social comedy form when he was concerned merely with publishing a popular novel, but when he wanted to write a serious work of fiction, he turned to classical Greek and Elizabethan genres, such as the pastoral and the tragedy.

This very choice, however, raised a second artistic problem for Hardy in his search for an adequate literary form. Whereas the classical writers saw human life secure within a stable and ordered religious and social context, Hardy saw humanity as isolated and alone, searching fruitlessly for meaning in the world. Because Hardy denied the static and ordered worldview of the past, he was in turn denied the context of myth, symbol, and ritual that derived from that view. Thus, Hardy had to create a modern myth that presupposed the absence of God. Hardy's use of the traditional patterns of tragedy and pastoral, combined with his rejection of the value system that gave meaning to these patterns, resulted in a distortion of the old form that in turn created a grotesque new form.

In a typical Hardy pastoral novel, such as *Far from*

*the Madding Crowd*, nature is not divinely ordered, as it is in the classical pastoral. Although on the surface the story seems to fit the pastoral mode—it is set in a rural community, the main character is a shepherd, and the inhabitants seem content with their lives—the clash of Hardy's atheistic view with the traditional pastoral creates a grotesque inversion of the form. The story is thus a fable of the barrenness and death of the unified pastoral world, the tragic results of wrong choice, and the irrationality of sexual attraction. Although critics have suggested that Hardy's best-known “tragic” novel, *The Mayor of Casterbridge*, is his most explicit use of the Greek tragic pattern, there are many differences that make it difficult to see it as typically Greek. The fall of Michael Henchard, the mayor, at the end is the result of a combination of factors, not the least of which is Henchard's mistaken view that the world around him is unified and dependable. His death symbolizes the disappearance of the old order. What really brings Henchard down is that, given the loss of a transcendent order, he has violated the only order left to humans: the human-created order of humanity itself.

Interest in Hardy's work has followed two basic patterns. The first was philosophical, with many critics uncovering what they saw to be metaphysical structures that supposedly underlay his fiction. Since the early 1970's, however, interest has shifted to that aspect of Hardy's work most ignored before: his technical facility and his generic experimentation. Only since the late 1980's has what once was termed Hardy's fictional clumsiness been reevaluated in terms of poetic technique. Moreover, Hardy's career as a poet, which has always been under the shadow of his fiction, has been reevaluated. During his career, which began in the Victorian era and did not end until after World War I, Hardy was a contemporary first of Matthew Arnold and then of T. S. Eliot. Critics have seen Hardy as an important transitional figure between the Victorian sensibility and the modern era. Like the great moderns that followed him, Hardy realized that the task of the artist was not to try to find an external controlling force but rather to write works that symbolize the modern need to find or create such a value system.

## THE RETURN OF THE NATIVE

**First published:** 1878

**Type of work:** Novel

*A powerful young woman rebels against her isolation on the desolate heath but is defeated by the crushing indifference of nature to the desires of humankind.*

Many readers have noted the formal classical structure of *The Return of the Native* as well as the similarities of the characters to such powerful mythic figures as Oedipus and Prometheus. It is, however, the brooding Egdon Heath itself that becomes the more significant structuring principle. In fact, as many have noted, the heath is one of the principal actors in the drama, for the actions of all the characters are reactions in some way to the indifference that the heath represents. Egdon Heath is the landscape from which God has departed. In its barrenness, it seems like some giant prehistoric monster lying dormant but ready to swallow up anyone who tries to escape its grasp.

As in other Hardy rural idylls, there is a chorus of rustic characters in *The Return of the Native*. They belong on the heath because of their ignorance of the incongruity between the human longing for meaning and the intractable indifference of the external world symbolized by the heath. They still maintain a mythic, superstitious belief in a pagan animism and fatalistically accept the nature of things as they are. The Druidical rites of the fires that open the novel, the insignificance of Christian religion, the voodoo doll of Susan Nonesuch—all these characterize the pagan fatalism of the rustics.

The main characters in the novel are not merely rustic, and they make something other than a fatalistic response to the heath. All of them are characterized by their various reactions to the heath's indifference. Mrs. Yeobright is said to have the very solitude of the heath concentrated in her face. Although she knows she no longer has hope of escape, she focuses all of her attention on seeing that her son Clym does. Damon Wildeva is an outsider, the mysterious stranger who seems detached from the heath but who ultimately must answer to its indifference. Tomasine Yeobright aligns herself with the natural world because of her innocence and therefore sees no discrepancy between human

wishes and the blindness of the natural world. Diggory Venn, the most puzzling character in the novel, is an outcast, wandering the heath as both a rustic and a demoniac figure.

The most towering figures in the novel, however, are Clym Yeobright, the native of the title who returns to the heath, and Eustacia Vye, the powerful, rebellious figure who yearns to escape its bleakness. As is typical of cultural values of the period, Eustacia's only real hope of leaving the crushing suffocation of the heath is by being "loved to madness"; thus her rebellion is often manifested as coquetry. Clym, on the other hand, wishes to remain on the heath, seeing only friendliness written on its face. Having spent some time in the intellectual ferment of the social world, he now wishes to escape the disease of thought and teach the rustics what they intuitively know: that the only life is the life of fatalistic acceptance.

Clym is the disillusioned intellectual trying to return to the mythic simplicity of the natural world; he would prefer not to grapple with the incongruities he has seen. He is indeed blind, as his mother tells him, in thinking that he can teach the peasants the view that life is something "to be put up with" when they have always known and fatalistically accepted that fact. He furthermore reveals his blindness by marrying Eustacia, thinking she will remain with him on the heath, while Eustacia reveals that she is similarly misdirected by idealizing him and thinking that he will take her away. Both characters search for a meaning and a basis for value, but both are trapped by the irrationality of love and vain hopes in a basically irrational world.

After the two marry and Eustacia, in one of Hardy's typical examples of human misunderstandings and the mischance of events, turns Clym's mother away from her door to die on the heath, Clym blames her for his mother's death and drives her away. Eustacia's trip across the heath is one in which the natural world seems inimical to her, for she stumbles over roots and "oozing lumps of fleshy fungi" that impede her path like the organs of some giant prehistoric animal. At the end of the novel, Eustacia's suicidal leap into the pool is less a capitulation to the forces around her than it is a heroic rebellion, for it is an assertion of the absurdity of human hopes by a romantic temperament that refuses to live by such absurdity.

*The Return of the Native* is probably the most de-

bated of all Hardy's novels, having been called a masterpiece by some critics and a failure by others. Some readers have seen it to be primarily the story of Clym Yeobright's spiritual odyssey, while others have declared as central Eustacia's struggle with the heath. Eustacia herself is one of Hardy's most puzzling creations. While one reader claims that her story is a realistic case history, another calls it a supernatural myth; while one sees her as a tragic heroine, another calls her the parody of a heroine. Even Diggory Venn has been the subject of much debate and argument, being interpreted as both a peasant laborer and a demonic visitant, while Damon Wildevie is seen alternately as a romantic adventurer and Eustacia's demonic familiar. Moreover, the accidents and coincidences that dominate the plot have been the source of much critical disagreement, called both the fault of weaknesses in the characters and the result of Hardy's philosophic determinism, while the framework of magic and superstition that surrounds the action of the work has been termed both grotesque parody and animistic gratuitousness. It is because the novel hovers between realism and romanticism, between the real world and the dynamic world of myth, that both its characters and its actions are so much a subject of critical controversy.

## TESS OF THE D'URBERVILLES

**First published:** 1891

**Type of work:** Novel

*An innocent young rural maiden is cast out of her familiar world after losing her virginity and finally rebels against the injustice of society and the universe.*

*Tess of the D'Urbervilles* centers on Tess's relationship to the natural world. As that relationship changes, so does her situation. At the beginning of the novel, Tess is a child of nature who is confident that the natural world will protect her and provide her with a value system. When nature fails her, however, she has no value system to which to turn and thus is thrown out of her comfortable world to journey both outwardly and inwardly in search of a way back to her relationship with the natural world.

Tess first appears "at home" in the world of the small hamlet of Marlott, where, in the May Day dance, she manifests her innocence. Tess, however, is not a typical rustic maid; she is more sensitive than her friends. It is this sensitivity that ultimately undermines her. For example, shame for her father's drunken condition makes her volunteer to take a load of beehives to market, and despair for the laziness of her parents makes her ignore where she is going. As a result, when the family's only horse is killed, her sense of duty makes her overcome her pride to go to her aristocratic relatives for help. It is her first journey outside her secluded and protected world and her first encounter with the corruption of society.

Alec, her cousin, is a stock figure of the antinatural world, and when they meet, the image is a classic one of innocence in the grasp of the corrupt. When Alec takes Tess into the woods, she is not afraid of him, for she feels that she is in her natural element, and she so trusts the natural world to protect her that she falls asleep, only to be seduced by Alec. The antinatural force and her own innocence conspire to make her an outcast among her people. When her illegitimate child is born dead and the church refuses to give it a Christian burial, Tess renounces her religion and leaves the valley of her home in search of some new meaning for her life.

Tess begins her quest in the Valley of the Great Dairies, where the natural world is so lush and fertile as to be a symbolic realm, and Tess hopes for a reintegration with the world she has lost. She puts her moral plight out of her mind until she meets the morally ambiguous Angel Clare. Whereas Tess has challenged formal religion because of her personal experience, Angel has challenged it because of intellectual questioning. Like Clym Yeobright in *The Return of the Native*, Angel has left the intellectual world for the natural world, where he believes innocence and uncontaminated purity and goodness prevail. These qualities are precisely what he sees in the milkmaid Tess.

On the first night of their marriage, however, Tess confesses her previous indiscretion with her cousin Alec, and Angel, unable to accept her as less than pure, leaves her. Tess wanders the countryside once again, until one morning on the road she awakes to find dead pheasants around her. At this point, Tess becomes aware that in a Darwinistic universe, violation, injury, and even death are innate and inescapable realities. Tess realizes that she is not guilty by the laws of such a world. With this new realization, she can go to Chalk-Newton, a land symbolic of the wasteland situation in which she finds herself, and fully accept the blind indifference of the world; she no longer holds out hope of being reintegrated into the natural world of value and meaning.

It is at this point that Alec returns to her life. Taking the path of least resistance, and having given up all hope, she begins living with him. Hope returns, too late, in the form of Angel Clare, who, having come to the same existential realization at which Tess had arrived, returns. Now seeing Alec as the embodiment of all the deception and meaninglessness in the world, Tess kills him, asserting her freedom from social values and her willingness to accept the human penalties of such freedom.

In the final chapter of the novel, Tess and Angel wander until they end up at Stonehenge, where Tess lies down on the pagan altar and willingly gives herself up to the authorities as a kind of archetypal sacrifice. Tess is the embodiment of human rebellion against an empty universe. The basic source of Tess's tragedy throughout the novel springs from her insistent hope that she will find external meaning and value. Only at the end does she achieve true awareness that such meaning does not exist.

## JUDE THE OBSCURE

**First published:** 1895

**Type of work:** Novel

*A young man tries to find meaning in the life of the mind and the spirit, only to be defeated by his own physical desires and the narrow-mindedness of his society.*

*Jude the Obscure* may be thought of as the argument of *Tess of the D'Urbervilles* taken one step farther. Whereas the latter focuses on the loss of a unified order and meaning, the former begins with the premise of that loss and deals with the epic search for meaning. The novel is the archetypal story of everyone who searches for a basis of meaning and value. The problem for Jude is that all of the symbols of meaning for him—education, religion, the beauty of Sue Bridehead—are illusions. Jude is “obscure” because he is in darkness, trying to find an illumination of his relationship to the world but failing at every turn.

The novel begins with Jude as a young man losing his only real friend, the schoolmaster Phillotson, who has been the center of his world. Thus, from the first Jude must find a new center and a new hope to relieve his loneliness. His first projection of hope is toward the celestial city of Christminster, where his teacher has gone. In the first section of the book, his dream is like an indefinable glow in the distance. His ideal value system, represented both by the Christian and the classical framework of Christminster, is put aside, however, when he meets Arabella, described by Hardy as “a substantial female animal.” Seduced by the flesh, Jude marries Arabella when she says she is pregnant and gives up his hope of an education. His discovery that Arabella has deceived him is the first disillusionment he suffers in his quest for meaning.

The second phase of Jude's spiritual journey in-

volves his actual journey to Christminster, a city the vision of which is made even more specific by his seeing a picture of Sue Bridehead, who becomes for him a concrete image of his idealizations. Jude's first disillusionment at Christminster comes when he is turned down by all the colleges to which he applies. Thus, he shifts from the life of reason to the life of religion, practicing the rituals of the church.

During the next phase of his search, after having lost Sue to his old schoolmaster Phillotson, Jude becomes aware of the aridity of the religious life and burns all of his theology books. When Sue leaves Phillotson and returns to Jude, he has new hope, in spite of the fact that Sue is unwilling to live with him as a wife. The return of Arabella frightens her into giving in to his sexual desires, and the couple have children together.

When the most morbid of the children kills himself and the others, Sue makes an extreme shift from her former rebellion and accepts a supreme deity whose laws she believes she has transgressed. As penance, she leaves Jude to return to Phillotson. After Sue leaves, Jude goes to "a dreary, strange flat scene, where boughs dripped, and coughs and consumption lurked, and where he had never been before." This is a typical Hardy technique for presenting moments of existential realization: The natural world becomes an inimical reflection of the character's awareness of the absurd. Subsequently, Jude's reaction to the world around him is complete indifference. Jude's final journey to see Sue is a journey to death and a final rejection of the indifferent universe of which his experiences have made him aware. *Jude the Obscure* is the most crushing example of Hardy's vision. It may be one of his last novels because it is difficult to imagine pushing the tragedy of lost hopes beyond this point.

## WESSEX POEMS, AND OTHER VERSES

**First published:** 1898

**Type of work:** Poetry

*In this collection, Hardy meditates on loss in many contexts—personal, historical, and philosophical.*

The criticism of *Jude the Obscure* and *Tess of the D'Urbervilles* for their supposed immorality led Hardy to pursue seriously his longstanding ambition to write poetry. Appealing to a better educated, more sophisticated audience than novelists did, poets were given more latitude. The poems in *Wessex Poems*, the first of many volumes of poetry that Hardy was to publish, included some poems written as early as the 1860's, as well as poems written specifically for the book. *Wessex Poems* received a mixed critical reception. The established poetical style of the Victorian age had grown stale, and Hardy—somewhat like his contemporary Gerard Manley Hopkins—sought a new poetry. Difficulties in Hardy's syntax and his very eclectic diction led many of the first readers of the *Wessex Poems*—and many readers since—to find the poems in this volume sometimes awkward.

Hardy employed a wide range of poetic forms in *Wessex Poems*: sonnets (including a sixteen line "sonnet" in the form pioneered by George Meredith), ballads, and dramatic monologues among them. In "The Impercipient," Hardy makes ironical use of a metrical form common in Anglican hymns. Equally ironic is his use of the rigorous patterns of the sonnet to complain of the randomness of Fate in "Hap," which is in this respect a forerunner of Robert Frost's later sonnet, "Design."

In "Hap," Hardy concludes that the Fates could as easily have sent him happiness as sorrow in his life. In poem after poem in this volume, Hardy writes of frustration, loss, grief, and suffering. The loss of love brings pain; the loss of faith brings only regret; death brings grief. Even history is loss—of past achievement—provoking nostalgia that is as bitter as it is sweet. Perhaps the single most critically admired poem in *Wessex Poems* is the little lyric "Neutral Tones," in which Hardy's vivid description of the bleak setting of a meeting between disil-

lusioned former lovers effectively conveys the emotion of the meeting. Another critically praised poem—one among many more—is “Nature’s Questioning,” in which ambiguity, complexity, and the open ending are characteristic of modern sensibilities. “The Dance at the Phoenix” uses ballad form effectively to trace the life of a woman from her uninhibited youth through her long and responsible marriage to one last revel before her death. “Thoughts of Phena” is Hardy’s deeply personal meditation on the death of a cousin who had once been close to him. Some critics in 1898 complained of the pervasive pessimism of the volume, but time has shown that in theme and tone Hardy’s *Wessex Poems* were better attuned to the direction poetry was to take, even before World War I.

### SUMMARY

Thomas Hardy is something of an anomaly in nineteenth century literature. On one hand, there is something excessively old-fashioned and melodramatic about his fiction; on the other hand, there is also something powerfully symbolic about such characters as Eustacia, Tess, and Jude, who find themselves trapped in a hopeless world not of their own making, a world that seems to offer no meaning and value, and a world against which they

quite rightfully rebel, even though such rebellion inevitably ends in defeat.

Hardy is one of the two most widely read and discussed English novelists of the nineteenth century, second only to Charles Dickens as the British writer most representative of the period and most controversial and worthy of study. Every year, new books are published on Hardy that attempt to lay bare the secret of his thought, his art, and, indeed, his continuing power. Hardy was a great existential humanist. His hope for the world was that it would realize that creeds and conventions that presuppose a God-centered origin of value were baseless. His hope was that men and women would loosen themselves from those foolish creeds and become aware of their freedom to create their own human value system. If people would only realize, Hardy reasoned, that all are equally alone and without hope for divine help, then perhaps they would also realize that it is the height of absurdity for such lost and isolated creatures to fight among themselves. At once old-fashioned and modern, Hardy is perhaps the single most important transitional figure between the old world of unity and faith and the new world of fragmentation and doubt.

Charles E. May; updated by David W. Cole

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

- Desperate Remedies*, 1871
- Under the Greenwood Tree*, 1872
- A Pair of Blue Eyes*, 1872-1873
- Far from the Madding Crowd*, 1874
- The Hand of Ethelberta*, 1875-1876
- The Return of the Native*, 1878
- An Indiscretion in the Life of an Heiress*, 1878 (serial); 1934 (book)
- The Trumpet-Major*, 1880
- A Laodicean*, 1880-1881
- Two on a Tower*, 1882
- The Mayor of Casterbridge*, 1886
- The Woodlanders*, 1886-1887
- Tess of the D’Urbervilles*, 1891
- Jude the Obscure*, 1895
- The Well-Beloved*, 1897

SHORT FICTION:

*Wessex Tales*, 1888  
*A Group of Noble Dames*, 1891  
*Life's Little Ironies*, 1894

## DISCUSSION TOPICS

- How does Thomas Hardy respond to the Victorian culture's pervasive belief in human—and especially British—progress?
- What are Hardy's attitudes toward social class and class conflict?
- Are Hardy's views of romantic love clear? Are they consistent in his work?
- How does Hardy depict southwestern England—the Wessex of his fiction and poetry?
- Compare the themes, forms, and diction of some of Hardy's poetry to those of another poet, such as his predecessor Alfred, Lord Tennyson (perhaps the quintessential Victorian poet), Gerard Manley Hopkins (a near-contemporary, displaying both striking similarities and striking differences with Hardy), or Robert Frost (a younger American regionalist who also had a dark side).

# WILSON HARRIS

**Born:** New Amsterdam, British Guiana (now Guyana)  
March 24, 1921

*Harris is a poet, novelist, critic, and philosopher whose work is concerned primarily with the quest for identity on the individual and communal levels.*

## BIOGRAPHY

Theodore Wilson Harris was born in New Amsterdam, in British Guiana (which became Guyana in 1966) on March 24, 1921. He went to school in the capital, Georgetown, before attending Queen's College from 1934 to 1939. He studied land surveying, and following graduation in 1942 he was appointed an assistant government surveyor and promoted to government surveyor in 1944. Between 1942 and 1953, Harris made numerous expeditions into the rain forest of his South American country. The Cuyuni River, the Essequibo River, the Potaro River, and various inland and coastal regions, where he came in close contact with the indigenous peoples and pristine landscapes, were later incorporated into his first novel, *Palace of the Peacock* (1960), as well as two collections of short stories, *The Sleepers of Roraima* (1970) and *The Age of the Rainmakers* (1971).

He married Cecily Carew in 1945. In 1950, he visited France and Britain and published his first collection of poems, *Fetish*, in 1951. A second (and last) book of poetry, *Eternity to Season*, was published in 1954. Following his divorce from Carew, Harris immigrated to Britain in 1959, where he met and married Scottish writer Margaret Burns, to whom he dedicated all his novels thereafter. A book of essays, *Tradition, The Writer, and Society*, was published in 1967. Harris and Burns lived in Holland Park, London, an area which was to influence the setting of the novel *Da Silva da Silva's Cultivated Wilderness and Genesis of the Clowns*, published in 1977.

British Guiana gained its independence from England in 1966 and changed its name to Guyana. In addition to Guyana, the Anglophone Caribbean nations include Antigua, Barbados, Bermuda, St.

Lucia, Grenada, Jamaica, Trinidad, Tobago, British Honduras, St. Vincent, and St. Kitts. While these nations have in common a shared history of colonialism, slavery, and decimation of the native peoples, they also reflect different cultures and political systems. Guyana, for example, while being an English-speaking country, is primarily South American in its culture. (It borders on Venezuela, Brazil, and Suriname.) Harris is very conscious of this identity, and feels strong affinities to Latin American writers.

Harris's novels can be grouped into phases, each dealing with facets of one theme, and taking its inspiration from the numerous traditions that make up the multiracial, multicultural Caribbean culture he comes from. It is this combination of cultural traditions, embracing the African, East Indian, ancient Greek, Judeo-Christian, and Native American, that makes his work complex, difficult, and at times baffling even to his ardent admirers. In this, Harris differs from Caribbean writers who highlight one ethnic affiliation, such as Derek Walcott, who emphasizes the African heritage, or those such as V. S. Naipaul, who view the Caribbean's racially mixed communities as culturally impoverished or otherwise weakened. Harris, on the other hand, views his own and his country's mixed heritage as a source of strength, vitality, and original creativity.

Ever since he published his first book of poetry, Harris has been producing an average of one novel per year. He has also authored a large number of critical essays. Some of these have been collected in the books *The Womb of Space: The Cross-Cultural Imagination* (1983) and *Explorations: A Selection of Talks and Articles* (1981). Almost all of his creative work transcends the conventional boundaries of

time and space, leaping from dream to reality, from one time structure to another, and from one hemisphere to the other.

Harris is quite secretive about his personal life, granting relatively few interviews. He is fully established as a groundbreaking writer and has held academic positions at the University of Texas at Austin, the University of California, the University of the West Indies, the University of Toronto, Leeds University, the University of Mysore, Yale University, and the University of Newcastle, Australia.

### ANALYSIS

Wilson Harris is considered a challenging, difficult writer by even his most enthusiastic fans. His style is a complex combination of layers of mythic symbolism, drawing upon the various African, East Asian, Native American, and European cultural traditions. His writing is an attempt to capture the unique Caribbean identity. Harris completely rejects the notion of the lack of history of the West Indies, which have been seen as a mere appendage to the European imperial powers, as some remote islands, landed upon by mistake, that serve at best as stepping stones on the way to the more important destinations. Instead, Harris insists that this part of the world, through its history of conquest, colonization, and slavery, has developed a wealthy heritage latent in the collective memory of all Caribbean peoples.

Harris's writing is not so much a re-creation of this history as it is an attempt to resurrect and highlight it, to bring it to the surface again, after it has been discarded as unimportant by the colonial powers. This is a common concern of numerous Caribbean writers, who seek to assert the vitality of their heritage, and are frequently harsh in their depiction of how Europe exploited, dispossessed, and betrayed the New World. Harris, however, is unique in that he does not present the West Indies as a culture in conflict with the European powers that have conquered and dominated it. All cultures, according to Harris, are complementary, and while Europe has tended to exclude non-European people from its definition of "civilized" and to project a notion of universal human experience based upon its limited knowledge, no history of the world can be complete if it does not take into account the experience of all cultures. Harris's aim is to expose "all partial orders masquerading as totalities or absolutes."

Harris first gained international recognition with the 1954 private publication of *Eternity to Season*, a collection of boldly experimental poems drawing on various ancient myths and rich in multiple layers of imagery. These poems were originally published in Guiana under the pseudonym Kona Waruk, which Harris abandoned almost immediately. A previous book of poetry, *Fetish*, had received little praise because of its difficult and frequently paradoxical use of language. These are Harris's only two books of poetry, although his prose style is poetic, and he occasionally includes some original poems in his works of fiction.

Harris's first four novels, *Palace of the Peacock*, *The Far Journey of Oudin* (1961), *The Whole Armour* (1962), and *The Secret Ladder* (1963), making up the Guyana Quartet, deal with the conquest of the Americas, early colonization, slavery, and plantation life. They reflect, in their detailed depiction of the people and places, Harris's early years as a land surveyor. These novels also express, to a lesser degree, all the elements that Harris elaborates on in his later works: the search for an identity, the fluctuation between visions and consciousness, the leaps forward and back in time and space, and a conscious emphasis on language and creativity. Many of the characters encountered in these early works appear again in later novels. The quartet was followed in 1964 by *Heartland*.

In 1965, Harris published *The Eye of the Scarecrow*, the first book of a new cycle that additionally includes *The Waiting Room* (1967), *Tumatumari* (1968), and *Ascent to Omai* (1970). With the exception of *The Eye of the Scarecrow*, which takes place in the coastal city of Georgetown, where Harris lived as a child, the setting of these novels is the interior, and they take the form of diaries, reminiscence, logbooks, and dreamlike recollections. These novels have been compared to the work of Irish writers Samuel Beckett and James Joyce, whom Harris admires, and about whom he wrote critical articles, elaborating on their need, similar to the West Indians, to reconstitute a coherent unity after experiencing "something which bordered upon a state of tragic humiliation and eclipse."

Most postcolonial writers try to highlight aspects of cultures that were either denied validity or degraded. In the seven novellas that make up *The Sleepers of Roraima* and in *The Tree of the Sun* (1978), Harris tries to revive, in the strictest sense of the

word, the Caribbean culture that has been all but annihilated through colonialism. This is one of the more uncommon approaches to Caribbean literature, focusing not on the present but on the pre-Columbian aspects of that area's history.

Paralleling his own travels, the settings of Harris's novels move from the Americas to Europe and back. *Black Marsden: A Tabula Rasa Comedy* (1972) takes place in Edinburgh, hometown of Harris's wife Margaret, and the central character, Dr. Black Marsden, is a hypnotist who influences all who come in contact with him, except his host, Clive Goodrich. This novel was followed in 1975 by *Companions of the Day and Night*, in which Goodrich, free from Marsden's magic, travels to Mexico with Idiot Nameless. In *Companions of the Day and Night*, the various influences that characterize Caribbean culture are prominent again; Goodrich's trip is calculated not in terms of the European calendar but in pre-Columbian fashion: the nine-day cycle known as companions of the night and the thirteen-day cycle known as companions of the day. His other works of fiction include: *Carnival* (1985), *The Infinite Rehearsal* (1987), and *The Four Banks of the River of Space* (1990).

In addition to novels, Harris has authored numerous essays, including essays published after each novel that attempt to explain the vision articulated in his fiction. Most of these articles are reprinted in *Explorations*, a collection that gives the reader helpful insight into Harris's thought. Another collection of essays, *The Womb of Space*, provides Harris's interpretation of the works of writers such as Edgar Allan Poe, Ralph Ellison, Jean Toomer, Juan Rulfo, Jean Rhys, Paule Marshall, Aime Cesaire, Raja Rao, Zulfikar Ghose, and others.

## PALACE OF THE PEACOCK

**First published:** 1960

**Type of work:** Novel

*The novel describes a seven-day river expedition into the Guyanese interior, during which the members of the crew die one by one.*

*Palace of the Peacock* contains most of the elements that Harris elaborates upon in his later

works, and it establishes his rejection of the conventional European style of fiction writing, which follows a linear pattern of narration and in which all aspects of the story are finally brought together to a logical conclusion. The storyline in this novel is as follows: Donne, a white colonizer, is leading a multiracial crew into the forest in hopes of enlisting cheap labor for his ranch plantation. As they penetrate deeper into the interior, the members of the crew, and finally the captain himself, die off one after the other.

The novel is very rich in symbolism. Donne, the ruthless white master, stands for the exploitative European presence in the Caribbean, concerned with individual gain, and having no appreciation of the natives except in terms of the physical labor that can be extracted from them. The crew of the ship represent the major racial groups of postcolonial Guiana: indigenous, African, and Asian. The length of the journey, seven days, hints at an anti-Genesis, a destruction rather than creation of the New World. The journey itself is representative of a quest, an exploration of identity as well as territory.

The novel begins as a dream of Captain Donne's twin brother, the narrator. In the dream, Donne has been murdered by Mariella, a Native American woman he had seduced, exploited, and abused. The murder is a symbolic reference to the spirit of defiance and bitterness of the natives against the colonialists. Significantly, Mariella is also the name of the territory of the mission the crew stop at during their expedition.

Mariella, who also appears as an old woman, is similar in her variety of states of being to the crew members who are already dead and are reliving their adventures through the narrator's vision. Finally, the murdered captain, Donne, whose story is told by his twin brother, eventually merges with this narrator, completely eroding of the traditional definition of a protagonist as a separate literary character with a specific function in the story.

Although aspects of *Palace of the Peacock* are ex-

plained toward the end of the novel, no final resolution takes place. Instead, the narrative implies that all stories and histories are merely interpretations of a vision, a perception construed in a state of altered consciousness.

### **“YUROKON”**

**First published:** 1970 (collected in *The Sleepers of Roraima*, 1970)

**Type of work:** Short story

*“Yurokon” is a fable centering on cannibalism.*

Like the other two short stories that make up *The Sleepers of Roraima*, “Yurokon” takes place in the twentieth century, and its central character is a young Carib, trying to reconstruct his identity out of what is left of his cultural mythology, which is jealously guarded by an elder. In the first short story, “Couvade,” a grandfather explains to the young man, Couvade, the meaning of his name, and the reader gains insight into one of the beliefs of the original peoples of the Caribbean. Similarly, in the second short story, “I, Quiyumucon,” readers are told of another Caribbean tradition through Poli, the son of Quiyumucon. In “Yurokon,” the young man asks his uncle why his tribe is known as “huntmen of bones,” and the uncle explains that the Caribs resorted to cannibalism out of self-defense, to scare the Spanish conquerors away. “We became huntmen of bones when we ate our first Spanish sailor,” the uncle states, not denying the charge of cannibalism, yet seeking to explain it. The uncle goes on to explain how, by fashioning flutes out of the dead Spaniards’ bones, the Caribs wanted to make the conquerors think they had been eaten, reduced to a morsel in the mouths of the natives, “the morsel of the flute, that was all.”

In the twentieth century, little is left of the Caribs besides their name, which they have given to the sea they roamed and the islands they peopled. Their name is the source of the word “cannibal.” Their ritual involved the eating of a piece of flesh of their defeated enemies. In their own worldview, the Caribs were engaging in a process they called “transubstantiation of species”; they did not leave

their defeated enemies to rot away, but instead fashioned flutes out of their enemies’ bones, transforming death into melody.

The initial encounter between Caribs and Spaniards is recounted through Yurokon’s visions, influenced by his uncle’s version of the story, as well as the more common European rendition of it. Both groups are portrayed in highly ambivalent terms. The Caribs represent “innocent evil” (well-intentioned cannibalism), and the Spaniards “maleficent good” (destroying in the name of civilizing). The imagery that represents each group also suggests an overlap between the two. As Yurokon awakes from his dream, in which he has visualized the defeat of the Caribs and their withdrawal into the underworld, he hears a Catholic missionary, Father Gabriel, announcing Eastertide, the resurrection.

The historical defeat of the Caribs can be interpreted as a transubstantiation (just as the cannibal’s victim is transubstantiated) of the species rather than its extinction. Yurokon, who had been disturbed by the loss of his tribe’s name, is relieved to realize that namelessness is also “a sea of names,” just as “numberlessness,” which is “native to heaven, means both without numbers and innumerable.”

### **THE EYE OF THE SCARECROW**

**First published:** 1965

**Type of work:** Novel

*An unnamed narrator, N., attempts to reconstruct, through a personal diary, the events of his childhood in Georgetown, British Guiana.*

*The Eye of the Scarecrow* is one of Harris’s more disjointed novels as far as language and sequence of events are concerned. The novel is in the form of a diary. Over nine months, the diarist, N., seeks a new way of rendering life by letting past events speak for themselves as he surrenders to a “visionary organization of memory,” free from tedious realism.

Through the diary entries, the reader perceives N. as introspective, prone to hallucinations, and highly sensitive, while his friend L. is practical and

levelheaded, "the engineer in charge of the expedition." In his diary, written in 1963 and 1964, N. is trying to reconstruct the events of the year 1948, which witnessed a major, if abortive, miners' strike in Georgetown. That year is confused, in N.'s recollections, with 1929, the year of the beginning of the Great Depression. The diary itself covers a nine-month period, symbolic of gestation, the creation of a new person. It opens with N. describing the funeral processions of the fallen strikers of 1948. The confusion between years and between the symbols of birth (N. writes that he is "riding out of the womb") and death (the funeral hearse) gradually takes over the whole novel, and it leads in the final section to a full fusion of the narrator and L. This is rendered more baffling by the occasional repetition of earlier segments of the book. This fusion of apparent opposites is hinted at in an earlier reference to L. and N. sending for a prostitute together on their expedition in 1948. N. is first shown as disapproving of L.'s exploitation and manipulation of the woman, Hebra, and shrinking from even touching her, yet he soon finds out that he has behaved with no less blind and insensitive lust himself, as he awakens by her side.

The scarecrow, a metaphor that runs throughout the book, assumes various guises in different sections, shifting from a desiccated look on L.'s face, to the dislocated image of the Georgetown coastline, to the figure of the dying governor of Guiana (representing the end of the British Empire), to the tenements of Waterloo Street. All the while the scarecrow also represents the fallen victims of 1948 and 1929: the strikers, the beggars, the nameless paupers, the many living dead.

The narrator's quest concludes with "THE MANIFESTO OF THE UNBORN STATE OF EXILE," in

which he describes language as the vehicle for expressing silence. Language alone, readers are told, can express "the ultimate 'silent' and 'immaterial' complexity of arousal. And this is the stuff of one's essential understanding of the reality of the original Word, the Well of Silence."

Harris, in this novel, employs some of his longest sentences ever: many take more than one dozen lines and require a second and third reading before they can be comprehended. Since the novel itself is relatively short (less than one hundred pages), the result is a compact matrix of themes, ranging from the analysis of relationships, to the quest for inner harmony through the wedding of opposites, to a philosophical discussion of language, couched in the historical background of Guyana as a land of violence, conquest, and cross-fertilization.

## SUMMARY

Wilson Harris can safely be called one of the most original and difficult writers of the second half of the twentieth century. His extreme erudition, together with a familiarity with various cultural traditions, allows him, in his fiction, to depict the heterogeneity of his native land. His writing is elusive, calling for numerous interpretations rather than a single and definitive explanation. As he builds a Caribbean identity that has been silenced by the European version of history, Harris refuses to take sides, to reach a final verdict as to who qualifies as victim or victor in the encounter between Europe and the Americas. He thereby leaves room for change and renewal, for a revival of the nearly extinct.

## DISCUSSION TOPICS

- Wilson Harris seeks to present the complex culture of the Caribbean. How did the slave trade contribute to this complexity?
- Is Caribbean culture too complicated in its ethnic and sociological makeup to be regarded as an entity?
- What makes such elements as diaries and the recollection of dreams useful for Harris?
- Examine the scarecrow as metaphor in Harris's novel *The Eye of the Scarecrow*.
- Harris is a writer with a record of success in academic institutions. Does he cut himself off from less academic audiences by his difficult style?
- No resolution takes place in *Palace of the Peacock*. What literary or other cultural experiences of Harris's audiences in recent times have prepared them to accept such an apparent deficiency?

## JAROSLAV HAŠEK

**Born:** Prague, Bohemia, Austro-Hungarian Empire (now in Czech Republic)

April 30, 1883

**Died:** Lipnice nad Sázavou, Czechoslovakia (now in Czech Republic)

January 3, 1923

*Hašek's unfinished novel The Good Soldier: Švejk is an antiwar satire written in the picaresque manner. Švejk, perhaps the best-known character in Czech literature, sees the world as absurd and refuses to take it seriously. Whether he is truly an imbecile or a con artist feigning mental deficiency, he manages to confound the author and expose the flaws and failures of institutes intended to improve humankind.*

### BIOGRAPHY

Jaroslav Hašek (HAH-shehk) was born in 1883 in Prague, which was then part of the Austro-Hungarian Empire. His father, an alcoholic, was a schoolteacher who died when Jaroslav was thirteen. Although the family did not have much money, they lived in an affluent section of the city. Jaroslav was a clever but mischievous boy who was attracted to disruption and who held little respect for authority. After being expelled from grammar school following a rock-throwing incident, he was sent to work in a chemist's shop but was soon fired. He had already begun writing, and on the advice of a potential employer, he returned to school, completing his education at the Czecholavonic Commercial Academy in 1902.

A walking tour he undertook in 1900 inspired him to complete a number of stories based on his experiences, and several were published in small journals. In spite of this early success and his exposure to a lively artistic community in Prague, Hašek was not attracted to avant-garde ideas and did not aspire to literary success. In 1906, he joined an anarchist organization and began writing political articles and editing an anarchist journal; his activism led to a jail sentence for assaulting an officer during a demonstration. However, during this time he had fallen in love with Jarmila Mayerova, a woman whose parents did not approve of the relationship because of his political affiliations and his reputation as a drunken prankster. In order to convince Jarmila's parents that he would make a responsible

husband, he began publishing short stories.

After returning to the Catholic Church, Hašek married Jarmila in 1910, but he was unable to maintain an orderly life. He was fired from editing the journal *Animal World* because he wrote articles about nonexistent species and advertised the sale of pedigreed werewolves. He also continued to frequent pubs. After a quarrel with Jarmila and a drinking spree, he apparently tried to jump from the Charles Bridge; although he later denied he was attempting suicide, he was confined for a brief period to a mental hospital.

Hašek reconciled with his wife, but his hoaxes continued. He established the Cynological Institute, which was simply an unsuccessful dog-selling business. In 1911, he founded a mock political party and ran for office. By the summer of 1911, Hašek had separated from his wife and returned to a life of drinking and partying. At the same time, he continued to write, producing scripts for cabarets and introducing the first stories to feature a soldier named Švejk.

In 1915, Hašek was drafted into the Austrian army, and in spite of his police record and his association with anarchist groups, was assigned to the Ninety-first Infantry Regiment. From České Budějovice in southern Bohemia, he was sent into Hungary and then to the Galician front, a part of the Austrian empire now subsumed by Poland and the Ukraine. His regiment was engaged in heavy battle, and in the fall of 1915 he was captured by the Russians. Conditions in the prison camps were

dreadful, but Hašek was able to secure a position working for a camp commander and thus avoided undue hardship.

When a military group of Czech and Slovak volunteers, later called the Czech Legion, was formed, Hašek joined, using his writing talents to recruit volunteers and churn out propaganda. During this period he was able to produce a second series of Švejk stories, which was published in Kiev in 1917. Many of the characters, including Lieutenant Lukaš, are based on Hašek's acquaintances from the Ninety-first Infantry Regiment.

While working with the Czech Legion, Hašek supported the Russian czars, but following the Bolshevik Revolution, he left the legion for the Red Army in Russia and became a member of the Communist Party. Although he had continued to drink and was arrested on several occasions, his disruptive behavior ceased after he joined the Communists. For more than two and one-half years he remained sober and stayed out of trouble. He did, however, remarry without having divorced his first wife.

In 1920, Hašek brought his new wife to Prague with the intent of helping to establish the Communist Party in Czechoslovakia. However, he soon abandoned his political goals and took up his old habits. Unable to find employment, he began writing what would become the first volume of *Osudy dobrého vojáka Švejka za světové války* (1921-1923; *The Good Soldier: Švejk*, 1930). He was forced to publish this book himself, but the venture proved successful enough that he was able to purchase a small house in the village of Lipnice, where he continued work on the next volumes. He was also able to secure a publisher. The second and third volumes were as popular as the first. However, his carousing was undermining his health; he was forced to dictate much of the last volume, and at times his sentence structure grew incoherent. He died in 1923 without having finished the fourth volume.

Hašek built his novel from his life. He shared with Švejk an affinity for clashes with authority, a fondness for storytelling, and an attraction to drink, but character and author differ distinctly in temperament. While Švejk adjusts to whatever situation he encounters and is almost always happy, Hašek was an inveterate rebel for whom conformity was difficult. His biographers maintain that, despite the humor of his writing, he was for most of his life a very unhappy man.

## ANALYSIS

Although Jaroslav Hašek wrote hundreds of short stories and articles, his literary reputation rests solely on his incomplete novel *The Good Soldier: Švejk*. The novel is set during World War I and is based on Hašek's experiences as a soldier in the Austrian army.

Švejk is an enigma who appears to be both a blundering idiot and a shrewd manipulator confounding whatever authority he encounters. In creating Švejk, Hašek may have been inspired by a short sketch that appeared in several popular journals in 1906. Both this character and Hašek's original soldier, who first appeared in a 1911 series of stories, are Czech peasants whose ignorance keeps them in constant conflict with military authority.

The first Švejk was created during a period of strict censorship by the Austrian government, a fact that may account for the two-dimensionality of the character. A second series of stories published while Hašek was in Russia recruiting Czech prisoners of war to fight against Austria serves as little more than anti-Austrian propaganda; the stories are humorless and the characters flat. However, the Švejk of the novel is a picaresque character who recognizes that the world is absurd and that there is nothing to be done to bring order or meaning to existence.

The structure of the novel is episodic and rambling. Digressions are frequent as Švejk, who repeatedly gets into trouble, explains himself through lengthy monologues only tangentially related to the situation at hand. Although Švejk faces harsh treatment from his superiors, he remains cheerful, willing to undergo whatever is necessary for the protection of the Austro-Hungarian Empire. He does not change as a result of his experiences, and his misadventures frequently carry him back to where he started.

This circularity is particularly evident in the chapter "Švejk's České Budějovice anabasis." After getting himself ejected from the train carrying his company, Švejk sets out on foot to catch up with it; however, he manages always to head in the wrong direction. Throughout the last three volumes of the novel, Švejk is separated from his company and its officer, Lieutenant Lukaš, then reunited to find that nothing has changed as the army snails its way through bureaucratic inefficiency toward the front.

When Hašek died in 1923, his characters had not yet reached the battle lines; consequently, *The Good Soldier: Švejk* is an antiwar novel which does not depict combat. Still, Hašek conveys the futility of war, both through the use of an omniscient narrator, who provides undisguised criticism, and through Švejk and his companions. Like Švejk, his fellow soldiers expect to die. One of the group is writing a history of the company's battles before the fact, using the logic that since the outcome of war is the same—death—the experience of dying in battle must be recorded in advance.

Hašek further underscores the foolishness of war by blurring the lines between allies and enemies. In the opening chapter, Švejk, still a civilian, is accused of treason. When he reports for military duty while suffering from rheumatism, he is charged with disloyalty in spite of his professed willingness to serve; once he assumes active duty, he is suspected of spying and is even mistaken for a Russian prisoner of war. When asked by a cruel officer to respond to a poster depicting an Austrian soldier impaling a Russian against a wall with his bayonet, Švejk sympathizes with the mortally wounded Russian and with the Austrian, who he predicts will be punished for damaging his bayonet. Austrian propaganda does not instill hatred of the enemy, only a reminder of the hostility of the military toward its own soldiers.

Hašek's satire succeeds in reaching beyond the boundaries of war, for it is ultimately the social structure that he targets. Švejk's experiences as a soldier mirror those of his civilian life, suggesting that the military is no different from other institutions. Švejk's willingness to conform allows him to survive, but at the same time, his conformity undermines authority, causing whatever system is wielding control to implode. It seems fitting that *The Good Soldier: Švejk* is incomplete, for Hašek has envisioned a worldview that does not provide for resolution.

## THE GOOD SOLDIER: ŠVEJK

**First published:** *Osudy dobrého vojáka Švejka za světové války*, 1921-1923 (English translation, 1930)

**Type of work:** Novel

*Josef Švejk, a Czech drafted by the Austrian army to fight in World War I, creates havoc and undermines authority through seemingly innocent actions, and no one can determine whether he is a blundering fool or a shrewd operator.*

Jaroslav Hašek intended *The Good Soldier: Švejk* to be a six-volume novel based on his experiences in World War I; however Hašek died before completing the fourth volume, which ends before Švejk experiences active combat. The first volume begins in 1914 in Prague. Archduke Franz Ferdinand, nephew of the Austrian emperor, has just been assassinated in Sarajevo, an event which will result in the outbreak of the war.

Josef Švejk, a Czech, is introduced as a veteran who has been certified an imbecile by the Austrian army. He now makes a modest living selling mongrels with forged pedigrees. News of the assassination does not interrupt his daily routine of pub visits, but he soon draws the attention of an undercover police officer and is arrested for speaking disrespectfully of the late archduke. When he confesses willingly to charges of treason, Švejk is sent to a lunatic asylum, where he enjoys his treatment so much he is eventually released.

However, he does not have long to celebrate his freedom, for he is soon called to rejoin the Austrian army. When he appears for his physical in a wheelchair because of a rheumatism attack, he is accused of malingering and sent to the garrison jail, where prisoners are subjected to daily enemas until they admit to faking infirmity. Švejk, however, undergoes his treatments cheerfully.

He is finally released to the custody of Chaplain Katz, a priest with a fondness for liquor. As the chaplain's assigned servant, called a "batman" in the military, Švejk takes on the responsibility of finding ways to finance the chaplain's debauchery and of delivering him safely home afterward. This arrangement ends abruptly when the chaplain

loses Švejk in a card game to another officer, Lieutenant Lukaš.

The lieutenant is a kind man who seems genuinely fond of Švejk. Still, Švejk's blundering repeatedly complicates the lieutenant's life. In an effort to please Lukaš by acquiring a dog for him, Švejk procures a stolen animal. Catastrophe ensues when the true owner turns out to be a colonel who has Lukaš and Švejk transferred to the Ninety-first Infantry Regiment in Budějovice, where march battalions are forming to be sent to the Galician front. The first volume ends with Švejk expressing his joy at the prospect of dying in combat with the lieutenant.

The second installment of the novel opens with Švejk and Lukaš en route to Budějovice. Švejk manages to lose some of the lieutenant's luggage, to insult a major general, and to pull the emergency cord on the train, bringing it to a halt. Švejk is removed from the train, and Lukaš continues without him. After convincing the stationmaster of his innocence, Švejk begins drinking with a Hungarian soldier and misses the next trains. Finally, he is apprehended by another officer who orders him to set off on foot to rejoin his company; however, Švejk walks in the wrong direction, roaming from village to village, until he is mistaken for a spy and finally escorted to Budějovice, where his identity is established. Švejk is sentenced to three days in the military prison for losing his regiment before returning, much to the dismay of Lieutenant Lukaš, to the company as its orderly.

The regiment moves on to Hungary, where Lieutenant Lukaš begins an ill-advised relationship with a married woman. Švejk, delivering a letter to the woman for the lieutenant, encounters her husband. Švejk swallows the letter, which he claims to have written himself, but when a fight breaks out, he is arrested once again. The charges are soon dropped, but a newspaper article causes embarrassment for the company. In the concluding adventure of this segment, Švejk makes hash of a coded message, leaving the lieutenant with undecipherable orders.

In the third part, subtitled "The Glorious Licking," Švejk's company makes its way through Hungary, where tensions between Hungarians and Czechs run high. Švejk's companions on the journey include the gluttonous Baloun and an occultist cook. Many of the episodes concern procuring and

consuming food and drink. Even the entry of Italy into the war is discussed in terms of the effects on the men's rations. Švejk steals a chicken from local peasants, contributing to ethnic hostility and once again leaving the lieutenant exasperated.

A sadistic officer, Lieutenant Dub, joins the battalion and attempts to catch Švejk violating regulations, but Švejk is able to undermine Dub's efforts by carrying out orders literally. As the battalion approaches the front, Švejk, separated from the others, startles an escaped Russian prisoner who is bathing. The man runs off, but instead of pursuing him, Švejk decides to try on the Russian's uniform. Before he knows what is happening, he is captured by a group of Austrian soldiers.

In the fourth section, Švejk is first mistaken by his captors for a Russian Jew because he speaks German. He is then determined to be a defector and is sentenced to be executed. When a chaplain visits his cell for a spiritual consultation, Švejk begins a long monologue about attractive women, which greatly disturbs the chaplain, who appears to suffer a nervous breakdown. A telegram clearing Švejk of all charges arrives soon after, and Švejk is returned to his march company. Hašek died before finishing the novel, leaving no indication of what would become of Švejk.

Illustrations by Josef Lada were completed after Hašek's death, when a version of the novel was serialized in the Sunday supplement of a Czech newspaper, and most translations include a number of these drawings.

## SUMMARY

Since the first volume appeared in 1921, *The Good Soldier Švejk* has been popular but controversial. Reviewers at the time of the novel's publication were generally skeptical, given Jaroslav Hašek's reputation for perpetrating hoaxes and for aligning himself with radical movements. The influential German critic Max Brod considered Hašek's work as important as that of the German Czech author Franz Kafka, while the noted scholar

Rene Wellek dismissed *The Good Soldier: Švejk* as “unliterary.” In the 1930’s, the book was banned by the Nazis but embraced by the Communists, who found the title character representative of the common worker. By the year 2000, the New York Public Library had named the novel one of the one hundred most important books of the twentieth century, yet Hašek has received little critical attention from American scholars.

K Edgington

## BIBIOGRAPHY

### By the Author

#### LONG FICTION:

*Osudy dobrého vojáka Švejka za světové války*, 1921-1923 (4 volumes; *The Good Soldier: Švejk*, 1930; also as *The Good Soldier: Švejk and His Fortunes in the World War*, 1973)

#### SHORT FICTION:

*Dobrý voják Švejk a jiné podivné historky*, 1912

*The Red Commissar: Including Further Adventures of The Good Soldier: Švejk, and Other Stories*, 1981

*The Bachura Scandal, and Other Stories and Sketches*, 1991

#### POETRY:

*Májové výkřiky*, 1903

## DISCUSSION TOPICS

- In Jaroslav Hašek’s novel, *The Good Soldier: Švejk*, in what ways does Švejk appear to be “a patent idiot”?
- What evidence suggests Švejk is an educated man?
- How does Hašek’s use of specific place names affect your reading of *The Good Soldier: Švejk*?
- How does the narrator’s point of view differ from Švejk’s?
- Some critics claim that Švejk is amoral. Do you agree? Support your opinion with examples.

## VÁCLAV HAVEL

**Born:** Prague, Czechoslovakia (now in Czech Republic)  
October 5, 1936

*Havel, who became Czechoslovakia's president in 1989, is one of the best-known contemporary European playwrights and an acclaimed essayist and poet.*

### BIOGRAPHY

Václav Havel (HAH-vehl) was born in Prague, Czechoslovakia (now in the Czech Republic), on October 5, 1936, into a wealthy patrician family. Sharing the fate of their entire class, the Havels lost their property to collectivization when the Communist government came to power in 1948, nationalizing all private enterprises and assets. Because of the bourgeois background of his father, Václav Havel, and mother, Božena Vavreckova, young Havel was barred from institutions of higher learning.

He nevertheless attained schooling in night classes while working in a chemical laboratory. After completing his secondary education, he became a stage technician at the ABC Theatre in Prague in 1959. Between 1960 and 1969, he worked in various positions with several playhouses, including the Theater on the Balustrade, beginning as a menial worker and advancing to become a dramaturge and playwright; concurrently, he studied dramaturgy at the Academy of Dramatic Arts in Prague.

During the years that led up to the political liberalization and reforms of the Prague Spring in 1968, the Theater on the Balustrade became the most influential theater company in Prague. Havel coauthored three plays before his first independent effort, *Zahradní slavnost* (pr., pb. 1963; *The Garden Party*, 1969), which immediately brought him critical acclaim and wider audiences. Yet all hopes for democratization, evident, for example,

in a greater freedom of the press, were crushed in August, 1968, when the invasion of the Warsaw Pact armies headed by the Soviet Union restored a hard-line Communist regime under Gustáv Husák and established rigid control of the political and economic life.

During the brief period of reform, Havel had his previously confiscated passport returned to him and was permitted to travel to New York in mid-1968 to witness the first American production of his play *Vyrozumění* (pr. 1965, pb. 1966; *The Memorandum*, 1967) under Joseph Papp, a production that won an Obie Award. Two years later, *Ztižená možnost soustředění* (pr., pb. 1968; *The Increased Difficulty of Concentration*, 1969) met with similar success in another New York production. Immediately after the Soviet invasion, Havel, like other artists and representatives of public life, made radio broadcasts from the underground to appeal to the West for support and to call for continued protest among his compatriots against repression of civil liberties. As a result of his unequivocal championing of human rights, Havel again had his passport confiscated, and, along with thousands of others, was forced into various blue-collar jobs, some of which later provided him with subject matter for his plays and infused his vision.

Havel's writings were not published, and his plays were banned from the stage in Czechoslovakia between 1970 and 1989. Yet he categorically refused to emigrate and continued to write regardless of all pressure and hardship. *Žebrácká opera* (pr. 1975, pb. 1977; *The Beggar's Opera*, 1976), an adaptation of John Gay's *The Beggar's Opera* (pr., pb. 1728), was first performed clandestinely by a Czech

amateur troupe in November, 1975. Havel's subsequent plays premiered mostly in foreign productions, with a clear preponderance of one-act plays over full-length plays, such as the seldom performed *Horský hotel* (pb. 1976, pr. 1981; the mountain resort).

The play *Spiklenci* (pr. 1974, pb. 1977; the conspirators) was first performed in the Federal Republic of Germany. The one-act plays *Audience* (pr. 1976, pb. 1977; English translation, 1976) and *Vernisáž* (pr. 1976, pb. 1977; *Private View*, 1978) were first produced in 1976 in Austria; the one-act *Protest* (pr. 1978; English translation, 1980) was performed in 1978. *Largo desolato* (pr., pb. 1985; English translation, 1987) premiered in Vienna, while the Faustian satire *Pokoušení* (pr, pb. 1986; *Temptation*, 1988) was first performed in 1986 in Vienna and in 1987 in England. Similarly, Havel's essays first appeared abroad, among them "Moc bezmocných" in London, later translated as "The Power of the Powerless."

For his criticism of the repressive Communist regime, Havel earned its unrelenting hate. During the 1970's, he was arrested and imprisoned several times. Havel became one of the signatories and spokespersons for Charter 77, a human rights declaration of January, 1977. In 1979, Havel, along with other Charter 77 members, was arrested and tried on charges of "subversion of the republic." He was sentenced to four and a half years in prison.

Between his two prison terms, Havel wrote the acclaimed *Protest*, the third part of the trilogy that also includes *Audience* and *Private View*. A selection of letters that Havel wrote to his wife from prison appeared as *Dopisy Olze: Červen 1979-Září 1982* (1983; *Letters to Olga: June 1979-September 1982*, 1988). For reasons of poor health, which prompted appeals on his behalf from the international intellectual community, Havel was released in February, 1983.

Until the Velvet Revolution of November, 1989, which peacefully ousted the hard-line Communist regime in Czechoslovakia, Havel was subjected to harassment by secret police and endured a brief imprisonment in early 1989 that again caused an international outcry. In December, 1989, Havel was elected president of the newly democratic Czech and Slovak Federal Republic, an office for which he was reconfirmed in June, 1990, in the first freely held elections since 1948. Two years later, in

the wake of the dissolution of the Soviet Union and the political realignments that accompanied that historic event, Havel announced on July 17, 1992, that he would resign on the following Monday rather than preside over the likely division of his nation into separate Czech and Slovak republics. He planned to continue working for democracy.

Since then, Havel has followed the changing international scene. He founded a yearly conference, Forum 2000, which deals with world affairs. He has written numerous essays commenting on these affairs often published in newspapers and magazines, including *The New York Times*, *The Washington Post*, and *The Guardian*. These essays often deal with issues of abuse of human dignity and freedom in places such as Tibet, Sudan, Burma/Myanmar, Zimbabwe, and North Korea. He also addresses concerns about preserving the planet against the threat of global warming. His book *Prosím stručně* (2006; *To the Castle and Back*, 2007) records his life leading up to and away from his governmental career at Prague Castle. It consists of multiple forms: reminiscences, quoted memoranda, and selections from a lengthy interview conducted by Karel Hvíždala. All of these are interspersed with excerpts from a running account of his visit to Washington, D.C., in the spring of 2005.

In the meantime, he has not abandoned his theatrical interests. In 2006, he was invited to be artist-in-residence at Columbia University. During his stay there, several theaters joined together to present a festival of eighteen of his plays. The next year brought the news of his first new play in eighteen years, *Odcházení* (pb. 2007, pr. 2008). Loosely based on William Shakespeare's *King Lear* (pr. c. 1605-1606, pb. 1608) and Anton Chekhov's *Vishnyovy sad* (pr., pb. 1904; *The Cherry Orchard*, 1908), the action emerges out of the retirement of a chancellor named Rieger, whose power and villa are both taken from him as his political rival plans to make the villa's orchard into a major shopping center. Naturally, one would look for parallels with Havel's own career, and while there are some, Havel points out the many disparities that come of his satirizing Rieger as a glib politician. Havel himself is in the play as the disembodied voice of the playwright commenting on his own creation. The National Theatre originally was to produce the new work in March, 2008, but Havel withdrew it when the theater denied his wish that the main roles be played

by his second wife, Dagmar Havlova (a role he wrote for her), and Jan Triska (the role of the chancellor) and that the director be David Radok. The Archa Theatre in Prague agreed to honor Havel's requests and produced the play in May, 2008.

## ANALYSIS

To view Havel exclusively as a critic of 1960's Communist Czechoslovakia and as a dissident during Husák's so-called normalization period of the 1970's and 1980's would limit his scope as a writer and thinker. Although Havel resisted being called a philosopher, his thinking is firmly grounded in his country's humanistic tradition. The all-pervasive themes of his dramatic fiction and essays are individual responsibility, human dignity and identity, and the burden of human existence. While these themes are central to modern art, Havel's dramatic vision particularly owes a debt to Franz Kafka and the French Theater of the Absurd. Furthermore, Havel was influenced by Martin Heidegger's work, which was conveyed to the Czechs and Slovaks by the philosopher Jan Patočka, who steadfastly applied the principles of individual responsibility to his own life amid persecution.

Paul Wilson, in the introduction to his translation of *Letters to Olga*, rightly notes that phenomenology is congenial to a central and Eastern European mind that struggles to free itself from ideology and its deterministic worldview. Rather than attributing responsibility for the state of things to external factors, phenomenology seeks the obligation for betterment within the individual. Consequently, human rights, according to Wilson, are not privileges that can be granted or taken away at will but principles that govern responsible human conduct, which in turn revitalizes society.

This philosophical stance in part accounts for Havel's courageous, uncompromising championing of human rights. Havel writes about his own experience—from "below," where he was forced by the political circumstances—in the hope of addressing universal human concerns. Thus, in his work he not only exposes a corrupt, repressive regime in central Europe but also discloses a universally shared modern condition.

Havel's interest is devoted to questions such as how the individual copes with impersonal power, how people maintain their identities, and how they carry themselves under the burden of existence.

Although the author calls for the individual to assume responsibility and to live in the truth (as described in his essay "The Power of the Powerless"), he is not a naïve dreamer who would expect immediate and far-reaching results. Yet Havel seems steadfastly convinced that power is not an external but rather an internal faculty. This responsibility to answer only to one's conscience at all costs is an active and perhaps inescapable endeavor.

Not surprisingly, Havel's plays, particularly the so-called Vaněk trilogy, consisting of the semiautobiographical one-act plays *Audience*, *Protest*, and *Private View*, ironically expose the attempts of individuals to justify their selfish conformity in a repressive political system in which they claim to have no part, yet from which they shamelessly benefit. In *Audience*, Vaněk, a dissident, works in a brewery where he is being observed by the secret police with the help of his boss, an informer, who, among other unethical proposals, asks Vaněk, the writer, to relieve him from writing reports by composing them himself. *Protest* juxtaposes the dissident Vaněk and the successful sellout Staněk; the latter selfishly seeks Vaněk's help against the arrest of his daughter's boyfriend, only to reason artfully against and ultimately dodge the signing of the very petition on the young man's behalf that Vaněk has already prepared. *Private View* attacks the vacuous lives of conformist snobs, depicting a couple who subscribe to materialistic comforts and exhort Vaněk to abandon his obstinate antagonism and its corollary material deprivation. In each of these plays, the mental and linguistic acrobatics and sophistries reveal the absurdity of life in "normalized" Czechoslovakia, or, more universally, the schizophrenia of a life lived against one's conscience.

Havel is interested in language, in both its potential benefits and its perniciousness. The essay "Words on Words" restates this theme of the far-reaching "power of words to change history" that is already present in his early plays *The Garden Party* and *The Memorandum*. The two satires are scathing absurdist indictments of the official Communist bureaucratism and its empty clichés that are characteristic of a dehumanized society in which monstrous paradoxes abound. Like these two plays, the vicious comedy *The Increased Difficulty of Concentration* is more than a satire on Communist bureaucracy and an individual's plight to escape its dehu-

manizing effects; it reiterates Havel's recurrent themes, which range from the schizophrenia of existence to fragmentation, alienation, and the loss of human identity.

## THE MEMORANDUM

**First produced:** *Vyrozumění*, 1965 (first published, 1966; English translation, 1967)

**Type of work:** Play

*This play is a grotesque on the introduction of Ptydepe, an artificial, "logical" language, into a large organization satirizing the dehumanizing officialese of prereform Communist Czechoslovakia.*

*The Memorandum* is perhaps Havel's most widely performed play, along with *Private View*. Again, it would not do Havel justice to view the play exclusively as a parody of Communist bureaucracy and its lingo; rather, it is about the dehumanizing effects and the tyranny of language in any system that causes the disintegration of human identity.

The twelve scenes are set in a deliberately "generic" large organization, the purpose of which, like that of any amorphous self-serving bureaucracy, is not plain. Josef Gross, the managing director, and the development of his personality from the introduction to the abolition of the artificial language Ptydepe are both central to the play. Gross cannot decipher a memorandum directed to him because it is written in Ptydepe, a new office language introduced apparently without his knowledge by deputy director Ballas and his cronies and taught in classes in which every employee seems to have enrolled.

Ptydepe is presumably rational and precise and therefore superior to "dilettantish" natural languages, with their vagueness and ambivalence. Its goal is to eliminate imprecision by limiting all similarity between words and thereby achieve the highest possible redundancy in language. The result is monstrously long words that are formed by the least probable combination of letters. This new

doctrine is difficult and complex, so it can be mastered only by discipline and most of all by faith. It is easy to see the parallels between Ptydepe and Communist ideology.

After attempting in vain to stop the spread of Ptydepe, Gross becomes enmeshed in a Kafkaesque catch-22: Even the translation director, Stroll, cannot perform the translation unless Gross's text is "authorized" by a "Ptydepist," a specialist who gives permission for each translation. Prior to an authorization, however, the memo needs to be translated. Gross realizes that since he cannot acquire Ptydepe himself because of his lack of faith, the only way to learn what his memo contains is to know it already.

Ballas glibly threatens Gross into submission by ridiculous charges, forces him to sign a declaration of compliance to Ptydepe, coerces him into self-indictment for his "wrongdoings," and finally reduces him to the post of "staff watcher," a spy who observes all employees through a crack in the wall. Gross regains his rank with the help of Maria, a sympathetic typist, who translates his memo at a moment when Ballas and his associates already begin to reverse themselves in a total rejection of Ptydepe. The memo itself utterly renounces the artificial language.

Ballas ingeniously justifies his reversal and again pressures the vindicated but naïve Gross into compliance, this time by threatening to expose Gross's forced declaration of advocacy of Ptydepe. A search for culprits ensues. As a result, Maria is dismissed for performing an unauthorized translation. Gross conveniently rationalizes his inaction by claiming that if he maintains his position he will keep Ballas and his cronies in check. Ballas, in the meantime, introduces a new nonsensical bureaucratic language, Chorukor, a very antithesis to Ptydepe. Gross placates Maria by empty, hollow phrases invoking high ethical ideals; he blames the "difficult times" in which humankind, including himself, is fragmented, manipulated, and alienated. This "analysis" is ironic coming from an unwilling conformist who diagnoses in himself the very ills that are Havel's primary philosophical concerns but who fails to assume his individual responsibility.

## LETTERS TO OLGA

**First published:** *Dopisy Olze: Červen 1979-Září 1982, 1983* (English translation, 1988)

**Type of work:** Letters and essays

*This publication contains 144 selected letters from prison to Havel's wife written between June, 1979, and September, 1982; the last sixteen letters are noted for their philosophical content.*

*Letters to Olga* is a moving document of Havel's imprisonment and, simultaneously, an important philosophical statement, primarily in the final sixteen letters, which were circulated separately and illegally underground.

The letters are particularly interesting in the light of the circumstances under which they were composed. Havel was subjected to hard labor with set quotas that were deliberately high and thus difficult to fulfill. He was permitted to write home only one four-page letter a week to only one person, so it is perhaps not surprising that he chose to address them to Olga Havel, his wife from 1964 until her death in 1996. Censorship was extremely strict and whimsical. The letters had to adhere to precise specifications: They had to be legible and without corrections, quotation marks, or foreign words. The censors prohibited humor and any thoughts that went beyond what they classified as family matters. The prisoners could not write rough drafts or take notes.

Under such difficult conditions, the weekly letter writing evolved into an anxious guessing game against the arbitrary interpretations of the censors, who ruthlessly confiscated letters that did not fit their specifications. Havel developed a strong dependence on this sole means of intellectual expression permitted to him.

Through her occasional letters, Olga grants him vicarious participation in the cherished life outside the prison. That explains Havel's recurring insistence that Olga write to him more often, in more detail, and answer his questions and requests—an insistence that occasionally culminates in downright petulance and frustration. Havel persistently inquires about such mundane matters as the upkeep of their weekend retreat, Hrádeček, their Prague apartment, or Olga's social life.

Naturally, censorship inhibited intimacy and so the letters may be perceived as devoid of true warmth and feeling. Yet Olga's presence is felt, and Havel's dependence on her, his earnest adviser and first critic of his work, is evident. When Havel became seriously ill in prison in early 1983, it was his wife who alerted the intellectual community abroad, whose interventions on Havel's behalf speeded his release from prison before his sentence was terminated.

The final sixteen letters do not constitute a rigorous philosophical treatise, but even so they show Havel's indebtedness to phenomenological thought and illuminate the tenets of his work. At the center is the image of birth that symbolizes the fundamental condition of humankind, the experience of separation and release, of breaking away: Humanity is cast into an alien world and faces the question of who it is. What essentially characterizes humankind is a boundless primal sense of responsibility for others in a world into which it is cast. All individuals share this isolation in a world from which they cannot escape, and this vulnerability and helplessness cry out for compassion. The misery of others reminds them of their own "thrownness" and isolation in the world. It follows that humankind is not only responsible for others but also obligated to shape the environment, free from scientific or ideological determinism.

### SUMMARY

Václav Havel's life and work bear witness to his unwavering humanism, his assertion of individual conscience and responsibility under adverse conditions. His primary interest is devoted to universal dilemmas that transcend the mere historical circumstances of Communist totalitarianism in central Europe and include questions of human identity, fragmentation and alienation, communicational collapse, and existential schizophrenia.

In his essay "Words on Words," Havel describes the earthshaking potential, both beneficial and

detrimental, of language. That words of truth prevail and indeed can change history has been proven by him and the thousands of students, artists, intellectuals, and ordinary citizens who peacefully toppled Czechoslovakia's hard-line Communist regime in 1989.

## DISCUSSION TOPICS

- A common theme in the works of Václav Havel is the sense of the arbitrary isolation of the individual in a senseless society. Discuss instances of this theme and the bearing it has on Havel's own experience as a revolutionary in Communist Czechoslovakia.
- Havel makes much of the use, misuse, and abuse of language in his plays. Why does he take such interest in this matter?
- Why would Havel have preferred drama to other forms of literature?
- What position does Havel take on the matter of social responsibility? Does the individual owe anything to his or her society?
- Havel's memoir *To the Castle and Back* is composed of pieces from a long interview, selections from his governmental memoranda, and journal entries from his visit to the United States after he had left office. What effect does this structure seem to have? Why did he not write it as a straight chronological memoir?
- In what sense could one argue that Havel's plays are disguised autobiographies?
- What might have led Havel to return to playwriting so many years after he gave it up for the sake of his government work?

## BESSIE HEAD

**Born:** Pietermaritzburg, South Africa  
July 6, 1937

**Died:** Serowe, Botswana  
April 17, 1986

*An exiled South African writer, Head voiced Africans' perspective on apartheid and other social issues based on her experiences, exposing inequity and despair as her characters, often ostracized because of ethnicity or gender, strived to belong and survive.*

### BIOGRAPHY

Bessie Head was born in the Fort Napier Mental Institution on July 6, 1937, at Pietermaritzburg, South Africa, to Bessie Amelia Birch Emery, the daughter of affluent English immigrants. Her paternity remains unknown, although most sources state that Head's father probably was an African man who tended her grandparents' racehorses. Named Bessie Amelia Emery at birth, the infant Head was placed for adoption because her mentally ill mother remained institutionalized. After Afrikaners refused to raise the biracial child, George and Nellie Heathcote accepted Head as a foster child. Residing in Pietermaritzburg during her early childhood, Head thought Nellie Heathcote was her mother. Her biological mother, of whom she was unaware, died when Head was six years old and provided money for her daughter's education.

In 1950, Head began studies at an orphanage, St Monica's Home, near Durban, South Africa. Head voraciously read literature, savoring the ability to live vicariously through books. Her reading was the catalyst for her interest in writing because she wanted to create similar experiences for readers. A magistrate court eventually revealed that Head's real mother was white and her father African. Her school principal threatened that Head might suffer insanity like her mother. Devastated, the teenage Head questioned her true identity.

By 1953, Head enrolled in a program to become a teacher, completing it two years later. She began teaching primary students in Durban in 1956. In July, 1958, Head moved to Cape Town and started

writing for the *Golden City Post*. The next spring, she relocated to Johannesburg, where she wrote for the *Drum* periodicals, supported political reform, and affiliated with the Pan Africanist Congress.

She married journalist Harold Head on September 1, 1961, at Simonstown. They both secured writing assignments with *The New African*. Head gave birth to her son, Howard, on May 15, 1962. She also completed her manuscript for *The Cardinals* (1993) that year. By February, 1964, Head was separated from her husband, and she secured exit visas for herself and her son so she could leave South Africa to teach in Serowe, Botswana. After being dismissed from her teaching job, Head moved to the Bamangwato Development Farm in early 1966 and then resided in the Francistown refugee camp.

Head's article published in the *New Statesman* in 1966 resulted in her receiving an advance from Simon & Schuster for her first novel, *When Rain Clouds Gather* (1969). By January, 1969, Head had returned to Serowe, where she constructed a home and gardened for the local cooperative, selling produce and gooseberry preserves to supplement her royalties. During 1970, Head wrote another novel, *Maru* (1971).

She experienced an emotional collapse in the spring of 1971, resulting in treatment at the Lobatse Mental Hospital. After being released, Head started a third novel, *A Question of Power* (1973), which was short-listed for the Man Booker Prize in 1974. In that same year, the Norwegian government granted Head citizenship and asylum in that country, but she decided to stay in Africa,

working on her short-story anthology, *The Collector of Treasures, and Other Botswana Village Tales* (1977). Head interviewed community residents and began writing her nonfiction book *Serowe: Village of the Rain Wind*, published in 1981.

Head received expanded global recognition for her writing; journalists for the British Broadcasting Corporation (BBC) and *London Magazine* profiled the author. In the summer of 1977, she traveled to the United States to participate in the University of Iowa's International Writing Program workshops. The university library's vast African collection benefited Head's historical research. During her American trip, Head learned that the government of Botswana had denied her request for citizenship, although it eventually designated Head a citizen in February, 1979.

Head wrote *A Bewitched Crossroad: An African Saga* (1984) and traveled in Europe and Australia to attend literary events. In February, 1986, her divorce became final. Suffering from hepatitis, Head died on April 17, 1986, at Sekgoma Memorial Hospital in Serowe and was buried in that community's Botolaote Cemetery. Publishers posthumously released several of Head's books, including *Tales of Tenderness and Power* (1989) and *The Cardinals, with Meditations and Short Stories* (1993).

BessieFest, a celebration of Head's seventieth birthday, was held in July, 2007, and participants, including scholars and colleagues, gathered in African places associated with Head to commemorate her literary achievements. The Bessie Head Trust preserves her Serowe home.

## ANALYSIS

Viewing herself as a humanitarian, Bessie Head wrote to examine her life and community, expressing her awareness of political, religious, and social issues and seeking to depict African cultures authentically. Her characters experience internal turmoil, much like Head did as she dealt with misperceptions and untruths regarding her identity. Head wrote her fiction primarily from a third-person viewpoint, with omniscient observers removed from the situations they described, much like her characters were removed from their native homes and relocated as exiles and refugees to unfamiliar places. These characters, like Head, strive to become part of their new communities and secure acceptance.

As Head's characters endeavor to belong, they often remain outsiders, both to their new communities and to themselves. Head created characters on the periphery, confused not only by their often mixed ancestry but also by peoples' reaction to them. As a result of misunderstandings and assumptions, Head's characters are frequently victimized by generalizations that define them inaccurately and associate negative stereotypes with them. Although some of this categorization is benign, many people maliciously assign identities to exclude or vilify characters.

As Head depicts in *A Question of Power*, deception causes fragile individuals to question their worth and to believe lies. Support or ostracism from their community determines whether characters will thrive or succumb to identifiers beyond their control, such as parentage. Racism within ethnicities, as Head depicts in *Maru*, exposes inequities that seem unnecessary.

Head consistently creates borders as a literary device in her writing; her characters are trapped physically and emotionally by both real and imagined boundaries. Political and legal borders designate rules for characters to abide or resist. Other boundaries, including livestock fences and corals, indicate how the freedom of human beings and animals is restricted on land, with only the sky offering movement without borders. Freedom, however, presents responsibilities and demands accountability.

Gender roles are another important component of Head's writing. Both men and women represent innocence and evil. Rejecting rigid archetypes, Head does not cast all female characters as victims, nor depict males solely as villains. Characters in such works as the *The Cardinals* are complex and display both naïveté and malice. Head creates strong women who are resilient to the challenges presented in patriarchal societies. Some women are depicted as fragile, yet exhibit the strength and resourcefulness to overcome their weaknesses. Many of Head's fictional men are misogynists or predators who torment women, taking advantage of their vulnerabilities by manipulating them or cruelly attacking their insecurities. Some of Head's male characters, however, are compassionate and offer possibilities for salvation; acts of kindness and affection redeem characters.

Power and wealth are also important concerns

in Head's work. Most of her characters are impoverished financially. Rejecting greed and materialism, many of her characters consider the freedom to make unhindered decisions priceless. Their perception of wealth is to possess and share innate qualities of empathy and community. However, some entitled characters scheme, planning how to acquire more monetary wealth and power over people they consider inferior.

Head effectively develops emotions as strong literary elements. Many of her characters experience or indulge in hostile behavior, and both oppressors and victims express their rage. Anger and hate offer her characters the means to intimidate targeted individuals and groups or to resist oppression, often culminating in aggression and violence. Passive characters internalize their fury, punishing themselves instead of their tormentors by allowing their emotions to become irrational and paralyzing. Head emphasizes how peace and hope can enable characters to adapt to their circumstances and to embrace faith in themselves and their community, thus attaining the power to live sanely.

Head uses images of nature to intensify her characterizations and settings. She personifies nature as a fickle character, which both oppresses and rejuvenates human beings. Head's settings are often bleak, particularly the dying bush in *When Rain Clouds Gather*, where even tree roots wither. She uses colors, such as red dust, black vultures, and white ants, to accentuate her imagery and suggest conflicts between individuals, within individuals, and between individuals and nature. Drought represents the depletion of hope and trust that nature will protect, emphasizing the need for Head's characters to summon their inner resources to survive such barrenness.

Interested in portraying Africans realistically, Head gives voice to ordinary people in her novels and nonfiction work, *Serowe: Village of the Rain Wind*. She offers an African perspective of natives' roles in that continent's history in *A Bewitched Crossroad: An African Saga*.

## WHEN RAIN CLOUDS GATHER

**First published:** 1969

**Type of work:** Novel

*A Zulu man freed from jail escapes from South Africa into Botswana, where he lives as a refugee, seeking freedom, community, and self-knowledge.*

Survival and rebirth resonate in *When Rain Clouds Gather*. The protagonist, Makhaya Maseko, nervously waits in an elderly man's hut in Barolong, South Africa, before daring to cross into independent Botswana. Makhaya burns a note linking him to a bombing plan and reveals he dislikes his tribe and has been imprisoned. Police sirens wail as they pass in the darkness before he climbs barbed wire fences to freedom. Moving blindly in Botswana, Makhaya hears melodious bells that replace the harsh sound of sirens.

Makhaya spends the night with an older woman and a girl, who tell him the bells are worn by the cattle, which move freely. After sunrise, a truck driver offers Makhaya a ride to a crossroads where Makhaya hopes to register as a refugee. At the police station, the policeman knows Makhaya's name, showing him a newspaper article identifying him as a saboteur. Makhaya denies that charge, and the officer says he realizes that Makhaya only thinks about violence but does not pursue it.

Makhaya sees an elderly man, Dinorego, outside the post office and tells him that he desires contentment. Dinorego, an outsider originally from northern Botswana, contemplates Makhaya's fortitude for living in rural Botswana, commenting that God has blessed his village, which is free of crime and violence and rich with generosity and tolerance compared to urban South Africa. Dinorego invites Makhaya to his and his daughter Maria's home in Golema Mmidi. Here, Makhaya encounters a community of women because most of the male villagers are at cattle posts tending their livestock. Dinorego introduces Makhaya to an Englishman, Gilbert Balfour, who aids the natives by providing scientific and cooperative agricultural methods to ease impoverishment. The village's punitive subchief, Matenge, is aware of Makhaya's arrival and suspicious of his intentions.

Makhaya joins Gilbert in his efforts to build res-

ervoirs in order to store water during a prolonged drought, and he agrees to teach women how to erect tobacco storage sheds. During this work, Makhaya meets Paulina Sebesto, also an outsider, who has moved to Golema Mmidi with her daughter after her husband committed suicide. Her son is at a cattle post with the family's cows. Mma-Millipede, a divorced woman who has been Dinorego's friend since childhood, envisions Makhaya and Paulina together. Accepted in the community, Makhaya participates in villagers' rites of passage, including Gilbert and Maria's wedding, and becomes closer to Paulina.

When Paulina's son, who is suffering from tuberculosis, does not return with the other cattle-men, Makhaya travels with Paulina and Gilbert across the dry bush, seeing bones from thousands of famine-stricken cattle and observing dead trees filled with vultures. They reach the hut, where Makhaya shields Paulina from seeing her son's corpse. He stays with the boy's remains and burns them, collecting the ashes in a container that he gives to Paulina, honoring her customs. The Golema Mmidi community gathers at Paulina's hut to grieve. They hope the annual September rain clouds will soon bring relief and restore life to the desolate bush.

When Paulina is summoned to court by a servant of Matenge, Paulina assumes her relationship with Makhaya has upset Matenge, who strictly controls Golema Mmidi. Villagers accompany Paulina as she walks toward Matenge's mansion. The crowd alarms Matenge, who cowers inside after his servants abandon him. The villagers watch Matenge's house, curious about why he has targeted Paulina. Inside, Matenge cries, contemplating his loss of control over the villagers. He realizes his future is gone if the villagers will no longer recognize his authority.

Makhaya enters Matenge's house by knocking the door down. The villagers follow him indoors. They discover that Matenge has hung himself. Although Matenge assumed the villagers threatened

his possessions, they are more interested in the freedom to make decisions. To them, wealth is generosity and compassion. Despite Matenge's cruelties to them, the villagers treat his body with benevolence, not vengeance, gently preparing it for the arrival of his brother, Paramount Chief Sekoto. Sekoto lies about his brother's suicide to protect his family's image and his power. Through her characterization of the brothers, Head emphasizes how fear and charm empower and weaken leaders and their communities.

Makhaya adapts to life in Golema Mmidi, achieving peace from his emotional strife. He proposes marriage to Paulina. Their sacrifices are the catalysts for beginning a new life together, and they will no longer be outsiders.

## A QUESTION OF POWER

**First published:** 1973

**Type of work:** Novel

*A South African woman exiled in Botswana alternates between experiencing nightmares and normal activities as she struggles with inner and external demons threatening her sanity.*

Head explores emotional instability in *A Question of Power*, which is divided into two halves, representing the two powerful male characters impacting the vulnerable protagonist, Elizabeth. Many scholars consider this powerful novel with strong autobiographical elements to be Head's most significant and provocative work.

In the first section, entitled "Sello," readers learn about Elizabeth's history, beginning with her birth in a South African mental hospital and her mixed racial heritage. Her story closely parallels many aspects of Head's life. Narcissistic men, including her unfaithful husband, have mistreated Elizabeth, who distrusts most males and loathes herself. As an adult living in Motabeng village with her son, whom she calls Shorty, Elizabeth experiences nocturnal visits from a villager named Sello, whom she sees sitting near her bed. Describing Sello as a monk, Elizabeth sleeplessly listens to his comments about poverty and Africa. Although good, Sello seeks to influence Elizabeth's soul

by revealing his susceptibility to evil.

Fragile because she feels like an outsider, Elizabeth obsesses about slights from her community because of her ethnic identity. Powerless, she questions if she belongs and doubts her worthiness. Sello comments about Elizabeth's precarious role in Motabeng. During her nocturnal episodes, Elizabeth also encounters Medusa, whose fury intensifies Elizabeth's despair. Elizabeth absorbs the messages she receives during the night, and her sanity weakens.

Head presents Elizabeth's experiences as streams of bizarre thoughts with intervals of lucidity, as she struggles with her inner demons. Elizabeth questions her sanity because of the absurd things she hears and sees. Head uses bird imagery, including a dead owl on Elizabeth's doorstep, hawks, and songbirds, to indicate Elizabeth's shifts from melancholy to normality.

In the second section, named for Dan, Elizabeth suffers Dan's derisive attacks, which demean her as being inferior to other women and denounce her mixed ethnicity. In her imagination she hears his messages as recordings cycling through the night. Dan is evil and manipulative, and his sadistic words and actions confuse Elizabeth, who often seems delirious as she endures his visits. Interested in controlling Elizabeth's body, Dan frightens her. Elizabeth believes Dan is in her bed with other women, tormenting her with their sexual prowess. His rejection and ridicule cause her mind to twist.

Elizabeth loses control of her emotions during daytime. Community members question her sanity, and she loses her teaching position at the local school because she refuses to convince others she is sane. Eugene, the principal, helps Elizabeth pursue agricultural tasks for the local cooperative. Working closely with an African woman, Kenosi, and an American, Tom, Elizabeth discusses political concerns in Africa and globally. When Tom says he supports Black Power, Elizabeth responds that the Africans might reject him because he is white.

Elizabeth contemplates whether good and evil, and God and Satan, can exist simultaneously within a person. She questions whether she is evil and harmful to others. Her mind exhausted, Elizabeth becomes fragmented and has a nervous breakdown. She talks in her sleep, scaring her son, who hears her rants. Elizabeth attacks an aged woman,

Mrs. Jones, living nearby, and hangs a sign on the Motabeng post office, accusing Sello, whom she blames for provoking her rage, of committing incest with his daughter. Her irrational acts result in her being sent twice to the hospital, where she is sedated.

Discarding the medicine prescribed to her, Elizabeth seizes power over her life. Returning to Motabeng, she embraces her sanity. The cooperative provides Elizabeth a peaceful Eden, where she

can be healed and cultivate land to sustain life. Elizabeth apologizes to Mrs. Jones, who says Elizabeth should trust Jesus, but Elizabeth believes faith exists more in ordinary human beings than in an unseen spiritual being.

As the two split halves of herself, represented by Sello and Dan, are unified, Elizabeth becomes whole. She no longer ex-

ists in fragments, and she believes Sello and Dan have strengthened her. Realizing that the abuse of power is evil, Elizabeth chooses love and self-acceptance instead of victimization and terror and is empowered. She holds her hand above the land to emphasize that she belongs.

## SUMMARY

Bessie Head shaped African literature with her unique perspectives and realism delivered through compelling characterizations, settings, and imagery. Her writing examined universal concerns, specifically understanding people's internal struggles to define and accept themselves and their roles in their communities, as well as the treatment of individuals and groups. Her work revealed how people's perceptions of self and others are often unreliable and resulted in emotional, political, and social paradoxes, antagonism, and persecution.

In addition to her commentary on both white and black suppression of African natives, Head incorporated references to violent racism during the Holocaust and in the United States in order to reinforce her themes of oppression. She emphasized the need for worldwide humanity and unity to com-

bat prejudice by her depiction of diverse peoples, representing various ethnic groups and socioeconomic classes, who overlooked their differences to achieve common benefits. Her messages of joy, love, and autonomy prevail over chaos, humiliation, and the abuses her characters endured.

## DISCUSSION TOPICS

- How does Bessie Head depict power as good or evil, or a combination of both, and which characters most convincingly exhibit those traits?
- Discuss how Head reveals the way insanity can empower characters.
- What boundaries, both physical and emotional, entrap or free Head's characters and how do they react to those borders?
- How does Head depict impoverishment and wealth? Which status seems to empower her characters the most? Why?
- Examine the descriptions of setting that enhance or weaken Head's narratives.
- How do suffering and sacrifice reinforce community in Head's fiction?
- Discuss the role of deception and truth to assert power in Head's novels.
- How does Head use imagery of drought and moisture, including tears, as a literary device?

## SEAMUS HEANEY

**Born:** Mossbawn, County Derry, Northern Ireland  
April 13, 1939

*The most significant Irish poet since William Butler Yeats, Heaney incorporates the very matter of Ireland, both its physical geography and its expansive history, in his poetry. Out of this rich literary clay he fashions an oeuvre that chronicles Ireland's past and present and heralds its future.*

### BIOGRAPHY

Seamus Heaney (HEE-nee), the eldest of nine children, was born on his Catholic parents' farm in County Derry, Northern Ireland, on April 13, 1939. On his father's side of the family were cattle dealers; on his mother's were mill workers. Heaney would break with both family traditions and embrace a different line of work as a man of letters, but his rural ancestry and the landscapes of his childhood would provide rich fodder for his poetry. The rural-industrial divide between his parents further revealed itself in their speech patterns. In his childhood, Heaney felt torn between his loquacious mother and his reticent father, a tension sustained in the adult poet's style of writing. A second tension was manifest in County Derry where Heaney was reared. Differences in practices and beliefs among Catholic and Protestant neighbors were apparent to the boy at an early age, despite generally peaceful relations between the local sects in the 1940's and 1950's. This experience, too, would provide material for future poetry.

The young scholar attended local grammar schools near Mossbawn, the name accorded the family farm. When Heaney was twelve, a scholarship replaced farm labor with academic pursuits, and he left home to attend St. Columbs College, a boarding school in Derry. His inaugural poem "Digging," published in *Death of a Naturalist* (1966), pays homage to the rural life of his forefathers, but from an early age Heaney's preference was for the

life of the mind. Heaney left Derry for Belfast to attend Queen's University. Following completion of English studies, he remained in Belfast, enrolling in postgraduate classes at St. Joseph's College of Education, where he earned a teaching certificate. At this point in his life, Heaney embarked on a teaching career and began writing poems in earnest, dual occupations that would remain constants in his life.

The 1960's were a time of expansion for Heaney in terms of his career, his family, and his publications. For much of the decade, Heaney taught at colleges and universities in Belfast, including positions as a lecturer at St. Joseph's College and later Queen's University. In 1965, he married Marie Devlin, a teacher. Their first son, Michael, was born in 1966, the same year *Death of a Naturalist*, Heaney's first collection of poems, appeared in print. A second son, Christopher, was born in 1968; a year later his second volume of poetry, *Door into the Dark* (1969) was published. In addition to teaching, Heaney broadcast education programs on the British Broadcasting Corporation (BBC) radio and television networks. In 1970, with political violence on the rise in Northern Ireland, Heaney accepted a one-year appointment at the University of California at Berkeley, temporarily relocating his family to the United States. Ironically, instead of fleeing political strife, Heaney encountered it in another form. At Berkeley, student protests over both civil rights and the Vietnam War caused him to assume a more political voice in his own poetry.

Following his year in Berkeley, Heaney formally resigned his post at Queen's University and settled

with his family in the south of Ireland. Their exodus to a rural cottage in Glanmore coincided with the publication of another volume, *Wintering Out* (1972). The influence of political unrest in Northern Ireland and abroad upon his poetry was evident. For the first time the poet's verse ventured from the private sphere into public concerns, and the collection received a subdued response from the critics, many uncomfortable with Heaney's new direction. In 1973, daughter Catherine Ann was born. With his family still lodged at Glanmore, for the next two years Heaney traveled between England and the United States to present lectures and readings of his poetry. In 1975, Heaney accepted a position as chair of the English department at Caryfort College in Dublin, and his family again relocated. *North* (1975), a collection of poems, appeared the same year and received positive appraisal from the critics. The 1970's ended with the publication of *Field Work* (1979) and the new decade began with the simultaneous publications of *Poems, 1965-1975* (1980; pb. in England as *Selected Poems, 1965-1975*, 1980) and *Preoccupations: Selected Prose, 1968-1978* (1980).

The 1980's found the poet and teacher still dividing his time among Ireland, the United States, and England. In 1982, Heaney took a post at Harvard University in Massachusetts that required his presence on campus only half the year. During his tenure at Harvard, two significant works, *Station Island* (1984) and *The Haw Lantern* (1987) were published. Beginning in 1989, Heaney served as professor of poetry at Oxford University in England, another flexible position that allowed him to focus on his writing. In the 1990's, Heaney produced poems at a prolific rate, also writing prose, plays, and translations. Collections of new poetry included *Seeing Things* (1991), *The Spirit Level* (1996), and *Audenesque* (1998). Heaney's reputation as a translator was further enhanced upon the publication of *Beowulf: A New Verse Translation* (1999), a popular and critical achievement. Two volumes of poetry, *Electric Light* (2001) and *District and Circle* (2006), also received positive appraisal in the twenty-first century.

Throughout his career, Heaney has been an advocate for his craft, conducting poetry workshops and judging writing competitions. In the mid-1960's, while teaching at Queen's University, Heaney assumed responsibility for the poetry work-

shop founded by British poet Philip Hobsbaum. In the 1970's, Heaney was an active member of the Republic of Ireland's Arts Council. Honorary degrees from numerous institutions in Ireland and abroad have been awarded Heaney in recognition of his poetry and service. The Irish Academy of Artists and Writers and the American Academy of Arts and Letters count Heaney among their distinguished members. The French Ministry of Culture dubbed Heaney a *Commandeur de L'Ordre des Arts et Lettres*. In 1995, Heaney's reputation as one of the most influential poets of the latter half of the twentieth century was confirmed when he received the Nobel Prize in Literature.

### ANALYSIS

Critics place Heaney in the Northern School, a loose affiliation of Irish poets who grew up during The Troubles, a period of conflict between various nationalist and unionist forces in Ireland beginning in the late 1960's. This group saw their country torn by political and religious strife for nearly three decades, and their poetry offers a varied response to the events of the times, acts of destructive and deadly violence. Among the writers associated with this group, including Derek Mahon and Michael Longley, Heaney offers the most intimate response. Many of Heaney's poems focus on history, politics, and personal identity; in particular, he examines the individual self both avoiding and embracing broader cultural concerns. For Heaney, the cultural and the personal are separate but bound aspects of a single identity, an idea reminiscent of English poet John Keats's theory of inseparable, but irreconcilable, opposites. Frequently, memory functions in Heaney's poetry as the linking element between self, history, and culture.

Much of Heaney's poetry is written from the first-person perspective and the poet directs his attention to events in his own life and immediate environs. "Digging," the first poem in his first volume, metaphorically connects his father and grandfather's labors breaking turf to the pen that Heaney hoists. "I'll dig with it," he notes in the final line of the poem, and does, into the landscape of his elders and back through the ages. Heaney avoids solipsism by allowing his poetic lens to travel in reverse to encounter generations of family members and centuries of ancestors. "The Tollund Man,"

featured in *Wintering Out*, explores the past through preserved corpses exhumed from the bogs. These remains of sacrificial victims become, in Heaney's verse, a metaphor for sectarian violence in present-day Ireland. Heaney links the two directly in "Punishment," published in *North*, a poem that contrasts sanctions against adulterous women in prehistoric times with reprisals against Irish women who consorted with British soldiers. The first were drowned, the latter tarred and feathered. Heaney questions whether his own position as detached poet, one who records events but does not participate in them, might not be a kind of complicity.

Heaney's poetic form varies from free verse to sonnets to terza rima; that he has mastered so many forms is a testament to his diversity and skill as a poet. However, what grounds his poetry is not a particular form but his ability to link Ireland's past and present through connected themes. Primary among these themes is Heaney's ongoing exploration of the role of the poet in contemporary society. For Heaney, the poet speaks not as a national troubadour, mouthpiece, or social conscience, but from the perspective of an observer, one who relays his own life and experiences as they touch upon and are touched by the experiences of others.

## STATION ISLAND

**First published:** 1984

**Type of work:** Poetry

*A collection of imagistic poems that are confessional in nature.*

Part 1 of this three-part collection contains poems that recount personal events and objects from Heaney's life. In one entry, the poet and his sons fly a kite that becomes emblematic of both the resiliency and the fragility of the human spirit. In another, the fabric of a bathrobe removed from its wearer by her lover is likened to the cloth of religious vestments, simultaneously elevating human sexuality to the level of the divine and returning the spiritual realm to the bodily. These slice-of-life poems capture individual images, snapshots of particular scenes and moments in the poet's life. Col-

lectively viewed as an album, they reinforce what it means to be human.

The title of this collection derives from the middle section, "Station Island." This twelve-part sequence focuses on pilgrimages, both religious and literary. En route to Lough Derg, a traditional destination for devout Irish Catholics, the pilgrim, apparently the poet Heaney, encounters deceased acquaintances and literary personages and engages them in dialogue. Central to their conversations is the role of the artist in relation to national, political, and religious concerns. Certain characters express anger that the poet has not joined the fight that ended their own lives. Others advise the poet to avoid participation in social movements, not merely to preserve the poet's life but to keep pure the poet's craft. Eventually the pilgrim meets James Joyce. The iconic Irish novelist, one of the many dead resurrected in the poem, advises the pilgrim to avoid all nationalistic affiliations. In section 12, Joyce warns against political involvement even for a noble cause: "You lose more of yourself than you redeem / doing the decent thing. Keep at a tangent." The resolution at poem's end announces the poet's role as one independent of entanglements with dominant forces. From the margins, the detached poet chronicles a culture from the outside looking in, all the while observing those on the inside pushing out. In "Station Island," Heaney seems to weigh against politically motivated poetry, suggesting that the politics of any age should not push the poet's hand across the page.

Part 3 resurrects Sweeney, the mythical Irish king who was ousted by a saint for refusing to finance construction of a cathedral. Transformed into a bird, Sweeney is both punished for his transgressions and liberated from the chains of nation rule. Heaney first presented Sweeney in his translation of the legend *Sweeney Astray: A Version from the Irish* (1983; revised as *Sweeney's Flight*, 1992). In the final poems in this collection, Sweeney and Heaney, ousted king and outsider poet, begin to

merge. In his refusal to write the poetry of politics and religion, Heaney, like his alter ego Sweeney, has gained a measure of freedom, a certain poetic license.

## “CLEARANCES”

**First published:** 1987 (collected in *The Haw Lantern*, 1987)

**Type of work:** Poem

*This sonnet sequence eulogizes a mother, reminisces about childhood, and ruminates on life and death.*

*The Haw Lantern* is Heaney’s midlife volume of poetry, a response to the myriad crises that commonly arise during that stage of life. The centerpiece of the collection is the sonnet sequence entitled “Clearances.” These sonnets commemorate the life and mark the death of the poet’s mother, Margaret Kathleen Heaney, whose simultaneous presence and absence are expressed in sparse but vivid imagery.

The first sonnet in the sequence opens with a cobblestone being tossed; the poet notes that it seems aimed at him. The hurled stone is a reference to his maternal great-grandmother, a Protestant who married a Catholic, thereby earning the derision of many in the community; it also symbolizes the unrest that plagued Ireland for so many decades. The aside suggests that Heaney, who has made his mark as a Catholic poet in Northern Ireland, might just as easily have written as a Protestant poet, save for his great-grandmother’s conversion by marriage, a chance stone tossed like a coin flipped. In this series of sonnets, *The Troubles* are closer to home, more personal, and more painful.

The first eight lines of the third sonnet in “Clearances” depict a son peeling potatoes alone with his mother while other household members attend Mass away from home. The next four lines switch to a scene of a priest presiding over the deathbed ritual. As others present in the room recite prayers for the dead or weep, the poet retreats back into this memory in the final couplet: “Her breath in mine, our fluent dipping knives—/ Never closer the whole rest of our lives.” Memory allows him to

experience true communion with his mother, a sacrament no less sacred and far more immediate than the rites for the dead offered by the priest. The fifth sonnet in “Clearances” merges the poet’s memory of unpinning air-dried linen sheets from the line and folding them into squares with his mother, the cloth alternately forming sails in the wind, and, though the poet never writes the word, a shroud for his mother.

## “THE SHARPING STONE”

**First published:** 1996 (collected in *The Spirit Level*, 1996)

**Type of work:** Poem

*Relying on the images of wood and clay, the poet pays tribute to a deceased father and simultaneously to all crafters, those both of wood and of life.*

In “The Sharping Stone,” Heaney returns to the earthen materials that first composed the subject matter of his poems. The item named in the poem’s title, a sharpening stone, is an instrument used to sharpen metal objects like knives, scissors, and axes. This whetstone also recalls blades used by woodsmen to fell trees and by carvers to hew timber into furniture and other objects for human use. In the first stanza, the poet recovers the sharpening stone from within an apothecary’s drawer as he packs up the now deceased man’s possessions. Intended as a gift for the older man, its future use is called into question.

In scope, the poem travels from present to past, from Ireland to other countries, and projects into a future time and place: the land of the dead. Engaged in the act of retrieving the whetstone from a cedar drawer, the poet ponders where next to place this tool. In the second stanza, memory guides the poet to a forest park and to two tree trunks “Prepared for launching, at right angles across / A causeway of short fence-posts set like rollers.” A side excursion to the Louvre Museum in Paris temporarily displaces both Ireland and wooden objects from the poem. The poet recalls an Etruscan clay double sarcophagus, one intended for the burial of a married couple. The image on its casing displays

husband and wife, two figures recumbent and content. As the stanza closes, the image is revealed to adorn a postcard sent to the father, who claimed it among his possessions, and in this manner the focus of the poem returns to the wooden drawer and its contents.

The image of a ship set to launch, introduced in the second stanza, returns in the fifth. The poet ponders placing the sharpening stone in its drawer and allowing both to drift downriver, recalling Viking rituals of sending the dead out to sea with provisions for the afterlife. Drawers, coffins, and boats are repositories for objects, whether sharpening stones, corpses, or passengers. The instruments that the artisans employed to craft these containers were sharpened by whetstones similar to the one the poet has retrieved. What connects sharpening stone to tool, and tool to drawer, and the wooden objects to each other, is the human crafter. Nature provides for people and people craft natural materials into serviceable objects to accommodate their journeys, which inevitably reach death. That Hea-

ney considers forwarding the sharpening stone to the deceased hints at the possibility that the human odyssey extends beyond death.

## SUMMARY

Seamus Heaney follows in the footsteps of William Butler Yeats, the premier Irish poet, with whom Heaney is frequently ranked and compared. Heaney was born the same year Yeats died, 1939, and some critics view this happenstance as a symbolic passing of the poetic torch in Ireland. As a modern-day Yeats, Heaney still wrestles with questions that plagued his compatriot a century earlier. Does poetry matter in a violence-ridden world? What responsibility does the poet share for the despair that ensnares so many people in his or her country? Heaney avoids definite answers to these questions; instead he chronicles personal events and experiences in poems that comprise a microcosm of Irish life in the latter half of the twentieth century and into the twenty-first.

**DISCUSSION TOPICS**

- What role do Seamus Heaney's rural upbringing and the landscape of his childhood play in his poetry?
- How do bogs function in Heaney's poetry as representations of the life and culture of the Irish people?
- In "Digging," what connections does Heaney make between the craft of writing and the labor of cutting turf?
- How does communication between the living and the dead function as a motif in "Station Island"?
- Describe the relationship between poet and mother in "Clearances" and poet and father in "The Sharping Stone."
- How does Heaney's poetry address the historical conflicts between unionist Protestants and nationalist Catholics in Northern Ireland?

## ANNE HÉBERT

**Born:** Sainte-Catherine-de-Fossambault, Quebec, Canada

August 1, 1916

**Died:** Montreal, Quebec, Canada  
January 22, 2000

*Dramatist, poet, short-story writer, and novelist, Hébert, one of Canada's most accomplished writers, was principally known for her brooding characters and mysterious worlds.*

### BIOGRAPHY

Born in Sainte-Catherine-de-Fossambault, a village near Quebec City, on August 1, 1916, to Maurice Hébert and Marguerite Marie Taché, Anne Hébert (ay-bahr) was the eldest of four children. With her brothers, Jean and Pierre, her sister, Marie, and her parents, Hébert lived in Quebec City, and spent her summers in Sainte-Catherine-de-Fossambault. She was reared in a cultivated and privileged French Canadian family whose ancestry dated back through her father's side to the first farmer in New France. Maurice Hébert, a civil servant, became known as a writer and literary critic. Her maternal grandfather was the architect for the legislative building in Quebec City. In this atmosphere, Hébert received an informal but impressive education from her father, who encouraged her in her efforts to write poetry, and from whom she learned much about the French language.

In addition to what she learned at Collège Notre-Dame-de-Bellevue and Collège Mérici in Quebec City, Hébert received a cultural and literary education in the circle of family and friends. An important figure in her childhood was her cousin, four years older than she, the poet Hector de Saint-Denys Garneau, who spent his summers at Sainte-Catherine-de-Fossambault. During her late adolescence, Hébert developed an interest in theater, and with Saint-Denys Garneau and others who were to become notables in the Quebec literary

world, she put on plays in the church hall in Sainte-Catherine-de-Fossambault.

In 1939, Hébert had begun publishing her poems in journals. Some of these poems would appear in her first collection, *Les Songes en équilibre* (1942; dreams in equilibrium), for which she received an important Canadian literary award, the Prix David. Her writing career was launched. For years after the death in 1943 of her cousin, Hébert worked on a collection of short stories, published in 1950 as *Le Torrent* (*The Torrent: Novellas and Short Stories*, 1973). The repressive atmosphere of a Roman Catholic church in Quebec is depicted in this work. Consequently, Hébert was forced to pay for the work's publication; she was unable to find a publisher willing to accept the manuscript. The Roman Catholic Church alienated many of the young artists, writers, and intellectuals of the time.

From 1945 to 1954, Hébert was involved in radio and film, working for Radio-Canada, the French branch of the Canadian Broadcasting Corporation, and the National Film Board of Canada. Her screenplay, *Saint-Denys Garneau* (1960), is a testament to the life and work of her brilliant cousin.

In 1954, Hébert received an award from the Royal Society of Canada, which enabled her to move to Paris and to devote herself to her career as a writer. At that time, Hébert settled in Paris, although she occasionally returned to Quebec. Hébert was one of very few Québécois writers whose works were published in France.

*Les Chambres de bois* (1958; *The Silent Rooms*, 1974), Hébert's first novel, published in France in 1958,

was awarded three prestigious prizes. In 1960, her father died. In the same year, Hébert was elected to the Royal Society of Canada, and in 1961 received the Prix du Gouverneur Général du Canada for *Poèmes* (1960; *Poems*, 1975), a revised version of her earlier work, *Le Tombeau des rois* (1953; *The Tomb of the Kings*, 1967). During the 1960's, thanks in part to a writing grant received from the Canada Council of the Arts, Hébert wrote *Kamouraska* (1970; English translation, 1973). This novel is considered to be one of the finest masterpieces of modern Canadian literature. In 1971, it was awarded the Prix des Libraires de France. Psychologically spellbinding, it moves from past to present, telling of the symbolic imprisonment of Elisabeth d'Aulnières, who, once involved in a passionate and brutal love affair, lives in an emotionless and rigid nineteenth century Quebec. In 1973, the novel was made into a film bearing the same title by the Quebec director Claude Jutra. For her life work, Hébert received the Prix David again in 1978; she was made a Companion of the Order of Canada in 1968 and an Officer of the National Order of Quebec in 1985.

Hébert continued to produce complex works that, often expressing a dichotomous view of existence—past and present, good and evil, reality and unreality—were eerie and fascinating. She made a compelling and original contribution to Canadian literature in particular and to world literature in general. She died of bone cancer in Montreal on January 22, 2000.

## ANALYSIS

Poet, dramatist, novelist, writer of short stories and novellas, and script writer, Hébert offered, in all of her works, a singular vision possessing a magical lucidity that saw beyond the mundane. While she wrote exclusively in French, she was nevertheless one of the few contemporary Canadian writers whose work was known throughout the world. Virtually all of her works were translated into English; *Kamouraska* has been translated into English, Finnish, Italian, German, Japanese, Spanish, and Czech. During a writing career spanning more than five decades, Hébert succeeded in portraying alienated and marginal characters, people whose destiny is more powerful than they. She also succeeded in creating a modern literary text that invites introspection and contemplation of life's mystery, breaking with the mode of traditional realism.

Her first collection of poetry, *Les Songes en équilibre*, bears the traits of a beginning mastery of verse. Hébert composed many of the poems in the collection in her early twenties. The poems are experiments with free verse, short lines, and the evocation of brief impressions. This collection contains traces of the poetic themes to be expressed so eloquently in her later works. Some of these themes are the foreboding created by death, the artist and the romantic vision of a dream world, and the recurring image of hands.

First published in its original language in 1950, *The Torrent* is a collection of six short prose works, one of which bears the title "Le Torrent" ("The Torrent"). In "The Torrent," François Perrault is brutally treated by his mother, "big Claudine," who, refusing to accept his decision not to return to school, renders him deaf by striking him on the head several times with a handful of keys. From this time on, a state of dispossession takes hold of François, who later becomes partially responsible for the violent death of his mother, and who isolates himself. His solitude is disturbed by his desires for a woman. He succeeds in buying a woman with feline eyes, whom he names Amica, from an itinerant peddler. Their relationship ends when Amica robs François and deserts him. He is left alone, weakened by a life of disappointment, and, in a lucid moment, wishes to lose himself in a mirror's reflection of his emptiness.

With *The Tomb of the Kings*, Hébert's fascination with death, physical constraint, and dispossession became evident. With a stark style that is characteristic of Hébert, these twenty-seven poems evoke a desire for introspection, for the other side of existence. The image of a woman's hands bears traces of life's experiences, a vivisection, and some bloody and horrible scene.

The title of the book *The Silent Rooms* refers to one of the book's poems, "La Chambre de bois" (literally, a wooden room), in *The Tomb of the Kings*. Its poetic form and its short unnumbered chapters, grouped in three parts, without transitions between them, draw attention to the lack of references to space and time. The reader does learn, however, that the rooms of the title are located in modern Paris. Despite this realistic element, the novel is dreamlike, weaving itself around psychological glimpses that reveal a fascination with death and an ultimate acceptance of life. Michel, a young

man of artistic temperament, and Catherine, the central character, begin a relationship that leads her through a process of self-discovery, commencing with Michel's attempts to confine her to a deathlike existence in their wooden rooms, and culminating in her realization that she wishes to liberate herself from Michel's oppressive presence. Catherine succeeds in doing so; in an unnamed Mediterranean landscape—warm, sultry, and framed by the sea and olive trees—she falls in love with Bruno, incarnation of light and vitality, and thus begins a new life.

The publication of *Kamouraska* marked a divergence in Hébert's career because it is based on a murder that took place in nineteenth century Quebec, in the town of Kamouraska. It is for this novel that she is best known in the English-speaking world. Elisabeth d'Aulnières is imprisoned for the murder of her husband, Antoine Tassy, while her lover and accomplice, George Nelson, successfully escapes to the United States. Like Catherine in *The Silent Rooms*, Elisabeth, once released from prison, leads a claustrophobic life with her new husband, Jérôme Rolland. In flashbacks, she relives the passion she shared with Nelson.

*Les Enfants du sabbat* (1975; *Children of the Black Sabbath*, 1977) is set in Quebec in 1944. Just as *Kamouraska* shifts between past and present, *Children of the Black Sabbath* alternates between images of pious religion and pagan witchcraft. The nun Sister Julie, a child of two practitioners of witchcraft—Adélarde, the devil incarnate, and Philomène—has been initiated by them into the practices of the black sabbath. Having mysteriously become pregnant within the convent, she is believed to be carrying the devil's child, and she undergoes an unsuccessful exorcism before giving birth, in a nightmarish scene, to a child half human and half beast. In so doing, she unleashes the forces of evil among the Sisters of the Precious Blood.

*L'Enfant chargé de songes* (1992; *Burden of Dreams*, 1994) recounts the childhood of Julien Vallières in an isolated area of rural Quebec, where he lives under the domination of his obsessive mother, Pauline. Julien's life is irremediably changed after he meets a mysterious and passionate young woman, Lydie Bruneau. Wild and indomitable, thundering through the countryside on horseback, she releases Julien's carnal desires, longing for love, and

a desire for a fuller appreciation of life. Hébert's aesthetics transcended the commonplace and the fashionable, underlining her uniqueness as a writer who contemplated the dichotomous nature of life.

### "MYSTERY OF THE WORD"

**First published:** "Mystère de la parole,"  
1960 (collected in *Poems*, 1975)

**Type of work:** Poem

*A cornerstone for Hébert's poetic aesthetics, this poem tells of the importance of language in an untamed and newly created land.*

Mysterious, brooding, and introspective, Hébert's poetry is distinctly her own. Her third collection of poetry, *Poems*, contains the poems of the previously published *The Tomb of the Kings*. A second section contains a short prose text, "Poetry, Broken Solitude," and fifteen poems, including the poem "Mystery of the Word." This poem has a sweeping biblical style and a solemn tone that speaks of possession, belonging, discovery, and beginnings. Whereas in *The Tomb of the Kings* Hébert evokes death and dispossession, in "Mystery of the Word" she celebrates life and the creative power of the word. Composed of sixteen long lines, "Mystery of the Word" recounts the birth of a primitive society that receives the gift of fire. The fullness and splendor of fire's horror are revealed to the society.

The text opens in a tranquil landscape, miraculously awakened by enlightening forces that instill in the individual a sense of belonging and magical wonderment. Received by outstretched hands like a sword, this event is an ennobling experience. Odorous arrows, a metaphor describing the fullness of sensuality, inevitably draw the senses to ferns, leaves, flowers, damp wood, blue grasses, and the ambient world, expressed as a musk-laden beast. Colors and sounds, personified, visit this new land in masses while the enchantment of dreams seizes the minds of the innocent.

As if by a curtain rising on a stage, announced by three beats of a stick (which is compared to the rhythmic pulsation of blood), the fullness of the

world is revealed, and, in an instant, takes hold of the human psyche. With it, the gift of the word is received, and seizes everything in a sweeping gesture. Through words, humanity and dawn, symbolic of the beginning of a civilization, become one. Forest and city, untamed lands and civilized collectives dot the land, which has become identifiable by the use of language.

The humanizing quality of language, its capacity to express the fullness of existence, makes it an indispensable element in the foundation of civilization and culture. It should be noted that Hébert's conception of the primordial importance and power of language is consistently expressed throughout her work. In the final verse of "Mystery of the Word," the narrative voice expresses the desire that the individual possessing the power of the word assume the responsibility of telling of life and death, at dawn among the grasses. This poem confirms the place of language in Hébert's aesthetics; for Hébert, language is the means by which the fullness of existence, including dreams and inexplicable manifestations of the unknown, is powerfully and simply expressed.

## KAMOURASKA

**First published:** *Kamouraska*, 1970 (English translation, 1973)

**Type of work:** Novel

*By her second husband's deathbed, Elisabeth d'Aulnières recalls a passionate love affair that led to the slaying of her first husband, for which she was imprisoned.*

*Kamouraska* is based upon the murder in 1839 of Achille Taché, squire of Kamouraska, which was plotted and carried out by Doctor George Holmes, the lover of Madame Taché, Elisabeth d'Estimauville. Holmes escaped prosecution by fleeing to Vermont, and in 1841 Madame Taché was found not guilty of the murder of her husband. In 1843, she married Léon-Charles Clément, a notary and later in his life a member of the Canadian parliament. Hébert alters the true events somewhat. In Hébert's novel, Elisabeth's flashbacks are the means by which the past floods into the present. Elisabeth

d'Aulnières's psyche is the means through which the plot unfolds. In Hébert's work, the first husband is named Antoine Tassy, and the lover George Nelson.

The novel, divided into unnumbered chapters, opens as Elisabeth sits at the bedside of her dying husband, Jérôme Rolland, in the family home in Quebec City. Thinking of her tearless eyes behind the black crepe veil she will wear in mourning, Elisabeth recalls the murder of her first husband, and the subsequent two months spent in prison. A dutiful wife for the past eighteen years, living an honorable and upright life, she appears in the eyes of the dying man as a triumphant figure of transfigured death. Flashbacks, daydreams, and nightmares express her repressed rage at standing trial for poisoning Tassy and for being abandoned by her lover, who raced wildly to freedom across the snow in a bloodied sleigh. She also rages at her powerlessness; a once passionate woman, she must conform to the puritanical mores of nineteenth century Quebec. As she witnesses her husband's death, Elisabeth realizes that she is in a living death. She recalls the truly vital life she had led before becoming Madame Rolland and assuming an identity that was intended to offer renewal but that, in actuality, represents another form of imprisonment.

One of the most powerful images of *Kamouraska* is the bloodied flight of Nelson across the snow to Vermont. He appears as a demon, released with furious force, soaked in blood, his black whiskers and ruddy dark complexion contrasting with the whiteness of the snow. The final scene of the novel, cast in the whiteness of bed linens and pallor of death, portrays a peaceful Rolland, who accepts his approaching death, having received his last rites, and therefore having a cleansed soul. He comforts his wife, who has awakened from a nightmare in which she saw herself, black, dug up from the earth, clinging to an immense lust for life, and running, begging and weeping, through the streets.

## CHILDREN OF THE BLACK SABBATH

**First published:** *Les Enfants du sabbat*, 1975  
(English translation, 1977)

**Type of work:** Novel

*Two worlds, one Roman Catholic, the other satanic, struggle for authority within a young woman.*

Hébert's dualistic perception of existence is seen in *Children of the Black Sabbath*, set in Quebec in 1944, with flashbacks to the preceding decade. Satanic rituals in an isolated mountainous area and religious ceremonies performed in the Convent of the Precious Blood are juxtaposed by means of narrative shifts. Witchcraft, demonic possession, exorcism, and satanic initiation find their corollaries in prayers, dedication to God, Mass, and initiation into cloistered life. In *Héloïse* (1980; English translation, 1982), set in Paris, Hébert depicts two worlds, one above (that of the living) and one below (that of the living dead, notably of vampires). In *Children of the Black Sabbath* she creates a similar dichotomous world. Whereas *Héloïse* is not without ironic humor (the vampires portrayed in it are fond of Bloody Marys, for example), *Children of the Black Sabbath* presents with great clarity the debauchery of both worlds.

Sister Julie of the Trinity was reared with her brother Joseph by practitioners of sorcery. Adélaré was their father and the devil incarnate, and Philomène was their mother. Sister Julie is carried back through dreams and memories to her childhood, where she was witness to lustful perversion,

drunken behavior, and satanic rituals. Now, in the apparent calm of the convent, she must reconcile her past with her present as a cloistered nun in the Convent of the Precious Blood. Her presence does, however, cause great disturbances, not only because of her inexplicable pregnancy, which produces in the novel's final scene the nightmarish image of a half-human, half-beast newborn, but also because it seems to unleash forces that free the nuns from the stultifying and supremely deceitful ways of convent life. Vowed to silence and personal deprivation, they soon become inclined to hallucinations, blasphemous behavior, and to rebellion, through erotic dreams, against the vow of chastity.

*Children of the Black Sabbath* is unsettling in its depiction of sordid sexual initiation in the world of sorcerers and deceit within the walls of the convent. As do many of Hébert's other works, this novel probes the traditional conception of reality, suggesting the existence of another world that is dark and powerful.

### SUMMARY

Anne Hébert, in a prolific and distinguished career, produced remarkable prose and poetic works, all of which adhered to a conception of life as a mysterious force, struggling to maintain equilibrium in its desires and obsessions. Choosing a rich, lucid, and wonderfully evocative style, she succeeded in creating aesthetic dimensions that are distinctly her own. Her writings, rather than being rational and realistic, combined dream and reality and unforeseen shifts in time and place. A supremely resonant voice, Hébert was, indeed, one of the most compelling writers of the twentieth century.

*Kenneth W. Meadwell*

## HEINRICH HEINE

**Born:** Düsseldorf, Prussia (now in Germany)  
December 13, 1797

**Died:** Paris, France  
February 17, 1856

*Heine is internationally celebrated as one of the greatest lyric poets of his time, as well as the author of vivid, frequently satiric prose works.*

### BIOGRAPHY

When Heinrich Heine (HI-nuh) misstated his birth date as January 1, 1800, and described himself as “one of the first men of the nineteenth century,” he was not only exploiting the dual sense of “first”—earliest and foremost—but also engaging in a characteristic bit of obfuscation. Heinrich Heine was actually born Chaim Harry Heine on December 13, 1797, in Düsseldorf, Prussia (now in Germany), the son of Samson Heine, a merchant, and Betty (or Peira) von Geldern Heine. Both his given name, Harry, and his family name derived from Chaim (the latter by way of Heymann or Heinemann). The Jewish antecedents of the poet’s parents were impressive, but in his parental home Judaism had been downgraded. The boy received only a spotty Jewish education in a Jewish school, but later he was sent to a lyceum attached to a Franciscan monastery, where the teaching was done largely by French priests. There, Heine received an early taste of the French culture and spirit, coupled with his love of Napoleon I, to which Heine was later to become so attached. Napoleon the conqueror and emancipator had brought hope and freedom to German Jewry, but after his defeat many of the old restrictions were put in force again. Following a brief sojourn in Frankfurt, Heine was set up in business in Hamburg by his wealthy uncle Salomon Heine. A failure in business and in love

(his affection for his cousins Amalie and Therese was unrequited), he was nevertheless a published poet at age twenty.

After attending the universities of Bonn and Göttingen, he spent two and a half fruitful years in Berlin, where he studied and frequented literary salons. In 1822, he joined the Verein für Kultur und Wissenschaft der Juden (Society for Jewish Culture and Scholarship), a group that strove to continue Moses Mendelssohn’s work of cultural emancipation. That autumn, he visited Prussian Poland and came to appreciate the self-assurance and unity of the eastern Jews, who, unlike German Jewry, were not prey to heterogeneous emotions and resentments. Heine, however, converted to Protestantism on June 28, 1825, shortly before taking a doctorate of laws at Göttingen, and was now called Christian Johann Heinrich Heine. The adoption of Lutheranism, the state religion of Prussia, was to have facilitated the poet’s law practice, which he never even attempted, or to have procured a professorship for him, which did not happen. Referring to his baptism as his “ticket of admission to European culture,” Heine often expressed himself in ironic, cynical, and even self-lacerating terms. Paradoxically, his Jewish awareness and education really began with this conversion, and Heine particularly prized the Bible, which he regarded as the “portable fatherland” of the Jews.

Heine spent the last twenty-five years of his life in exile. Attracted by the July Revolution of 1830, but also because he could not find any suitable employment in Germany and was bedeviled by censorship, he went to Paris in 1831, where he was to

spend the rest of his life, except for brief and furtive visits to Germany in 1843 and 1844. Associating with such famed French writers as Gérard de Nerval, Théophile Gautier, Victor Hugo, Honoré de Balzac, Alexandre Dumas, and Charles Baude-laire, Heine became an indefatigable cultural mediator, interpreting his native land to the French and vice versa and creating or introducing literary forms new to German literature, such as the travel letter and the *feuilleton*, an elegant, witty, stylistically brilliant essay on many aspects of culture. Until 1848, Heine was supported by a pension from the French government, and he also received an annual subvention from his uncle Salomon, though the latter's death in 1844 marked the beginning of family strife. In Paris, Heine remained what he had always been: a German Jew full of conflicts and contradictions. In 1849, he averred that he was no longer an admirer of the pleasure-loving Hellenes but merely an ailing Jew. After abandoning his flirtation with atheism, polytheism, and hedonistic paganism, he moved closer to a personal and transcendent God, but he remained ambivalent to the end.

After living with a young French shopgirl named Crescentia Eugénie Mirat (whom he called Mathilde) for seven years, he married her in 1841. In his last years, he suffered from a syphilitic infection, a progressive crippling malady that paralyzed his body but not his mind or spirit. During the last eight years of his life, he wasted away in the *Matratzengruft*, his self-styled mattress grave or crypt. Heine died in Paris on February 17, 1856, and was buried in the cemetery of Montmartre, at his own request without the ministrations of clergy.

## ANALYSIS

Heine's relatively brief life span encompassed such crucial and formative events as the rise and fall of Napoleon I, the Congress of Vienna, and the failed revolutions of 1830 and 1848. In German literature, the currents during Heine's lifetime were Romanticism, the Junges Deutschland (Young Germany) movement (a journalistic, political, and polemical movement), and poetic realism. Heine described himself as the last of the Romantics and sat in judgment on German Romanticism in *Die romantische Schule* (1836; *The Romantic School*, 1876), published in 1836 mainly for the benefit of French readers. By virtue of his activism, Heine is widely

considered as the leading and possibly only poetic (rather than merely journalistic and ephemeral) member of the group of young revolutionary firebrands, polemicists, and reformers of the Young Germany movement.

Heine grew up when German Jewry was taking its first, faltering steps "from the ghetto into Europe," to use Arthur Eloesser's phrase, a step that these Jews had been enabled to take by the work of two great men—Mendelssohn in the cultural sphere and Napoleon in the political and legal arena. German Jewry's struggle for emancipation is most strikingly symbolized in Heine, and his creative tension derives from the turbulence of his time. In him the *Weltschmerz*, the Romantic pessimism and sadness over the evils of the world and the precariousness of the human condition, mingled with his convoluted Jewishness. When Heine made his famous statement, "Der Riss der Zeit geht durch mein Herz," he meant that the maelstrom of conflicting religious, political, social, and cultural currents near the beginning of the German-Jewish symbiosis and the Industrial Age was producing a rift in his heart.

A remarkable blend of the Jewish and the German past may be found in *Der Rabbi von Bacherach* (1887; *The Rabbi of Bacherach*, 1891), a fragmentary prose work that Heine wrote in an effort to celebrate medieval Jewish life in the manner of Sir Walter Scott's depiction of medieval Scottish life. In the years following his conversion, Heine produced the great works that were to bring him worldwide fame and stature, variously, as the German Aristophanes, the German François Rabelais, the German Lord Byron, the German Voltaire, and the German Jonathan Swift. In 1826 and 1827, he published a volume of *Reisebilder* (1826-1831; *Pictures of Travel*, 1855), and 1827 saw the publication of *Buch der Lieder* (*Book of Songs*, 1856), the most popular poetry collection of the nineteenth century. Like its earlier and later companion volumes, this book contains poems that combine simplicity with sophistication and subtlety, poignance with eloquence, and epigrammatic concision with an expansive folk-song quality, in addition to presenting intentional dissonances and vulgarity in the manner of what has been termed romantic irony. In form, Heine's poems range from memorable epigrams of a few lines to brilliant ballads and extensive verse epics. *Book of Songs* contains such major

cycles as “Junge Leiden” (“Youthful Sorrows”), “Lyrisches Intermezzo” (“Lyrical Intermezzo”), “Die Heimkehr” (“The Homecoming”)—which includes “Lorelei” (“Loreley”), Heine’s best-known poem and, in Friedrich Silcher’s setting, widely regarded as a folk song—and “Die Nordsee” (“The North Sea”). Heine’s poetry inspired musical settings by Franz Schubert, Robert Schumann, Felix Mendelssohn, Franz Liszt, Johannes Brahms, Hugo Wolf, Richard Strauss, and other composers. In general, Heine’s works are as much “fragments of a great confession” as Johann Wolfgang von Goethe’s are. “Out of my great pains I make little songs,” Heine once wrote.

One of Heine’s two tragedies is *Almansor* (1823; English translation, 1905), which explores the conflicts between Moors and Christians in medieval Spain and may be regarded as a parable of the situation of German Jewry in Heine’s day. In it, the Moor Hassan’s reply to Almansor’s horrified remark about the burning of the Koran in the marketplace of Granada contains these words of chilling prescience: “That was only a prelude; where one burns books, one is going to wind up burning people, too.”

Louis Untermeyer, an outstanding biographer and translator of Heine, has pointed out that the poet’s ethnic inheritance is expressed in the flavor of his writings, which is not bittersweet, as it has often been characterized, but sweet and sour, the result of generations of cultural, as well as culinary, pungency. Heine’s wry wit and comic stance have led another noted critic, S. S. Praver, to discern a “reasonably straight” line from Heine to Philip Roth, Woody Allen, or Mel Brooks.

## GERMANY: A WINTER’S TALE

**First published:** *Deutschland: Ein*

*Wintermärchen*, 1844 (English translation, 1892)

**Type of work:** Poetry

*Based on his furtive trip to his native Germany from his Parisian exile, this work takes an irreverent look at many aspects of Germany’s history, culture, and present conditions.*

The title of *Germany: A Winter’s Tale* is reminiscent of William Shakespeare’s play *The Winter’s Tale* (pr. c. 1610-1611, pb. 1623), and the work shows Heine at the poetic peak of his radical phase. This frequently lighthearted but rarely lightweight verse epic is an impishly witty chronicle of the exiled writer’s first visit to Germany in October, 1843. Heine’s work was published as a supplement to his collection *Neue Gedichte* (1844; *New Poems*, 1858) in September, 1844, was reprinted separately the following month, and then appeared uncut in installments in the Paris revolutionary journal *Vorwärts* (forward) in October and November, the first two printings having been proscribed and confiscated by the German authorities. Representing Heine’s answer to the bombastic political poetry of his time, *Germany: A Winter’s Tale* takes a refreshingly irreverent look at many German conditions and attitudes, particularly symbols of German nationalism and conservatism. The poet attempts to bring some fresh air into the musty corners of the German past and sweep away the Romanticists’ fascination with an idealized medievalism. It helps to remember that Heine’s native country was still decades away from being united; in his time, Germany was an agglomeration of thirty-six petty principalities, each headed by a king, a duke, a bishop, or another kind of potentate. Heine excoriates the backward political and social structure, as well as the hidebound mentality, of a land that was still under the spell of absolutism, feudalism, and nationalism.

Heine’s poetic sequence consists of twenty-seven sections, each called a *caput* (head, heading, or chapter). In his four-line stanzas, the poet employs colloquial language and a meter based on iambic stresses. The second and fourth lines are rhymed, frequently in the comic punning fashion

familiar to American readers from the poems of Ogden Nash or Dorothy Parker. The vibrant, dynamic effect achieved by Heine is reminiscent of facile folk poetry or folk songs and has inspired a number of imitations and updated adaptations.

In the opening caput, the traveling poet describes his emotions as he, Antaeus-like, touches the soil of his native country again for the first time in a dozen years. A sort of pie-in-the-sky song sung by a harp-playing girl makes him think of replacing the lullabies of institutionalized religion with rousing secular songs about liberty and a good life for everyone here on earth. In the next section, Heine reflects on the connection between snooping Prussian customs agents and censors looking for intellectual contraband. Caput 3, set in Aachen, is a satiric sally against the stiffness of Prussian soldiers and the outworn relics of medievalism. In Cologne, the poet remembers the clerical narrow-mindedness of that city and the legend that the bones of the Three Wise Men from the East are interred in its famous cathedral. Caput 5 presents a hilarious conversation with Father Rhine, the river having long been a bone of contention between the Germans and the French. The poet then symbolically communes, in the nocturnal city, with the ax-bearing executor of his ideas, who then smashes, in the poet's dream, the skeletons of the Wise Men, representing false beliefs. After remembering Napoleon the libertarian, Heine reaches Westphalia and enjoys succulent German food again. Traveling through the Teutoburg Forest, where the Cheruscan chieftain Arminius (or Hermann) vanquished the Roman legions of Varus in 9 C.E., Heine wonders what Roman greatness his mediocre contemporaries would have achieved if the outcome of that battle had been different. A nocturnal breakdown of his carriage gives Heine a chance to make a pompous speech to some wolves and assure them that he is one of them. A roadside crucifix stirs thoughts of Christ and the dangers faced by idealists.

In caputs 14, 15, 16, and 17, Heine concerns himself with the so-called Kyffhäuser Legend, according to which Emperor Frederick Barbarossa

(Frederick I Barbarossa) and his retinue are asleep in a Thuringian mountain cave and will come to the aid of their country in its hour of need. The poet fantasizes that the emperor shows him around and asks to be updated on political and cultural figures; but the two quarrel, though an apologetic Heine admits, somewhat ironically, that some aspects of the past are preferable to the present. Following a nightmarish encounter with the Prussian eagle, a symbol of confinement and oppression, and after slogging through the mud of Bückeburg, Heine finally reaches Hamburg (caput 20) and is reunited with his beloved

(and quintessentially Jewish) mother, who serves her son a sumptuous meal. The poet comments on the people and places of Hamburg, a large part of which was destroyed in a conflagration of May, 1842. On a street, he encounters a majestic woman who, far from being a lady of the evening, turns out to be Hammonia, the "guardian goddess" of Hamburg, and claims to be the daughter of Charlemagne. The rest of Heine's work contains his conversations with her. Assessing his situation and stature, she warmly invites him to return to Hamburg and even vouchsafes him a glimpse of Germany's future in a sort of enchanted chamber pot, but the poet is almost overcome by the stench. (It is interesting to note that a German recording of this work, complete with music and sound effects, briefly presents the voice of Adolf Hitler at this point). In a rather weak conclusion, Heine describes himself as an heir of Aristophanes and, referring to the *Inferno*, the first canticle of Dante's *La divina commedia* (c. 1320; *The Divine Comedy*, 1802), entreats the king of Prussia to treat poets well, while warning him that they would be able to condemn him to eternal damnation.

## “HEBREW MELODIES”

**First published:** “Hebräische Melodien,”

1851 (collected in *Jewish Stories and Hebrew Melodies*, 1987)

**Type of work:** Poetry

*The poet celebrates the Sabbath observance, remembers one of the great figures of medieval Hebrew poetry, and passes a sardonic judgment on representatives of both Judaism and Christianity.*

Heine’s sequence of three poems on Jewish themes forms part of his collection *Romanzero* (1851; English translation, 1859). The title was undoubtedly suggested by the *Hebrew Melodies* (1815) of Lord Byron.

The poems reflect both continuity and change as far as the poet’s attitude toward Judaism and his Jewish heritage is concerned. “Prinzessin Sabbat” (“Princess Sabbath”) presents, in thirty-eight unrhymed stanzas, a warmly evocative account of the Sabbath observance in a synagogue. On the eve of the Jewish day of rest, Israel (that is, a Jew) is temporarily freed from the witch’s curse that has transformed him into a dog and enters the house of prayer like a prince ready to meet his princess, the personification of the Sabbath, who is as humble and quiet as she is beautiful. Heine describes the richly symbolic festive bustle in the synagogue as the princess promises her beloved culinary delights. Such treats stir visions of biblical scenes, but the waning of the Sabbath threatens to transform the observant Jew into a workaday beast again. The poem ends with a description of the traditional *Havdalah* ceremony. The smell of a spice box sustains the worshipers, who are saddened and weakened by the need to bid the Sabbath farewell, and a few drops of wine serve to extinguish the candle and thus the day of rest.

“Jehuda ben Halevy,” the longest poem in this sequence, has twenty-four stanzas and almost nine hundred lines, and yet it is a fragment with an elegiac beginning and undertone, for in his age-old mourning for devastated Jerusalem the poet invokes the exemplary figure of Judah ha-Levi, a scholar, physician, and poet. Heine gives a flowery description of the making of the poet and his study of the Torah and the Talmud, but he also integrates

him into the mainstream of Christian medieval Europe and calls him the equal of the great Provençal poets, though his muse was Jerusalem rather than some lady love. In a long digression, Heine concerns himself with jewels found by Alexander the Great after his victory over the Persian king Darius III in 331 B.C.E., specifically the wondrous wanderings of a pearl necklace. He also pays tribute to the other great poets of that age, Salomon ben Judah ibn Gabirol (Ibn Gabriol) of Malaga and Moses ibn Ezra of Granada.

“Disputation” consists of 110 unrhymed stanzas. The witty narrator gives a mordant account of a fourteenth century public debate between a Franciscan friar and a rabbi at the Toledo court of King Pedro I of Castile. The question to be settled in this grotesque variant on a medieval tournament is which is the true God, the threefold Christian God of love or the Hebrews’ stern deity. Since the loser will have to adopt the religion of the winner, each dueling debater has assistants ready with baptismal basins and circumcision knives. The friar gives a crude, absurd account of Christian beliefs, and the more rationalistic rabbi emphasizes that Jehovah is a strong living presence. In this twelve-hour mental marathon, the arguments become increasingly heated and vituperative, and when the king asks his queen for her judgment, she comes to the unsettling conclusion that “both of them stink.”

## SUMMARY

Heinrich Heine’s fame rests primarily in his body of lyric poetry. It led to some of the most well-known German folk songs ever produced and has appeared in numerous foreign translations. While calling himself the last of the Romantics, he often criticized the Romantic movement for its lack of social and political commitment. In the turbulent period before the revolution of 1848, he advocated a new German literature addressing such important issues of the day as human rights, women’s emancipation, and equal representation of the masses in national government. He continues to be regarded as one of Germany’s most outspoken champions of the liberal cause.

One of Heine’s early translators, the American poet Emma Lazarus, has pointed out that Heine was a German Jew with the mind and eyes of a Greek, a beauty-loving, myth-creating pagan soul housed in a somber Hebrew frame. Cer-

tainly Heine's poetic persona encompassed the German literary heritage and the Western tradition, as well as classical antiquity and timeless popular legend.

## DISCUSSION TOPICS

- Investigate the cultural background that made it necessary for a baptism to admit Heinrich Heine to "European culture."
- Consider Heine's role in mediating between the often antagonistic German and French cultures.
- What were Heine's contributions to the Young Germany movement?
- Relate Heine's wit and comedic talents to those of present-day comics, such as Woody Allen and Mel Brooks.
- Characterize Heine's criticism of the Romantics' conception of medievalism.
- What forces in his background and personality prepared Heine for his sardonic representation of both Judaism and Christianity in his poem "Disputation"?

## JAMES HERRIOT

**Born:** Sunderland, England  
October 3, 1916

**Died:** Thirlby, near Thirsk, Yorkshire, England  
February 23, 1995

*Herriot is best known for his collections of semiautobiographical tales recounting his life as a veterinarian and his interactions with the animals, people, and landscape of the Yorkshire Dales in northern England.*

### BIOGRAPHY

James Alfred ("Alf") Wight, better known by his pen name, James Herriot (HEH-ree-uht), was born on October 3, 1916, in Sunderland, England. He was the only child of James Henry Wight, a musician, and Hannah Bell Wight, a singer. Three weeks after his birth, his family moved to Hillhead, a suburb of Glasgow, Scotland.

When he was thirteen years old, Herriot read an article in *Meccano Magazine* that made him decide to become a veterinarian treating small animals. However, when he graduated from Glasgow Veterinary School in 1938, jobs were scarce. He took a position as assistant to J. Donald Sinclair, who had a rural veterinary practice in Thirsk in the Yorkshire Dales in northern England. Donald's brother, Brian, also worked for the practice. Finding himself treating mostly large rather than small animals, Herriot quickly realized that he loved working with farm animals, loved the rugged countryside in which the practice was located, and greatly admired most of the farmers and farm workers with whom he interacted. When he first began practice, the draft horse was in widespread use. Gradually, the tractor replaced the horse, and his practice of veterinary medicine changed accordingly.

On November 5, 1941, Herriot married Joan Catherine Danbury, and on the same day he was made a partner in Donald Sinclair's practice. In 1943, during World War II, he joined the British

Royal Air Force. In 1944, he went absent without leave (AWOL) for a brief period to be present at the birth of his first child, Nicholas James Wight, who later became a veterinarian and practiced with his father. Herriot was not caught while he was AWOL. He was discharged from the air force in 1945 because of health problems that kept him from flying.

He then returned to practice in Thirsk. According to his biographers, it was when he was in the air force and away from the Dales that he realized how much he loved that area of England and loved being a rural veterinarian there. His daughter, Rosemary, was born on May 9, 1949. She, too, wanted to become a veterinarian, but Herriot considered that life too physically difficult for a female, so she became a physician and practiced in Yorkshire. When Nicholas and Rosemary were young, they used to make rounds with their father, visiting the remote farms with him on the Yorkshire Dales.

Herriot made several trips abroad, one to the Soviet Union in 1961 as a sheep veterinarian, one to Turkey in 1963 by airplane as a cattle veterinarian, and two to the United States in the 1970's to publicize his books. Most of the rest of his life was spent in and around Yorkshire.

In his late forties, Herriot decided that he needed an additional source of income, so he decided to try writing. He wrote under the pseudonym James Herriot because he believed that veterinarians should not advertise and that publishing works about his practice under his own name would be a form of advertising. He also changed

the name of his partner to Siegfried Farnon and the name of his partner's brother to Tristan Farnon. The town in which he lived became Darrowby, actually an amalgam of several towns in the area.

His first attempts at writing were short stories based on his work as a veterinarian. Periodicals rejected them. To better prepare himself, he read books about writing and reread works by some of his favorite authors, including Charles Dickens, Robert Lewis Stevenson, Sir Arthur Conan Doyle, and Ernest Hemingway. As a result, he decided to take his short stories and rework them into full-length books. He published two books in England, *If Only They Could Talk* in 1970 and *It Shouldn't Happen to a Vet* in 1972, but neither sold well.

Thomas McCormack, president of St. Martin's Press in New York, discovered both books when he was in England in 1972 and took them home with him. At the urging of his wife, McCormack read the books and decided to publish them as one volume. He had Herriot rework the material slightly to make a single volume and to add material about his marriage at the end of the book. As a result, *All Creatures Great and Small* was released in the United States in 1972 and quickly became a best seller. It remains Herriot's most popular book.

He then wrote a series of three more books, all of which, like *All Creatures Great and Small*, took their titles from the Anglican hymn "All Things Bright and Beautiful." These books were *All Things Bright and Beautiful* (1973), *All Things Wise and Wonderful* (1977), and *The Lord God Made Them All* (1981). He also published a number of books for children, such as *Moses the Kitten* (1984), *Only One Woof* (1985), and *The Market Square Dog* (1989). A collection of his dog stories appeared in 1986 and a collection of cat stories in 1994. In 1992, he published his last major book, *Every Living Thing*, as well as *James Herriot's Treasury for Children*. In 1979, he departed from his usual books about animals to publish *James Herriot's Yorkshire*, with photographs by Derry Brabbs, a tribute to the land he had come to love.

Herriot was diagnosed with cancer in 1992 and died from that disease in 1995. In 1996, *James Herriot's Favorite Dog Stories* was released in a new edition with an introduction that is believed to be the last thing he wrote.

Several films are based on Herriot's works. Probably the most popular was the television series *All*

*Creatures Great and Small*, produced by the British Broadcasting Corporation (BBC) in 1978, which drew on a number of his books. Herriot won numerous honors for his works, including the American Veterinary Medical Association's Award of Appreciation (1975), the Order of the British Empire (1979), an honorary doctorate from Heriot-Watt University in Edinburgh, Scotland (1979), and an honorary doctorate from Liverpool University in England (1983). He served as president of the Yorkshire Veterinary Society from 1973 to 1974 and was made a fellow of the Royal College of Veterinary Surgeons in 1982.

## ANALYSIS

James Herriot wrote tales based mainly on his work as a veterinary surgeon in the Yorkshire Dales in England. Each of his five major books covers material from two or three years of his life. He weaves the tales together, often beginning a tale in one chapter, leaving it for a chapter or two, and then concluding it. A major literary device that he uses well is the flashback. Part of one episode will remind him of an earlier one, and he does not conclude the narrative of the original episode until he finishes telling about the earlier one.

His books are basically episodic; they have no overall climax but instead consist of short narratives, many of which have their own climaxes, tied together by the same characters and settings. Many of the individual chapters can stand alone as separate stories.

There is some disagreement about how much of the books are based on fact and how much of their content is fictitious. At the very least, Herriot fictionalizes parts of his life, changing the names of people he knew, including himself, and the names of places where he worked and lived. Although his works seem to flow spontaneously, they are the end process of a series of revisions, rewrites, and polishing, things he claimed he loved doing. He recreates himself as a mature narrator who looks back on his past and is able to laugh at and sympathize with himself.

His first major work, *All Creatures Great and Small*, is set at a time before the coming of widespread mechanization to the English countryside and the advent of wonder drugs, including antibiotics, in the treatment of animals. His last major book, *Every Living Thing*, reflects some of the changes that in-

dustrialization and improvements in medicine brought to the practice of veterinary medicine. Although he dislikes change, he writes of the way advances in medicine enhance the way veterinarians treat animals. He finds antibiotics and sulfonamides especially helpful, but even these drugs are not always sufficient. New surgical techniques, about which Herriot reads in periodicals, also better equip a veterinarian to treat animals.

Throughout his major works, Herriot portrays himself as a comic figure, who, almost in spite of himself, becomes a competent veterinarian in a rural practice. He feels that he often makes a fool of himself in his practice, sometimes because of his misdiagnosis of an animal, as in the case of Mr. Handshaw's cow. Herriot says the cow has a broken pelvis and will never get up, but the cow ends up being fine. Sometimes he seems foolish to the farmers and their assistants even when his diagnosis is correct, as in their insistence that their animals have tail worm and his insistence that there is no such thing.

Herriot clearly exaggerates the traits of Siegfried Farnon, his employer and later his partner, and of Siegfried's brother, Tristan Farnon. Siegfried, too, becomes a comical character. He chastises Herriot for being forgetful at the same time that he is himself terribly forgetful; he scolds his assistant for being too generous in his use of thread and cotton, while the next day chastising him for being too parsimonious. When Siegfried puts on a show of patience, Herriot knows that some kind of trouble will ensue. Nonetheless, Herriot admires Siegfried's competence and concern and values his friendship. Tristan is a ne'er-do-well who repeatedly wrecks cars and mixes things up, as he does when he sends a can of cow excrement to Mr. Cranford with instructions to work it well into his boar's back using his hands, or when he sends a package of ointment to a laboratory to have it analyzed for John's disease. Still, Tristan is a friendly, compassionate, and brilliant person.

The books are tied together by Herriot's love for the countryside in which he works and for the people and animals who live there. He recognizes that behind most of the people's gruff exteriors is a strong concern for their fellow human beings and for their animals. Throughout the books runs the author's optimism about the human condition and the interaction of humans and animals. Each of the

major books deals with the problems of life and death, but life always triumphs, always goes on, and death seems a necessary part of the processes of life.

## ALL CREATURES GREAT AND SMALL

**First published:** 1972

**Type of work:** Nonfiction

*Herriot tells stories about his work as a rural English veterinarian and about his courtship and marriage.*

*All Creatures Great and Small* was James Herriot's first book to be published in the United States. In it, the mature Herriot tells of his youthful self, when he graduated from veterinary school and began working in a rural veterinary practice. The narrator, like the reader, is able to laugh at the naïveté of Herriot, as well as at the people who surround him, including his employer, Siegfried Farnon, and his employer's brother, Tristan Farnon. Simultaneously, the reader can recognize the close bond that develops between Herriot, Siegfried, and Tristan, the tremendous respect Herriot has for Siegfried, and the friendship he feels for Tristan.

At the beginning of the book, Herriot is lying on a cobblestone floor, covered with muck, shirtless, and in a cold, drafty barn, with snow sometimes blowing on him, as he tries successfully to deliver a calf. The first chapter ends shortly after he mistakenly thinks that a farmer's question "How about a drink?" is directed at him, rather than at the cow that gave birth. Thus, he immediately introduces the hardships of a rural veterinarian's life, as well as the kind of comic character his early misunderstandings of the rural Yorkshire folk made him. He simultaneously reveals his awe and delight at the miracle of birth, even when it occurs in the most uncomfortable of circumstances. The book ends with his account of his honeymoon, with his wife assisting him as he does tuberculin tests of cattle. The entire book illustrates the kind of joy Herriot eventually finds in his work in the rough Yorkshire Dales.

*All Creatures Great and Small* illustrates how living

a simple life can provide an antidote for the complex problems of modern civilization. The narrator repeatedly reminds the reader that he is writing about a time of change, a time when the draft horse is disappearing from the farms and modern technology is replacing it. He also reminds the reader that the use of traditional medicines, some of which were ineffective, is ending. In addition, rural veterinary work is gradually shifting from large farm animals to small animals. On a larger scale, he laments how radio, television, and the automobile are making people similar everywhere. He even bemoans the disappearance of the older words and expressions of the Yorkshire countryside.

In spite of his conservatism, Herriot uses the new drugs as they become available and follows the new surgical procedures, most of which he reads about in magazines. However, he recognizes that there is no need to entirely abandon the old techniques. To Herriot's amazement, Siegfried successfully uses the traditional technique of bleeding to heal a case of laminitis, an inflammation in a horse's hoof, for a horse belonging to Mr. Myatt and his family, whom Herriot calls "gipsies."

The book shows Herriot, the man from the city, gradually overcoming the distance between himself and the people who dwell in the Dales, eventually becoming accepted and even loved by many of the rural folk among whom he works. He also learns to recognize that beneath their often rough exteriors are what he feels are the best qualities

of the Dalesmen, "the indestructibility, the tough philosophy, the unthinking generosity and hospitality." He interacts with people of all social strata, from the very rich and titled to the very poor, and he treats them all with dignity. He often discovers that he prefers the poor farmers who live high in the Dales and barely manage to make a living from their small, rocky farms to some of

the richer people in the lowlands. For example, he realizes that he prefers the company of the poor Alton family to the rich Taverner family. In his an-

ecdotes, he treats the joy and wonder of life, along with the hardship and death that are always present in the harsh landscape he comes to love so much.

By ending the book with his marriage, Herriot shows life triumphing over death and hope triumphing over pessimism. Some critics theorize that post-World War II America was more optimistic than post-World War II England, in part because of the devastating effects that bombing had on English cities. The optimism of *All Creatures Great and Small*, these critics feel, helped make the book popular in the United States, while the same optimism kept the two books from which it was drawn from being popular in England. In addition, the book's nostalgia for simpler past times and its romantic atmosphere, along with a strong advertising campaign, helped make and keep it popular in the United States. It has been translated into more than a dozen languages.

The marriage at the book's end represents a new beginning in Herriot's life, as well as what appears to be a decision to continue with that life rather than try to become the kind of small-animal veterinarian he originally intended to be. He paints himself as a comic figure throughout his wooing and winning of his wife, Helen Alderson. Herriot thus shows that love can triumph in spite of human failings. He and Helen spend their honeymoon testing cattle for tuberculosis and enjoy what they are doing, demonstrating the kind of close bond they have with the animals and people of the Dales, as well as their close bond with each other.

## SUMMARY

James Herriot's books are a basically optimistic account of his work as a veterinarian in the Yorkshire Dales. Although he encounters some unpleasant people and sometimes has to watch helplessly as good people are hurt when their animals die, he remains optimistic about human nature and nature itself. What he considers the miracle of birth always delights him.

From Herriot's point of view as the narrator of his tales, he recognizes how poorly equipped the pre-World War II veterinarians were to handle some of the cases they treated. However, he also recognizes the good veterinarians do with the limited resources available to them.

Richard Tuerk

## DISCUSSION TOPICS

- How does James Herriot view the births and deaths of the animals with which he works?
- What is Herriot's attitude toward the eccentricities of many of the people he encounters in Yorkshire?
- How does the interaction between Herriot, Siegfried, and Tristan provide comedy for Herriot's books?
- How does the comedy in Herriot's books enable him to write about serious, often distressing, topics without alienating his readers?
- What effect does the use of lines from an Anglican hymn as the titles of four of Herriot's books have on the readers' attitudes toward the books and the events in them?
- Many critics say that the Yorkshire Dales themselves are central to the meaning and effect of Herriot's books. Do you agree or disagree? Why?

## HERMANN HESSE

**Born:** Calw, Germany

July 2, 1877

**Died:** Montagnola, Switzerland

August 9, 1962

*Hesse combined elements of German Romanticism, Eastern religion, and Jungian psychoanalysis to explore the themes of the isolation of the artist and the fundamental duality of existence.*

### BIOGRAPHY

Hermann Hesse (HEH-suh) was born in Calw, Württemberg, Germany, on July 2, 1877, to Johannes and Marie Hesse. The family moved to Basel, Switzerland, in 1881, where Hesse acquired Swiss citizenship. He returned to Calw in 1889, and in 1890 and 1891 he attended Latin school in Göppingen in order to prepare himself for the Württemberg regional examinations. To qualify he had to renounce his Swiss citizenship. In 1891 and 1892, he was a student at the seminary in Maulbronn, which he left after seven months because he wanted to be a writer. In 1892, he underwent exorcism treatments in Bad Boll, attempted suicide, spent three months in a clinic for nervous diseases at Stetten, and was admitted to the Gymnasium in Cannstatt. Over the next ten years he worked in a clockworks factory in Calw and in bookshops in Tübingen and Basel. During this time he began writing a novel, "Schweinigel" (the hedgehog), the manuscript of which has disappeared. In 1899, he published his first prose work, *Eine Stunde hinter Mitternacht* (an hour beyond midnight).

In 1901, Hesse made his first trip to Italy, returning in 1903 to finish *Peter Camenzind*, his first successful novel, which appeared in 1904 (English translation, 1961). That same year he married Maria Bernoulli and moved to Gaienhofen on Lake Constance, where he began a career as a free-

lance writer. In 1905, his first son, Bruno, was born. In 1906, he published *Unterm Rad* (*The Prodigy*, 1957; also published as *Beneath the Wheel*, 1968) and founded *Marz*, a liberal weekly directed against the personal authority of Kaiser Wilhelm II. His second son, Heiner, was born in 1909, and his third son, Martin, in 1911. Meanwhile, he published *Gertrude* (1910; *Gertrude and I*, 1915; also published as *Gertrude*, 1955) and a collection of poetry, *Unterwegs: Gedichte* (1911; on the road). That same year he traveled to India, a journey that resulted in *Aus Indien* (1913; sketches from an Indian journey) and a lifelong interest in Eastern philosophy.

Hesse published *Rosshalde* in 1914 (English translation, 1970), the year that World War I began. He volunteered for active duty but was found unfit for military service and was assigned to the embassy in Bern, Switzerland, where he edited newspapers and established a publishing company for prisoners of war. In 1915, when his father died and his wife and youngest son fell seriously ill, Hesse suffered a nervous breakdown that led to psychotherapy with J. B. Lang, a student of Carl Jung.

In 1919, Hesse moved to Montagnola, Switzerland, where he lived until 1931. The year 1919 also saw the publication of *Demian* (English translation, 1923), a book that gathered a cult following throughout Europe. *Blick ins Chaos* was published in 1920, and translated into English as *In Sight of Chaos* (1923). *Ausgewählte Gedichte* (selected poems) appeared in 1921, the same year Hesse suffered an emotional crisis that lasted eighteen months, during which time he underwent psychoanalysis with Jung himself. *Siddhartha*, Hesse's most

popular novel, appeared in 1922 (English translation, 1951). In 1924, Hesse became a Swiss citizen again; in 1926, he was elected a member of the Prussian Academy of Writers, from which he resigned in 1931 after expressing fears that the academy was deceiving people about contemporary German politics.

In 1927, Hesse turned fifty; his second wife, Ruth, divorced him; Hugo Ball published a biography of him; and *Der Steppenwolf* (*Steppenwolf*, 1929), his most bizarre work, appeared. In 1930, Hesse published *Narziss und Goldmund* (*Death and the Lover*, 1932; also published as *Narcissus and Goldmund*, 1968), and in 1931, he married Ninon Dolbin and moved into a house in Montagnola built especially for him by H. C. Bodmer with a lifetime right of occupancy. In 1932, Hesse published the third work inspired by his travels in the Far East, *Die Morgenlandfahrt* (1932; *The Journey to the East*, 1956).

Between 1932 and 1943, Hesse wrote and published many stories and poems but spent most of this time composing his masterpiece, *Das Glasperlenspiel: Versuch einer Lebensbeschreibung des Magister Ludi Josef Knecht samt Knechts hinterlassenen Schriften* (1943; *Magister Ludi*, 1949; also published as *The Glass Bead Game*, 1969), the novel that not only capped a lifetime of supreme literary achievement but also led directly to his being awarded the Nobel Prize in Literature in 1946. Between 1939 and 1945, many of Hesse's works, including *Steppenwolf* and *Narcissus and Goldmund*, were banned in Germany. *The Glass Bead Game* was published in Switzerland in 1943, but by 1946 publication of his works was resumed in Germany, and that same year Hesse was awarded the Goethe Prize in Frankfurt.

*Gesammelte Dichtungen* (collected works), in six volumes, appeared in 1952 in honor of Hesse's seventy-fifth birthday, and succeeding years saw publication of facsimile editions, correspondence, incidental pieces, and new and old poetry. In 1956, the Hermann Hesse Prize was established by the Society for the Advancement of German Art in Baden-Württemberg. On August 9, 1962, Hesse died in Montagnola.

## ANALYSIS

Hesse's first published work, *Eine Stunde hinter Mitternacht*, is a collection of short stories overflowing with sentimental posturing and romantic cli-

chés, a style Hesse soon came to call sick and incomprehensible, but which he simply refined rather than repudiated. In his next work, *Hinterlassene Schriften und Gedichte von Hermann Lauscher* (1901), the hero with a split personality became the model for a long line of alter egos (*doppelgänger*), including Narcissus and Goldmund, Emil Sinclair and Max Demian, and Hans Giebenrath and Hermann Heilner.

The early works contain many of the themes that appear in Hesse's later writings. One of these is the author as confessor-observer who looks at life objectively and perceives a higher resolution above its superficial contradictions. A similar theme is that of the child who views the world in the eternal present and lives as in a paradise, unaware of the passage of time. Other familiar themes are those of the mirrored image, the outsider, and the Earth Mother. There is also a pervasive love of nature throughout Hesse's works. The hero of *Peter Camenzind*, Hesse's next major novel, strives to obey his own inner law the way seeds obey theirs. His experiences as a student in the city expose him to the artificiality of humankind, and he comes to feel that his mission is to lead the world back to God through Nature. *Peter Camenzind* also contains another of Hesse's central themes: a moment of awakening when intuition and intelligence ignite in a burst of inspiration. *Beneath the Wheel* is a school novel much like James Joyce's *A Portrait of the Artist as a Young Man* (1916), John Knowles's *A Separate Peace* (1959), and J. D. Salinger's *The Catcher in the Rye* (1951). Like Joyce's novel of initiation, this novel chronicles the rebellion of its main characters, Hans Giebenrath and Hermann Heilner, against a dehumanizing educational system. Heilner has the courage to escape, but Giebenrath retreats into a world of madness and ultimately commits suicide. The theme of the inaccessible woman dominates Hesse's next novel, *Gertrude*. Similar goddess figures can be found in *Peter Camenzind* and particularly in *Demian*, where Frau Eva, Demian's mother, is portrayed as a shadowy Earth Mother and an object of veneration to those few who bear the mark of Cain.

Discouraged by the events of World War I, branded a traitor by his country, and devastated by a series of domestic disasters, Hesse underwent psychoanalysis to emerge spiritually reborn. The artistic reflection of this rebirth is *Demian*, in which

Hesse makes conscious use of dreams, memories, and associations. Hesse published it under the name of its narrator, Emil Sinclair, because he wished to express the change of personality he (Hesse) had experienced with psychoanalysis and because he wished to appeal to a more intellectual kind of reader. There is only one principle that *Demian* teaches: that people have a duty to be themselves. Those who abide by this principle will be the ones qualified to lead humanity into the future. In *Demian*, these people bear the mark of Cain as a badge of honor, not shame, a sign that they have the courage to break old rules and create new ones. From *Demian* on, Hesse's theme is the fundamental oneness of all being. This vision of the unity of all life is central to *Klingsors letzter Sommer* (1920; *Klingsor's Last Summer*, 1970) and *Knulp: Drei Geschichten aus dem Leben Knulps* (1915; *Knulp: Three Tales from the Life of Knulp*, 1971), Hesse's personal favorites among his own works, as well as to *Klein und Wagner* (1920) and to his most popular work, *Siddhartha*. Although Siddhartha's life closely parallels that of the Buddha, the novel, with its synthesis of all major religions, is really the profession of faith of a seeker who cannot accept any doctrine but who, when he finds his "way," is able to approve each doctrine and share in the universal brotherhood of all of those who have glimpsed something of the divine and the eternal.

*Steppenwolf* is, like all Hesse's work, the biography of a soul. In this novel, Harry Haller purges his soul of time and personality in a vain attempt to attain the realm of the Immortals. Although he fails because he has not learned to see the eternal behind the temporary and to laugh at the game of life, the novel ends on a note of hope for Haller. In *Narcissus and Goldmund*, the conflict between Spirit and Nature is embodied in the relationship between Narcissus, the analytical thinker and theologian who represents the Spirit, and Goldmund, the dreamy artist who represents Nature. Narcissus inhabits a monastery, the World of the Father, while Goldmund lives in the outside world, the World of the Mother. Ultimately, a mystical union of these opposites is realized.

After *Narcissus and Goldmund*, Hesse's perspective again changes, and in his last two prose works the individual quest is no longer the center of the novel. In *The Journey to the East*, the message is that the willful, personal self must die and the supra-personal self must increase. This means the liberation of the true self and the ability to view life as a game. The journey Hesse describes in this work is not geographical but spiritual. All wayfarers are drawn irresistibly eastward in search of the home and youth of the soul, the everywhere and nowhere, the unification of all times. The east becomes a metaphor for the Kingdom of the Spirit, and the whole book is an appeal to a way of life that runs against the currents of the time. When Hesse speaks of the order of the wayfarers, he perceives them as a wave in the eternal stream of the human spirit toward the East, toward Home. This novel also celebrates artists as artist-saints, for among the travelers are famous painters, writers, and musicians. *Demian* expresses the belief that it is through those who bear the mark that humanity progresses. Now, years later, this belief is reaffirmed. *The Journey to the East* announces that it is good for those who bear the mark to know that they have comrades and to know that they are part of the journey.

*The Glass Bead Game* is Hesse's masterpiece. Like *The Journey to the East*, *The Glass Bead Game* expresses faith in the indestructibility of humanity's spiritual culture. Regardless of differing interpretations, *The Glass Bead Game* repeats the major motifs of Hesse's other works, particularly the essential duality of human nature, which is represented by contrasting characters who form bonds that ultimately transcend their differences and result in an all-encompassing oneness. The artist-saint and the millennium are the principal themes of *The Glass Bead Game*. The artist-saint—the self-fulfilled individual—is embodied in such characters as Goldmund, Demian, Siddhartha, and the Wayfarer to the East. In *The Glass Bead Game*, the artist-saint Josef Knecht is formally installed in the eternal and invisible Kingdom of the Spirit, the end of the Inward Way.

## SIDDHARTHA

**First published:** 1922 (English translation, 1951)

**Type of work:** Novel

*A young Brahman searches for ultimate reality through profligacy and asceticism and learns that wisdom cannot be taught but must come from one's inner struggle.*

*Siddhartha* combines two universal myths, that of Everyman searching for enlightenment and that of the hero on the way to sainthood. Siddhartha takes the journey common to all of Hesse's later heroes, passing from the irresponsible paradise of childhood through the purifying conflicts of youth to the liberation of adult wisdom, the "higher irresponsibility" of absolute faith. Throughout Hesse's works is the reminder that one can learn how to live only from life itself, not from books or teachers. Thus, Siddhartha, the eternal seeker, goes his own way, bowing to no one. He must disregard the wishes of his father, the advice of his friend Govinda, and finally even the counsel of the great Buddha. Only thus can he find his way to his true self.

The story of *Siddhartha* is also built on the myth of the quest. For Siddhartha, the quest begins when he feels that the teachings of Brahmanism do not lead to salvation and decides to try other paths. He leaves home with his friend Govinda to join the ascetic Samanas, with whom he spends three years. When he realizes that asceticism and yoga are only leading him further away from himself, he goes with Govinda to hear the teachings of Guatama the Buddha. Govinda remains with the great teacher, but Siddhartha decides that he must seek his own path through immersion in the world of the senses.

He travels to a large city, where he falls in love with Kamala, a famous courtesan. With her help Siddhartha becomes wealthy, able to afford anything he wants—including Kamala herself. Eventually he realizes that this life of indulgence is just as pointless as a life of denial, that both luxury and asceticism can be extremes that obstruct the path to spiritual illumination. He decides, therefore, to turn his back on the world of Sansara and illusion. Unaware that Kamala is now pregnant with his

child, Siddhartha flees the city and returns to the river, where, in despair, he almost commits suicide.

Realizing that suicide is an evasion, not an answer, he decides to stay by the river and to try to understand himself. He looks upon the contrary experiences of asceticism and indulgence as necessary opposites that define and neutralize each other, leaving him once again in his original state of innocence but with a knowledge of good and evil. Living with the wise ferryman Vasudeva, Siddhartha learns many secrets from the river, the most important ones being that time is an illusion, that all being is one, and that for knowledge to be significant, it must be conditioned by love.

Twelve years later, Kamala comes to the river with her son in search of Buddha. When she dies from a snake bite, Siddhartha begins to care for the boy. He loves his son desperately, but the boy longs to escape the two old boatmen and return to life in the city. Eventually he escapes, and Siddhartha, realizing how deeply he loves his son, also realizes that loving him means letting him go. Vasudeva soon dies, and Siddhartha takes his place. Govinda appears one day and is struck by the change that has overtaken Siddhartha, for it is clear to Govinda that Siddhartha, like Buddha, has at last achieved absolute peace and harmony.

When Hesse talks of peace and harmony, he means the perfect balance of opposites. Every truth is made up of equally true opposites. In order for Buddha to teach about the world, he had to divide it into Sansara and Nirvana, illusion and truth, suffering and salvation. The world itself, however, is never one-sided. A deed is never wholly Sansara or wholly Nirvana, just as a person is never wholly a saint or a sinner. These absolutes persist because people are under the illusion that time is real. Time is not real; and if time is not real, then the dividing line between this world and eternity, between suffering and bliss, between good and evil, is also an illusion.

The lesson Siddhartha learns is that the world is

perfect at every moment, that every sin carries the hope of grace within it. During deep meditation it is possible to dispel time, to see simultaneously all of the past, present, and future, and then to see everything as good, everything as perfect, everything as Brahman. Thus, everything that exists is good—death as well as life, sin as well as holiness, wisdom as well as folly. Everything is necessary; it needs only the concurrence of true believers. Then all will be well with them and nothing can harm them.

## STEPPENWOLF

**First published:** *Der Steppenwolf*, 1927  
(English translation, 1929)

**Type of work:** Novel

*An idealistic artist, struggling to accept the crassness of the real world, learns how to relate to humanity without compromising his integrity.*

*Steppenwolf* is Hesse's most surrealistic novel. With its cast of dreamlike characters, its Magic Theater, and its nightmarish imagery, it comes closer than any of his other works to re-creating the fevered intensity of the lost soul adrift in time and space, ensnared in its own smothering web. The only way back is the mystical process of depersonalization. Harry Haller, the main character, is a man in deep despair because he doubts his ideals and his vocation. Life has become senseless; he longs for new values. Haller first has to learn to accept himself wholly, then to perceive life as a game, and finally to expand his soul to include the whole world in its totality.

On the surface, a bourgeois world is a world of sanity. Haller looks about him at the comfortable routine of domestic existence, and although he feels nostalgia for it, he can no longer accept it. Thus when he sees a sign that says "Magic Theater; Entrance Not for Everybody; For Madmen Only," he tries to enter, because only madmen can make any sense out of a bourgeois world. Until Haller reads the pamphlet entitled "Treatise on the Steppenwolf," he has always thought of himself as a double personality: man and wolf, the civilized human being and the freedom-loving outlaw. So great is this inner tension that Haller has often been on

the point of taking his life and indeed is able to keep living only because he plans to commit suicide on his fiftieth birthday.

After reading the treatise, however, Haller realizes that he is wrong in supposing that he is a two-fold person. All people, he learns, have manifold personalities, and the common notion that each person is a single ego is false. The road to enlightenment is to surrender the idea of a central ego and to expand the soul until it includes nothing less than everything. To achieve this enlightenment, one must experience certain symbolic rites of passage that will remove one from the clutches of the bourgeois.

Haller has such an experience when he encounters a professor of comparative folklore with whom he once studied and accepts an invitation to dine with him and his wife. During the meal, Haller is forced to behave courteously and exchange social lies with his host and hostess. When the professor, a right-wing nationalist, ridicules a newspaper article denouncing the kaiser, however, Haller declares angrily that he is the author of the article and cares nothing for the professor, his scholarship, or his politics. Calling himself a schizophrenic who is no longer fit for human society, Haller storms out, relieved; the lone wolf in him has triumphed over the bourgeois.

Haller then meets Maria, who becomes his mistress, and Pablo, a handsome young musician with extensive experience in sex and drugs. One evening Pablo invites Haller to his quarters for a little entertainment—"for madmen only," he explains—the ticket of admission being one of Pablo's drugs. When Haller has succumbed to the influence of

the drugs, Pablo holds up a small mirror in which Haller sees himself in a double vision, as a man whose features blend with those of a shy, beautiful, dazed wolf with smoldering, frightened eyes. Next Pablo leads him into a theater corridor where there is a full-length mirror. Standing before it, Haller sees himself in a

hundred forms: as child, adolescent, mature man, both happy and sad, dressed and naked. One form,

an elegant young man, embraces Pablo.

Turning from the mirror, Haller walks down the corridor, off of which are dozens of doors, each offering the fulfillment of a thwarted or unrecognized aspect of Haller's personality. Haller goes through a sequence of bizarre experiences climaxing in the symbolic murder of Hermine and culminating in his appearance before a dozen robed judges who, instead of sentencing him to death as he expects, condemn him to "eternal life." Then all but Haller laugh. He is left feeling that he still has much to learn about how to live but promises himself that he will work at it and one day even learn to laugh.

## NARCISSUS AND GOLDMUND

**First published:** *Narziss und Goldmund*, 1930  
(English translation, *Death and the Lover*,  
1932; also as *Narcissus and Goldmund*,  
1968)

**Type of work:** Novel

*Two close friends lead contrasting lives, one spiritual, one sensual, ultimately realizing that they are but opposite sides of the same nature.*

In *Narcissus and Goldmund*, Hesse reaches into the past to explore the theme of the reconciliation of opposites. The conflict between artistic and scholarly existence had always been a problem for him, and in this novel Hesse embodies those opposites in the personalities of two close friends whose interdependent lives take meaning from each other. Both young men meet as novitiates in a monastery, but it is clear from the beginning that they are destined for very different vocations. Narcissus is a scholar who searches for meaning in abstractions, whereas Goldmund is a sensualist who seeks meaning in the concrete world of the senses.

At the end of his novitiate, Narcissus takes final vows and starts his prescribed ascetic exercises, dedicating himself to a life of service to the spirit even though he is aware of its one-sidedness. Goldmund, on the other hand, runs away from the monastery and meets a young gypsy who surrenders herself to him and then leaves him to return to her husband. Thus Goldmund's first experience in

the world of the senses teaches him how unstable and fleeting it is. Yet he continues his search for worldly satisfaction. He has an adventure with a peasant woman, then joins the household of a knight, from whom he flees after getting involved in a triangle with the knight's two daughters. Shortly thereafter Goldmund experiences the violence of the world when he kills a thief, hides the corpse, and escapes.

Goldmund next becomes a disciple of Master Nicholas, a sculptor whose statue of St. Mary he admires. When Goldmund fashions a statue of the disciple John, the features are clearly those of Narcissus. Master Nicholas realizes Goldmund's possibilities and decides to admit him to the guild and give the young man his daughter in marriage. Goldmund, however, does not want to live a bourgeois life and deserts his master. It is the period of the Black Death, and Goldmund meets two refugees, a vagabond cleric and a girl the cleric thinks he has rescued from the plague. For a time the three live together in a country cottage, but once the girl falls ill with the disease, the cleric flees, leaving Goldmund to nurse her until her death. Goldmund then returns to Master Nicholas, who, he learns, has died from the disease.

Soon thereafter Goldmund is caught in bed with the governor's mistress and condemned to death. When a priest comes to give him extreme unction, Goldmund considers killing the priest and escaping in the priest's habit, but the priest turns out to be Narcissus, who has become Abbot John. As Narcissus had promised, he has come to his friend in the hour of his direst need, when the world of the senses and the world of violence and disease have led him to contemplate the sin of premeditated murder. Through Narcissus's influence, Goldmund is released, and the two friends return to the monastery, where Goldmund is given a shop in which he can create sculptures. Once again Goldmund cannot submit to the discipline of monastic life and flees. Years later he returns to the monastery as a tired old man. The world has become too much for him; he longs for peace but harbors no grudge against fate. He has no faith in a life after death but still looks forward to dying, seeing it as a happiness in which his mother will take him by the hand and lead him back into the innocence of nonexistence.

Although Narcissus is portrayed from the begin-

ning as being well on the way to perfection, in the end he has not yet achieved it. His life seems complete only when it is seen as a frame of reference within which Goldmund's experiences acquire meaning. The life of Goldmund is developed in stages as he moves upward from innocence through experience to attain, through sensuality, the higher innocence that Narcissus has sought through spirituality. Neither, however, can make it alone. As halves of the same entity, they need each other. This reality is the interdependence that is the theme of all of Hesse's works.

## THE GLASS BEAD GAME

**First published:** *Das Glasperlenspiel*, 1943  
(English translation, *Magister Ludi*, 1949;  
also as *The Glass Bead Game*, 1969)

**Type of work:** Novel

*A young man in a futuristic utopian society renounces the emphasis on pure intellect and the world of the spirit, leaves the Order, and dies.*

*The Glass Bead Game* is Hesse's masterpiece. He wrote it over a period of eleven years (1932 to 1943), during a time when the world seemed bent on self-destruction. Because *The Glass Bead Game* is, among other things, an urgent plea for an all-embracing humanitarianism, it has a more didactic tone and a more explicit linkage with spiritual ideas from the past. The result is a book subject to many interpretations. On one level it restates Hesse's belief in the individual's ability to attain perfection and to help others by serving as an example, creating an eternal circle of master and disciple. By affirming faith in the individual's perfectibility and will to serve, Hesse implies his belief in the coming of a better humanity that will conquer chaos and barbarity.

For many readers, the significance of *The Glass Bead Game* lies in the synthesis that it represents in Hesse's art and life. It is the work in which he reaffirms most strongly his belief in the Kingdom of the Spirit, seeing in the Game an eternal approach to this Kingdom. The central figure's name, (Josef) Knecht, means "servant" in German, suggesting that his purpose is to serve the hierarchy. His

ultimate service is as supreme Magister Ludi, an office he holds for eight years, but he is plagued by doubts from the beginning. Slowly he realizes that he is aware of the polarities of the light World of the Father (Castalia) and the dark World of the Mother (the outside world). Knecht harbors two opposing feelings within his breast—one toward service to the Order, the other toward "awakening."

The irrational strain grows. As with Goldmund, it is the artist in him that desires liberation. When he does decide to leave the Order, the reason he gives is that he fears that devotion to the spiritual life in seclusion from the world leads to degeneration, that the glass bead game is nothing but an esoteric play as pastime. He prefers to become a Castalian teacher in the outside world. Not long after Knecht leaves Castalia in his quest for self-fulfillment, he drowns in an icy lake one morning right at sunrise. Hesse himself saw Knecht's death as a sacrifice made to free Tito, his pupil, to take up Knecht's cause. This affirmative conclusion is symbolized by the way Tito takes up the robe Knecht has left behind and puts it on after Knecht's death.

By writing *The Glass Bead Game*, Hesse tried to achieve mainly two goals: to build a spiritual realm in which he himself could live and breathe in spite of the poisoning of the world around him and to strengthen the resistance of his German friends against the barbaric powers under which they had to suffer. In order to create this spiritual realm, however, it was not enough to return to the past or to dwell on the present. Instead it became necessary for Hesse to project his ideas into the future, when the unbearable present would have become history. The utopian character of the novel, therefore, is not a gimmick but a need to view the present from a clearer perspective.

## SUMMARY

Hermann Hesse's works are all fragments of a long confession, reflecting a single human being and his relation to the world and to his own self. Although they are primarily concerned with self-recognition and self-realization, these spiritual autobiographies deal with the human condition in general. They have a mystical quality in the way Hesse traces the quest for identity in a universe that is either hostile or indifferent. Yet the quest is not

undertaken within the dogma of an established religion, for then obedience to an established law would suffice. To Hesse, one finds the way according to one's own inner law.

## E. T. A. HOFFMANN

**Born:** Königsberg, East Prussia (now Kaliningrad, Russia)

January 24, 1776

**Died:** Berlin, Prussia (now in Germany)

June 25, 1822

*The author of four novels and the composer of the opera Undine, Hoffmann wrote bizarre Romantic tales. A few provide the text of Jacques Offenbach's Les Contes d'Hoffmann (The Tales of Hoffmann) and of Peter Ilich Tchaikovsky's the Shchelkunchik (The Nutcracker Suite) ballet.*

### BIOGRAPHY

Ernst Theodor Wilhelm Hoffmann (HAWF-mahn) is known as E. T. A. Hoffmann, because he changed the name “Wilhelm” to “Amadeus” as a tribute to Wolfgang Amadeus Mozart, the German composer. Hoffmann was born on January 24, 1776, in Königsberg, East Prussia (now Kaliningrad, Russia). He came from a family of lawyers with a long tradition of service to the state, a calling that he also felt obliged to follow. His parents were separated when he was three years old, and he was cared for by a bachelor uncle, who was eccentric and demanding but a great lover of music. Hoffmann's thorough education in instrumental music and theory may have been the only positive aspect of his lonely childhood.

Hoffmann displayed virtuoso talents. He wrote music throughout his career and was middle-aged before he abandoned the notion that he would be remembered by posterity as a composer. Hoffmann was also a gifted artist and an inspired caricaturist, an ability that had a negative effect on his career. Yet his irrepressible humor and dualistic personality contributed to his genius. Hoffmann displayed a lifelong tendency toward excess in his lifestyle and in the consumption of alcohol, factors that help to explain his early death at the age of forty-six.

From 1792 to 1795, Hoffmann attended the uni-

versity in Königsberg as a law student. He passed difficult examinations, making him eligible for service as a high-ranking legal official in the Prussian government. His life, like that of the writer Franz Kafka a century later, was compartmentalized into pursuit of the traditional legal career during business hours and devotion to his artistic talents during his off-hours. Hoffmann also gave private music lessons and fell in love with one of his pupils, Cora Hatt, who was married.

From 1797 to 1807, Hoffmann held positions in Prussian courts of law in Posen, Plozk, and Warsaw. He was sent to the remote hamlet of Plozk because of an indiscretion involving his caricature portrait of one of the leading military personalities in Posen, who was not amused by the likeness. In 1802, Hoffmann married Michalina (Rohrer) Trzynska. During the years from 1797 to 1807, he continued to study both painting and composition, completing an opera and a symphony. He also began to write fiction at this time.

Because he refused to swear an oath of fealty to Napoleon I's occupation government, Hoffmann was dismissed from public service in 1807. After a time of personal hardship and near starvation in Berlin, he succeeded in obtaining the position of musical director and in-house composer at the Bamberg theater, where he stayed from 1808 to 1813. After the failure of his first production as music director, Hoffmann resigned but retained the job of composer of stage music and ballets. He gave

private music lessons again, and he fell in love with another pupil, Julia Marc. This unfortunate passion drove him to thoughts of suicide, a theme often adumbrated in his fiction. Divorce was not an option in Hoffmann's time and situation. In these difficult years, Hoffmann continued to write instrumental or choral music, published his first short story, "Ritter Gluck: Eine Erinnerung aus dem Jahr 1809" ("Ritter Gluck"), and functioned as a theatrical designer.

In 1813, Hoffmann was appointed music director for the opera company of Joseph Seconda in Dresden and Leipzig. He wrote such stories as "Der goldene Topf: Ein Märchen aus der neuen Zeit" ("The Golden Flower Pot"), an essay titled "Beethovens Instrumentalmusik" ("Beethoven's Instrumental Music"), and his own opera, *Undine* (1816), with libretto supplied by the writer Friedrich de la Motte Fouqué. This charming story of a water sprite in love with a mortal knight was produced in Berlin in 1816 for fourteen popular performances. The opera house burned to the ground, however, while Hoffmann watched, horrified, from his room across the street. *Undine* was soon forgotten. Contemporary music historians view it as one of the most unjustly neglected operas of Romanticism.

Hoffmann's months at Seconda's opera were brief. He returned to Berlin in 1814 to take the position of deputy judge in the court of appeal, a prestigious appointment that he held until his death in 1822. He continued to write stories, reviews of musical performances, novels, and sketches. He was well known in artistic circles, befriending the famous actor Ludwig Devrient and counting many Romantic writers among his close friends. He was also a habitué of the renowned wineshop Lütter and Wegner. Late in his life, he was appointed commissioner of inquiry for a set of important trials, where he acquitted himself with honesty and efficiency. He also returned to the fatal error of caricature, this time of people at the trial, whom he pilloried in a short story titled *Meister Floh: Ein Märchen in sieben Abenteuern zweier Freunde* (1822; *Master Flea: A Fairy Tale in Seven Adventures of Two Friends*, 1826). A man with, in his own words, "too much reality" to devote himself entirely to writing, Hoffmann continued to function in two spheres, even up until paralysis claimed his life. He dictated his last story, "Der Feind" ("The Enemy"), until a few days before

his death on June 25, 1822, in Berlin, Prussia. Hoffmann is among the most famous of all Romantic tellers of tales, particularly in England, France, and the United States.

## ANALYSIS

Hoffmann's fiction is noted for its astonishing depiction of pathological psychological states; for the use of description emulating the detail of dreams; for the introduction of grotesque, supernatural, and bizarre elements into his narratives; for its sometimes macabre humor; and for the portrayal of characters torn between two conflicting desires. His work, like his life, is dualistic, full of two-sided heroes leading frenetic, eccentric lives.

Hoffmann came to fame as a writer after having considered the calling of an artist or a composer-musician. He accompanied his efforts as a lawyer and author with the writing of operas, symphonies, and a wealth of smaller compositions. He often gave private music lessons to augment his precarious income and published critical articles about the music of his time.

Musicians and other kinds of artists play a significant role in Hoffmann's fiction as ambivalent heroes. The most famous (partly autobiographical) character that he created was Kapellmeister (Conductor) Johannes Kreisler, the hero of a cycle of stories, which served as the inspiration for the occasional music titled *Kreisleriana* by the nineteenth century composer Robert Schumann. Kreisler was also the hero of Hoffmann's avant-garde novel *Lebensansichten des Katers Murr; nebst fragmentarischer Biographie des Kapellmeisters Johannes Kreisler in zufälligen Makulaturblättern* (1819-1821; *The Life and Opinions of Kater Murr; with the Fragmentary Biography of Kapellmeister Johannes Kreisler on Random Sheets of Scrap Paper*, 1969; also known as *The Educated Cat*). In this novel, Hoffmann's dualism is graphically displayed, since the book purports to be the autobiography of a tomcat, who uses the reverse sides of the musician Kreisler's autobiography for his own story. Thus, each page of the cat's life alternates with pages of the musician's confessions. Murr (Purr) is the very embodiment of a limited and judgmental member of the middle class, and the composer's struggles are caused precisely because of such attitudes.

The eighteenth century composer Christoph Gluck is a main character in Hoffmann's earli-

est story, “Ritter Gluck.” In this tale, as in most, the supernatural plays a role because the composer is a ghost. Other magical, often humorous, elements figure prominently in the stories, including fire spirits and salamanders, in “The Golden Flower Pot”; twisted demoniac characters who appear in various guises and may be in league with the Devil, such as Coppelius in “Der Sandmann” (“The Sandman”); or eccentric violin collectors, who build houses symmetrical only on the inside, like Councillor Krespel in “Rat Krespel” (“Councillor Krespel”). Titles such as “Das öde Haus” (“The Deserted House”) from *Nachtstücke* (1817; night pieces), *Die Elixiere des Teufels: Nachgelassene Papiere des Bruders Medardus, eines Kapuziners* (1815-1816; *The Devil’s Elixirs: From the Posthumous Papers of Brother Medardus, a Capuchin Friar*, 1824), and “Der Elementargeist” (“The Nature Spirit”) attest to the range of fantastic themes that crowd Hoffmann’s tales.

Hoffmann often wrote about people who were obsessed by one peculiar idea. For example, he depicted the slightly mad obsession of Councillor Krespel for taking violins apart in order to see where their beautiful tone resided. That is analogous to the futility of doing an autopsy on a human body to search for the soul or the cause of a beautiful singing voice. Indeed, Krespel, a lawyer like Hoffmann, has been unhappily married to an operatic soprano from Italy (where the best violins were also made) and has a daughter who will die if she sings. Of course, she has a divinely beautiful voice, and, inevitably, she succumbs to the fatal temptation to sing. This theme is taken up by such later authors as Thomas Mann in his novella *Tristan* (1903; English translation, 1925). It is also typical of Hoffmann’s fiction that more than one related theme is treated in the same story, for example, building an inwardly symmetrical house, dismantling violins, and enforcing silence on a gifted, but physically frail, singer.

Hoffmann was the first author to write mystery fiction, when he published, “Das Fräulein von Scuderi” (“Mademoiselle de Scudéry”) in volume three of *Die Serapionsbrüder* (1819-1821; *The Serapion Brethren*, 1886-1892), twenty-two years before Edgar Allan Poe. It contains a fanciful description of an artist-criminal obsessed with a beautiful work of art, a theme that has enjoyed wide currency since Hoffmann’s time.

The author arranged his stories into collections, with names such as *The Serapion Brethren*, perhaps a reference to his own friends and fellow Romantics, or *Fantasiestücke in Callots Manier* (1814-1815; *Fantasy Pieces in Callot’s Manner*, 1996). In all, he wrote nearly fifty tales. Although an entire collection may not be remembered, individual stories have entered the canon of world literature and, aided by their use in musical compositions, have become part of the Western heritage, particularly through the use of “Nussknacker and Mausekönig” (“Nutcracker and the King of Mice”) in *The Nutcracker Suite* ballet of Russian composer Peter Ilich Tchaikovsky.

Fascinated by mesmerism, an early fad related to hypnosis, and by the ways in which the human spirit is drawn to conflicting realities, one of which may be fatal, Hoffmann captured the imagination of a Romantic generation. He is still read in numerous translations throughout the world.

### “THE SANDMAN”

**First published:** “Der Sandmann,” 1816  
(collected *Selected Writings of E. T. A. Hoffmann*, 1969)

**Type of work:** Short story

*A promising young author becomes the victim of an obsession with the identity of the two women whom he loves, and he plunges to his death.*

“The Sandman,” justly regarded as one of Hoffmann’s greatest stories, is the basis for a scene from the opera *Les Contes d’Hoffmann* (*The Tales of Hoffmann*) by Jacques Offenbach and for the Léo Delibes ballet *Coppélia*. It is a typical example of Hoffmann’s use of doubles.

While studying at the university, Nathaniel, a sensitive aspiring writer, believes that a barometer maker and binocular salesman named Coppola is a terrifying figure from his childhood. Dabbling in alchemistic experiments with a lawyer named Coppelius, Nathaniel’s father died in a laboratory explosion. So that she could hurry the children into bed whenever Coppelius visited Nathaniel’s father, Nathaniel’s nurse had used the figure of Coppelius to scare the children with stories of the

Sandman, who steals the eyes of children for his nefarious purposes. Although rationally, the two men cannot be identical, despite the similarity of their names (Coppelius and Coppola), an encounter with Coppola reminds Nathaniel of his father's death.

Nathaniel's agitation at encountering Coppola is soothed by a trip to his home. His fiancé, Clara, a name suggesting the clarity and reason recommended by the Enlightenment, exercises a healing influence on him, although she does not comprehend his confessional and deeply felt poetic art. In Clara's opinion, Nathaniel's preoccupation with emotionally stimulating poetry is not good for him.

Upon his return to the university, Nathaniel discovers his rooming house destroyed by fire. His new lodgings face the apartment of the mysterious scientist Spalanzani and his daughter Olympia. Using the binoculars purchased from Coppola before Nathaniel's restorative trip home, he observes and falls hopelessly in love with Olympia.

After meeting her at a gathering at the professor's home, Nathaniel is confirmed in his opinion that she is a woman who truly understands his artistic soul. She listens to his compositions by the hour, sometimes punctuating Nathaniel's reading with the single cry, "Oh!" Olympia, however, is an automaton, built by the scientist and fantastically endowed with "life" from the essence of Nathaniel's eyes, stolen by the "Sandman" Coppola when Nathaniel bought the binoculars. Thus, when Nathaniel looks into Olympia's eyes he sees and loves himself.

Nathaniel goes mad one day because he chances to see Spalanzani and Coppola struggling over ownership of Olympia and tearing her limb from limb in the process. Again nursed back to health by Clara, Nathaniel accidentally turns his binoculars on her. He suddenly understands that it is Clara who is really a lifeless doll. He attempts to murder her, but instead he falls from a great height onto the city square, just as the barometer maker is walking by.

In this tale, the themes of identity, the supernatural, demonism, alchemy, and automata, reflecting a fear of scientific innovation and the dilemma of the artist in society, combine to create the typical Hoffmannesque thrill of fear and alienation, combined with horror and tragic disappointment. One

can see why such tales influenced writers such as Poe and may be the forerunners of modern science fiction.

### "MADEMOISELLE DE SCUDÉRY"

**First published:** "Das Fräulein von Scuderi," 1820 (collected in *The Serapion Brethren*, 1886-1892)

**Type of work:** Short story

*The obsessive desire of a master jeweler to possess his creations leads him to murder and death in seventeenth century Paris.*

"Mademoiselle de Scudéry," considered to be Hoffmann's supreme achievement, may be the earliest mystery story. It served also as the inspiration for the opera *Cardillac* by twentieth century composer Paul Hindemith. Like many of Hoffmann's tales, it provides a psychologically accurate portrait of a pathological personality, in this case a split personality, or a Jekyll-and-Hyde figure, the master jeweler Cardillac. Written with attention to historical accuracy, and the creation of the mood in Paris during the reign of Louis XIV, the story is also a masterpiece of narrative technique, using a minor poet and spinster of advanced age, Mademoiselle de Scudéry, as the agency by which the fiendish criminal-artist is brought to justice.

A lengthy tale, "Mademoiselle de Scudéry" includes a narrative about a rash of notorious poisonings and the consequent creation of a special tribunal in Paris to hunt down malefactors. This reference serves to explain the mood of Parisians, who are almost hysterical even before the murders are perpetrated by Cardillac. It also calls into question the kind of justice available in society when a citizenry is roused, a query pertinent to events not only in Hoffmann's time but also in the present age.

In the main story, Cardillac's apprentice Olivier, who has Mademoiselle's special "pet" as a baby, and Madelon, the jeweler's daughter, are wrongfully accused of the theft of Cardillac's jewels and his murder. The young couple are portrayed as shining examples of virtue, and Scudéry must clear up the confusion to save the innocent couple.

In what proves to be a tortuous process, Cardillac's criminal behavior is revealed, but, to protect Madelon from knowledge of her father's crimes, Mademoiselle de Scudéry must secretly narrate the true events to the king himself, whose heart is softened by Madelon's resemblance to a woman whom the king once loved but lost to the convent. Formal procedures are circumvented in the interest of subjective and arbitrary considerations. Only the honesty of individuals assures that the streets of Paris are safe and that justice has been served.

Cardillac is revealed to be the victim of a prenatal influence—his mother's pathological appetite for jewelry during her pregnancy. He is driven to create masterpieces of jewelry in his daytime identity as the irreproachable jeweler for Paris nobility (Dr. Jekyll). At night, however, he is obsessively compelled to steal the lovely baubles back, killing their rightful owners (Mr. Hyde). After many baffling murders, one of Cardillac's victims parries the knife thrust intended to kill him and stabs

Cardillac instead. Olivier, who has discovered his master's secret, drags the jeweler back to his apartment, only to be taken for the thief-murderer himself. After Mademoiselle has explained the unique situation to the king, the young couple is permitted to immigrate to another country, thus keeping the truth from Madelon and the public while providing a rather questionable and subjective kind of justice.

## SUMMARY

E. T. A. Hoffmann's tales call into question the nature of the artist and of art itself, or they provide puzzling views of a reality only imperfectly comprehended. They are grotesque parodies of the ideal of harmonious beauty in art and narrative fiction. Typical Hoffmann heroes are talented but obsessive. They cannot conform to society, and thus they are compelled to seek understanding in unnatural ways. They are crushed by society or find themselves utterly unable to discern where reality lies. They are swept along by forces that they cannot control and forced to participate in bizarre, irrational events. Yet, the reader is captivated by Hoffmann's masterful storytelling. Ever the ironic humorist, he softens the harshness of his tragic vision with fantasy, wit, and humor.

## HOMER

**Born:** Possibly Ionia, Asia Minor (now in Turkey)  
c. early eighth century B.C.E.

**Died:** Greece  
c. late eighth century B.C.E.

*The Homeric Iliad and Odyssey provide both the finest examples of Greek epic and valuable testimony on the nature of the Mycenaean world.*

### BIOGRAPHY

The ancient Greeks recognized the advantage of keeping vague the identity of the poet whom they universally called *Omeros*. The *Iliad* and *Odyssey* became, in effect, national epics half a millennium before anything like pan-Hellenism actually existed. In them, ancient Greece saw its tradition and its history, and they alone marked the transition from a nonliterate culture to a literary one. It is hardly surprising, then, that seven cities claimed Homer (HOH-mur) as their own or that a mass of manifestly false genealogical material appeared in ancient times, concocted to demonstrate that the poet of the *Iliad* (c. 750 B.C.E.; English translation, 1611) and *Odyssey* (c. 725 B.C.E.; English translation, 1614) was their native son.

Ionia becomes, essentially because of the predominance of Ionian dialect, the region most often cited by modern scholars as Homer's place of birth. Still, this general agreement contributes little toward settling the infinitely more important question of how a presumably blind poet from a rural and relatively unsophisticated region of the Greek world could have written two poems as cosmopolitan as the *Iliad* and *Odyssey*. An explanation unacceptable to modern sensibilities is that there was no single poet called Homer, or even if there had been, that his poems were passed by oral tradition throughout the Greek world and received suc-

cessive refinements through the rhapsodes, professional reciters who presented them. The episodic nature of the poems themselves lends credence to the argument that they originally had been separate shorter works reconciled into epics. There again, nineteenth century etymologists deduced that the name "Homer" meant "the united." In plural form, the *Omeroi* would thus be guild members entrusted with maintaining the legends of the Trojan War at an appropriate standard. This original group, so the argument runs, became identified with the succeeding generation of Homeric imitators, called *Homeridae* (sons of Homer) even in ancient times. Reconciling this patronymic with the plural form yielded the name *Omeros*.

Because no definitive biography of Homer existed, even in ancient times, wildly contradictory dates appear to frame his life span. Modern scholars reject the ancient assumption that Homer lived within chronological proximity to the historical Trojan War, now generally set from 1194-1184 B.C.E. The majority of ancient opinion, following the historian Herodotus (484-425 B.C.E.), accepted a mid-ninth century B.C.E. period for Homer's mature years, as Herodotus claims (2.53) that Homer could not have lived more than four centuries before his own. Early Christianity found it expedient to place Homer's birth date as close as possible to the period assigned to biblical codification, primarily to reconcile the Greek and Hebrew traditions.

Until the mid-twentieth century, a ninth century dating for Homer remained the most popular; even so, an eighth century Homer is more logical

and has become widely accepted based on several arguments. Post-Homeric literature, including the epic imitations of the *Homeridae*, Hesiod and the Hesiodic continuations, and the earliest lyric and elegiac poems of Greek literature, are firmly placed in the seventh century B.C.E. All depend on Homeric influence as their most important internal feature. It is clear that Homer precedes Hesiod, and also as clear that relative chronological proximity exists between the two poets. That would place Homer's birth in the eighth century, not the ninth. It is also probable that Herodotus calculated the number of generations that existed between himself and Homer, for it is clear from another place in his work (2.142) that Herodotus calculates three generations as one hundred years.

None of these speculations settles the essential question of the poet's identity. Indeed, many people have become lost in various aspects of the question. An Ionian identity makes sense, and perhaps one might localize it even further to Smyrna on the coast of Asia Minor or to the offshore island of Chios, a stronghold of the *Homeridae*. The *Iliad* contains two specific references to the area: a description of the birds that gather beside the Cayster, the Ionian river, and a description of the northwest winds that blow from Thrace. Even so, that is hardly conclusive. Who Homer was, and whether one poet by that name actually existed, must essentially remain unanswered questions.

## ANALYSIS

Accepting an eighth century dating for composition of the *Iliad* and *Odyssey*, as most modern scholars do, logically raises questions regarding the appropriateness of the Homeric poems as historical testimony. Such questions do not grow substantially fewer by moving Homer's century back to the ninth. Archaeological methods developed since Heinrich Schliemann's excavations at the site of Troy in the 1870's have set the dates for the historical Trojan War between 1194 and 1184 B.C.E. That would mean that Homer's *Iliad* and *Odyssey* describe a historical period four or three hundred years anterior to his own. Since the Greek world was still at its preliterate stage (the ability to write existed, but the written language was not used for literary purposes), Homer had no written records upon which to rely. Even so, memory remains strong in preliterate societies. Mythic storytelling

becomes a privileged art, one that does not tolerate deviation from elements considered essential. Descriptions of personalities, places, events, and outcomes must remain consistent. Numbers involved and chronological frames for these events assume considerably less importance. Given that classical Greek identifies all numbers above ten thousand as *myria* (myriad), no ancient reader would have expected a precise inventory of numbers in the "Catalogue of Ships and Heroes" that fills *Iliad* 2. In fact, Greek notions of history before Thucydides differed as much as their understanding of biography before Plutarch (c. 46 C.E.-after 120 C.E.).

Nevertheless, archaeology supports much of what Homer provides regarding the Trojan War. Read emblematically, the *Iliad* implies a major clash of Greek and non-Greek cultures. Even ancient historical sources document the friction between the Peloponnesic Greeks and the inhabitants of Ionia, Caria, and Anatolia, and it is likely that the theft of Helen (whose value is material, not human, by Mycenaean standards) represents the mercantile friction that existed between the Peloponnesus and Asia Minor.

Moreover, the internal consistency of the Homeric poems constitutes a strong argument in favor of their reliability. Both *Iliad* and *Odyssey* rely extensively on verbatim repeated passages, epithets regularly assigned to people, places, and things, and massive lists known as epic catalogs. Formulaic endings often fill out the hexameter verse, implicitly supporting the authenticity of the line in question. All these techniques effectively become mnemonic devices that facilitated oral transmission of the poems by rhapsodes, who originally circulated the Homeric poems throughout the Greek world. It is clear that the *Iliad* and *Odyssey* had assumed privileged status at a period that approximates their composition. With this understood, it is unlikely that the rhapsodes would have altered the essentials of the poems in any substantive way. Late second century B.C.E. codification by Aristarchus and Xenodotus appears limited to division into books and a choice of likely readings between or among variant readings not significantly affecting the poems themselves. Obviously, stability of text cannot guarantee reliability of content, but, given the pre-Thucydidean conception of history, it is clear that the Homeric epics can provide valuable insights into the Mycenaean world.

Of course, Homer was not Mycenaean. Archaeological evidence shows that pre-Greek culture died following, and perhaps partly in consequence of, the power vacuum created by the absence of traditional power structures on the Peloponnese during the years of preparation and fighting at Troy. It is another question whether the Mycenaean kingdoms fell by a Dorian invasion or simply by neglect. Still, the *Odyssey* would support the latter contention, one sustained as well by modern archaeology. The instability of Odysseus's Ithaca is clear, and the poem clearly contrasts the Mycenaean outlook of Odysseus, Nestor, and Eumaeus with that which the suitors of Penelope have imposed. Likewise, it is easy to detect the unease that Menelaus shows upon his return to Sparta with the reclaimed Helen. Even young Telemachus, the son of Odysseus, senses how much the war has cost and the unhappiness that prevails in its aftermath.

One typical characteristic of Homeric epic is thus its ability to restrict a massive theme such as the Trojan War both chronologically and to its human dimension. The *Iliad*, though its theme is indeed the fighting at Troy, treats its subject only in terms of the conflict of Achilles and Agamemnon. Chronologically, it covers no more than ninety days, perhaps as few as sixty. It also initiates what would become the accepted practice of beginning in medias res (in the middle of events) and ending before the final conclusion of the events that it describes. There is nothing of the nine years that preceded the quarrel of Achilles and Agamemnon, nor is there anything of the strategy that would result in Greek victory: the wooden horse. Homer's narrative ends with the return of Hector's body to his father, Priam. The effect is to underscore the importance of *moira* (fate) as a controlling factor in Achilles' life. Readers know that once Achilles has made the decision to remain at Troy he will kill Hector and will himself die soon after. That Achilles' acceptance of *moira* would become a moral imperative as a result of Hector's killing of Patroclus thus emerges as the climax of Homer's narrative.

Narrative pattern in the *Odyssey* resembles that of the *Iliad* insofar as it begins in medias res. Odysseus has spent approximately seven years on Calypso's island as the epic begins. His adventures with his crew are behind him, and he recalls them subsequently to his Phaeacian hosts only by way of flashback. Most of the ongoing narrative of the *Od-*

*yssey* concerns itself with recognition scenes, and these culminate with Odysseus's recognition by the suitors and his gory slaughter of them and the unfaithful handmaidens. Another slaughter, that of the fathers of the suitors, appears about to start when the goddess Athena suddenly appears and ends the entire narrative by *deus ex machina* (goddess from the machine, describing any unnatural termination of narrative). Readers learn nothing through the *Odyssey* regarding how well (or badly) Odysseus resumes his position as king, husband, or father.

## ILIAD

**First compiled:** c. 750 B.C.E. (English translation, 1611)

**Type of work:** Epic poem

*Homer's Iliad presents the Trojan War in terms of the conflict between Achilles and Agamemnon; fate, willingness to accept death, courage, and pettiness are its timeless themes.*

Though the myths describe the Trojan War as a thirty-year cycle of preparations, conflict, and homecomings, the chronological period that the *Iliad* covers is actually quite restricted, not more than ninety days in the final year of fighting. Despite its focus on the quarrel of only two of its warriors, both of them Greek, Homer nevertheless conveys the full range of human emotions that prevails in war, even as he provides a vivid portrait of Mycenaean culture. The result is that his *Iliad*, bold and all-encompassing though it is, remains essentially quite limited; that is undoubtedly one of the most distinctive features of Homer's epic. Homer makes the limits of his intentions clear from the outset. His invocation to Caliope, the Muse of epic, specifies that he will sing of Achilles' anger.

Obviously, the anger of Achilles operates on several levels and has far-reaching consequences. On the personal level, it refers to the quarrel between Achilles and Agamemnon for possession of Briseis, a young woman originally given to Achilles by the Achaeans as his prize of honor. Agamemnon, too, had a captive mistress, Chryseis; yet, she was the daughter of a priest of Apollo named Chryses.

When Agamemnon haughtily refuses to return Chryseis to her father, Chryses invokes Apollo himself, who sends a plague upon the Achaeans. Once he realizes that the army will be decimated by disease if he takes no action, Agamemnon returns Chryseis to her father, though he simultaneously demands that Achilles surrender Briseis to him as her replacement. Agamemnon fears that the Achaeans will consider him weak if he does not enforce his will upon Achilles in this way, yet the reader perceives only Agamemnon's pettiness and insecurity.

Achilles reviles Agamemnon in the *agora* (assembly) of leaders, yet he surrenders Briseis to him without active resistance. More significantly, Achilles announces his intentions to withdraw his Myrmidons from battle and return with them to Phthia, their home in southern Thessaly. These dramatic announcements made, Achilles throws down the *skeptron* (staff), which gives him the un-

contested right to speak, and dashes from the *agora*. This extraordinary behavior at the least implies weakness and apparently cowardice. It seems to complement the pettiness of Agamemnon, but there are clearly other reasons for Achilles' actions.

Thetis, the goddess-mother of Achilles, subsequently appears to comfort her son, who is all too aware of how the Achae-

ans could interpret his sudden withdrawal and threat to return home. She reviews the alternatives that *moira* (fate) has assigned to him: either to slay Hector, the first of the Trojan warriors, and to be killed at Troy soon thereafter or to live a long and undistinguished life in Phthia, dying there of old age. Achilles well knows these alternatives. His withdrawal, which extends from *Iliad* 1 to *Iliad* 22, represents an essential pause to consider these alternatives at a crucial juncture of his life. Worth noting is the fact that Achilles undertakes no preparations to return home; also, although the war initially goes badly for the Achaeans, to the extent that Agamemnon offers Achilles an impressive se-

ries of gifts (including restoration of Briseis) for his return, Achilles' prolonged absence makes relatively little difference overall.

Agamemnon's embassy to secure Achilles' return contains elements of magnanimity and self-interest. Significantly, Agamemnon does not personally entreat Achilles. Instead, he enlists the cunning Odysseus and Diomedes (who would together devise the stratagem of the wooden horse), as well as Achilles' old tutor Phoenix. The appeal thus emerges through a combination of clever argument and sage advice, and the collection of gifts (listed in catalog form) is calculated both to impress the Achaeans with Agamemnon's *megala-psyché* (great-heartedness, generosity), as much as it is to force Achilles to make his decision. That is one of several places in which the humanity of the poem emerges. Achilles' concern for his old tutor, seen in his insistence that Phoenix remain overnight rather than attempt to return immediately, shows that he values privileged relationships such as master and student. It has its counterpart in Achilles' relationship to Patroclus, his young protégé in the art of war. This relationship, severed by Patroclus's death, will ultimately provide the impetus that Achilles needs to accept the short but glorious life that *moira* has offered him.

In one sense, all the characters of the *Iliad* recognize the inevitability of *moira* yet remain essentially powerless to change it. The tears of Achilles that precede his mother's appearance are an indication of this human frailty, but so is Hector's meeting with his wife, Andromache, and their infant son, Astyanax. In *Iliad* 6, long before Achilles returns to battle, the Achaeans have advanced to the very walls of Troy. Hector, the bravest of the Trojan warriors, searches for Alexandrus (Paris), whose theft of Helen had been the immediate cause of the war, and finds him in Helen's rooms. His reproaches make Alexandrus recognize his obligations, and Alexandrus takes up his arms to defend the city, but the primary contrast is clear. Andromache recognizes and regretfully accepts the likelihood of her husband's death in battle, but Helen belittles Alexandrus as a sensualist willing to allow others to fight for him. Andromache's fears for Hector correspond to those of the child, Astyanax, who does not recognize his father because of the helmet that he wears. When Hector removes the helmet, the child accepts his father's embrace, and the couple

laughs. There, then, is a contrast between pure love and simple sensual attraction as well as between responsibility and weakness.

Even the deities of Olympus display the flaws of their human counterparts. They, too, remain tied to *moira* and are essentially powerless to change it. They, too, govern by *agorai*, and these assemblies inevitably end as inconclusively as those of the human warriors below. The gods and goddesses have taken sides in the war, but these reflect their previous personal antagonisms rather than their concern with humanity. Thetis, for example, does intercede with Zeus for her son Achilles but is aware that doing so will necessarily provoke the jealousy of Hera, Zeus's wife. She must also know that any favor that Zeus grants to Achilles would necessarily be in the context of glory on the battlefield. Ironically, any such benefaction would necessarily hasten her son's death. Just as Agamemnon prevails in the human order, so does Zeus in the divine; yet neither appears able to take meaningful and decisive actions that affect outcomes. The power of both is limited to immediate actions and short-term results.

The peculiar powerlessness of Zeus emerges clearly in the Sarpedon episode, *Iliad* 16. At this point, Patroclus has received Achilles' permission to reenter battle wearing his master's armor. Patroclus experiences his *aristeia* (moment of glory), a series of combats in which he defeats one opponent after another. Sarpedon, a beautiful boy loved by Zeus, is one of those whom *moira* has determined that Patroclus will defeat. Zeus raises the scales of *moira*, watches Sarpedon's weight descend, and realizes that he must accept the young man's death. His resignation to *moira* parallels that of Andromache, even as it underscores the similarity of mortals and immortals.

Though Achilles allows his protégé, Patroclus, to enter battle, he himself remains apart. Patroclus is effectively Achilles' surrogate, however, and his appearance in his master's armor emphasizes this relationship. So devastating is the effect of his presence that the Trojans at first believe Achilles has returned. In one sense that is true, for Patroclus looks very much like Achilles, and the *aristeia* that he enjoys is equivalent to any that his master could

have enjoyed. It is also true that once Patroclus has entered battle, the *moira* of Achilles is sealed, for the lives of master and student are tied by the bonds of friendship and obligation. Patroclus dies at the hands of Hector, and while Hector succeeds in claiming the armor of Achilles, the body of Patroclus remains with the Greeks. The announcement of Patroclus's death sends Achilles into a threnody and leads to his construction of an extravagant pyre for the corpse. This development provides the opportunity for another catalog listing the offerings that formed the pyre. Averse as human sacrifice was to Greek sensibilities, the pyre includes young Trojans captured in battle.

Achilles now recognizes that his obligations to Patroclus have forced his return, but he has no armor worthy of the event. Thetis intervenes again, this time to secure armor crafted by the artisan deity Hephaestus, and once again Thetis's intervention hastens her son's *moira*. In effect, the alternatives that had existed in *Iliad* 1 are no longer available. The period of introspection has ended, and Achilles reenters battle knowing that he will kill Hector but equally aware that his own death will follow soon after. When Achilles meets Hector in battle, he is, in effect, encountering an aspect of himself. Hector wears the armor of Achilles, and Achilles has donned the glorious new armor that his mother, Thetis, had secured for him. In killing Hector, especially because Homer has already portrayed that warrior's character so sympathetically, Achilles eliminates his ties to the past and fully accepts the alternative of a short but glorious life. It is his true destiny and, like the armor provided by Thetis, the only *moira* that is appropriate for him.

The humanity that lies behind so much of the bravado in the *Iliad* emerges in the final scene of the poem. Old Priam, king of Troy, comes to Achilles to beg for the return of his son's body. Even though Achilles realizes that Hector had been the immediate cause of his beloved Patroclus's death and that Hector had forced Achilles to accept his own *moira*, he grants Priam's request and declares a truce for ritual mourning and appropriate burial of the dead on both sides. The *Iliad* thus ends in a suspension, rather than a resolution, of events.

## ODYSSEY

**First compiled:** c. 725 B.C.E. (English translation, 1614)

**Type of work:** Epic poem

*The return of Odysseus to Ithaca nearly twenty years after his departure for Troy represents his personal struggle, often against larger forces, to restore the stability that war had cast aside.*

Read at its most basic level, the *Odyssey* recounts Odysseus's struggles to return to his native island of Ithaca after ten years of fighting at Troy. It appears to be a highly particularized account of one warrior's struggles and sufferings. No doubt exists that Odysseus remains the focus; though names of his crew appear at intervals, they collectively constitute a vehicle that gets their master part of the way home, and all of them die long before their master reaches home. Even the mythic Phaeacians, who literally place the sleeping hero on his remote western island, remain peculiarly nameless, except for the family that rules them, but Alcinous, Aretê, and Nausicaä merely approve this final phase of the journey. The seafaring Phaeacians themselves suffer permanent hardship for their good deed: Poseidon landlocks their harbors in retribution for Odysseus's having blinded Polyphemus the Cyclops, the sea-god's monster son.

Once Odysseus finally realizes that the Phaeacians have actually returned him to Ithaca, and not merely abandoned him on a forsaken island in order to steal the treasure that their king had given to him, the hero proceeds to test everyone he meets, starting with Eumaeus, his swineherd, and Telemachus, the son whom he had to abandon in infancy in order to honor his commitment to fight at Troy. He tests his old nurse, Eurycleia, who, when she recognizes his scar received in youth during a boar hunt, appropriately venerates him. He tests his wife, Penelope, who has waited for Odysseus more than nineteen years, resisting more than a score of much younger suitors. Her stratagem of weaving and unweaving a funeral shroud for the aging Laërtes, Odysseus's father, allows her to delay choosing a new husband, but it also allows this assortment of brash young men with decidedly uncourtly manners to move into Odysseus's

great hall and deplete the wealth of his household through their ceaseless banquets and irresponsible behavior. This irresponsibility extends to the moral sphere as well, for the suitors, in short order, corrupt the handmaidens of the household.

True to form, Odysseus arrives disguised as a beggar, tests the suitors, finds that they have abused the laws of hospitality, and kills them all. He ratifies this action by pronouncing moral judgment on the handmaidens, as well. Once they have cleaned the great hall of the suitors' blood, he orders the handmaidens to be collectively hanged in the courtyard. While this mass slaughter is in progress, Phemius, the court rhapsode, is ordered by Odysseus to sing as loudly as possible to the loudest of musical accompaniments in order to cover the screams of those being killed. Furthermore, Odysseus enlists both Telemachus and Eumaeus as accomplices. The first thing that Odysseus and his nineteen-year-old son do together is, in effect, commit mass murder, then retreat to the suburban vineyard at which old Laërtes is awaiting the arrival of the fathers of the suitors, who are avid for vengeance. Another slaughter is about to begin when the goddess Athene, the mentor of Odysseus from the outset, calls a halt, and the *Odyssey* ends.

Seen in this way, Odysseus does not appear to be a very nice man, and certainly not very heroic. Even so, his epithet *polutropos* (many-wiled) implies that there is more to his character, and correspondingly to Homer's poem, than this rather negative reading implies. Indeed, virtually every action of Odysseus admits of positive and negative interpretations. In this respect, Homer's Odysseus mirrors humanity at large. To assess Odysseus positively, it is necessary to consider external particulars more carefully than has been done above. It is also important to bear in mind details that Homer assumes his audience knows and therefore does not, given the limited parameters of epic poetry, feel particularly obligated to supply.

First of all, Odysseus had never wanted to fight at Troy. He had been perfectly happy as king of his rural island with his young wife, Penelope, and infant son, Telemachus. He had even feigned madness by sowing his fields with salt instead of seed in order to escape his obligation to restore Helen to Menelaus. Canny Agamemnon, brother of Menelaus, recognized immediately, however, that this was a typical Odyssean ruse. To test Odysseus's sanity, Agamem-

non placed Telemachus in the path of the plowshare, and of course Odysseus had to turn the plow aside to spare the “seed” that he prized most of all: his son and heir. Homer knows that his audience will recognize immediately the disparate values of Odysseus and Agamemnon, for the latter would be willing to sacrifice his own daughter Iphigeneia in order to ensure a favorable wind for the departing armada. Agamemnon would, of course, pay the price for his moral lapse. Having escaped ten years of war with barely a scratch, his wife Clytemnestra, ironically Helen’s half sister, would murder him on the day of his return as he emerged from his bath.

Placing these sets of events beside each other shows the essential difference between Odysseus and Agamemnon. Odysseus privileges the values of home and family; Agamemnon quickly recognizes affronts to the honor of his clan but is willing to avenge these at the cost of his immediate family. Yet it is clear that the Trojan War has no positive effect on Odysseus. It forces him to place domestic considerations to one side and use his wiles in order to survive. Odysseus is, above all, a survivor, and his stratagems of the theft of the Palladium (the great statue of Athene in the citadel of Troy) and of the wooden horse ultimately bring victory to the Greek forces. Without them, the war would have continued even beyond the ten years specified in the myths.

That is the knowledge that Homer assumes, and the first item that he includes among Odysseus’s postwar exploits is that, after leaving Troy, Odysseus and his crew sack a town, that of the Cicones, who had been Trojan allies. Like many warriors, Odysseus has trouble laying aside the ways of war. What would have been acceptable behavior in the context of war becomes unacceptable afterward, yet Odysseus cannot recognize this fact. When he and his men arrive on the island of the Cyclops, the first thing that he and his men do is raid the stores of the Cyclops Polyphemus. Polyphemus is hardly a sympathetic creature. He is a giant, nonphiloprogenitive son of the sea-god Poseidon; like all Cy-

clops, he has in the middle of his forehead an eye the size of a wheel. This heterotopic eye effectively makes Polyphemus a symbol of irrationality, corresponding to the displaced moral environment in which Odysseus has functioned in the years since leaving Ithaca.

As Odysseus had eaten the food of Polyphemus without leave to do so, it is justifiable by the irrational standards of Polyphemus for the Cyclops to eat some of Odysseus’s crew, and he does so. When Polyphemus asks to know the name of their leader, Odysseus appropriately calls himself *Outis* (nobody), for he has, in effect, lost the dignity of a name derived from the infinitive *odyssasthai* (to be angry, wrathful). Wrath implies righteousness and reasonable cause, but the immediate history of Odysseus has allowed little chance for righteous anger. Once he blinds the Cyclops, however, Odysseus has neutralized one symbol of unreason in his world. When he follows this act by devising his crew’s escape from the Cyclops’s cave, strapping them to the undersides of Polyphemus’s sheep, he declares not only his name but also his patronymic and epithet to the monster: He is Odysseus, son of Laërtes, the sacker of cities.

Ironically, Odysseus’s bold insistence on his proper identity allows the anger of Poseidon to find its mark. Still, Odysseus has to identify himself fully in this way, even as he and his crew have to accept the consequences: long and hard struggles for the master and death by attrition for the crew. The crew, like the mass of humanity, satisfies itself with apparently easy courses of action and thereby defines life as existence that precedes death. As Homer kills them, singly and in groups, his audience wastes no mourning upon them; nor does Odysseus.

Though the crew appears largely as a collective entity, Homer makes clear that its individuals freely choose their doom. For example, the Lotos Eaters offer Odysseus’s crew lotos-fruit, which, when eaten, causes them to forget home and enjoy the earthly paradise of the present in which they find themselves. Forgetting one’s past is tantamount to abandoning the cause that produced the present and the impetus that impels the future. It is apparently easier to live in the eternal present, but doing so robs life’s journey of reason. The crew members who eat the lotos-fruit accept a form of the irrational with the excuse of world-weariness, but the

drug culture of the Lotos Eaters is merely death in life.

When Odysseus's crew taste the potion of the witch Circe, she transforms them into swine. Their almost unanimous collective identity had at least been human. After their transformation, they lose rationality, the highest human faculty; that happens because they had made insufficient use of the faculty. Hermes, Zeus's messenger but also, fittingly, the guide to the Underworld, warns Odysseus to prepare himself for Circe's magic by applying the *molū* (wild garlic), which he finds at his feet, before encountering the witch. Hermes also admonishes Odysseus to extract a promise from Circe not to emasculate him. In both respects, Hermes' advice focuses on the weed to preserve a sense of personal identity and power. The herbal drug is as secondary in importance to the state of mind that it produces as the lotos-fruit had been in the Lotos Eaters episode. What is important is its obvious availability and the self-assurance that follows its use. It is worth noting that Odysseus temporarily loses sight of his personal mission to continue life's journey, for he remains on Circe's island until pressured to resume his adventures. In doing so, he comes dangerously close to accepting the paradisaical present, essentially what the Lotos Eaters had offered. This lapse from obligation characterizes even the most heroic, however, and it underscores the fact that life's journey is nonlinear; it rather assumes varying degrees of circularity that resemble the past, which spring from it but always differ. Life returns to its origins at its end, though the origins themselves appear other than what they had been.

Perhaps the Aeolus episode emphasizes the difference between Odysseus and his crew most profoundly of all. The king of the winds entrusts Odysseus with a sack filled with all winds, which could conceivably oppose Odysseus's homeward journey. Aeolus appears to offer Odysseus an easy passage to his destination, but Odysseus must stay at the tiller nine days and nine nights, since he needs all his faculties to maintain his course. Within sight of Ithaca, Odysseus falls asleep, and this temporary loss of reason is enough to allow the jealousy and curiosity of his crew to surface. The crew resents the universal recognition that Odysseus receives and opens the sack thinking that it contains some special treasure that Odysseus does not wish to share. Immediately, the hostile winds blow Odys-

seus and his crew away from his homeland, and when the Ithacans reappear before Aeolus to request a second sack, the king refuses. This refusal is only right: Any benefaction requires personal responsibility for its proper use. Absent this responsibility, it becomes an imposed control that predetermines an outcome. Reaching the goal of the journey ultimately requires the skill of the traveler, not counting on the good fortune of meeting one's personal equivalent of a sympathetic Aeolus to smooth the passage.

Even as the Phaeacians are returning Odysseus to Ithaca, Telemachus, at the instructions of Athene disguised as the traveler Mentos, is about to set sail in search of Odysseus's whereabouts. The first four books of Homer's poem thus belong firmly to Telemachus and represent the young man's personal odyssey. Telemachus has never known his father, has seen only the aberrant, extended family that the arrival of the suitors has caused. His adventures in *Odyssey* 1 to 4 show him one family that respects moral values (that of Nestor of Pylos) and one that is entirely secular (that of Menelaus and Helen). Menelaus and Helen appear content, though the unease of their relationship is plain. It is only through an anodyne, which Helen adds to their wine, that they maintain this fragile equilibrium. They, like the crew members who had succumbed to the lotos-fruit or Circe's potion, have chosen existence rather than life. Telemachus also refines his understanding of the laws of hospitality through gifts mutually offered and tactfully refused, as well as through his sagacity, the polytropic quality that characterizes his father. He manages to elude the suitors, who plan his assassination upon his return, and returns to the other side of his island and to the hut of Eumaeus, to be reunited with Odysseus and plot the extermination of the suitors.

## SUMMARY

One could question whether even Odysseus and Penelope could recapture the same degree of happiness that they had enjoyed before the Trojan War and before the arrival of the suitors. Alfred, Lord Tennyson, in his poem "Ulysses," strongly implies his hero's disgust both with the Ithacans and with an "aged wife." Nikos Kazantzakis, in his *Odysseia* (1938; *The Odyssey: A Modern Sequel*, 1958), even more definitely describes Odysseus's need to face

death in the midst of an active life. Happiness takes the form of completing the heroic mission, and Homer's Odysseus and Achilles do this. For Achilles, completing the mission consists in the willingness to accept the destiny of a brief but glorious life, the only kind appropriate to his heroic nature. The life of Odysseus is longer, perhaps even more demanding because of its challenges, but no less worthy.

Robert J. Forman

## DISCUSSION TOPICS

- What are the advantages of a storyteller, such as Homer, beginning in medias res? Are there any disadvantages to such a beginning?
- Is the *Iliad* a glorification of war?
- Does the emphasis on *moira* corroborate common human presuppositions today as well as in Homer's time?
- Might the state of Ithaca when Odysseus returns reflect an awareness of the decline of the former Mycenaean world?
- To what extent does Odysseus succumb to the many temptations in his path?
- In their concentration on young Telemachus, do the first four books of the *Odyssey* amount to the first bildungsroman in Western literature?
- In what respect is Penelope a fitting wife for Odysseus?

## GERARD MANLEY HOPKINS

**Born:** Stratford, England

July 28, 1844

**Died:** Dublin, Ireland

June 8, 1889

*Hopkins's vigorous poetry was first published after his death, when he became a major influence on modern poetry.*

### BIOGRAPHY

Gerard Manley Hopkins was born on July 28, 1844, in Stratford, a suburb of London, England. His father, Manley, was a devout Anglican, a well-educated and successful author of marine handbooks and some poetry. At Oxford, Hopkins studied Greek and Latin and wrote poetry on nature and religious subjects. Among his teachers was Walter Pater, whose aesthetic and social theories influenced Hopkins; Hopkins's friends included Robert Bridges, the poet who encouraged him throughout his career and eventually published his poems.

At Oxford, Hopkins came under the influence of the Oxford Movement to revitalize Anglicanism by returning to its Roman Catholic roots, and this influence led him to John Henry Newman. Hopkins read Newman's autobiographical *Apologia pro vita sua* (1864), which described his conversion to Catholicism. Conversations with Newman led Hopkins to convert in 1866. Hopkins's conversion radically changed his life, alienating him from his family and leading him into a religious vocation. After completing his B.A. at Oxford with honors, Hopkins decided to take holy orders as a Jesuit. To mark this change in his life, he burned copies of his poems, though he had asked Bridges to save the best of his work. For seven years, he wrote no poems,

and for the rest of his life he remained unwilling to publish except when this was approved by his superiors in the Church.

Though Hopkins eventually resumed writing poetry, most of his energies from 1868 until his death were devoted to teaching, study, and, for a time, the duties of a parish priest. Having decided to seek ordination, he studied theology as he taught at various Catholic institutions. One of these was St. Beuno's in Wales, where he learned Welsh, which influenced his uses of alliteration and word arrangement in his poems. During this period, he produced his great ode "The Wreck of the *Deutschland*," a beautiful but forbiddingly difficult consideration of the drowning of five exiled Franciscan nuns. Ordained in 1877, he served as teacher and as priest in England and Scotland and served several terms in slum parishes in towns such as Liverpool and Glasgow.

During the last five years of his life, he was professor of Greek and Latin at University College, Dublin. Though the position was an honor, the work was very demanding, and he was unhappy away from England. He died from typhoid fever on June 8, 1889, in Dublin, Ireland.

In 1918, when Bridges published the poems that he had lovingly saved as his friend sent them to him, contemporary writers immediately recognized that Hopkins was a major new voice in poetry. Even though he had been dead for twenty-nine years, his innovations in form and style impressed the early moderns such as William Butler Yeats, W. H. Auden, and T. S. Eliot as refreshingly new.

## ANALYSIS

Hopkins is, above all, a Christian poet. He is also a difficult poet, who in his best work produced a density of diction and experimented with syntax, rhythm, and sounds in ways that can daunt an inexperienced reader. In fact, however, the difficulties of language and structure in his poems are not so great as they may seem at first. With a dictionary, patience, and a little imagination, any reasonably mature reader can make sense of Hopkins's unusual word choices and arrangements.

The more serious difficulty of Hopkins is his Christian point of view. While some forms of Christianity continue to hold great popular appeal, the number of readers who understand and appreciate traditional Christian doctrines has continued to decline since Hopkins's death. Most modern readers, even those who are practicing Christians, probably will need to use a commentary or reader's guide in order to make sense of Hopkins's uses of Christian scripture and doctrine.

An overview of Christian belief is helpful in order to understand the central concept of his poetic theory, "inscape." Traditional Christians believe that a single perfect and loving God, usually envisioned as a father, created the universe and all life. He made humankind with free will, which humankind then asserted against God, opening a division between humanity and God, called sin, that humanity could not heal by itself. This rebellion is called the Fall of Man. God desires a communion, or intimate spiritual relation, with humanity that remains impossible as long as humans feel separated from God.

To make this communion possible and heal the division, God descended to earth in human form. He was born as Jesus Christ of Nazareth to Hebrew parents, Mary and Joseph, in the first year of the modern calendar. Jesus lived a short life as a holy man, performing miracles and preaching an ethic of brotherhood and love on the grounds that God required it and that each individual possessed an immortal soul that connected that person with God. Then Jesus was accused of a variety of crimes and was executed on a cross near Jerusalem. Three days after his death, he was resurrected and appeared to a number of people in his physical body. Forty days later, he ascended into the realm of God the Father and is expected by Christians to return

at an undefined future date. At that time, he is expected to make judgments about all human souls that have ever lived to determine the ultimate quality of their afterlives.

Ten days after the ascension of Jesus, now celebrated at Pentecost, a new aspect of God entered into the world, a spiritual being called the Holy Spirit, that is said to flow through those who accept as true the story of Jesus and who work at conforming their wills to his teachings. The original division from God that humanity initiated is healed by God, who through Jesus Christ and the Holy Spirit reaches out to humanity with offers of communion. Though traditional Christian doctrine contains many more ideas and images and though many of these are disputed in various sects, most Christians agree on this central narrative.

Hopkins's literary models and mentors were Romantics such as John Keats and Walter Pater. This background disposed Hopkins to view nature sacramentally, as a kind of book upon which the messages of divinity were addressed to mankind. Romantic pantheism was not, however, consistent with Christian theology. In the theology of the medieval philosopher John Duns Scotus, Hopkins found ideas that helped him to resolve his vivid experiences of divinity in nature with Christian theology. From this thinking, the idea of "inscape" emerges.

Literary critics have differed considerably about the nature of inscape. Hopkins seems to have concluded that every object in the universe had a central organizing principle that could be called its identity. This spirit of the object was not a simple thing but a dynamic principle, the actuating core of its identity or being, and Hopkins called it the inscape of the object. Human beings are capable of recognizing the inscapes of other people and of objects. When they do so, they experience "instress," which can be described as a feeling of communion with the "soul" of the object. When one experiences instress, one finds Christ in the object, the imprint of God the creator upon His creation. Many of Hopkins's poems are about the experience of instress, the discovering of inscape, and the momentary union with God through Christ in the contemplation of natural objects. This set of ideas justifies critics in labeling Hopkins a Christian Romantic poet.

## “GOD’S GRANDEUR”

**First published:** 1918 (collected in *Poems of Gerard Manley Hopkins, Now First Published, with Notes by Robert Bridges*, 1918)

**Type of work:** Poem

*The poet reflects on the persistent human failure to see God’s presence in nature.*

Hopkins’s ideas of inscape and instress seem to imply that every object in creation has something like a soul, that is, a power that points toward its divine creator. He begins “God’s Grandeur,” composed in 1877, with the assertion that the world as a whole has this inscape: “The world is charged with the grandeur of God.” Though several senses of the word “charge” may be relevant in this statement, the primary sense seems to be of electric force. God is like an electric charge present in the world. This image is continued in the statement that this divine force “will flame out.” While conveying the idea of a lightning strike implicit in the image of an electrical charge, this new image also suggests the Pentecostal tongue of flame, which introduces one of the aspects of God’s presence in the world as the Holy Spirit, the idea with which the poet ends. Hopkins extends this idea into that of blinding light, another familiar biblical image associated with God, when he says that the flaming out of the grandeur of God is “like the shining of shook foil.” In a letter, Hopkins said that he was thinking of gold foil, which “gives off broad glares like sheet lightning and . . . owing to its zigzag dints and creasings and network of small many cornered facets, a sort of fork lightning too.” Other senses of foil may also enrich this image—for example, the idea of a sword, with its suggestions of challenge and judgment. The next image compares the gathering of the force of God in nature to the way oil gathers in a container as seeds or olives are crushed.

Having asserted the presence, greatness, and force of divine power in nature, the poet poses the main question: “Why do men then now not reck his rod?” He asks why, given the visible power of God in nature, people fail to see it and to show regard for God. The phrase “reck his rod,” which may seem archaic and needlessly difficult, like the entire grammatical arrangement of the question, never-

theless is carefully chosen. “Rod” seems mainly to refer to the scepter, symbolic of power to judge, that points to and rhymes with God; but rods are also often thought of as instruments of punishment. “Reck” is a little used and archaic term, meaning to regard or care for, and both meanings are relevant here. It is also however, related to words such as “recognize” and “reckoning,” with their various connotations. Such meanings amplify the question in several ways. For example, these ideas remind readers that recognizing the power of God in the world leads to knowledge (reckoning in the sense of navigation) about the purpose of one’s life.

As this look at the first quatrain of the sonnet demonstrates, one characteristic of Hopkins’s poetry is a density of diction that allows the reader to pursue individual word choices into areas of meaning that nearly always enrich the depth and suggestiveness of the poem. Hopkins chooses words and images that reverberate deeply. Even though the above analysis may seem to some readers to have “overread” the first four lines, professional readers typically find much more of interest to say about them simply on the basis of word choice and images, and even more when they consider aspects of rhythm, sound, and grammar.

The second quatrain of the octave (or first eight lines) answers the question of the first quatrain. The reason people do not honor God as they should is that they are unaware of God’s grandeur. The poet says that generations have walked the earth, searing or burning it for business purposes, blurring or making it difficult to see and smearing it or making it less visible with work of all kinds. It is a complex idea that has at least two meanings. First, the world itself is altered by human labor so that it reveals God’s grandeur less clearly and directly. Second, however, the processes of trade and labor alter human perception, so that people are less attuned to seeing the inscapes of nature. The poet repeats this idea in the last two lines of the octave, where he says that nature is smudged by man and smells like man and that, because people wear clothing, they are less likely to perceive nature directly.

Having asserted that God’s power in nature is brilliantly if sporadically visible but that human labor obscures its visibility and weakens the human ability to perceive it, the poet turns to the miracle

of Spirit's continuing presence in the sestet, the last six lines of the sonnet. The poet says that even though labor blinds people to it, God's grandeur persists. At the center of every natural thing is a freshness that the poet can see. This realization is just as true as that the darkness of sunset does not presage eternal darkness but rather a new dawning. These observations mean that the Holy Ghost is present, that it continually renews the "bent" or misshapen world, just as a bird—a typical image of the Holy Spirit—broods over its nest, pouring energy into its egg (the world) so that it will hatch to reveal a new bird, the double of itself within.

The richness and depth of "God's Grandeur" is apparent in Hopkins's use of diction, imagery, and metaphor, but these techniques do not exhaust the art of the poem. One can learn a lot more about it by studying how Hopkins arranges alliteration, meter, and rhyme. For example, one of the astonishing features of this poem is that while it is especially rich in language, it is very confined in form. Not only did Hopkins use one of the most restrictive forms in English poetry, the sonnet, but he chose one of the most difficult forms of the sonnet, the Italian, which uses only four rhyming sounds at the ends of its lines. Such a choice seems quite appropriate for a poem about how the infinite energy of God is constrained in the physical form of the world.

### "THE WINDHOVER"

**First published:** 1918 (collected in *Poems of Gerard Manley Hopkins, Now First Published, with Notes by Robert Bridges*, 1918)

**Type of work:** Poem

*The poet sees Christ represented in a falcon's flight and dive in pursuit of its prey.*

Dedicated "To Christ Our Lord," this sonnet in the Italian form was composed in 1877. While diction, image, and metaphor are central technical elements in the poem's success and meaning, "The Windhover" nicely illustrates Hopkins's more radical experiments with meter and sound.

In the octave, the poet says that while walking in

the morning he saw and admired a falcon in its flight. In the first three lines of the sestet, he recounts a visionary experience, his narration shifting into present tense. The vision comes upon him as he watches the bird dive in pursuit of its prey, and several levels of meaning "burst" forth from this motion. The vision begins with the word "buckle." When the bird buckles, it collapses, pulling back its wings for a swift, controlled descent. Yet this verb also means to put on armor, to prepare for action as in a battle, and it also means to fasten together, as in buckling the ends of a belt. Furthermore, collapse can mean at least two things, the drawing in of the bird as it dives or the folding up of one who experiences pain or momentary weakness. These are only a few of the many interesting meanings critics have found in nineteenth century uses of this word.

Fire bursts forth from the bird when it dives, and this fire makes the bird "a billion/ Times told lovelier, more dangerous." This vision leads the poet to address the bird: "Oh my chevalier!" A chevalier is a knight, one who serves a king in battle and who is often represented as rescuing the weak and oppressed from evils both natural and supernatural. One key suggestion of the knight image is the idea of putting on armor to enter into a battle. This image connects with the divinity to whom the poem is addressed, Christ. The knight putting on his armor is parallel to Christ's incarnation, the son of God entering a physical body to become Jesus, thereby entering the world to do battle with human sin.

This suggestion of incarnation is one way in which God descends to human beings and in which God is like the falcon that descends to grasp its prey, except that God's intention is benevolent. For this reason, among others, the falcon's dive may be seen as a billion times lovelier, but why a billion times more dangerous? Perhaps the poet there reflects upon the human experience of grace. Trapped in sin as humans are, in the smudged world of "God's Grandeur," they are unlikely to welcome the radical changes that God's "dive" requires of them. This negative aspect of grace is reflected in another descent suggested by the bird's dive, the descent into the grave, by which Christ's incarnation is completed as he shares death with humankind and by means of which Christ's "prey" is figuratively snatched up from the earth, as Christ makes possible the human ascent into heaven that

completes the act of divine grace. Just as the bird will rise after its dive, so Christ arose after his death, and humans who accept this graciousness may rise after their deaths.

In the last three lines of the poem, the poet asserts almost humorously that his vision really is not a wonder. After all, a mere plow shines as a result of its plowing the earth, and almost burnt coals, when they fall and break, flash forth red-gold fire. While he may appear to retreat from the intensity of the vision of the diving bird, he cannot really reduce his own or the reader's impression of the profundity of that vision. Though he chooses an ordinary plow as his next image of comparison, that image evokes the idea of a descent into the earth in order to prepare a new resurrection, and its shining evokes the fire that broke from the windhover. When he turns to the burnt coals, he cannot avoid an exclamation of affection—"ah, my dear"—addressed to the bird and to Christ as they reveal themselves in the coals. In breaking to reveal flames within, they remind him of the breaking of Jesus' body on the cross, the fall that sent forth the gleams of resurrection and Pentecost.

When Hopkins composed "The Windhover," he had been thinking about altering the rhythmic patterns of contemporary poetry. In Old English poetry he noticed metrical arrangements that he came to call "sprung rhythm." Much of the poetry written before Hopkins in modern English made use of fairly strict syllable counts to determine basic poetic forms. For example, a sonnet would contain as close as possible to 140 syllables, fourteen lines of ten syllables each, and the rhythm of each line would be made of five iambic feet (iambic pentameter), as can be illustrated in the first line of this poem: "I caught this mórning mórning's mínion, kíng-" (the accented syllables are marked). Though it does not make grammatical sense presented this way, this line shows the pattern of iambic pentameter, five pairs of syllables, the first in each pair unaccented, the second in each pair accented. In "The Windhover," there are no more lines that follow strict iambic pentameter so closely. Yet a carefully studied and prepared oral reading will reveal that each line has five heavily accented syllables.

For the main rhythmic pattern of Hopkins's poem, unaccented syllables are not counted, though how they are accented is important to preparing a performance of the poem. Sometimes, as in line 12, Hopkins marked some syllables he intended to have accented; otherwise, the reader must make judgments about which five syllables should receive the major accents in reading. The result of careful thought and analysis, however, is usually an exciting and provocative performance of the poem.

That Hopkins gave so much attention to his rhythm and that he modified, without abandoning, the basic sonnet form underscores the degree to which he thought of his poems as intended for oral performance. When one studies the poem, it becomes clear that one of the many functions of Hopkins's frequent alliteration, especially the repetition of consonant sounds, is to control or at least suggest where accents should fall within the lines.

It is sometimes difficult to believe that a poet would give so much attention to what might seem the minor aspects of a poem, such as its rhythm and sounds. Yet even if one did not have the evidence of his correspondence, the sheer quantity of alliteration and the stress marks in this poem would indicate that Hopkins must have thought about these things. Hopkins not only thought deeply about how he would organize the sound and rhythm in his poems but also worked to integrate those aspects with the overall meaning and experience he hoped to convey. This effort can be seen, for example, in the opening of the poem, where no line has an end-stop—a final punctuation mark—until the exclamation point after "ecstasy." To perform this opening is to realize that it is designed to make speaker and listener feel breathless and, thereby, to convey the wonder of seeing and of almost feeling the flight of the windhover. That this breathless line ends in ecstasy suggests even deeper thought in Hopkins, whether intuitive or conscious, which may have whispered to him that, in a poem about a visionary experience, a good first place to pause is on the word "ecstasy."

## “HURRAHING IN HARVEST”

**First published:** 1918 (collected in *Poems of Gerard Manley Hopkins, Now First Published, with Notes by Robert Bridges*, 1918)

**Type of work:** Poem

*In this Italian sonnet of 1877, the speaker is so moved by his spiritual vision of the harvest season that he leaps into the air.*

Though “Hurrahing in Harvest” is just as rich in diction and ideas as “God’s Grandeur” and “The Windhover,” it may seem more accessible to beginning readers of Hopkins because the poet’s vision and actions are simpler. In the first quatrain, he observes with wonder the beauties of the harvest season, the piling of the grain for threshing, and the wind and clouds of the sky. On both levels, he sees harvest, for he finds in the clouds images of winnowing grain. In the second quatrain, he recounts his experience of walking through such a landscape. As he walks, his heart and his eyes glean, or gather, the remains of the harvest, and what they glean is Christ, “our saviour.” Gathering up visions of Christ in the landscape, he sees Christ as a lover speaking to him through the landscape: “What lips yet gave you a/ Rapturous love’s greeting of realer, of rounder replies?” Rapturous love, however, points beyond a comparison of Christ with a lover, for “rapture” shares the root meaning of “raptor,” a bird of prey like the windhover, that seizes its prey and carries it into the sky. For a Christian, the Rapture is that moment when the soul is caught up into Heaven for the final judgment. Christ as rapturous lover is, therefore, an apt image of Christ the savior and the judge, who in the variety of ways observed in “The Windhover” offers to bring the faithful soul out of sin and into the bosom of God.

In the sestet, the poet sees the autumn hills beneath the rich blue sky as Christ’s shoulders, capable of lifting the world like a strong but sweet-smelling stallion. He reflects that this world is always present, waiting to speak in this way to a beholder. When the beholder, in this case the poet, appears, then his heart grows bold wings with tremendous strength to hurl the earth away from his feet. In this way, the heart becomes the raptor, drawing the body with it heavenward, toward God.

Though this poem is clearly typical of Hopkins in its themes and technique, it also can remind readers vividly of seventeenth century Metaphysical poetry, where the figure of Christ as a lover is not uncommon, as in John Donne’s “Batter My Heart, Three-Person’d God.” Like his American contemporary, Emily Dickinson, Hopkins was drawn to Metaphysical conceits, those sometimes shocking comparisons, so delightful in Donne’s poetry, that are capable of moving and astonishing effects. Such an effect occurs when the wings of the poet’s heart carry his body into the air, wittily and somewhat humorously suggesting his imminent ascension into Heaven.

## “I WAKE AND FEEL THE FELL OF DARK, NOT DAY”

**First published:** 1918 (collected in *Poems of Gerard Manley Hopkins, Now First Published, with Notes by Robert Bridges*, 1918)

**Type of work:** Poem

*The poet meditates upon his alienation from God and his self-imprisonment.*

In 1885, during the difficult years of exile in Dublin and demanding labor as a professor, Hopkins wrote a series of poems that Robert Bridges called “the terrible sonnets.” In most of these poems, Hopkins explores the theme of exile from God, the alienation and doubt that all believers feel at times. These feelings tend to lead to self-loathing, because it is the human self that stands as a barrier to permanent union with God.

In “I Wake and Feel the Fell of Dark, Not Day,” the poet awakens in the dark, implicitly awaiting the light of day. The word “fell,” however, indicates that this is more than a literal awakening in the night. A fell is the hide, or pelt, of a dead animal. His feeling the fell of dark suggests imprisonment in an animal body and the desire to escape into a “body of light.”

In the rest of the first quatrain of this modified Italian sonnet, the poet addresses his heart, lamenting the “black hours” they have spent, the terrors they have experienced together in this seem-

ingly endless night. In the second quatrain, he says that he has been speaking metaphorically, that where he has said hours he means years. In fact, his whole life has been lived in the dark of separation from God, yearning for the light of final union. All of his prayers to God have been like dead letters, sent to one who is distant. Dead letters are not delivered and may be returned to the sender. This comparison emphasizes the speaker's despairing sense of entrapment. Unable to communicate with God, he is caught forever in painful communion with his suffering heart.

In the sestet, he says that he understands that God has deliberately given him this experience of exile, though here he says little about why this is the case. In another dark sonnet, "Carrion Comfort," he suggests that God's purpose may be to strengthen or purify him in some way, but in this poem he concentrates on the experience of being made to experience the bitterness of his own flesh.

Though his imagery repeatedly suggests loathing of his physical body, it is not clear that it is the body itself that he hates. Rather, what hurts him is that being in a body prevents his union with God. He says "Selfyeast of spirit a dull dough sours." This line seems to say that his body is like dough and his spirit like yeast. That yeast should raise and "ennoble" the dough, but instead it sours it. The problem seems, therefore, not to be in the body or the dough but in the isolation of the spirit, the "self-yeast." What is needed is a renewing influx of the Holy Spirit as it is presented in "God's Grandeur."

Perhaps a brilliant visionary experience as in "The Windhover" or "Hurrahing in Harvest" would seem a consoling reply to one of his dead letters, a glimpse of light that would promise a greater light to come. Nothing of that kind, however, comes to the speaker in this poem. His final reflection is that this experience is like that of the damned, except that for them it is worse. He does not explain why at the end of the poem, but the beginning has made this clear: because the damned have no expectation of the day, they have no faith and, therefore, no hope.

### SUMMARY

Gerard Manley Hopkins was a brilliant Christian poet. He produced a small number of finely crafted and moving poems in his lifetime but, for religious reasons, made little effort to publish them. When they were published twenty-nine years after his death by Robert Bridges, Hopkins quickly took a place of honor among modern poets. His radical and difficult experimentation with diction, sound, syntax, and rhythm made him especially attractive to early twentieth century poets. Though his poems seem difficult, they are accessible to patient readers who are willing to inform themselves about Hopkins's traditional Christian beliefs. Indeed, his poems repay repeated study with new discoveries that make them seem increasingly rich and moving as one comes to know them better.

Terry Heller

#### DISCUSSION TOPICS

- Explain why Gerard Manley Hopkins could not be a nature poet in the same way as John Keats and other Romantics of the earlier nineteenth century.
- In the great sonnet "God's Grandeur," Hopkins omits a preposition, presumably "in," in the line "There lives the dearest freshness deep down things." Observe how by placing the missing word in various places in the line, several complementary meanings emerge.
- Observe how Hopkins blends both joy and caution in his religious affirmations. Why are both important?
- Cite instances of how Hopkins appropriates and heightens extremely common and not particularly beautiful things from everyday life.
- Explain what poetry lovers owe to Robert Bridges, other than his poems.
- Much religious verse is difficult to read if the reader does not share the poet's religious outlook. What makes Hopkins's poetry exceptional in this respect?
- Study one Hopkins poem very carefully. Does the experience justify the effort?

# HORACE

**Born:** Venusia (now Venosa, Italy)

December 8, 65 B.C.E.

**Died:** Rome (now in Italy)

November 27, 8 B.C.E.

*One of the most important authors of Rome's Golden Age, Horace excelled at both satire and lyric poetry, while adapting the form and rhythms of Greek verse to the Latin language.*

## BIOGRAPHY

Horace (HAWR-uhs) was born Quintus Horatius Flaccus on December 8, 65 B.C.E., in the small Apulian town of Venusia (now Venosa in south-eastern Italy). The date is recorded in the brief profile of Horace attributed to Suetonius, which appears as an appendix to some of Horace's early manuscripts. The place is recorded in Horace's own *Satires* (35 B.C.E., 30 B.C.E.; English translation, 1567), where the author frequently provides information about his own life. These two sources, Suetonius and Horace himself, permit the biography of Horace to be reconstructed in greater detail than is possible for most other ancient figures.

Horace's father was a freedman (*libertinus*, a slave who had bought his freedom), who made his living by collecting money at auctions. Horace was born, therefore, into nearly the lowest ranks of Roman society. Yet Horace's father was thrifty and managed to save enough money to buy a small farm in Venusia. Moreover, he wanted his son to have greater opportunities than his own. That meant that the young Horace needed to receive a better education than could be obtained in the local schools of Apulia. For this reason, Horace's father moved the family to Rome and enrolled his son in a school attended by the children of equestrians and senators. There Horace's education consisted largely of memorizing passages of early Latin poetry under the stern tutelage of Lucius Orbilius Pupillus. Later in his life, Horace would question the lavish praise that many of his contemporaries heaped upon the early Roman poets. Horace came to believe that much of the language used

by authors such as Livius Andronicus and Gaius Lucilius was awkward and uninspired.

Horace's mother is never mentioned in his works. It seems likely, therefore, that she died early in Horace's life, perhaps even before the family left Venusia. On the other hand, the relationship between Horace and his father seems to have been quite close. Lacking money for a servant, Horace's father escorted the boy to school himself. Moreover, in one of his *Satires*, Horace describes the practical lessons in morality that his father gave him during these years: Horace's father would point out examples of Roman citizens whose way of life was noble and whom Horace was to imitate. He would also mention those whose character was base and whose habits the boy was to avoid. This sort of "education by example," important to both Roman satirists and historians, was to be a major stylistic technique in Horace's own *Satires* and *Epistles* (c. 20-15 B.C.E.; English translation, 1567).

When Horace was about twenty years old, he went to Athens to pursue an advanced course of study. While in Greece, Horace became absorbed with the political intrigues that were occurring throughout the Roman world at the end of the Republican period. He abandoned his studies during the autumn of 44 B.C.E. and joined the forces of Marcus Junius Brutus, one of the principal assassins of Julius Caesar. After Brutus was defeated by Octavian (later the Emperor Augustus) and Marc Antony at the Battle of Philippi in 42 B.C.E., Horace returned to Rome. There he found that his father had died and that his family's small farm in Apulia had been confiscated to provide land for Octavian's veterans.

As a result, Horace became a legal secretary or treasury clerk in order to support himself. In his spare time, he began to write verse. It was during this period of his life that some of the *Epodes* (c. 30 B.C.E.; English translation, 1638) and *Satires* were written. Horace's poetry began to be circulated among other members of the Roman intelligentsia, and, in this way, Horace met the poet Vergil. Vergil's literary patron was the wealthy Etruscan aristocrat Gaius Maecenas, and, through Vergil, Horace secured his own introduction to Maecenas. In 38 B.C.E., Maecenas became Horace's patron as well, freeing the poet from financial concerns for the rest of his life. Moving in such elevated literary and political circles, Horace met a number of the most influential persons of his day. He became reconciled with Octavian and appears to have been present at the conference that led to the Treaty of Tarentum in 37 B.C.E.

After Vergil died in 19 B.C.E., Horace virtually became the poet laureate of Rome. In 17 B.C.E., ten years after Octavian had assumed the title of Augustus, Horace composed a great choral hymn in honor of the emperor. This poem, the *Carmen saeculare* (17 B.C.E.; *The Secular Hymn*, 1726), was sung by a choir of twenty-seven boys and twenty-seven girls. Its theme was that Rome, under Augustus's leadership, had entered a new era of peace and reform. Augustus also encouraged Horace to write a fourth book of the *Odes* (23 B.C.E., 13 B.C.E.; English translation, 1621) long after the first three books had been published. He asked Horace to compose an epistle on the art of poetry and commissioned him to write the official hymn celebrating the military victory of his stepsons Drusus and Tiberius.

Horace died on November 27, 8 B.C.E., in Rome, only a few months after his patron, Maecenas. Their tombs were built beside each other on the Esquiline Hill in Rome. In his own works, Horace describes himself as short, fat, delicate in health, and prematurely gray. His contemporaries added that the poet was congenial though independent in spirit, promiscuous, tactful, kindly, and sensitive to the feelings of others.

## ANALYSIS

The body of work published by Horace is rather small, reflecting the author's belief that a poem that is tightly crafted and highly polished is supe-

rior to a work that is longer and less refined. For this reason, Horace's models were not the ponderous Saturnian lines of Andronicus or the lengthy satires of Lucilius. Rather, Horace turned for inspiration to the Greek poetry of Archilochus, Sappho, and Alcaeus, imitating both their meters and their style in Latin verse.

Horace claims to have been the first Latin poet to have adopted Archilochus's iambic meter and to have introduced the style of Alcaeus to a Roman audience. The influence of these Greek predecessors is already apparent in Horace's earliest published works, the seventeen iambic (or iambic-dactylic) poems known as the *Epodes*. A number of the *Epodes* reflect a satirical approach intentionally reminiscent of Archilochus; this humorous style was to be repeated in the *Satires* and the *Epistles*, as well. Not even Horace's patron, Maecenas, is spared, bearing the (admittedly rather gentle) brunt of Horace's satire in Epode 3.

Even in these early and derivative works, however, something of Horace's originality may be seen. For example, apart from his closest friends, Horace rarely mentions specific individuals in these poems. In fact, the object of Horace's satire is frequently not an individual at all, but a general type of character or a particular human flaw. Satire 1.1 thus criticizes the human inability to be contented with one's lot in life, Satire 1.3 ridicules intolerance, and Satire 1.9 presents Horace's encounter with a persistent, but unnamed, bore.

In this way, Horatian satire lacks the topicality of the Athenian playwright Aristophanes or the bitter invective of the Roman satirist Juvenal. Horace's satirical tone tends to be one of bemused ridicule of common human faults, tempered always with tolerance and the poet's awareness of his own imperfections. To some extent, Horace's unwillingness to criticize individuals is a reflection of the political turmoil that occurred during his youth—it would not have been prudent for a former partisan of Brutus to ridicule political figures who had sided with the victorious Octavian—but it may be attributed to Horace's own personality. Throughout his works, Horace appears to be a genuinely amiable human being who disliked conflict and who was willing to adapt to a changing political climate.

Horace's preference for dealing with general literary types rather than specific individuals may be seen even in his greatest literary works, the *Odes*.

For example, the women to whom Horace addresses his odes of love tend to be imaginary female “types” rather than identifiable women of his own day. Their names are usually drawn from Greek lyric or elegiac poetry and are indicative of their appearance or character. Thus, *Odes* 1.5 is addressed to Pyrrha (Greek for “blonde”), *Odes* 1.22 speaks of Lalage (“chatterbox”), and *Odes* 1.23 mentions Chloe (“fresh young thing”). The presence of these type characters makes Horace’s love poetry quite different from that of his contemporary Catullus, whose passionate love affair with Lesbia (an actual Roman woman, whose real name was probably Clodia) may be charted in his poetry from first infatuation to final, bitter rejection.

Horace’s love poetry thus lacks, at times, the passion and intensity of Catullus’s lyrics. Horace’s poems tend to be highly polished and charming, even studied, rather than realistic depictions of a young man in love. Yet what Horatian love poetry may miss in spirit, it more than compensates for in the perfection of its language. Not a word is out of place in one of Horace’s *Odes*, and these works have no parallel in Roman poetry for the beauty of their imagery or allusions.

Horace composed 103 *Odes* in all, arranged in four books published at various periods of his life. Their meters were borrowed from Greek lyric poetry and are amazingly diverse. Indeed, each of the first nine poems in Horace’s first book of *Odes* is composed in a different meter. Each of the odes usually has an addressee (such as Augustus, Maecenas, Pyrrha, or some other person, real or imaginary) and an occasion that, at least as a literary device, prompts the composition of the ode. Within this general framework, Horace mixes traditional Greek themes such as the pleasures of love and drink with more familiar Roman concerns such as the greatness of the state, the nature of the ideal citizen, and the need to preserve one’s integrity in a chaotic society. Satirical themes, such as the notion that one’s heirs will only waste tomorrow the wealth that one hoards today, familiar from the *Satires* and *Epistles*, also sometimes appear.

One of the innovative features of the *Odes* is Horace’s ability to combine these traditional themes in new and unexpected ways. A drinking song, for example, may unexpectedly include patriotic themes, or a poem on the passing of the seasons may suddenly draw a parallel to the ages of a per-

son’s life. The freshness of the *Odes* is attributable, in large part, to the novel way in which these poems recombine traditional literary themes.

Certain phrases introduced by Horace in the *Odes* have become so famous that they are commonplaces in the Western literary tradition. These phrases include *nil desperandum* (“never despair”), *carpe diem* (usually translated as “seize the day,” but a more accurate rendering would be “pluck the day like a flower”), *integer vitae* (“the man whose life is pure”), *auream mediocritatem* (“golden moderation”) and “*Eheu fugaces*” (“Alas the fleeing” years slip away).

## SATIRE 1.9

**First published:** 35 B.C.E. (collected in *Satires*, 35 B.C.E.; English translation, 1567)

**Type of work:** Poem

*While strolling along the Sacred Way, Horace encounters a bore, who persists in accompanying him despite his hints that he would prefer to be alone.*

Horace’s description in Satire 1.9 of his encounter with a bore is an excellent example of his satirical style. The bore is never named, and though several critics have attempted to identify him with the poet Sextus Propertius, Horace provides no clues as to his identity. The reason is that Horace does not wish to create a poem filled with invective against a particular individual. Rather, Horace’s intention is to satirize dullness in general. Humor in the poem is derived from the reader’s identification with Horace’s predicament. Everyone can recall an incident

in which an annoying individual would not leave despite numerous hints. In this way, Horace criticizes the behavior of the bore and of others like him rather than attacking the person by name.

During their (rather one-sided) conversation, the bore reveals that he is a poet and is hoping that Horace will introduce him to Gaius Maecenas (Horace's wealthy patron). In so doing, the bore alienates Horace still further by completely misunderstanding the relationship that poets such as Horace have with their patron, by stressing his ability to write quickly (elsewhere in the *Satires*, Horace makes it clear that he prefers polished writing to swift writing), and by assuming that Horace wants to compete with the other poets in Maecenas's circle. The bore, therefore, appears shallow and insensitive, as well as annoying.

It is unlikely that Horace, in this satire as elsewhere, really sought to correct the fault that he is ridiculing. Few readers will leave this work with a renewed desire to be more interesting and less annoying to others. Rather, by gently mocking this common human flaw, Horace leaves his readers smiling at a situation that they will recognize and a type of folly with which they are well familiar.

### ODES 1.9, THE SORACTE ODE

**First published:** 23 B.C.E. (collected in *Odes*, 23 B.C.E.; English translation, 1621)

**Type of work:** Poem

*On a winter day, Horace looks out from the warmth of a friend's house and sees the snows covering Mount Soracte.*

The charm of *Odes* 1.9, the Soracte ode, is derived from Horace's ability to combine the traditional themes of lyric poetry in new ways. The poem begins with an image of winter: Mount Soracte, twelve miles north of Rome, is covered with snow, and the trees are laden with ice and frost. This image, then, is set into strong contrast with the poet's description of the warmth inside the house of Thaliarchus (Greek for "master of the festivities"), where wine flows abundantly and logs are heaped upon the fire. This contrast reminds Horace, rather abruptly, of how all things, such as the winter cold, are determined by the gods and must be entrusted to them. As a result, humankind, the poet says, should enjoy its youth while it can, taking delight in such simple pleasures as the

warmth of the fire and the distractions of love.

In this way, Horace moves from a description of a natural scene to a commentary on the human condition. The Soracte ode may be read on a number of levels. It captures, as does much of Greek lyric poetry, the particular feeling that its author had at a given moment. Yet it is also a symbolic commentary on the contrast between youth (the fire inside) and old age (the white snow outside).

### ODES 1.37, THE CLEOPATRA ODE

**First published:** 23 B.C.E. (collected in *Odes*, 23 B.C.E.; English translation, 1621)

**Type of work:** Poem

*The Romans may rejoice again, now that Cleopatra has been defeated.*

A combination of drinking song, victory ode, and political manifesto, *Odes* 1.37, the Cleopatra ode, is a celebration of Cleopatra VII's defeat by the forces of Octavian and Marcus Vipsanius Agrippa in 31 B.C.E. It is also another example of Horace's ability to combine diverse themes and poetic genres in an interesting way. While the poem begins with a simple invitation to drink in celebration of the Roman victory, the tone of the work gradually becomes more serious as the work progresses. Cleopatra is first presented as a queen plotting mad destruction for the Capitoline Hill (line 37), then as an accursed monster (*fatale monstrum*, line 21), then as "no submissive woman" (*non humilis mulier*, line 32) but a queen who preferred death to humiliation. There is, in the end, a grudging admiration by Horace for Cleopatra's heroism, even though she had been an enemy to the Roman people.

Marc Antony, who had been defeated along with Cleopatra, is not mentioned. (He had been similarly ignored in Octavian's declaration of war against Cleopatra.) Horace does not think it suitable to revel in the defeat of Antony, a fellow Roman citizen. Nevertheless, Antony's presence is felt throughout the poem in the frequent references to wine and drunkenness. Before the battle, Octavian, Cicero, and others had attempted to de-

pict Antony as a drunk. The poem's structure as a drinking song, its references to Caecuban and Maeotic wine, and its (historically inaccurate) image of Cleopatra as inebriated at the battle are all attempts to remind the reader indirectly of Antony.

The meter of the work is borrowed from the Greek lyric poet Alcaeus, who also wrote drinking songs and victory odes. The repetition of the word "now" (*nunc*) three times in the opening line established an immediacy as though a great threat, long impending, has only now been removed. In addition to the imagery of drunkenness and wine, symbolism of the hunter (Octavian) and hunted (Cleopatra) appears throughout the work. Cleopatra fled, Horace suggests, from the pursuit of Octavian; but when death proved inescapable, she met it nobly as befits a queen.

## THE SECULAR HYMN

**First published:** *Carmen saeculare*, 17 B.C.E.  
(English translation, 1726)

**Type of work:** Poem

*At a festival proclaiming the dawn of a new age, the chorus invokes the gods' blessings upon the Roman people.*

Originally sung by a double choir of twenty-seven boys and twenty-seven girls on June 3, 17 B.C.E., *The Secular Hymn* is an important statement about the Romans' view of their empire in the time of Augustus. Stemming from an Etruscan belief that a new age of humanity was inaugurated each eleven (or, in some cases, ten) decades, the Centennial Festival reflected Augustus's view that, with his reign, a new period had begun. For this reason, the poem is filled with images of the rising and setting sun, the passing of the seasons, and, most of all, symbols of birth.

The goddess of childbirth, Eileithyia (or Ili-thyia), is mentioned both because a new age is being born and because of Augustus's belief that Rome needed to return to its traditional values. The emperor rewarded Romans who produced large families and imposed a higher level of taxation upon those who remained single. In this way, Horace is able to use the figure of Eileithyia to shift

from the birth imagery at the beginning of the poem to advocacy of Augustus's social policies in the second group of verses.

Moreover, Eileithyia is only one of the deities invoked in this hymn. Horace also addresses Apollo and Diana, the Sun, the Fates, Ceres, and a host of other gods and goddesses. The resulting image is that Rome's destiny is guided by all the deities in the Roman pantheon. It was the will of the gods that Rome should become great, and it was through their efforts that Augustus rose to rule the state.

The fertility of the Italian countryside and the founding of the Roman people by the Trojan warrior Aeneas, alluded to in this poem, appear also as major themes in the works of Vergil and on the Altar of Peace (*Ara Pacis*), erected in Rome between 13 and 9 B.C.E. These images represent, therefore, a consistent view of how Augustus wished his rule to be portrayed. As the one who brought about the end of the Roman Civil Wars, Augustus is depicted as making it possible for battlefields to become wheat fields once again. As the new Aeneas, Augustus is depicted as fulfilling the gods' plan begun at the very beginning of human history.

The poem ends with an invocation of Apollo and Diana, as it had similarly begun. This "ring composition" allows Horace to tie the poem directly to the human cycles that the Centennial Festival honors. Even as the hymn itself begins, rises, and ends, so (Horace suggests) do the ages of human life. The poet expresses Augustus's belief, however, that the current age would be one of unparalleled peace and prosperity.

## THE ART OF POETRY

**First published:** *Ars poetica*, c. 17 B.C.E.  
(English translation, 1567)

**Type of work:** Poem

*In a letter addressed to Gnaeus Calpurnius Piso, Horace offers a wide-ranging critique of literature and practical advice on how to write various types of poetry.*

Horace's *Epistles* (c. 20-15 B.C.E.) are written in the same meter, and with much the same style, as

his *Satires*. In form, they are poetic letters intended for a recipient who is named in the first few lines; in actuality, they are general commentaries about human weaknesses or other issues of concern to the author himself.

*The Art of Poetry* is a reiteration of many of the same arguments found in *Epistles* 2.1, written at the request of Augustus. In that work, Horace discussed his views about the proper role of literature and the place of Roman poetry within the ancient literary tradition. In *The Art of Poetry* itself, Horace expands upon these and couples them with specific suggestions for the authors of his day.

Horace begins by praising consistency as the highest virtue of poetry. A work that attempts to be now one thing, now another, is eventually, according to Horace, being nothing at all. For this reason, authors must maintain the same tone throughout a work, not attempt to improve an inferior effort with a “purple patch” (*purpureus . . . pannus*, lines 15-16) of fine words every now and then. Moreover, authors should not attempt subjects that are beyond their powers. If they do, the result will make them look ridiculous.

Each incident and word in a poem should be chosen with care. Precise selection of what is needed, rather than a torrent of words, creates the most polished result. The meter, too, should be chosen with care: Dactylic hexameter, the meter of Homer (and, coincidentally, of *The Art of Poetry*), is appropriate for epic; elegiac couplets are appropriate for sad subjects and songs of thanksgiving; iambic verse lends itself to satire; lyric meters are suitable for victory odes and drinking songs. These meters had all become traditional by Horace’s day, and the poet warns his readers that audiences expect them: A serious thought may unintentionally be made to seem comic if presented in an improper poetic form.

In dramatic poetry, language assigned to a character must both suit the traditional depiction of that character and be consistent within the work itself. In epic poetry, it is best not to prolong the story by starting at the very beginning but to thrust the reader right “into the middle of things” (*in medias res*, line 148). Brevity, as well as an ability to convey both wisdom and pleasure, are essential to the skilled poet.

The reader should not, however, find fault with a poet who occasionally fails to fulfill these high standards since, in the phrase of Horace, “even great Homer sometimes nods” (line 359). Still, the public will not long endure a second-rate poet, and it is the author’s goal to see that such passages are rare. This lapse tends to occur, Horace suggests, when poets distribute their work without sufficient editing. Thus, instead of publishing a work immediately, the poet should set it aside for a time—at line 388, Horace recommends, with satirical exaggeration, that it be set aside for nine years—to see if it still seems as inspired later.

The advice that Horace provides in *The Art of Poetry* is thus a combination of common sense, practical observations drawn from a lifetime of writing, and views inherited from earlier literary critics such as Aristotle, Neoptolemus of Parion, and Philodemus. Probably the last work that Horace wrote, *The Art of Poetry* has played an important role in defining both the classical style and the canons of good writing developed in later periods.

## SUMMARY

Horace’s own works adhere to the principles that the author set forth in *The Art of Poetry*. His poems are consistent, well crafted, brief, and highly polished. Their language is chosen both for its appropriateness to the topic and for the emotional force of its imagery. This achievement is all the more impressive in light of the incredible variety of Horace’s poetry. He perfected both satire and lyric poetry. He was at home with the simple charm of the *Epistles* as well as the lofty grandeur of *The Secular Hymn*. Through his works, the reader comes to understand Horace both as an individual and as a representative of the values of Augustan Rome.

In each of his poems, Horace emphasizes the general human condition instead of particular situations. His satire is not filled with invective against individuals, but with parody of common folly. His love poetry does not reflect his own experiences but, rather, is written to imaginary characters. Even in those lyric poems where he begins by capturing the experience of a specific moment, Horace will usually generalize, using the incident as a way of commenting upon a larger truth.

Jeffrey L. Buller

## BIBLIOGRAPHY

### By the Author

#### POETRY:

*Satires*, 35 B.C.E., 30 B.C.E. (English translation, 1567)

*Epodes*, c. 30 B.C.E. (English translation, 1638)

*Odes*, 23 B.C.E., 13 B.C.E. (English translation, 1621)

*Epistles*, c. 20-15 B.C.E. (English translation, 1567; includes *Ars poetica*, c. 17 B.C.E.; *The Art of Poetry*)

*Carmen saeculare*, 17 B.C.E. (*The Secular Hymn*, 1726)

#### NONFICTION:

*The Epistles of Horace*, 2001 (David Ferry, translator)

## DISCUSSION TOPICS

- Contrast Horace's satirical approach with Juvenalian satire (which is exemplified in the work of a writer such as Jonathan Swift).
- What features of Horace's poetry make him a challenge to translate? Why do so many translators keep making the attempt?
- To whom or what can contemporary poets looking for a patron like Gaius Maecenas turn?
- Horace's love poetry is very different, much less passionate, than Catullus's. What aspects of love can Horace present most effectively?
- If Horace is taken as a good example of what is meant by "classical" poetry, what are the virtues of modern poems so designated?

## NICK HORNBY

**Born:** Redhill, Surrey, England  
April 17, 1957

*Hornby's novels combine frank honesty with tolerant and sympathetic wit to chronicle the chaotic misadventures of contemporary relationships. In addition to works of literary and popular music criticism, Hornby has written fiction that examines and critiques modern attitudes toward friendship, sex, and romance with humor, candor, and pathos.*

### BIOGRAPHY

Nick Hornby was born on April 17, 1957, in Redhill, England, the son of Sir Derek Hornby, a successful businessman, and Margaret Hornby, a secretary. His parents' marriage dissolved when he was eleven; Sir Derek moved to houses in both France and the United States, while Margaret continued to work as a secretary in the northern suburbs of London. Hornby lived with his mother, with occasional visits to his father, and the sharp contrast in his parents' respective economic classes, by his own later admission, provided a kind of joint cultural identity, torn between the luxurious affluence of his prosperous father and the sensible, if comparatively sparse, middle-class comforts of his mother.

During his childhood, Hornby discovered the passions that would later feature prominently in his writing. A youthful occupation with reading, particularly comic books and children's literature, cemented his interest in the printed word. A fascination with popular music, ranging from the British rock bands of the mid-1960's to the louder and more bohemian groups emerging from the American and British punk scenes, provided distractions from his fractured home life. Above all, Hornby developed a deep passion for Arsenal, a professional soccer team located in the Highbury section of

north London. During Hornby's formative years, Arsenal had a spate of poor luck. Perennial losers, the Arsenal team nonetheless offered Hornby a sort of cultural identity, though even in the terraces of Highbury this identity remained fractured; the bulk of Arsenal fans were working class. For the middle-class son of a knighted millionaire to support a solidly blue-collar team took a certain amount of social gymnastics, but Hornby loved his trips to the stadium, and the team would remain a source of passionate fascination.

Upon completing secondary school, Hornby attended Cambridge, where he studied English. The experience was a frustrating one; Hornby would later claim that studying literature at the university stunted his development as a writer, imposing upon him a dry and scholarly style that he was unable to ably replicate. After college Hornby held a variety of jobs, ranging from English teacher to corporate representative for Samsung. Frustrated by his life, Hornby turned, slowly, toward literary endeavors.

Hornby's first efforts at writing were screenplays, but he judged these efforts poorly, considering them failures. Feeling cramped by the style that had been imposed upon him in college, able to communicate authentically only through dialogue but still unsure of his voice, Hornby struggled for a time. In the mid-1980's he discovered a number of American writers who would exercise a considerable influence upon him, among them Raymond Carver, Anne Tyler, and Lorrie Moore. The simplicity of their style, coupled with the sympathetic

warmth and humor present in their works, seemed to Hornby to be absent from contemporary English fiction and inspired him to replicate their literary success in an indelibly English setting.

Hornby's first published works, however, were nonfiction. Working as a journalist, Hornby had written articles for a variety of mainstream publications in both England and the United States. His first book, *Contemporary American Fiction*, a collection of critical essays examining the works of his American literary heroes, appeared in 1992 and marked Hornby's initial sojourn into criticism, an area in which he would later distinguish himself.

However, it was his second book, *Fever Pitch* (1992), that brought distinction. A memoir of his obsession with Arsenal, *Fever Pitch* is a collection of essays examining not only the Arsenal teams of the 1960's, 1970's, and 1980's but, more important, the nature of obsession with sport and, by extension, the nature of obsession itself. Hornby's identification with Arsenal had not faded with age; rather it had become more integral to his existence and the London team's frustrations had come to closely mirror his own. While *Fever Pitch* is distinctly English in its content, the book's broad appeal extends beyond London devotees of soccer; the overriding theme of male obsession with sports, often at the expense of all else, is a universal one.

Though not a novel, *Fever Pitch* established many of the elements that would come to dominate Hornby's fiction. The theme of male obsession, in this case with a sports team, would feature prominently in Hornby's first novel, *High Fidelity* (1995), a work that examines the nature of sex and friendship from a specifically male perspective with a healthy mix of sincerity and irony. Garnering both critical and commercial success, the novel announced Hornby's presence as a legitimate voice in contemporary literature. Following *High Fidelity*, Hornby wrote the more ambitious *About a Boy* (1998), a best seller that further cemented his growing reputation.

Having established himself as a commercially viable and critically acclaimed author, Hornby's subsequent writings demonstrated an increased scope. Building on the success of *About a Boy*, Hornby spent a decade examining the pitfalls of contemporary life from a variety of perspectives, including female voices. *How to Be Good* (2001) examines a practical vision of ethics, and *A Long Way*

*Down* (2005) explores the psyche of a collection of suicidal characters. Hornby has also established himself as a refreshing critical voice, examining both popular music and literature with personal candor that, although not scholarly, is nonetheless insightful.

The birth of his son Danny, who would be later diagnosed with autism, led Hornby to organize the publication of *Speaking with the Angel* (2000), a collection of writings by himself and several of his literary peers, to raise money for Treehouse, a small school for autistic children. In the early twenty-first century, Hornby was living in Highbury in north London, not far from the stadium where Arsenal plays its home matches. He also was working on a screenplay and contributed regularly to a variety of publications.

## ANALYSIS

Hornby's work has long been categorized among the so-called "lad-lit" novels of the latter half of the twentieth century—novels written by male authors focusing upon relationships from a specifically male perspective. Certainly the archetypal "lad lit" protagonist—a single, thirty-something man, whose personal and professional life is stunted by his own immaturity—seems an apt description of both Rob from *High Fidelity* and Will from *About a Boy*, but to assume that Hornby is nothing more than a contributor to a widely defunct popular literature movement minimizes his contributions to contemporary writing. Hornby's work, though widely imitated, is largely original.

Hornby's fiction is notable for its realism. His characters are instantly recognizable and believable, though never mere stereotypes. These realistic characters are placed in realistic situations; Hornby is content to consider the nature of contemporary life by focusing only upon the ordinary details of ordinary men and women. His prose follows suit, as the stylistic hallmark of Hornby's novels is directness. There is an authenticity to this style; Hornby's characters, though insightful, are never erudite, and as such their words accurately reflect their levels of education and intelligence.

Hornby's tone is characterized by the seemingly contradictory presence of both sincerity and irony. The irony stems from the occasionally bitter, occasionally playful sarcasm that characterizes Hornby's sense of humor. The sincerity stems from

revelations of emotion stemming from failed relationships, superficial friendships, and strained love affairs. Hornby's presentation of modern men and women is one of alienation, largely of a character's own making. The focus upon the trivial, at the expense of the vital, allows one to create a world where one is temporarily immune to the pain of daily life; it is only when that world is inevitably invaded by its own pitiful reality that Hornby's characters must seek to address their own spiritual, emotional, and moral failings. It is only then that these characters grow up.

The search for self-actualization, on however small a scale, is the preeminent theme of Hornby's work. While Hornby's characters are neither heroic nor villainous, it is their occupation in a sort of middle ground that makes them accessible and endearing to the reader. However detestable their actions, they are still generally good people with real potential, and however likable their personas they are still very flawed people with real limitations. To both their credit and their distress, Hornby's characters are fully aware of both their failings and their successes. Self-awareness seems like a burden before it acts as the catalyst for real growth and, though no heroes are born, complete adult men and women emerge.

## HIGH FIDELITY

**First published:** 1995

**Type of work:** Novel

*Following the dissolution of his latest relationship, record store owner, popular music enthusiast, and inveterate serial-dater Rob Fleming attempts to make sense of his personal life.*

*High Fidelity*, Hornby's first novel, immediately establishes both the tone and the thematic content of the work upon the first page. Rob Fleming, following the departure of his girlfriend Laura, ruminates upon his past relationships, creating a top-five list of his most devastating break-ups. In a prolonged apostrophe to the recently departed Laura, Rob explores how these relationships, ranging from his first kiss as an adolescent to his first

adult love affairs, altered his perspective forever. The narrator's self-awareness becomes immediately apparent, as even his ironic detachment seems to provide emotional context, as does his unique organizational patterns of thought that will hold true throughout the entire novel. Rob is a man who arranges his thoughts, whether personal, professional, or trivial, in "top-five" lists. While some of these lists reveal no more than his favorite films or songs, others reveal the innermost workings of his mind.

The novel focuses upon the aftermath of Rob's breakup with Laura, taking the reader on a tour through the narrator's fractured psyche. Having opened the door to old memories in the opening apostrophic rant, Rob will find himself treading through the past repeatedly. Initially this pilgrimage into memory is little more than sentimentality, but closer investigation brings Rob to seek insight from his past romantic mistakes. Amid the daily business of running a failing record store, listening to and talking about music with his two employees and friends, conducting a brief affair with an American singer-songwriter, and generally missing Laura, Rob decides to investigate his own past for answers, reconnecting with his old girlfriends to seek the cause for his broken relationships.

While *High Fidelity* makes no claim to be a philosophical discourse on the level of Albert Camus or Jean-Paul Sartre, Rob's existential angst is perhaps more accessible and readily identifiable than, say, Meursault's in Camus's *L'Étranger* (1942; *The Stranger*, 1946). The loneliness, frustration, insecurity, and pain brought on by even a relatively mundane occasion can spark intense introspection. Rob may eschew the philosophical discourse of the intellectual, but his own existence has been, in his mind, a failure, and the meaning of that failure is necessary to consider. At various points he ascribes blame to his parents, his friends, his former girlfriends, even popular music, but none of these ex-

planations seem adequate. It is only when he accepts that he himself is the cause that Rob is able to break loose from the cycle of failed romances.

Thematically, *High Fidelity* is a novel concerned with priorities, with learning to place the vital over the trivial after the relationship has been inverted for so long. Rob discovers that his pop music snobbery is superficial elitism. The seemingly useless knowledge that Rob has acquired regarding music is proven to be valuable only when it is directed toward an actual goal, as when Rob resumes an old occupation as a disk jockey at a club. By the end of the novel, Rob has redirected his life, reuniting with Laura, resisting old temptations to sabotage contentment, and looking toward the future. The personal calamity of the first chapter has provided the impetus for true self-discovery.

## ABOUT A BOY

**First published:** 1998

**Type of work:** Novel

*This novel examines the unlikely friendship between Will, a wealthy thirty-something bereft of direction and ambition, and Marcus, a lonely twelve-year-old alienated from his classmates.*

With *About a Boy*, Hornby moved into more ambitious territory. While *High Fidelity* was to some extent autobiographical, *About a Boy* expands the focus beyond the adult obsessive to examine adolescence along with arrested development. While at times less convincing than *High Fidelity*, *About a Boy* finds Hornby experimenting more with both tone and characterization.

The novel focuses upon two characters, Will and Marcus, and their improbable friendship. Will is the heir to a fortune, having inherited the publishing rights to a popular Christmas song. Will has never had to work, and prefers to spend his days listening to music, watching television, using drugs, dating, and driving around London. Will's leisure has allowed him to be "cool" by the standards of men's magazines; he goes to the right clubs, wears the right clothes, and listens to the right music. Marcus, by contrast, is a twelve-year-old boy who does not fit in at school. His parents are separated,

and Marcus lives with his mother, Fiona, a depressive who does not care much about fashion or modern music. Marcus never wears the right clothes and knows nothing about the right music, making him an easy target for bullies.

The two protagonists meet when Will, for purely selfish reasons, becomes interested in dating single mothers and joins a group for single parents, pretending to have a son. Through the group he meets Suzie, a friend of Fiona's, with whom he starts a relationship. When Suzie, at Fiona's request, brings Marcus to a picnic that Will attends, the two are introduced. Initially the relationship is characterized by mutual dislike; Will thinks Marcus is strange and Marcus thinks Will is self-absorbed and annoying. Will has made up his mind to never see Suzie or Marcus again when they drop Marcus off at home, only to discover that Fiona has tried to kill herself.

The attempted suicide changes Marcus's perspective. Once comfortable with a two-person family unit, Marcus now realizes that, should Fiona commit suicide, he will be alone. He resolves to make Will a part of his life, attempting to arrange a relationship between Will and Fiona. His fantasies about Will and Fiona marrying prove to be unlikely, but Marcus is persistent. While a romantic relationship between Will and Fiona never materializes, Marcus continues to visit Will daily.

Will, for his part, is confused by Marcus's persistence. At first he wants nothing to do with this strange child who hassles him day after day, but gradually he comes to realize that Marcus, who is bullied at school every day for being different, needs help. For the first time in his life, Will begins to think beyond himself.

So begins the unlikely friendship between the thirty-six-year-old adolescent and England's oldest twelve-year-old. Will provides Marcus with information about clothes and grunge music, while Marcus provides Will with a greater sense of purpose. Along the way, Marcus befriends and falls in love with Ellie, a fifteen-year-old troublemaker at

his school, whose obsession with the rock band Nirvana acts as a catalyst to another unusual friendship, and Will falls in love with an illustrator and single parent named Rachel.

The end result of Marcus's relationship with Will is, as the latter notes, the necessary sacrifice of the comfortable for normalcy. Will sacrifices his detachment in order to become more involved, while Marcus sacrifices his endearing idiosyncrasies to become more of a typical adolescent. While there is a clear sense that something is lost in the transition, both characters judge that the change is for the best. Ultimately the novel is a sort of coming-of-age tale, though with a rather intriguing twist: coming-of-age for Will might mean becoming an adult in his mid-thirties, but for Marcus it entails becoming a normal kid.

Structurally the novel is divided by chapters, alternating between third-person limited narrations from the perspectives of Marcus and Will. As such, the main literary technique that Hornby uses is stylistic infection, wherein the thoughts and feelings of the two protagonists determine Hornby's diction. The chapters told from Will's perspective are ironic and detached, while those from Marcus's

perspective reflect the curiosity and innocence of a twelve-year-old. This narrative technique serves to heighten the detailed characterization of both Will and Marcus.

## SUMMARY

Nick Hornby's popularity is likely related to the accessibility of his novels, which, in turn, is a by-product of his style. The relatively simple, yet eloquent, diction of his prose, interspersed with both slang and profanity, accents the realism of his work, which in turn makes the existential crises faced by Rob and Will recognizable to readers. The specifically British settings may be deeply ingrained into the substance of the work, but the broader issues and the broader questions his characters confront are such that a change in dialect or accent in no way diminishes them. Film adaptations have shifted the location of *Fever Pitch* to Boston and *High Fidelity* to Chicago, but the thematic content in both cases remains unaltered. This success serves as testament to the universality of Hornby's work and the extent of his appeal.

Kevin Farrell

## DISCUSSION TOPICS

- Discuss the relationship between maturity and happiness in Nick Hornby's novels.
- How does Hornby's use of distinctly male perspectives influence the meaning of *High Fidelity* and *About a Boy*?
- Compare Hornby's portrayal of romantic relationships to that of a female author.
- Discuss the role that popular culture plays in Hornby's novels.
- Compare and contrast Will from *About a Boy* and Rob from *High Fidelity*.
- *High Fidelity* is written in the first person while *About a Boy* is written in the third person. How does the difference in point of view in each novel serve to establish Hornby's literary meaning?
- How does Hornby distinguish between the trivial and the vital? Do you agree with the distinction? Why or why not?
- Compare Hornby's prose to that of another English writer.

## A. E. HOUSMAN

**Born:** Fockbury, Worcestershire, England

March 26, 1859

**Died:** Cambridge, England

April 30, 1936

*Although he operated under self-imposed limitations of theme and form, Housman is known as one of the most gifted lyric poets in the English language.*

### BIOGRAPHY

Alfred Edward Housman (HOW-smuhn) was born on March 26, 1859, the eldest of seven children born to Sarah and Edward Housman. Although Housman was born in Fockbury, Worcestershire, England, he grew up in Bromsgrove, near Birmingham, where the Housman family moved when he was still in infancy. Bromsgrove is in close proximity to the Shropshire hills that would become the central setting in Alfred's most famous collection of poems, *A Shropshire Lad*, published in 1896.

Housman's childhood was mostly unhappy. He was frail, often sickly, very devoted to his mother, and alienated from his father. His mother's death in 1871 on young Housman's twelfth birthday further served to alienate his father, a masculine, sporting, practicing attorney who fancied himself as a country squire and who displayed some disappointment that his eldest son did not share these same characteristics or inclinations. The elder Housman soon remarried a cousin, however, and young Housman found in his stepmother, Lucy Housman, a devoted and supportive person who helped make the remainder of his early life bearable, if not altogether happy.

Housman's education began at the Bromsgrove School, where he distinguished himself in his studies from the outset. In fact, at Bromsgrove, Housman was at the top of his class and upon graduation won a scholarship to Oxford in 1877. At Bromsgrove, he developed a taste for classical languages and excelled in both Latin and Greek. He continued these studies at Oxford, becoming especially interested in the Roman poet Sextus Propertius. In

addition, Housman read the works of English writers Matthew Arnold and Thomas Hardy, both contemporaries, whose ideas and forms influenced much of Housman's poetry.

While Housman was matriculating at Oxford, he met Moses Jackson, a classmate who would have a profound effect on the rest of Housman's life. Although Jackson and Housman were from similar backgrounds, Jackson was everything that Housman was not—tall, handsome, well built, athletically inclined, and confident in his own abilities. Jackson and Housman became not only fast friends but also roommates for most of their college careers, along with A. W. Pollard, another Oxford undergraduate. Housman, however, desired more than simply Jackson's companionship; in short, Housman found himself deeply in love with Jackson, a situation from which he apparently never recovered. The exact nature of Jackson's rejection of Housman's affections is not clear, for while they remained lifelong friends, Jackson's rejection left Housman emotionally impaired.

During Housman's first years at Oxford, he continued to succeed brilliantly in his studies, often earning top honors in his examinations, so it was quite unexpected on everyone's part when, in 1881, he miserably failed his final examination in the classics. Housman left Oxford in 1881 without a degree, although he did manage to qualify for a lower degree the following fall. Having received this degree, Housman returned to Bromsgrove, where he taught lower grades while preparing to take the civil service examination, which he took and passed successfully in the fall of 1882. He took a job as a clerk in Her Majesty's Patent Office in

London and moved there in December, 1882, to share an apartment with Jackson and Jackson's younger brother, Adalbert. Housman remained in this job for ten years, until 1892. During this period, Housman continued to study Latin and Greek, working especially on emendations to the texts of various classical authors and preparing scholarly articles for publication in the *Journal of Philology* and *The Classical Review*, while earning a respectable reputation as a classical scholar.

In 1886, Housman moved to his own apartment and lived in near seclusion, devoting most of the time away from work to his studies. In 1887, Moses Jackson took a teaching job in India, and the grief over his departure pushed Housman even further into seclusion. His grief became even more pronounced two years later when, in 1889, Jackson married Rosa Chambers. Housman recorded his feelings in a commemorative poem, "Epithalamium," that he began writing in 1890 but did not publish until 1922 in his last collection, *Last Poems*.

In 1892, Housman won an appointment to the Chair of Latin and Greek at University College in London. Although his record was marred by the previous failure of the examination in the classics at Oxford, his reputation as a careful and brilliant scholar was confirmed by a number of leading scholars in the field. Thus, Housman delivered his opening lecture to the University College faculty in October, 1892, and began a long career as a teacher and scholar of considerable renown.

In November, 1892, the painful death from typhoid of Adalbert Jackson caused a tremendous shock to the customarily sensitive Housman. Not only was the grief over his friend's death intense, but it also triggered a flurry of poetic creativity through which Housman poured out all of the emotion, the sadness, and the pain with which he had lived for so long. Over the next several years, Housman wrote numerous poems, sixty-three of which were assembled into *A Shropshire Lad*. Although the book sold slowly at first, when the Boer War began in 1899, sales had increased considerably, and by World War I, *A Shropshire Lad* had become one of the most popular poetry collections ever.

In 1911, Housman was named Kennedy Professor of Latin at Cambridge and a fellow of Trinity College. He taught there for the remainder of his career, during which time he continued to devote

his time to classical scholarship but wrote only a few new poems. Housman's composition of poems seems to have ceased with the death of Moses Jackson in 1923. Thereafter, Housman devoted his remaining years to his teaching duties and his scholarly interests until his death on April 30, 1936, in Cambridge, England, from complications of heart disease.

## ANALYSIS

Housman's poems all seem to be motivated by one of several emotions: grief and sadness over loss, unrequited love, and a strong sense of fate or destiny. Within this narrow focus, however, Housman created many memorable poems, several of near classic standing, and all imbued with a sense that life, after all, is something to be endured rather than enjoyed.

Housman is frequently termed a minor poet. This classification results in large part from Housman's refusal, or inability, perhaps, to move beyond a handful of themes and to his limiting himself to the lyrical ballad for much of his poetry. Furthermore, the entire corpus of Housman's published poems consists of 178 short works, far fewer in number than most career poets. It must be noted, however, that the bulk of Housman's poetry was produced within the ten-year period from 1892 to 1903, and that Housman perhaps preferred praise for his scholarly studies of the Roman poet Manilius.

Despite Housman's status as a minor poet, however, *A Shropshire Lad* is among the most popular books of poems in the English language. In this short collection of sixty-three poems is found the essential Housman: the superb lyric form, the precise, unornamented language, the extraordinary simplicity in style and tone, and the hauntingly poignant mood that characterizes nearly every poem.

*A Shropshire Lad* is certainly no haphazardly arranged collection of poems; indeed, it is a consciously arranged selection, both chosen and numbered to reflect and emphasize several recurrent themes, among them, praise and celebration of rural life, the constancy of death, especially the death of the young, love lost or unreturned, the special qualities of the soldier, and suicide. These themes are also addressed in *Last Poems*, as well as those poems collected and published posthumously by Housman's younger brother, Laurence Housman.

A typical Housman poem, then, may have a fixation on death, on lost love, or on the unbearable-ness of human life. Furthermore, Housman's persona of Terence Hearsay figures importantly in many of the poems as one who understands the pulse of Shropshire society and who feels compelled to articulate its feelings, concerns, and general way of life. Terence Hearsay, name symbolism included, gives the poems authority, authenticity, and objectivity.

From a technical standpoint, Housman's poems are quite often miniatures wrought to perfection. The lines are short, even, and to the point; furthermore, the language is clear and direct. Yet for all the simplicity of form, language, and theme, there is a formal elegance to Housman's poetry, from the regularity of the meter to the precision of the rhyme. Note, for example, in the opening poem of *A Shropshire Lad*, the following stanza:

From Clee to heaven the beacon burns,  
The shires have seen it plain,  
From north and south the sign returns  
And beacons burn again.

The iambic pattern alternates between tetrameter and trimeter lines; alternate lines rhyme as well, giving the poem a lyrical impression; and the combination of these features, then, gives the very high degree of formality to the poems. This first poem repeats the stanzaic form above in seven additional stanzas, and many of the poems throughout the collection repeat the pattern, or a similar one, as well.

Housman did not venture or experiment beyond the miniature poems in his first collection. In subsequent collections, rather than showing any broad growth as a poet, Housman only varied the themes and forms that had established his reputation as a poet many years earlier. These later poems perhaps provided more depth to the examination of these themes. Further, Housman's body of work seems intent on advancing the idea that limitation and concentration make for excellent poetry. In the final analysis, these characteristics are what readers remember and appreciate about Housman.

## "1887"

**First published:** 1896 (collected in *A Shropshire Lad*, 1896)

**Type of work:** Poem

*On the eve of the fiftieth anniversary of the reign of Queen Victoria, the poet muses about the condition of England.*

In "1887," the first poem in *A Shropshire Lad*, Housman establishes the main themes, the main technique, the chief setting, and the main mood that would characterize the remainder of the sixty-three short poems that constitute the collection. For this reason, "1887" is often referred to as a "frame poem," along with poems LXII and LXIII, for a very deliberately arranged collection.

During the otherwise festive occasion of the eve of Queen Victoria's Golden Anniversary, when others are poised for, or already engaged in, celebration, the persona in Housman's poem adds a strong sense of melancholy as he recalls the past and ponders the future. In short, there is considerable lament over the fact that many friends have made the transition from life to death, many by the horrors of war. The speaker fully understands that the soldiers have performed their duty as "saviours" of the queen and England proper, but he interjects a tone of bitterness that on this happiest of occasions they could not join in the celebration because "themselves they could not save."

Despite the gloominess of the poem, however, the speaker pledges continued love and allegiance to England, the queen, and God, seemingly fully realizing that death is a natural part of life and that life, despite its many travails, must be endured. Thus, the poem ends with a grave admonition that

Oh, God will save her, fear you not  
Be you the men you've been,  
Get you the sons your fathers got,  
And God will save the Queen.

Indeed, England's continued success and the queen's protection are dependent upon the strength of the Shropshire lads and their many counterparts.

### **"LOVELIEST OF TREES"**

**First published:** 1896 (collected in *A Shropshire Lad*, 1896)

**Type of work:** Poem

*In springtime, a young man muses over the brevity of life.*

"Loveliest of Trees" is one of the finest examples of Housman's lyrical poems. The rural setting of the Shropshire woodlands in springtime is a beautiful sight, to behold, with the cherry tree—the loveliest of trees—in full white bloom to celebrate the time of rebirth and rejuvenation associated with Easter. Yet the beauty strikes a chord of melancholy in the speaker, who realizes that life is indeed short; and even if he lives to his full life expectancy, that, too, will be too short a time to behold such splendor as these trees in bloom.

While there is present the popular *carpe diem* theme in "Loveliest of Trees," Housman adds to it a somber sense of impending doom as the speaker resolves to view the beauty of the world while he is yet alive. The attitude and the mood that it creates is typically Housman, in that even in the face of immense beauty, there is always the discomfort of knowing that life has no real permanence, that death and doom are, without question, imminent.

### **"TO AN ATHLETE DYING YOUNG"**

**First published:** 1896 (collected in *A Shropshire Lad*, 1896)

**Type of work:** Poem

*Upon the death of a young runner, the poet celebrates his life and premature death.*

"To an Athlete Dying Young" is one of Housman's most often anthologized poems. Its quiet,

melancholy tone, its theme of the comfort of death, and its simplicity of form and style combine to make the poem a classic celebration of release from the difficulties of life.

In this short elegy, written upon the death of a young, celebrated athlete, Housman advances the idea that it is far better to die in one's prime, while one can be remembered for his or her youthful accomplishments, than to become infirm, forgotten, ignored, or replaced in the memories and hearts of one's townspeople. With the typical detached, observant tone often employed by Housman, the speaker hails the dead youth as a

Smart lad, to slip betimes away  
From fields where glory does not stay

who will not suffer the fate of many other

Runners whom renown outran  
And the name died before the man.

Technically speaking, "To an Athlete Dying Young" is indicative of Housman's gift of poetic craft. The even meter and the taut rhyme add to the deliberate, somber, reflective mood established from the first stanza onward. In addition, contrasting symbols and images—the victory parade and the funeral cortege, the laurel and the rose—add complexity to a deceptively simple poem.

The poem concludes with the projection of what the speaker perceives as victory for the dead young athlete, now a "Townsmen of a stiller town":

And round that early laureled head  
Will flock to gaze the strengthless dead  
And find unwithered on its curls  
The garland briefer than a girl's.

Thus, Housman insists that death, especially for youth, is a victory over the impending difficulties, tragedies, and heartbreak that accompany life.

## **“TERENCE, THIS IS STUPID STUFF”**

**First published:** 1896 (collected in *A Shropshire Lad*, 1896)

**Type of work:** Poem

*A friend chides Terence, the poet figure, about his melancholy poetry, and Terence responds.*

“Terence, This Is Stupid Stuff,” poem LXII of *A Shropshire Lad*, is commonly considered Housman’s apologia. In this next-to-last poem in *A Shropshire Lad*, Housman moves toward the conclusion of his presentation of his many themes and offers justification for the melancholy tone of his poetry.

The poem is structured as a dialogue between Terence, the poet figure, and one of Terence’s friends, who initially chides Terence for writing poetry that is somber and thought provoking rather than uplifting and celebratory. The friend warns Terence, jestingly, that he is driving his friends “Moping melancholy mad” with his serious poetry, and that they would prefer something happier, “a tune to dance to.”

Terence responds that the purpose of his poetry is not to entertain but to strengthen and instruct. In fact, Terence suggests that if all that his friends want to do is to have a good time, then there is dancing and drinking for them in which to participate, but that these are hardly answers for life’s many problems. Terence claims to know that from personal experience. Therefore, Terence explains, because life is full of uncertainties, heartbreak, and pain, people should prepare themselves accordingly. His poetry, then, is written to prepare each person for “the dark and cloudy day” that each one will surely face.

Terence concludes his response to his friend’s complaint by relating the ancient tale of King Mithridates, who, anticipating that rivals would attempt to poison him, took small amounts of arsenic and strychnine and developed an immunity to them. Thus, when the attempted assassination occurred, Mithridates was prepared to ward off the ill effects of the poison. Likewise, Terence insists that the poetry will help immunize his readers against “the embittered hour” when they come face to face with adversity.

In “Terence, This Is Stupid Stuff,” Housman re-emphasizes his theme of stoicism and suggests, once again, that life is made bearable by concentrating on its tragedies, and by doing so, one learns to live in the face of adversity.

## **“EPITAPH ON AN ARMY OF MERCENARIES”**

**First published:** 1922 (collected in *Last Poems*, 1922)

**Type of work:** Poem

*The poet celebrates heroism.*

“Epitaph on an Army of Mercenaries” is a short, occasional poem of eight lines, one of the many poems that Housman wrote to celebrate the extraordinary bravery of soldiers in the face of great odds. In this poem, the poet honors the British mercenaries, professional soldiers who performed with great valor and heroism at the battles of Ypres during the early stages of England’s entry into World War I.

In short, Housman says that these soldiers, although paid for their work, saved a world that was fast crumbling; further, had it not been for these hired soldiers, much, if not all, would have been lost. Unfortunately, despite being paid for their services, many of the soldiers were killed in battle; those who were not were often victims of the harshest criticism. Housman both laments their predicament and celebrates their most important contributions.

Housman’s antireligious sentiments are also revealed in this poem. These sentiments were no secret and had been expressed in many of the poems in *A Shropshire Lad*. In “Epitaph on an Army of Mercenaries,” however, the poet, in the process of applauding the soldiers’ defense, is bitterly critical of a God who would abandon the world, let the heavens fall, and allow the foundations of the world to crumble.

## **SUMMARY**

A. E. Housman’s poetry has many enduring qualities, among them the intensity of feeling, the fastidious care with which the setting is etched, the

careful maintenance of tone and mood, and the poignancy of the moments of experiences captured and preserved in time. Housman has frequently been accused of being bitterly critical and even sardonic in his poetry. The careful reader, however, will recognize Housman's sincere presentation of actual experiences, experiences that he or she perhaps would rather not confront but that are almost certain to occur. That is perhaps Housman's chief contribution to poetry—the strong medicine that the world needs to immunize it against the ills of life.

## DISCUSSION TOPICS

- Why might a teacher of poetry writing recommend A. E. Housman's *A Shropshire Lad* to a highly articulate would-be poet?
- Does reading Housman make a reader melancholy? If not, why not?
- What is Housman's attitude toward the athlete dying young? Is the athlete seen as an individual, as a typical athlete, or as representative of a larger class of people?
- Comment upon *A Shropshire Lad*'s unusual sense of unity and coherence.
- What does referring to Housman's poems as "strong medicine" mean?
- Housman was a Latin and Greek scholar. In what ways do his poems reflect that interest? In what ways do they not?

## TED HUGHES

**Born:** Mytholmroyd, Yorkshire, England  
August 17, 1930

**Died:** North Tawton, Devon, England  
October 28, 1998

*Hughes is recognized as one of England's leading poets writing after World War II; his work is especially noted for its compressed syntax and rhythms, as well as its often violent portrayal of nature.*

### BIOGRAPHY

Edward James Hughes was born on August 17, 1930, in Mytholmroyd, on the Calder River, one of England's first industrialized rivers yet also near the wildness of the moors. Hughes was the youngest of three children of Edith Farrar, who traced her ancestry back to the martyr Bishop Farrar, and William Hughes, a carpenter, who was one of only seventeen of an entire regiment to have survived the battle at Gallipoli in World War I. When Hughes was seven, the family moved to Mexborough; there, Hughes led a double life of living in town but often roaming about on nearby farms and estates. The landscape and the language of West Riding and South Yorkshire were undoubtedly significant in shaping Hughes's sensibility: his fascination with animals, natural processes, and archaic myths; the conflict between wilderness, farm, and industrialization; the rhythms of collapse and renewal; and the spare, physical language of the people are present throughout his poetic career.

In 1948, Hughes won an open exhibition to the University of Cambridge. He postponed his studies at Cambridge until 1951, choosing to serve for two years in the National Service, in the Royal Air Force (RAF) as a mechanic at an isolated radio transmission station in Yorkshire. Though he planned to study English literature at Pembroke College, Cambridge, he changed in his third year to archaeology and anthropology. He graduated in June,

1954, the same month that his first poem, "The Little Boys and the Seasons," appeared in the Cambridge journal *Granta*. For the following two years, he worked as a rose gardener, a night watchman in a steel works, a zoo attendant, and a schoolteacher.

In late February, 1956, Hughes met Sylvia Plath, who had arrived from the United States on a Fulbright Scholarship to study. Her own literary career had begun in 1950 with the publication of her poetry. Four months after their first meeting, Plath and Hughes were married. In Plath's *Letters Home* (1975), she states that she learned through Hughes "the vocabulary of woods and animals and earth" and felt herself like "adam's woman [sic]." Hughes brought to Plath's attention the mythologic underpinnings of poetry as conceptualized by the British poet, novelist, and essayist Robert Graves in his *The White Goddess: A Historical Grammar of Poetic Myth* (1948). In turn, Plath brought Hughes into contact with the poetry being published in the United States. On his behalf, Plath typed and sent the manuscript of Hughes's first collection, *The Hawk in the Rain* (1957), which was selected by the poets W. H. Auden, Stephen Spender, and Marianne Moore in a competition for the publication of a first book of poems in English. Published simultaneously in England and the United States, *The Hawk in the Rain* gained immediate critical recognition.

In 1957, Hughes and Plath went to the United States to teach, Plath at Smith College and Hughes at the University of Massachusetts. After a year, they abandoned their teaching in order to spend more

time writing. In the spring of 1959, Hughes received a Guggenheim Fellowship, and in December they returned to London. In 1960, Hughes's second collection of poems, *Lupercal*, appeared, and Plath published her collection of poems *The Colossus, and Other Poems*. In 1960, their first child, Frieda Rebecca, was born. Growing weary of the city, the family moved to a thatched rectory in Devon, and in 1962 their second child, Nicholas Farrar, was born. During this period, Hughes was at work not only on some of the poems and stories in *Wodwo* (1967) but also on plays and articles; Plath was completing her novel *The Bell Jar* (1963) and was at work on her *Ariel* (1965) poems. By the middle of the year, their marriage was collapsing, with Hughes leaving her for another woman; they returned to London separately, where in February, 1963, Plath committed suicide.

By holding imaginary dialogues with his children, Hughes created three children's books, *How the Whale Became* (1963), *The Earth-Owl and Other Moon-People* (1963), and *Nessie the Mannerless Monster* (1964), also published as *Nessie the Monster* (1974), and thereby avoided falling into silence. In 1967, *Wodwo* was published, as was his text *Poetry in the Making: An Anthology of Poems and Programmes from "Listening and Writing,"* which describes to students the practice of writing. In 1970, Hughes married Carol Orchard, the daughter of a Devon farmer. In 1970, *Crow: From the Life and Songs of the Crow* was published; this cycle of poems is perhaps Hughes's most important contribution to Anglo-American poetry because of its spare language, the trickster figure of Crow, and the desperate vitality of the voice.

In 1971, Hughes collaborated with the director of the National Theatre, Peter Brook, to create and produce *Orghast* for the Fifth Shiraz Festival in Iran. *Orghast*, both the name of the play and the play's invented language, is based on various myths and folktales, especially that of Prometheus. Hughes continued his interest in dramatic and cyclical poems with *Gaudete* (1977). Simultaneously, Hughes's vision of the natural world became increasingly acute in *Remains of Elmet* (1979), *Moor-town* (1979), *River* (1983), and *Wolfwatching* (1989). In December, 1984, Hughes was named England's poet laureate, succeeding John Betjeman. The publication of *Birthday Letters* (1998) with its use of first-person and intimate autobiographical details of

domestic life marked a stylistic departure in his life's work. He died in North Tawton, Devon, on October 28, 1998.

## ANALYSIS

Much of the sensibility of Hughes's poetry can be defined by several consistent elements. The influence of *The White Goddess*, the landscape of Hughes's childhood, and the connection between literary influences and the vernacular speech of his Yorkshire environs are essential elements of Hughes's poetics. Familial concerns are less self-evident; Hughes seldom seems overtly autobiographical or confessional. Nonetheless, it should be noted that Hughes has written of his family, such as his mother's ancestry ("The Martyrdom of Bishop Farrar" in *The Hawk in the Rain*) and his father's ordeals in World War I ("Dust as We Are" and "For the Duration" in *Wolfwatching*).

Perhaps the earliest and most intellectually formative influence was that of *The White Goddess*. Given as a prize to Hughes from his grammar school, Graves's work initiated an interest that continued in Hughes's anthropological studies at Cambridge and further developed throughout his life. Hughes remained an assiduous reader of myths, folklore, ethnology, and poetry. Graves proposes that myth, particularly of fertility and renewal, is the authentic language of poetry. Hughes considers poetry or myth as the means for reintroducing the community to its origins or sources of the energy of renewal. In many ways, Hughes's long dramatic poem *Gaudete* is the culmination of his vision of division, struggle, and atonement through transformation as described in *The White Goddess*. In this work, nature and the human world are divided; there is a human desolation and the impending apocalyptic aftermath of a psychomachy (or a conflict of the soul with the body). At each turn, the poem's mock-epic hero, Lumb, faces a distorted vision of the White Goddess as an expression of death.

Directly linked to the idea of mythopoeia is Hughes's attention to the natural landscape. The physicality of Hughes's diction corresponds to his focus on natural objects. As a child, Hughes would accompany his older brother in the hills and moors, retrieving what his brother shot. In his *Poetry in the Making*, Hughes describes that "at about fifteen my life grew more complicated and my atti-

tude toward animals changed. I accused myself of disturbing their lives. I began to look at them, you see, from their own point of view. And about the same time I began to write poems.” To be a mythmaker, Hughes implicitly knew that he must be a naturalist. Examples of Hughes’s engagement with his natural landscape are to be found throughout his collections of poetry. Perhaps most noteworthy, however, is the sequence of thirty-four poems in the collection *Moortown*. In these poems, Hughes details the human toil of farming, the rhythms of farm life, and the profound intersection of the human world and the natural world beyond. It is the toil of the farm, the continual birthing and death, and the seasons’ demands that reinitiate an understanding of nature and the intimate connection between the human body, the psyche, and the world of nature.

Hughes’s influences are often cited as the poets Geoffrey Chaucer, William Shakespeare, Gerard Manley Hopkins, Dylan Thomas, and D. H. Lawrence. In an interview with the critic Ekbert Faas, Hughes argues that whatever “speech you grow into, presumably your dialect stays alive in a sort of inner freedom, a separate little self. . . . [I]n the case of the West Yorkshire dialect, of course, it connects you directly and in your most intimate self to middle English poetry.” The title poem of the collection *Wodwo* illustrates this point. The word “wodwo” appears in the anonymous Middle English poem *Sir Gawain and the Green Knight* (c. 1375–1400) and means a wild man of the woods, and in Hughes’s poem “wodwo” represents the centrality of the unconscious and the mythic demand to be named: “But what shall I be called am I the first/have I an owner what shape am I.” The childhood core of experience—language and landscape—remain in the poet and provide the energies for the writing of poetry.

In the collection *Crow*, Hughes offers several directions in understanding these various influences: The figure of Crow is the consummate poet-bard, the primordial storyteller and memory for an

entire culture; an Everyman, hero, and clown—the prototypic figure of the Trickster found throughout the world’s mythologies. The language of the poems is direct and vernacular; it rejects Latinate words for words rooted in the archaic and Anglo-Saxon. *Crow* investigates the centrality of the Anglo-Saxon-Norse-Celtic roots in the English language and psyche that are, Hughes argues, constantly repressed.

Hughes’s work is also often described, or disparaged, as violent. Such violence is, in fact, the violence of transformation, part of Graves’s interpretation of myth as a movement through birth, life, death, and renewal. The violence ascribed to Hughes’s work is also an attribute of the language and rhythms that he uses: The language is compact, highly stressed, and direct. Hughes responded to the question of violence in his interview with Faas by stating that “Any form of violence—any form of vehement activity—invokes the bigger energy, the elemental power circuit of the Universe.” Throughout his work, Hughes argues that the epoch’s destructive activities—particularly World Wars I and II and the environmental crisis—have destroyed both humanity’s contact with the natural world and the rituals that maintained the health of the world’s communities. Hughes’s poetry attempts to renew contact with nature, not through accommodation but on nature’s own elemental terms. “Hawk Roosting,” from *Lupercal*, is often cited as an example of Hughes’s celebration of violence. Through its utterly direct language and its inhabitation of the perching hawk, the poem, however, provides a needed contact with the natural world and its powers. The hawk comes to represent nature thinking. The poem contains echoes of the biblical book of Job; indeed Job’s inability to understand his unmerciful God parallels the fruitless efforts to understand nature. The poem warns against confusing human identities with those of the hawk, for to do so will distort nature, as well as humankind. In Hughes’s vision, nature offers no compromises.

## “THE THOUGHT-FOX”

**First published:** 1957 (collected in *The Hawk in the Rain*, 1957)

**Type of work:** Poem

*The poet imagines a fox’s approach through the night, which is a metaphoric reverie of the writing of poetry.*

“The Thought-Fox” appeared in Hughes’s first collection of poems, *The Hawk in the Rain* (1957), and is one of his most celebrated and anthologized poems. This poem contains many of the stylistic and thematic elements that have come to define Hughes’s poetry. In terms of Hughes’s poetic development, this poem was unmistakably his breakthrough, signaling his departure from the rhetorical and Metaphysical poetry and his movement toward mythmaking.

The poem comprises a reverie by immediately invoking the imagination in the first line: “I imagine this midnight moment’s forest.” The alliteration in this line suggests a casting of a spell. The first stanza of this twenty-four-line poem arranged in quatrains evokes solitude; plainly, the writer is working late at night alone, the only sound being “the clock’s loneliness.” Beyond the writer’s domain of time and the blank page exists the primordial force of the imagination.

The poet becomes actively aware of the approach of the nearness of the other or the imagination in the second stanza. The poet stands at literal and figurative thresholds: He stares at a blank page, which becomes the dark window, the starless sky, and then into the forest’s darkness. In the third stanza, the poet has crossed these various thresholds to make contact with this totem-figure of the unconscious or the imagination. Both the poet and the metaphorical fox are tentative in their approaches. The rhythm enacts the moment-by-moment movement of the reverie. The selection of simple words underscores the directness of the experience and the rhythm of the poem’s trancelike chant: “Two eyes serve a movement, that now/ And again now, and now, and now/ Sets neat prints into the snow.”

The fourth stanza traces the movement of the fox through the trees. Gradually the blank, snowy page fills with print, the tracks of the thought-fox.

The poem is simultaneously depicting the transcription of a poem from the imagination onto the page and describing the moment of inspiration. The fifth stanza is the most abstract while also seeking to convey the fullness and primordial magic of reverie as the poet is swept into the “deepening greenness,” or vitality, of the imagination. The force of the reverie overwhelms the poet, until the sudden physical presence and departure of the fox in the sixth stanza occurs: “Till, with a sudden sharp hot stink of fox/ It enters the dark hole of the head.” The imagination at this moment shows its immediacy and power; the fox is no longer a shadow but dangerously close before vanishing and leaving the page printed, scented with its presence, its territory marked. The imagination, for Hughes, is a primordial force; its presence is both creative and predatory. The poem implies that it is necessary, however, to engage these archaic powers if one is to write an authentic poetry.

## “SALMON EGGS”

**First published:** 1983 (collected in *River*, 1983)

**Type of work:** Poem

*The poem is a meditation on the sanctity and continuity of the river, the salmon, and life.*

“Salmon Eggs” is the closing poem of Hughes’s collection *River* (1983). The collection itself is a sequence of forty-three poems offering both description of river life and meditations on the spiritual and physical ecology. “Salmon Eggs,” as the final poem, offers an affirmation: “Only birth matters/ Say the river’s whorls.”

There are two movements in the poem. One is the horizontal flow of the river, its journey downstream, oceanward, toward conclusion and, implicitly, extinction. The other movement is vertical, from the sky, penetrating the water’s surface, probing the sediments. The poet occupies the intersection of these two movements and travels their axis. The poem opens in the past tense, suggesting that had the reader arrived sooner he or she, too, would have seen the salmon. The second stanza, cast in the present moment, gives witness to the salmon’s

fatal exhaustion after spawning. Throughout the poem, there are images of fertility and birth, as well as exhaustion and extinction. These two conditions are never isolated; one always informs the other. For Hughes, the essential role of the poet is to be at the intersection of these movements, to witness and record them.

"Salmon Eggs" continues with the poet or speaker describing his reverie: "I lean and watch the water/ listening to water/ Till my eyes forget me/ And the piled flow supplants me." Rather than the incantatory archaic and totemic being invoked, as in "The Thought-Fox," this poem's reverie carries the poet into the geologic and biological world of catkins, spiders, "mud-blooms," and "Mastodon ephemera."

The speaker notes that "Something else is going on in the river/ More vital than death." Death is merely part of nature's overarching processes. Hughes sees everywhere the continuity of life—"The river goes on/ Sliding through its place, undergoing itself/ In its wheel." The conventional symbol of the river as a coursing of life is certainly evoked here, as well as the vision of life as cyclical. The river is also understood in poetry and myth as the process of time, encompassing both time's passage and eternity—rivers, such as the Styx of Greek mythology, lead to death, as well as to immortality. Hughes's image of the wheel becomes identified as the water mill, a common image in the English landscape, and one that has come to represent both time and fate. The poet communes with the river and invokes a blessing upon the river and upon the salmon, "Sanctus Sanctus/ Swathes the blessed issue." The river becomes a holy "font . . . swaddling the egg." In the course of the river "*Only birth matters.*" The poem closes with the river's movement spreading to encompass the sun and earth. The final line—"mind condenses on old haws"—suggests the crystallization of consciousness or awareness in the same way that dew condenses on the leaves of a hawthorn hedge.

## BIRTHDAY LETTERS

**First published:** 1998

**Type of work:** Poetry

*The poet chronicles his relationship with his former wife, poet Sylvia Plath, and the aftermath of her suicide.*

*Birthday Letters*, a popular best seller, earned Hughes critical acclaim, receiving the Forward Poetry Prize, the T. S. Eliot Prize for Poetry, the Whitbread Prize for Poetry, and the Whitbread British Book of the Year Award. This collection of eighty-eight poems, written over a period of twenty-five years and published just months before the poet's death, created a literary sensation because of its depiction of intimate details of Hughes's life with Sylvia Plath. After Plath's suicide, Hughes remained stoically silent regarding her death. The publication of this book, thirty-five years later, broke that silence.

The book is arranged chronologically, and its first poem, "Fulbright Scholars," illustrates Hughes's initial glimpse of Plath. As its title suggests, the poem re-creates an uncertain memory of seeing a photograph of Fulbright Scholars, in which Plath would have appeared. Hughes places Plath on a pedestal in the poem, unapproachable: "Maybe I weighed you up, feeling unlikely." He describes her "American/ Grin for the cameras, the judges, the strangers, the frighteners." Finally, at poem's end, Hughes quietly compares this first vision of Plath to the taste of a first peach: "It was the first fresh peach I had ever tasted./ I could hardly believe how delicious."

"St. Botolph's" chronicles Hughes's first meeting with Plath at a party celebrating the publication of a literary magazine. He devotes much space to a physical description of his future wife. Again, he describes her as "American," comments on her long fingers, her hair, her smile, and a scar from her earlier suicide attempt while still an under-

graduate. Hughes ends the poem with the effects of their first kiss, "the swelling ring-moat of toothmarks/ That was to brand my face for the next month."

Hughes incorporates the Roman myth of Romulus and Remus in "Life After Death," a poem recounting his, and their children's, grief after Plath's suicide. The eyes of the couple's son show a remarkable similarity to those of Plath and become "wet jewels,/ The hardest substance of the purest pain/ As I fed him in his high white chair." Similarly, "his sister grew/ Paler with the wound/ She could not see or touch or feel." The family is comforted by the sound of wolves from a nearby zoo: "The wolves lifted us in their long voices./ They wound us and enmeshed us/ In their wailing for you, their mourning for us." At the end of the poem, Hughes compares his two children to the mythic founders of Rome, "two babes, who have turned, in their sleep,/ Into orphans/ Beside the corpse of their mother."

The second-to-last poem in the collection, "The Dogs Are Eating Your Mother," is one of only two poems not addressed to Plath. This poem is ad-

dressed to the couple's children, Frieda and Nicholas, to whom the book is dedicated. The poet warns his children: "Protect her/ And they will tear you down/ As if you were more her. . . . Let her be their spoils." However, the poem ends on a note of hope: "Imagine/ These bone-crushing mouths the mouths/ That labour for the beetle/ Who will roll her back into the sun."

## SUMMARY

Ted Hughes offers a powerful vision of the world and of poetry. While the underpinnings of much of his thought may seem esoteric, his poetry is direct and sensory; the poems' immediacy brings the reader into contact with the archaic, mythic, or primordial forces explored by Hughes. Hughes certainly belongs to the tradition of English landscape poets, such as Andrew Marvell, William Wordsworth, or D. H. Lawrence; however, his vision of the natural world suggests that any attempt to control nature results not only in damaging the natural world but also in the distortion and destruction of the human spirit.

## VICTOR HUGO

**Born:** Besançon, France  
February 26, 1802

**Died:** Paris, France  
May 22, 1885

*Recognized as a guiding force of the Romantic movement in Europe and the leader of the Romantic rebellion in his own country, Hugo provided nineteenth century France with its greatest novels, verse drama, and lyric poetry.*

### BIOGRAPHY

Victor-Marie Hugo (HYEW-goh) was the third son of Major Joseph Leopold Sigisbert Hugo and Sophie Trebuchet Hugo. He was born in Besançon, in eastern France, on February 26, 1802, in the third year of Napoleon I's First Republic. He was a slight, somewhat misshapen child, who at birth seemed to the doctor to have little chance for survival. No omen could have been more false, as Hugo became a titan of strength and energy, living during one period of his life with the equivalent of three marriage partners and, as an octogenarian, outliving all five of his children.

Hugo's parents quarreled much and separated frequently, gaining legal separation in 1818. His father distinguished himself in a military career, serving Napoleon's brother, Prince Joseph, under whom he obtained a colonelcy and the governorship of Avellino in Italy; he later became count of Sigüenza in Spain when Joseph Bonaparte, having become king of Naples, went on to the kingship of Spain and the Indies. It was in Spain that the young Victor Hugo developed a penchant for Spanish history, legend, and grandiloquence that would materialize in works such as *Hernani* (pr., pb. 1830; English translation, 1830) and *Ruy Blas* (pr., pb. 1838; English translation, 1890). Victor's father attained the rank of general but, after the defeat of Joseph

Bonaparte, returned to France, where he commanded a garrison in Thionville. The three Hugo brothers, after their parents' separation, went to Paris to live with their mother.

Hugo married Adèle Foucher in 1822, three years after he and his brothers had founded *Le Conservateur littéraire*, a magazine for which Hugo wrote more than 120 articles and more than twenty poems in its first two years of existence. In 1821, the magazine had merged with *Les Annales de la littérature et des arts*. That was the year in which his mother died and during which he was at work on his first novel, *Han d'Islande* (1823; *Hans of Iceland*, 1845), a romantic extension of the love shared by Adèle and himself. In the year of his marriage, his first book was published, *Odes et poésies diverses* (1822, 1823); it was dedicated to Adèle.

Adèle and Victor had three sons and two daughters—Léopold II, Léopoldine, Charles, François Victor, and Adèle. The marriage was filled with uncertainty and marred by infidelity, especially on Victor's part, but was never dissolved. After the publication of *Odes et ballades* in 1826, Hugo befriended Charles Augustin Sainte-Beuve, who had reviewed *Odes et ballades* very favorably and who came, after a time, to carry on an extended amorous liaison with Adèle. The true love of Hugo's life was Juliette Drouet, who devoted herself to him from 1832 until she died in his arms in 1883.

Hugo's long and imposing verse drama, *Cromwell* (pb. 1827; English translation, 1896), appeared in 1827; it was not successful, but the prose preface written for it later was a great success as

a Romantic manifesto. It champions Romantic against French classical literature, upholds the grotesque as an essential artistic development, calls for new rules and models of composition, and associates nature with truth.

French Romanticism may be said to have begun officially at the first performance of Hugo's play *Hernani* on February 25, 1830. One of the cardinal rules of French classical dramaturgy—no carry-over, or enjambment, of a phrasal unit from the end of a verse-line to the beginning of the next—was broken in the first two lines of the drama. The vociferous protest against Hugo's audacity was shouted by the Romantics in the audience, and *Hernani* went on to an acclaimed run.

The fame that *Hernani* brought to Hugo was sustained by his second novel, *Notre-Dame de Paris* (1831; *The Hunchback of Notre Dame*, 1833), published when he was only twenty-nine. It was at this period in his life that Hugo had to contend with losing much of Adèle's love for him as she responded favorably to Sainte-Beuve's amatory overtures. Hugo translated his heartache into his fifth volume of poetry, *Les Feuilles d'automne* (1831).

His personal problems were in fellowship with his deepening social consciousness. He deplored the gross disadvantages suffered by the poor at the hands of the wealthy, and he despised the powerlessness of the lower echelons of society against injustices. Two of his works—*Le Dernier Jour d'un condamné* (1829; *The Last Day of a Condemned*, 1840) and *Claude Gueux* (1834)—established an outcry that would culminate in *Les Misérables* (1862; English translation, 1862). Of his personal problems there appeared both the intensification and the solution in the young actress Juliette Drouet, whom Hugo met when she was cast in one of his plays, *Lucrèce Borgia* (pr., pb. 1833; *Lucretia Borgia*, 1842). Adèle was as tolerant of Victor's love for Juliette as he had been of his wife's consorting with Sainte-Beuve. When Victor Hugo and Sainte-Beuve parted company permanently in 1834, the break resulted from professional differences and not personal conflict.

Drouet abandoned her own career and committed her entire life to Hugo, copying his manuscripts and serving him with a selfless devotion that became a mainstay of his emotional life. In October, 1837, he returned alone to Metz, where he and Drouet had first consummated their love. Trou-

bled in spirit and shaken by his initial failure to be elected to the Académie française, Hugo composed his poem "Tristesse d'Olympio" ("Olympio's Sadness"). "Olympio" is the name by which Hugo identified himself as a literary Romanticist. Hugo was elected, in his fifth candidacy and in the lingering triumph of his play *Ruy Blas*, to the Académie in 1841, by which time Drouet had become the equivalent of his second wife.

His triumphs and publications continued, and his fame grew. His personal joys alternated with personal tragedies. In 1843, his daughter Didine and her husband drowned in a boating accident. In 1844, he began his love affair with Léonie d'Aunet, wife of the painter Auguste Briard. In 1845, elevated to the peerage, he became Vicomte Hugo; shortly afterward, he and Madame Briard were surprised in their love nest by the police. In 1848, Hugo founded a newspaper, which within a short time placed itself in opposition to Napoleon III. The editors, including his two brothers, were arrested in 1850, and Hugo himself went into an exile that was to last for twenty years. He was joined in exile by Drouet. His literary productivity flourished during these two decades. He published *Les Châtiments* in 1853; an enormously successful (and perhaps his very best) volume of poetry, entitled *Les Contemplations*, in 1856; *La Légende des siècles* in 1859-1883 (*The Legend of the Centuries*, 1894); the monumental *Les Misérables* in 1862 (English translation, 1862); *William Shakespeare* in 1864 (English translation, 1864); and *Les Travailleurs de la mer* in 1866 (*The Toilers of the Sea*, 1866), among many other works.

During the last years of his exile, his son Charles presented Hugo with the author's first grandchild, Georges, born in 1867. Hugo's wife Adèle died the following year. Then, as the Second Empire under Napoleon III came to an end, Hugo returned to Paris, was received triumphantly, and embraced the Republican cause. His continued political activities, along with his literary and polemical work, did not abate, despite his advancing age. His last novel, *Quatre-vingt-treize* (*Ninety-Three*, 1874), was published in 1874, and is, according to André Maurois, one of his finest. Three years later, Hugo was elected to the senate.

In 1878, Hugo and Drouet moved into a house at 130 Avenue d'Eylau. Hugo's eightieth birthday was celebrated as a national holiday, and the Ave-

nue d'Eylau was renamed the Avenue Victor Hugo. Drouet died on May 11, 1883; Hugo followed her in death on May 22, 1885, in Paris. At the news of his death, the senate and the chamber of deputies adjourned abruptly in initiation of a national mourning. Hugo's body lay in state beneath the Arc de Triomphe and was carried in triumphal procession to the Pantheon, where the remains of one of France's greatest literary giants was given a burial befitting a conquering hero.

### ANALYSIS

Hugo's literary artistry has as its base a definitive Romanticism, a religious sensibility, and a constant regard for the oppressed; its superstructure—a huge corpus of lyric poetry, an important group of verse dramas, and a soaring succession of novels—rises like a Gothic cathedral above the less excessive and more orderly monuments of nineteenth century French literature. For Hugo, excess confirmed and did not suppress greatness: "Heaven," he wrote, "is excess." His religious sensibility was nurtured by his sense of the divine, both in all things, in accordance with pagan depths of imagination, and above all things, in keeping with the Judeo-Christian concept of a deity of creation and succor. His regard for the oppressed is evident in his novels, with their pageantry of victimized innocence, and in his political tracts in favor of revolutionary changes to better the lot of workers and the poor.

To select from his works those most patently representative of the respective constituents of his literary artistry's base, one would perhaps choose the play *Hernani*, which ensured the victory of Romanticism for an entire generation, the novel *The Hunchback of Notre Dame*, with its personification of God as human expression and female force, and the novel *Les Misérables*, with a christological pilgrim of immortality as its hero.

For the inner Hugo, the subjective Olympio, one may turn to the Romanticism of his deeply subjective lyric poems. While the lyrics are replete with Romantic excess and concern for the downtrodden, they offer the reader the religious insight and the sense of personal triumph that Hugo experienced in the complex dimensions of human sadness. His Romantic melancholy is born of a joy in life and nature that reacts poignantly to its own curtailment by its own realization of the brevity and

imperfection of human life before the lasting grandeur and magnificent beauty of nature.

In his 1856 collection of poems, *Les Contemplations*, his attitude toward poetic composition is most explicit. The collection is divided into six books, inclusive of 156 poems written during the period from 1830 to 1856, along with preface, prefatory poem, and long eight-part valedictory poem addressed "A celle qui est restée en France" ("To Her Who Has Remained in France"), that is, his daughter Léopoldine, who had died in 1843 and whose spirit pervades the second half of the collection. In the first book, "Aurore," the seventh poem, "Réponse à un acte d'accusation" ("Answer to an Accusation"), written in 1834, constitutes his *ars poetica*. He pleads guilty to trampling upon good taste and traditional French verse, to saying "Let there be darkness" in the manner of God saying "Let there be light," and to ravaging the "old A B C D." He asserts his disregard of Aristotelian limitations and his declaration of the equality, independence, and maturity of words. He sees himself as a revolutionary force taking art by the neck and standing as the instigator of a revolution of words.

In his declaration of the independence of words, he is like Jacques Derrida and the twentieth century deconstructionists who see words as Protean in their resistance to inflexible denotation and lexical boundaries. Just as the deconstructionists came to see words as objects, and objects as words, Hugo, in "À Propos d'Horace" ("Apropos of Horace"), had seen nature as "alphabet des grandes lettres d'ombre" (the alphabet of the great literature of darkness). Darkness or shadow, in Hugo's perspective, is where the truth lies: Light is the mask of Apollo, the disguise of darkness.

"Suite" ("Continuation"), a poem written in 1855 on the island of Jersey, is placed directly after "Answer to an Accusation" in "Aurore." It personifies the word (*le mot*) as a creative entity. The word says "My name is FIAT LUX"—let there be light. The word, antedating its speaker, is like writing, which for Derrida antedates and creates language (and speech, which is the use of language). For both writers, what is posited is the Logos. "Continuation" concludes with "le mot, c'est le Verbe, et le Verbe, c'est Dieu" (the word is the Logos, and the Logos is God).

Hugo lyrically identifies himself with artistic expression by Romantically revolutionizing artistic

expression, which in turn is Divinity itself. Prior to the publication of *Les Contemplations*, Hugo had begun work on two theological poems, the unfinished *La Fin de Satan* (1886; the end of Satan) and the never completed *Dieu* (1891; God); both long fragments were published posthumously. Oriented from Christianity, Hugo's religious sensibility found its tentative expression in a post-Christian spiritualism, not unrelated to the occultism of seances, which stabilized his belief in his personal immortality.

His unorthodox Christianity is discernible in *The Hunchback of Notre Dame*, in which architecture is seen as a form of writing (one might say, with the deconstructionists, a statement of Writing, or Logos), and in which Notre Dame (Our Lady) is not only the actual cathedral in Paris but also the spirit of the Virgin Mary, for whom the cathedral is named, as well as the virgin Esmeralda, who takes sanctuary within it. Hugo has in this novel already objectified his trinity of God, Soul, and Responsibility: God is the Logos expressed in the architecture, Soul is the female force of Our Lady, and Responsibility is the sanctuary given to "our lady" Esmeralda.

The magisterial *Les Misérables* is a prose parallel to *La Fin de Satan* and very much of a piece with the spiritualism of his 1850's poetry. The theological directions of the novel are apparent in the valley of the shadow—the life of danger, flight, concealment, injustice, and violence—through which the Christlike figure of Jean Valjean passes and in which he is witness to truth. The name "Valjean" itself means "John of the Valley."

Images of the valley of the shadow, of the world of truth in darkness or of dark truths, are dominant in Hugo's work. True light is the spiritual radiance experienced in the darkness, which is the shadow of God; it is the understanding provided by the shadow of the Logos, by "Ce que dit la bouche d'ombre" (what the mouth of shadow says). Con-junctive with his theological apprehension of true light in the darkness of shadow is his aesthetic notion of beauty in the grotesque. In his *La Préface de Cromwell* (1827; English translation, 1896), he speaks of the grotesque as one of the supreme beauties of drama. His own mastery of the grotesque can be seen in his Quasimodo, the hunchback of Notre Dame. Grotesquerie appears in tandem with theological shadow in *Ninety-Three*, his

last novel, in which the sun rises over a stone monster, the Tourgue (a prison), and a wooden monster, the guillotine. Characteristically, he calls the building a "dogma" and the machine an "idea"; and he adds, "The Tourgue was the monarchy, the guillotine the revolution."

In general, Hugo probes deeply the paradoxes of religion and lyric Romanticism and expresses these as a divine happiness situated in human sadness.

## THE HUNCHBACK OF NOTRE DAME

**First published:** *Notre-Dame de Paris*, 1831  
(English translation, 1833)

**Type of work:** Novel

*A beautiful young woman, reared by gypsies, becomes the beloved of an ineffectual poet, a lecherous priest, and a grotesquely deformed bell ringer.*

*The Hunchback of Notre Dame*, Hugo's second novel, emphasizes the theme of *anankē*, the Greek word for fate or necessity. *Anankē* appears in the novel chiefly as inevitable transition; stylistically, the transition is from classicism to Romanticism and, ultimately, from the human to the divine. The cathedral of Notre-Dame is the embodiment of what must be recognized as the permanence of transition. In origin a Gallo-Roman temple to the classical deity Jupiter, it became a Christian basilica and, later, in the twelfth century, a Romanesque cathedral; as its construction continued into the thirteenth century, the Gothic style overtook and succeeded the Romanesque configuration; and the cathedral, completed in 1345, stood as the architectural scripture of its own history. The novel is about this cathedral as a statement of *anankē* more than it is about any particular one of its many characters. In that sense, to translate the title, *Notre-Dame de Paris*, into *The Hunchback of Notre Dame* is seriously to delimit the magnitude of the novel.

The action of the novel begins on January 6, 1482, and ends in July of the same year, with an epilogistic chapter disclosing the fate of Quasimodo, the hunchback, dated to mid-1484. Es-

meralda, a sixteen-year-old woman, identified as a gypsy and dancing in the company of her trained goat, catches the eye of Archdeacon Frollo, who orders his misshapen ward, Quasimodo, to kidnap her. Gringoire, a poet, fails in his efforts to intervene, but Esmeralda is rescued by Captain Phoebus and falls in love with him. She becomes the “bride” of Gringoire in a mock ceremony produced by a “court” of beggars. She later becomes the “bride” of Captain Phoebus, who promises marital commitment in his seduction of her but is murdered by Frollo before he can consummate his desire. Frollo frames her for the murder of Phoebus and offers to save her life if she will yield to his desire. She refuses and is then temporarily saved from execution by Quasimodo, who engineers sanctuary for her in the cathedral of Notre-Dame. Quasimodo also loves her and ultimately, after her actual execution, embraces her in death as his “bride” and achieves burial with her.

Esmeralda, loving the one man who does not really love her and being loved by three men whom she does not love, remains a virgin through three “marriages,” as Hugo reconstructs the Christian Trinity through Our Lady: Mother, Daughter, and Holy Spirit. Esmeralda is the point at which virginity, motherhood, and divinity intersect. Esmeralda, issuing from the womb of Our Lady (the cathedral that had been her sanctuary) is executed in an analogue to crucifixion. By the same spiritual geometry, Notre-Dame, the cathedral of the Mother Church, with its eponymous Virgin Mary as divine Mother,

is the temporal-spatial point at which ancient, medieval, and modern architectural *logoi* (words) intersect in permanent transition. The transition is marked by the fifteenth century invention that will supersede the Logos of architecture: the printing press, which will prevail as the new Writing of humankind. The printed book is identified, in a chapter titled “Ceci tuera cela” (this will kill that),

as the killer of architectural scripture and as the new representation of the human mind.

The narrative integrates some of the standard devices of ancient romance—such as the switching of infants, with the gypsy-infant Quasimodo substituted for Agnes, the daughter of Paquette la Chantefleurie, and the infant’s shoe by which the mother sixteen years later recognizes Esmeralda as her daughter—and Hugo’s Romanticism, in which truth reposes in darkness and grotesquerie. The true depth of the human spirit is sounded in the emotions of the shadow-concealed, deformed, one-eyed Quasimodo. The falsity of exterior light is explicit in the shallow, shining-knightlike Captain Phoebus, whose name is a metonym of the sun.

## LES MISÉRABLES

**First published:** 1862 (English translation, 1862)

**Type of work:** Novel

*A saintly fugitive from justice improves the lives of those whom he befriends and loves, achieves ascendance over his relentless pursuers, and redeems himself.*

The title *Les Misérables* is Hugo’s revision of his original title, “Les Misères.” The choice is affinitive with Hugo’s Romanticism, as it indicates a preference of the concrete (*the wretched ones*) to the abstract (*miseries*), of persons to situations. The full connotative strength of neither title can be retained in literal English translation, and it is good that English translations of the novel appear under the French title. The word *misérables* supports the double sense of “those who are wretched” and “those who are to be pitied.” The second sense implies the possibility or presence of pities. The readers of the novel, then, may participate in the narrative as those who pity the pitiable. Pity is, etymologically, an act of *pietas* (piety). It is in this subjective inclusion of the reader in the artwork that Romanticism differs from classicism. With regard to *Les Misérables*, the reader’s pity is an experience of piety; and piety, in the full Latin sense of *pietas* (devotion, dedication, commiseration), is as much the theme of the novel as it is a manifestation of Hugo’s deep religious sensibility.

The story begins with an account of the exem-

plary piety of a Christian bishop, Monseigneur Myriel Bienvenu, who selects as the most beautiful name of God not Creator, Liberty, Light, Providence, not even God or Father, but the name given by Solomon, Miséricorde (compassion or pity). He is contrasted with men who dig for gold: He is one who digs for pity. To this seventy-five-year-old bishop, in the year 1815, comes Jean Valjean, a paroled convict who has spent nineteen years in prison. He is seeking lodging for the night, and no room has been found for him at the inns of the town. The priest offers him food, lodging, and trust. Valjean had been sentenced to prison, first for the theft of bread to feed his widowed sister and her seven children, and subsequently for four unsuccessful attempts to escape. Hardened by imprisonment and the reception given him by those who had either despised or exploited the former convict, he is capable now of crime for its own sake, as well as for survival. Checking his movement to murder the bishop as he sleeps, Valjean settles for stealing the household silverware. Apprehended and returned to the bishop, he is released, as the bishop, insisting the silverware was not stolen, adds a pair of candlesticks to the “gift.” Valjean’s receipt of mercy restores him to piety, the showing of mercy to others, although the first stage on his new journey involves his reflex theft of a coin from a boy, in his tearful remorse for which he undergoes repentance: He awakens to see a semblance of “Satan in the light of Paradise,” returns to the door of

Monseigneur Bienvenu, and prays in the predawn darkness.

Valjean’s life of altruism takes the forms of various *personas* after his moment of truth in the shadow. The first of these is that of the good mayor of a town; his appropriate pseudonym is Père Madeleine (translatable as Father Magdalene, that is, a priestlike layman converted from wrongdoing).

He intercedes with a police inspector, Javert, to save a woman, Fantine, from a six-month prison sentence. Then, learning from Javert that another man had been arrested as

Valjean in connection with the goods stolen from the bishop, Valjean turns himself in. Later, he escapes from prison and becomes the protector of Fantine’s daughter, Cosette. Living under cover in Paris, he rears Cosette as his daughter and becomes devoted to her. Eventually, Cosette falls in love with Marius, a political activist, toward whom Valjean will bear a paternal resentment; he is once again a “father,” and Cosette addresses him as such. Marius is wounded in the republican uprising of 1832; Valjean rescues him and carries him to safety through the labyrinthine Parisian sewers. The strictly honorable Javert, who finally discovers his unceasing pursuit of Valjean to have been unjust, commits suicide. Cosette and Marius are wed. Valjean, vindicated and at last content, dies in peace in the light of candles held by the “gift” candlesticks.

The novel incorporates a number of subplots and a great variety of characters. All of its narrative elements contribute in the manner of an epic, which it is, to a broad perspective of the Napoleonic era. The Emperor Napoleon I himself appears in the long episode devoted to the Battle of Waterloo. Marius’s father is an officer in Napoleon’s army whose life is saved by Thénardier, to whom accordingly Marius is in debt and by whom Valjean comes also to be pursued. The history of postrevolutionary France, its changing social institutions, the persistence of its religious customs, and its political turmoil, along with realistic depictions of Parisian life and converse, much of which is embodied in the character of a street-smart boy named Gavroche, are interstitial to the vast fabric of Hugo’s tale. To his Romantic tale Hugo adapts much of the machinery of classical epic.

Hugo includes two parenthetical disquisitions: one on the Convent as an abstract idea and as historical fact (part 2, book 7) and one on argot, or slang (part 4, book 7). These slow down the narrative but greatly intensify its substance. The Convent, according to Hugo, is abstractly right in its nurture of religious sensibility but concretely wrong in its preservation of outmoded ritual and dogma. Argot is *la langue des ténébreux* (the language of the shadows). It is the language mainly of wrongdoers (those abominated by society), like “cant” in Henry Fielding’s *The History of the Life of the Late Mr. Jonathan Wild the Great* (1743, 1754) and “nadsat” in Anthony Burgess’s *A Clockwork Orange*

(1962), but it is also the language of poverty and is, in its rebelliousness and poetic turn, a language of true life.

Rebelliousness, religious sensibility, and poetic concretion make *Les Misérables* an epical testament to Romanticism. In its five parts, comprising forty-eight books, themselves comprising 361 chapters, the novel discloses the failure of rationalism and of rigidly organized religion. The first two chapters of the first book in part 1 are significantly titled “Un Juste” (a just man) and “La Chute” (the fall). The just man is Monseigneur Bienvenu; the fall is that of Jean Valjean, but it is a fall, not from, but into, grace as he becomes the bishop’s successor in justness. His passage through crime and, climactically, through the Dantesque hell of the sewers of Paris is a pilgrimage of redemption, a movement not toward a paradisiacal light but into the true light at the core of darkness. The last chapter of the concluding book is titled “Suprême Ombre, Suprême Aurore” (supreme darkness, supreme dawn). The supreme darkness is the life that Valjean has fully lived; the supreme dawn is his death.

### “ECSTASY”

**First published:** “Extase,” 1829 (collected in *Les Orientales: Or, Eastern Lyrics*, 1879)

**Type of work:** Poem

*The poet expresses an affinity with nature.*

The “Ecstasy” that Hugo describes in this twelve-line poem is his experience of himself in nature as nature identifies itself with God. The poem reads, in prose translation, as follows:

I was standing alone by the waves on a starry night, under a cloudless sky and by a sea unbothered by sails. My eyes saw more than the material world; and the woods and mountains and all of nature seemed to question, in mingled murmur, the waves of the sea and the fires of heaven. And the countless legions of golden stars were answering, in voices raised and lowered in a host of harmonies; and the blue waves, which nothing controls or hinders, were saying, as their crest foamed back in an arc, “It is the Lord, the Lord God!”

The solitary stance of the individual in an almost but not quite pantheistic communion with nature is a characteristic posture of nineteenth century Romantic poets in Germany and England, as well as in France. During the eighteenth century, “nature” was “human nature,” which could be improved by rationalism and enlightenment, and ecstasy was as suspect an irrational quality as it had been to Plato. With Johann Wolfgang von Goethe, William Wordsworth, and Hugo, however, “nature” was the terrestrial and physical universe with which an individual could establish a subjective relationship that was predispositional to spiritual gratification and religious satisfaction. Hugo intones that relationship in this short lyric, in which ecstasy and the night transcend reason and daylight.

### “OLYMPIO’S SADNESS”

**First published:** “Tristesse d’Olympio,” 1840 (collected in *The Literary Life and Poetical Works of Victor Hugo*, 1883)

**Type of work:** Poem

*The poet makes a solitary retreat to the valley in which he and his mistress began their love affair.*

“Olympio’s Sadness” is Hugo’s realization that nature, endlessly beautiful, can be seen as cruel to human beings, whose beauty, in love and as part of nature, is fleeting and cannot, or will not, be sustained by nature: “How little time it takes for you, Nature, with your unwrinkled brow, to change everything, disregardingly, and, in your acts of transformation, to snap the mysterious threads that bind our hearts.” Hugo saw himself as an Olympian, both in his unorthodox religiousness, which was closer to Greek paganism than to Christianity, and in his sense of personal greatness. For him, sadness was not the opposite of happiness but the comprehension of happiness, even as he considered the true light of the religious soul to be implicit in the darkness and not external to it.

The poem was composed in October, 1837, and is rich in autumnal resonance; but the day is bright with light, and the sky is unvaryingly clear. The external light brings the poet no joy. Joy is to be

remembered only in the natural things—birds, streams, the sky, lakes, and such—that have no remembrance but are themselves remembered and, in being remembered, are for lovers “the shadow of love itself.” The thirty-eighth, and last, stanza locates the soul in a pitch-black night, where the holiness of memory, the essence of human happiness, sleeps in the shadow.

In making this sentimental journey to the scene of his early days of love with his mistress Juliette Drouet, Hugo is following the examples of his fellow Romantic poets Alphonse de Lamartine and Alfred de Musset, each of whom had written superb poems about such retreats.

The first eight stanzas of the poem, each consisting of a pair of two and a half Alexandrine verses, is a third-person narrative of the poet’s return to the scene of his love: the pond, the garden, the orchard, the chestnut tree where the poet and his mistress held trysts and which they used as a repository for love letters. These stanzas are followed by thirty Alexandrine quatrains in which the poet recounts in direct statement his reactions to the loss of subjective syntony over a three-year passage of time.

The poem opens with “The fields were no longer dark,” and, in the smiling autumn light, the poet finds the sadness of his soul. The poem closes

with “this night which no light spangles,” in which in darkness his soul senses the pulsation of memory. The progression of the day from light to darkness defines the progression of the soul from melancholy to the bliss enclosed in what Wordsworth calls “the still sad music of humanity.”

## SUMMARY

Viewing philosophy as, in the words of his character Jean Valjean, “the microscope of thought,” Victor Hugo chose lyric poetry, the verse drama, and the novel to produce his macroscopic depiction of human feeling. He is the consummate Romantic, for whom the dark reaches of the emotions hold more truth than do the logic and science of the Enlightenment. “Science,” he wrote, “has the first word on everything, the last word on nothing”; and he urged artists always to oppose “shadow to light” and “invisible truth to visible fact.”

The three *r*’s evident in Hugo’s life and work are revolution, Romanticism, and religion; and, in his writing, each is implicit with his apprehension of the female force: The fictional women in his novels and the actual women who inspired most of his poetry all attest to his belief that “the poem that is Woman pervades the history of Man.”

Roy Arthur Swanson

## DISCUSSION TOPICS

- What features of French classical literature did Victor Hugo oppose most vigorously? What classical elements does he appropriate?
- Why is the common title *The Hunchback of Notre Dame* an inadequate translation of Hugo's title?
- Why is the title *Les Misérables* usually not translated?
- What is Hugo's sense of the relationship between God and nature?
- Trace Hugo's use of light and dark as symbols in "Olympio's Sadness" and in other poems.

## ALDOUS HUXLEY

**Born:** Laleham, near Godalming, Surrey, England  
July 26, 1894

**Died:** Los Angeles, California  
November 22, 1963

*Widely renowned as a satiric novelist, Huxley contributed significantly to literary modernism's skeptical reassessment of the scientific and technological tendencies of twentieth century society.*

### BIOGRAPHY

Aldous Leonard Huxley was born on July 26, 1894, in Laleham, near Godalming, Surrey, England, the third son of Dr. Leonard Huxley, a teacher, editor, and writer, and Julia Arnold, niece of Matthew Arnold and sister of novelist Mrs. Humphrey Ward. Aldous was also the grandson of Thomas Henry Huxley, a well-known scientist, and the brother of scientist Sir Julian Huxley.

Huxley had planned on a career as a physician, but an affliction with nearly total blindness while studying at Eton altered his plans, and, upon partial recovery three years later, he entered Balliol College, Oxford, and earned a degree in English literature. While Huxley was at Oxford, World War I began, and he was refused enlistment because of his poor eyesight; eventually, he became totally disillusioned about the war and about the direction of twentieth century society, particularly after a visit to America in the Roaring Twenties, during which he was appalled by the material excesses and what he saw as a pervasive spiritual emptiness. The death of his mother when he was fourteen and of his brother Trevenen when Aldous was eighteen may have contributed to the skeptical bent of Aldous's mind. The Oxford years, however, did establish important literary connections for Huxley, since during his years there he met Bertrand Rus-

sell, the Sitwells, D. H. Lawrence, and Lytton Strachey, among others, as well as his future wife, Maria Nys.

After graduation, Huxley worked briefly for the Air Board as a patriotic duty until his poor vision forced his resignation. He then taught at Eton, the preparatory school from which he had been graduated, but did not enjoy teaching, perhaps because of his somewhat introverted nature. He switched to a position as second assistant editor of *The Athenaeum*, a literary review; the increased salary allowed him to marry Nys in 1919. Then, in 1920 and 1921, he worked as drama critic for *The Westminster Gazette*, at the same time writing *Crome Yellow* (1921), his first novel, which began the development of his reputation as a skillful satiric novelist. (Although he had been publishing poetry and short stories since his college days, including *The Burning Wheel*, 1916, his first poetry volume, none had been very successful.)

The even more successful novels *Antic Hay* (1923) and *Those Barren Leaves* (1925) followed, allowing Huxley the financial security to leave journalistic work and travel widely in Europe and even once around the world, with stops in India, the Dutch East Indies, and the United States. In fact, from 1923 until his death in 1963, Huxley lived elsewhere than in England, returning there only for visits. From 1923 until 1930, he lived in Italy, studying and admiring Italian architecture and landscapes (painting being a hobby) but expressing contempt for Fascism. While there, he wrote *Point Counter Point* (1928), which was second only

to *Brave New World* (1932) in popularity. The latter was written during Huxley's years in southern France, at Sanery-sur-Mer; he had moved there in 1930 because of the pleasant climate and reasonable cost of living. During these years of residence in France, he also took a trip to Central America that was the basis for his successful travel book *Beyond the Mexique Bay* (1934). Given his diverse knowledge and interests, Huxley also wrote book reviews, newspaper articles, plays, short stories, and forewords, introductions, and prefaces for others' works—a total of some eighty-five works being written or edited by Huxley by the time of his death in 1963.

That death came in the United States, to which Huxley had emigrated from France in 1937 for several reasons, including not only his belief in impending disaster in Europe (on the eve of World War II) but also his love of the Mojave desert and its climate. The latter, particularly, in combination with the Bates method of visual reeducation, improved his eyesight.

Huxley remained politically engaged in the 1930's and early 1940's, attending to his humanistic concerns, working to avoid World War II, even writing a book, *Ends and Means*, in 1937 on war's motives and futility. Both during and after World War II, however, he turned to less practical considerations and embraced a kind of psychological and philosophical/religious mysticism as a solution to the lack of wholeness, to the fragmentation, of the modern world. That mystical focus is evident even in the 1941 study of Father Joseph, *Grey Eminence*, and in his important later novels, *After Many a Summer Dies the Swan* (1939), *Ape and Essence* (1948), and *Island* (1962). Paradoxically, however, given the Huxley family's scientific tradition, that mysticism was also pragmatic and empirical, involving an attempt to synthesize all of life's diverse elements. Thus, during his years in America, Huxley wrote scripts for Hollywood films and articles for *Playboy* and *Esquire* while at the same time writing essays on parapsychology and mystical novels (novels that also include the very earthy, such as the sexual elements in *Island*). Nor did the mystical concern preclude some political and social activity, such as Huxley's work for the United Nations Food and Agriculture Organization based on his concern with overpopulation, or his help in the Campaign Against Hunger in 1963.

Socially, too, he was active, talking with composer Igor Stravinsky, taking walks with author Thomas Mann, having picnics with screenwriter Anita Loos and actor Charlie Chaplin, and even going for drives with a juvenile delinquent (Huxley enjoyed and studied automobiles throughout his life).

The mystical concern did help Huxley deal with his wife's death from cancer in 1955 and with his own long struggle with cancer that ended on November 22, 1963, in Los Angeles, California. His life and work indeed reflect a highly varied but impressively unified mind that continually developed in a consistent way from early satiric skepticism to the confident mysticism of the later years and which throughout shows the constant human conflict between the intellectual and emotional polarities of the human personality. Huxley did in fact achieve the synthesis and unity that were the object of his lifetime search.

## ANALYSIS

Huxley's primary thematic concern in his fiction is with the ramifications of humanness: what the authentic human values are, what lifestyles humans should adopt, and what type of society or world humans should create. He is particularly concerned, in that context, with the issue of modernist alienation and isolation in a complex scientific and technological society that, particularly in 1928 and 1932 (the respective dates of publication of his two most important novels, *Point Counter Point* and *Brave New World*), was in great upheaval because of the economic problems of capitalism that were all too evident. As a humanist in the classical and Renaissance sense of a broadly educated and talented person with a devotion to improving life on earth, Huxley particularly focuses upon the psychological effects of twentieth century life, of a life of nonstop action as it shapes human attitudes toward love, material possessions, and political structures, but especially as it affects the personal balance and happiness of individual human beings. If humans were not happier in the twentieth century than in the past (and Huxley firmly believed that they were not), then why not? Where did they err and lose the normal human balance of intellect and emotion, body and soul, love and hate, self-concern and concern for others—all the balances involved in being naturally adjusted and contented?

Implicit in such an assumption of balanced “naturalness” is the Romantic conception of humans living in harmony with nature, with all of the created, living world, and thus with themselves. Such a Goetheian Romantic stance inevitably led Huxley to be critical of science and technology and of any positive human future based upon such products of the rational side of human beings. Hence, Huxley continuously presents the scientist as a threat and his creations, his machines, as a similar danger because they control those who use them. The use of machines is implicitly connected to corrupted values in *Point Counter Point* and *Brave New World*, for example. In the former, this theme is depicted in Lucy Tantamount’s fascination with airplanes and fast travel as a way to avoid real emotion in relationships, as a way to speed to a new and superficial love relationship. Hence, Lucy deserts Walter Bidlake because he is too caring; too deep in his attachments, too unlike the mechanistic superficiality and temporariness and rapid pace of Lucy’s modern life. Similarly, machines in *Brave New World* adversely affect the normal freedom and balance and harmony in life; for example, mechanical birth processes that allow the creation of perfectly planned, robotic humans who are further controlled by science-created soma, a drug for pleasure and distraction that deprives humans of the pain and suffering that motivate thought and questioning, and thus intellectual development. The result is an acceptance of controlled, thoughtless, superficial lives that lack both emotional depth and intellectual attainment.

It was this kind of presentation of science and technology that led H. G. Wells, the positivist science-fiction writer, to write a letter to Huxley damning him for treason to science after *Brave New World* was published. Such presentation also led to Huxley’s being criticized for cynicism, with many critics not wanting to, or at any rate failing to, note the real human potential for success implicit in both *Point Counter Point* and *Brave New World*. Those successes include the balanced-living Mark and Mary Rampion in the former (who do their own housework, read and discuss ideas, and live emotionally and fully, as well) and Bernard and Helmholtz in the latter.

There are also unbalanced and tragic characters in Huxley’s novels, characters who embody Huxley’s ideas about flaws in human development,

flaws that lead to unnaturalness and psychological aberration. The purpose of these characters in Huxley’s novels of ideas is to illustrate the causative forces of psychological aberration, such as Spandrell’s unnatural closeness to his mother, which causes him to hate her, himself, and everyone else when she remarries. He is led to murder as a product of his hate-filled imbalance. Such scenes merely illustrate one type of human perversion and do not indicate the cynical views of the author.

More justified criticisms of Huxley’s novels are that the concern with ideas is so pervasive that characterization is often limited to speeches and dialogue as a way to present ideas, and that plot unity is often lacking because too many characters are used to represent the mélange of ideas involved. However, both *Point Counter Point* and *Brave New World* present positive, hopeful ideas as well as negative ones, as Huxley conveys his messages about the need for more human psychological balance and for more skeptical analysis of the “advancements” in science and technology.

## POINT COUNTER POINT

**First published:** 1928

**Type of work:** Novel

*In early twentieth century England, a range of interrelated characters illustrate the modern world’s complexity and the difficulty of harmonious, sane existence within it.*

*Point Counter Point*, Huxley’s greatest novelistic success except for *Brave New World*, is a complex work involving a multitude of characters who represent various extremes of imbalance in earthly life, imbalances that detract from naturalness and harmony. As such, these characters are the most inclusive presentation of Huxley’s ideas about erroneous human values and actions and about the complex social, political, economic, and psychological causes of such actions and values.

The novel unfolds in a very diffuse way. The introductory section is structured around a party given by Lord Edward Tantamount and his wife, which is attended by a multitude of the “rich and famous,” including nearly all of the characters

whose lives are alternately focused upon in the rest of the novel. At the party, the central conflict is also foreshadowed, that between the socialist Illidge, Lord Tantamount's scientific assistant, and the ultraconservative, capitalistically privileged leader of a reactionary political group, Everard Webley. That plotline then develops with Spandrell's very Freudian and psychologically violent perverseness contributing to the radical violence implicit within Illidge's perspective. (Spandrell has been too psychologically attached to his mother, and her remarriage devastates him, turning him into a pathological being, the villain of the novel.) At Spandrell's urging, he and Illidge eventually perform the central action of the novel, the murder of Webley. That murder leads to the novel's climactic moment, the somewhat tragically heroic decision

by Spandrell to destroy himself by forcing the police to kill him, illustrating the destructiveness of the social, political, and psychological counterpoints in twentieth century society.

The other plot line counterpoints develop in similarly tragic ways. The painter John Bidlake's psychosexual excessiveness is paralleled by that of the editor Burlap and

the Tantamounts' spoiled daughter Lucy, all three characters pursuing sexual pleasure at the expense of other characters, such as John Bidlake's wives and models, Burlap's rejected secretary Ethel Cobbett (who commits suicide), and Walter Bidlake, from whom Lucy drifts away out of boredom in her pursuit of sexual adventures. These psychosexually excessive characters are themselves also seen as tragic, John Bidlake unable to cope with death, Lucy pursuing sexuality in a desperate attempt to escape thought and deep feeling, and Burlap regressing to an almost infantile sexual relationship with Beatrice Gilray.

The tragic lives of the psychosexually excessive are counterpointed by the equally tragic lives of the religiously and intellectually excessive. Fanatically Christian Rachel Quarles almost totally retreats from her husband and children into religious isola-

tion, in the process bringing Walter Bidlake's mistress, Marjorie, into the same kind of mystical isolation, which leaves Marjorie totally incapable of helping Walter cope with his rejection by Lucy Tantamount. Similarly, Walter's intellectual excessiveness makes him incapable of contentment with either Marjorie or Lucy, since, like Don Quixote, he has read so much idealistic literature that he is continually searching for more than reality affords. Thus, his life is continual tragic dissatisfaction. Also, the philosophically excessive Philip Quarles continually withdraws into thought and avoids feeling, and thus cannot relate to his son, little Phil, or even feel very affected by Phil's death. He is also so withdrawn that he nearly drives his wife into an affair with Webley, a circumstance prevented only by Phil's sudden illness and Webley's murder. Philip Quarles's future is as bleak as that of most of the other characters, since he remains trapped within his personal imbalance. The intellectually scientific are also presented as a counterpoint to the psychosexually excessive, with Lord Edward Tantamount embodying the withdrawn, socially dysfunctional scientist who cannot sexually relate to his wife and who is only happy doing experiments in his laboratory. Thus, at the novel's end, only the Rampions, Mark and Mary, remain as embodiments of the possibility of synthesis and balance in an imbalanced, fragmented modern world that is resoundingly rejected by Huxley in this profoundly satiric novel.

## BRAVE NEW WORLD

**First published:** 1932

**Type of work:** Novel

*In the future world imagined in this novel, there is no provision for complete and emotional human existence.*

*Brave New World* continues the presentation of human psychological and other imbalances of *Point Counter Point*, but in a more creative and unified way. It is set in a future society in which control over individuals is nearly absolute and in which there is virtually no possibility of maintaining a sane, balanced, and fully human existence.

Through the future setting of a scientifically created and controlled technological society, operating in artificial harmony by virtue of nearly deadened human emotional and intellectual attributes, Huxley focuses on the danger of what twentieth century society could become if the values of order, profit, and power continue to prevail over spontaneous creativity, mutual respect and pleasure, and cooperative idealism.

The citizens in this “brave new world” are controlled and conditioned from birth, in fact before birth, by means of genetic engineering, or mechanical childbirth processes. Humans are then subjected to a variety of operant conditioning techniques, including hypnopaedia, or sleep-teaching, which fit them for their carefully planned roles in the society. This role preparation is involved even in the genetic engineering, too, as the embryonic rocket engineers’ birth tubes are kept in constant motion to prepare the engineers to work in weightless environments in which right-side-up and upside-down positions alternate constantly. In the words of the director of the genetics institute, “They learn to associate topsy-turvydom with well-being; in fact, they’re only truly happy when they’re standing on their heads.” The conditioning continues throughout life, the sleep teaching reinforced by the entertainment drug soma, which encourages narcissistic self-indulgence and thus lack of concern for larger decisions of societal direction made by the few in power.

The system of scientific and technological control, directed by Mustapha Mond, is not yet perfect. Some humans continue to be dissatisfied and want more than what is prescribed for them. Mond, who fears real human experience and thus uses control and artificial creation to avoid such balance, has trouble particularly with the emotional and intellectual longings of several characters, with their often subconscious desire to be whole. Specifically, Bernard keeps longing for real love, not just entertainment sex, and the same is true to some extent

of Lenina (thus the important Freudian psychology element again in Huxley’s work). Also, Helmholtz keeps feeling unfulfilled because of some deeply suppressed need that has not been totally eliminated.

The Savage, though, is particularly problematic for Mond. The Savage realizes the total imbalance, the total inhumanness, of the society in its elimination of both deep feeling and intellectual attainment. He believes in feeling, in living, and in experiencing real human pain and thus real human joy—even the pain of death, which defines and creates human joy. When Mond questions him, the Savage admits that he is “claiming the right to be unhappy.” Mond responds with the following:

Not to mention the right to grow old and ugly and impotent; the right to have syphilis and cancer; the right to have too little to eat; the right to be lousy; the right to live in constant apprehension of what may happen tomorrow; the right to catch typhoid; the right to be tortured by unspeakable pains of every kind.

The Savage’s response is simply, “I claim them all.” They are all part of being human, of being in the real world, and Huxley sees the drug-induced life of scientific and technological society as destructive of that real world. Thus, the Savage dies tragically by hanging himself, in primitive reaction against a world that has eliminated the side of human beings that he represents.

## SUMMARY

In *Brave New World*, which describes a future society that seems perfectly orderly, harmonious, and controlled but which is actually depraved, unhappy, and hellish, Aldous Huxley embodies his principal ideas. He also embodies them in *Point Counter Point*, in a diffuse portrait of imbalanced characters in early twentieth century England.

One of those principal ideas is that humanness and authentic human values involve recognition of and participation in all the dichotomies of human existence: emotion and intellect, mind and body, body and soul, love and hate, self-concern and concern for others. Without that balance and total development, humans are doomed to incomplete, and often tragic, lives. The other principal belief is that modern society is itself unbalanced in its

overly scientific and technological orientation, leading to intellect dominating emotion and thus to final tragedy unless drastic adjustments are made. It is that idea that continues to make Huxley's two great novels tremendously important in solving the problems of today's world.

John L. Grigsby

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

*Crome Yellow*, 1921  
*Antic Hay*, 1923  
*Those Barren Leaves*, 1925  
*Point Counter Point*, 1928  
*Brave New World*, 1932  
*Eyeless in Gaza*, 1936

## HENRIK IBSEN

**Born:** Skien, Norway  
March 20, 1828

**Died:** Christiania (now Oslo), Norway  
May 23, 1906

*Ibsen is widely regarded as the most important dramatist since William Shakespeare, not only for the depth and complexity of the major characters in his plays but also for his technical innovations and his subtle use of symbolism.*

### BIOGRAPHY

Henrik Johan Ibsen (IHB-suhn) was born in Skien, a small town on the east coast of Norway, on March 20, 1828, to Knud and Marchinen Altenburg Ibsen. By all accounts, he was a withdrawn and introspective child, much given to reading, painting, and creating puppets for the tiny theater that he had constructed in a storehouse attached to his childhood home. The financial decline of the Ibsen family severely curtailed his formal education. Though he had hoped to go to the university and study medicine, in 1843 he left school and became an apprentice to an apothecary in the small coastal town of Grimstad, where he was to spend nearly seven years. The revolution of 1848 in France, coupled with his study of Cicero's oration against the Roman senator Lucius Sergius Catiline (Catiline), inspired the young Ibsen to write his first play, an unsuccessful verse tragedy entitled *Catalina* (pb. 1850, revised pb. 1875, pr. 1881; *Catiline*, 1921), which treats Catiline not as a traitor to Rome but as an idealistic reformer.

In 1850, Ibsen left Grimstad for Christiania, where he tried his hand at journalism while studying for the examinations that would qualify him to enter the university. Although his second play, *Kjæmpehøien* (pr., pb. 1850, revised pb. 1854; *The Burial Mound*, 1912), was accepted by the Christiania Theater and performed three times that autumn, his other projects met with little success. While he was struggling to make his mark in liter-

ary circles in Christiania, a Norwegian National Theater was established in Bergen to encourage Norwegian playwrights to develop an independent dramatic tradition. In the autumn of 1851, Ibsen was offered a position as "dramatic author" in this new theater. The next spring, the directors of the theater sent him abroad to study theatrical methods. He spent six weeks at the Royal Theater in Copenhagen and about a month in Dresden, Germany, seeing plays and studying stage machinery. After his return to Bergen, he signed a five-year contract as "scene instructor," a position that placed him in charge of blocking, decor, and costumes. He was also expected to write a new play each year for performance on the anniversary of the opening of the theater. In this capacity, he wrote *Sanctansnatten* (pr. 1853, pb. 1909; *St. John's Night*, 1921), *Fru Inger til Østraat* (pr. 1855, pb. 1857; *Lady Inger of Østraat*, 1906), *Gildet paa Solhaug* (pr., pb. 1856, revised pb. 1883; *The Feast at Solhaug*, 1906)—Ibsen's first theatrical triumph—and *Olaf Liljekrans* (pr. 1857, pb. 1902; English translation, 1911).

In 1856, nineteen-year-old Suzannah Thoreson, a young woman of strong character and progressive views, accepted Ibsen's proposal of marriage; they were married on June 18, 1858, nearly a year after Ibsen had left Bergen to become the artistic director of the Christiania Norwegian Theater. Though it was a great success at the Norwegian Theater, his next play, *Hærmændene paa Helgeland* (pr., pb. 1858; *The Vikings at Helgeland*, 1890), could not offset the growing financial difficulties of the the-

ater, which finally had to close down in the summer of 1862. Ibsen's negative views of marriage in *Kjærlighedens komedie* (pb. 1862, pr. 1873; *Love's Comedy*, 1900) stirred up a storm of protest, and not even the success of *Kongsemnerne* (pb. 1863, pr. 1864; *The Pretenders*, 1890), a historical drama of Shakespearean proportions, could rescue him from the desperate financial situation into which he had fallen. Disillusioned by failure in his chosen career, he felt like an outcast. Supported by a state grant for foreign travel, he, his wife, and their young son left Norway in 1864 for what was to be twenty-seven years of self-imposed exile—with only two short visits to his homeland before his return to Christiania in 1891.

The Ibsens settled first in Italy, where they remained for the next four years. The verse drama *Brand* (pb. 1866, pr. 1885; English translation, 1891) proved so successful in book form that it made Ibsen financially independent for the first time in his life. Though less successful with critics than *Brand*, its companion piece, *Peer Gynt* (pb. 1867, pr. 1876; English translation, 1892), quickly went into a second edition. It was first produced at the Christiania Theater in 1876 with a musical suite by Norwegian composer Edvard Grieg and has been staged frequently ever since. In 1868, the Ibsen family settled in Dresden, where they remained for nearly seven years, during which time Ibsen wrote *De unges forbund* (pr., pb. 1869; *The League of Youth*, 1890), a five-act political comedy satirizing liberal politicians. Immensely popular in its day, this play has not earned a permanent place in the modern repertory, nor has *Kejser og Galilæer* (pb. 1873, pr. 1896; *Emperor and Galilean*, 1876), a two-part drama in ten acts about the Roman Emperor Julian, who was called Julian the Apostate.

In 1875, Ibsen moved his family to Munich, Germany, where he wrote *Samfundets støtter* (pr., pb. 1877; *The Pillars of Society*, 1880), a play that signaled a new direction in his work. This play and the eleven that followed it all deal with problems in contemporary life. Between 1878 and 1891, the Ibsens divided their time between Munich and Rome with vacations in Berchtesgaden and Gossensass in Tyrol and, in 1885, a summer in Norway. During this period, Ibsen achieved international fame with a series of fascinating, often controversial plays: *Et dukkehjem* (pr., pb. 1879; *A Doll's House*, 1880), *Gengangere* (pb. 1881, pr. 1882; *Ghosts*,

1885), *En folkefiende* (pb. 1882, pr. 1883; *An Enemy of the People*, 1890), all of which have a social emphasis. In the next four plays, *Vildanden* (pb. 1884, pr. 1885; *The Wild Duck*, 1891), *Rosmersholm* (pb. 1886, pr. 1887; English translation, 1889), *Fruen fra havet* (pb. 1888, pr. 1889; *The Lady from the Sea*, 1890), and *Hedda Gabler* (pb. 1890, pr. 1891; English translation, 1891), Ibsen became increasingly interested in exploring the psychological depths of his dramatic figures.

In 1891, Ibsen left Munich to spend the rest of his life in Christiania. His last four plays, *Bygmester solness* (pb. 1892, pr. 1893; *The Master Builder*, 1893), *Lille Eyolf* (pb. 1894, pr. 1895; *Little Eyolf*, 1894), *John Gabriel Borkman* (pb. 1896, pr. 1897; English translation, 1897), and *Naar vi døde vaagner* (pb. 1899, pr. 1900; *When We Dead Awaken*, 1900), are deep philosophical meditations on the conflict between life and art. In the spring of 1900, Ibsen became gravely ill; the next year, he suffered his first stroke. In 1903, another stroke broke his health completely. He died on May 23, 1906, in Christiania and was buried with great honor by the Norwegian state.

## ANALYSIS

Ibsen's protagonists generally have great difficulty in coming to terms with the ideas, institutions, and laws that direct their lives. For that reason, they battle for freedom and truth, though their efforts are frequently undermined by the fact that their own past misdeeds threaten to destroy them. This pattern is already evident in *Cataline*, the protagonist of Ibsen's first play. An ardent idealist, *Cataline* is powerless to reform a corrupt society because he is haunted by the ghosts of his own past. The two women in his life, his gentle wife Aurelia and the avenging Furia, represent the opposing forces at war within him. The alternative to active engagement with the forces that limit freedom is aesthetic withdrawal. The conflict between Ibsen's own desire to retreat into aesthetic contemplation and his need to act is clearly expressed in "On the Fells," a poem about a hunter who contemplates life from the heights. Ascent to the mountain top, a common Romantic symbol of artistic detachment, is nearly always connected with the aesthetic view of life in Ibsen's plays.

Many of the concerns of Ibsen's early plays come into sharp focus in the two verse dramas *Brand* and

*Peer Gynt*, both of which raise the question of how one can be true to one's self. Loosely based on some of the ideas of Danish philosopher Søren Kierkegaard, *Brand*, with its insistence on total commitment ("all or nothing"), is an existentialist tragedy. Brand is a fiery young pastor who carries Romantic individualism to the extreme. After an unrelenting struggle against "the spirit of compromise," a struggle that costs the lives of his infant son and his wife, he is swallowed up by an avalanche, which reproves him with the words, "He is the God of love." If Brand represents commitment to duty and to a high-minded way of life that kills joy and denies love, *Peer Gynt*, the hero of Ibsen's next play, learns—almost too late—that only by rejecting the self-sufficiency of the romantic individualist and committing oneself to love can one transcend the limits of the self.

The opposition between Brand's self-denial and *Peer*'s self-indulgence is restated in *Emperor and Galilean* as the conflicting claims of Christian asceticism (the Tree of the Cross) and pagan hedonism (the Tree of Knowledge). In this play, the Emperor Julian dreams of effecting a synthesis between these two views of life by establishing a mysterious "third empire." The hope that some such synthesis will open a new path for happiness and self-fulfillment recurs in many of Ibsen's subsequent dramas. *Emperor and Galilean* was Ibsen's last historical play; *Peer Gynt* was his last verse drama. After *The Pillars of Society*, all of Ibsen's plays deal with contemporary life. *The Pillars of Society* is a thesis play designed to show that society is built on rotten foundations. Following the pattern of the popular French "well-made play," Ibsen makes the gradual unveiling of past misdeeds the source of dramatic tension in this play, but instead of trivializing and resolving all conflicts in the last act, he adds psychological depth and social significance to this technique by pressing forward to an unmasking and a confession. A similar pattern underlies all of his subsequent dramas: The protagonist is forced to confront a problem from the past.

In most of these plays, personal conflict is

rooted in ideological differences. Ultraconservative characters, usually businessmen or lawyers, oppose any sort of social change that will jeopardize their wealth or their authority. Their outmoded ideas are challenged by rebellious, idealistic individualists who may be political reformers, artists, or women. The truth-seeking idealists in *The Pillars of Society*, *A Doll's House*, and *An Enemy of the People* believe that it is their duty to identify and label "lifelies," that is, the evasions and distortions of the truth in the light of which most people lead their lives. Serving as foils to Ibsen's female rebels are a number of female figures for whom ideas or moral issues are less important than security and the opportunity to be devoted wives and mothers. Many of Ibsen's important characters have lost their chance for happiness by marrying for money rather than for love. Others have an unfortunate tendency to misjudge or overestimate the people whom they are trying to reform or to dominate.

Ibsen first began to question the power of the truth to make humanity free in *The Wild Duck*, where he seems to conclude that most people have a very limited capacity for facing the truth and that harmless illusions are much less dangerous than full-blown ideals. In his next three plays, *Rosmersholm*, *The Lady from the Sea*, and *Hedda Gabler*, he offers psychological portraits of women whose inner struggles threaten to destroy them. Isolated male figures tend to dominate the plays that he wrote after his return to Norway—*The Master Builder*, *Little Eyolf*, *John Gabriel Borkman*, and *When We Dead Awaken*—all of which deal with impotence, old age, and the lack of love. In one way or another, all four of these plays raise once again the question of aesthetic withdrawal, only to show that love, not art, is the only means of self-fulfillment.

More a gadfly than a preacher, Ibsen frequently poses problems without attempting to solve them. The master of the strong curtain, he favors contrapuntal endings: Two opposing views of life collide, leaving motivations and outcomes in doubt. Ibsen believed that the playwright's task was to raise questions, not answer them.

## PEER GYNT

**First produced:** 1876 (first published, 1867;  
English translation, 1892)

**Type of work:** Play

*A romantic dreamer tries to find an empire within himself but finally discovers that his empire really lies in the love of Solveig, the woman who loves him.*

Peer Gynt, the title character, is a man in search of himself. His problem is that he misunderstands “self-realization” and seeks fulfillment in his poetic dreams because he fears life and love. In order to show the full range of his negative development, Ibsen shows Peer first as a feckless young man of twenty, then as a middle-aged tycoon, and finally as a broken old man returning to his native Norway.

As a youth, Peer lives fictional adventures so vividly in his imagination that they almost become his own life experiences. He dreams of being an emperor but is never ready when opportunity knocks. While he has been playing hooky in the uplands, Ingrid of Hegstad, an heiress whom he might have married, has been betrothed to another young man. Looking for trouble, Peer sets off for Hegstad to engage in belated courtship. Among the wedding guests is Solveig, a pure young woman whom Peer instantly loves. When Solveig refuses to dance with him, he gets drunk and steals the bride. Abducting Ingrid makes Peer an outlaw. Though Ingrid is quite willing to marry Peer, he sends her back to her father because he loves Solveig. In what may be a dream sequence, he encounters a woman in green, the daughter of the Troll King, who takes him to her father’s kingdom, where everything is reversed: Black seems white and foul looks pure. Peer is a candidate for the hand of this troll princess, a negative counterpart of Solveig, but in order to win her father’s full approval he must wear a

tail and accept selfishness as a way of life. Peer is quite willing to accept these conditions, until he learns that in doing so he can never return to humanity.

After his narrow escape from the trolls, Peer’s path is blocked by a languid monster called the Boyg, who tells him to “go roundabout.” The Boyg seems to be a portmanteau symbol for everything that prevents Peer from being himself. By having church bells rung, his mother Åse and Solveig—the women who love Peer—manage to save him both from the trolls and the Boyg, yet they cannot save him from himself. What little remains of Åse’s property is seized to compensate Ingrid’s father; yet she gladly suffers for her son. Solveig makes an even bigger sacrifice for Peer: She leaves her beloved family and searches for Peer in his mountain hut. When the troll princess arrives accompanied by their troll son, however, Peer realizes how unworthy he is of Solveig’s love and “goes roundabout,” abandoning her there.

Many years later in North Africa, Peer is a middle-aged millionaire who owes his fortune to all sorts of unprincipled enterprises. Though still apparently human, he has espoused the troll way of life, which he now defines as “the Gyntian self.” Most of the fourth act takes place in a symbolic desert that represents the aridity of this “Gyntian self.” Riding a stolen horse, he encounters a group of Bedouins who take him for a prophet. He falls in love with the exotic dancer Anitra and believes that he is emperor of her thoughts, but she strips him of his rings and clothes and rides off on his horse, abandoning him as he once abandoned Ingrid. While contemplating the Great Sphinx, Peer meets Begriffenfeldt, the mad director of an insane asylum in Cairo. At the asylum, the only place where illusion truly triumphs over reality, the inmates hail Peer as one of them, and Begriffenfeldt crowns him the Emperor of Self.

One brief scene in act 4 shows the faithful Solveig still waiting for Peer’s return. In act 5, the aged and embittered Peer does return to Norway, where everything that he encounters reminds him of his wasted life and points to his impending death. Near his old mountain hut, he hears Solveig singing and realizes that this was where his true empire lay. Yet he is still afraid to face her. Haunted by the emptiness of his stillborn visions, he next encounters the eerie Button Moulder, a mysterious

figure who has been sent to dissolve him, since he has never become the self that he was intended to be. During the final scenes in the play, Ibsen illustrates what “being oneself” really means. Only in the loving arms of Solveig does the dying Peer discover that he has always been himself in her faith, her hope, and her love.

## A DOLL'S HOUSE

**First produced:** *Et dukkehjem*, 1879 (first published, 1879; English translation, 1880)

**Type of work:** Play

*After eight years of marriage, a woman discovers that her husband has never understood her and that marriage has prevented her from becoming herself.*

In *A Doll's House*, Nora Helmer returns home on Christmas Eve with a Christmas tree that must be hidden from the children until it is trimmed. Indeed, hiding is a major theme in this play. Later in the first act, Nora plays hide-and-seek with her children, and she hides the macaroons that her husband, Torvald, has forbidden her to eat. A more dangerous secret is the fact that, years earlier, she had borrowed a large amount of money to pay for the sojourn in Italy that enabled Torvald to recover from a serious illness. She had borrowed the money illegally from a usurer named Krogstad, and she has secretly been repaying the loan out of the small sums that she is able to earn by copying documents or to save from her household budget. To spare her dying father, who was to have been her cosigner, she even forged his signature on the contract.

That something is wrong with the Helmers' marriage quickly becomes evident in the first scene: Torvald treats Nora more like a favorite child than a wife, and to please him she seems perfectly willing to pretend to be his little “skylark” or his “squirrel.” In other words, she is content to live in a dollhouse. Nora's old school friend, Mrs. Linde, is one of those Ibsen characters who has married for money, not for love. The man she did love—and jilted—was Krogstad. Now a penniless and child-

less widow, she would be very happy to settle down in a dollhouse, but necessity forces her to beg Nora to help her get a job in Torvald's bank.

The plot hinges upon Nora's ignorance of three important facts: Krogstad holds a minor position in the bank of which Torvald is shortly to become manager; Torvald is so embarrassed by Krogstad's presumptuous familiarity that he plans to fire him; and forgery, no matter what the motivation, is a serious crime. Ironically, Torvald fires Krogstad and promises his position to Mrs. Linde. This act prompts Krogstad, who is trying to regain his respectability, to use his knowledge of Nora's forgery to blackmail her: If he loses his job, he will expose her and ruin Torvald. Nora's attempt to persuade Torvald to retain Krogstad precipitates the crisis: Torvald angrily dispatches the letter of dismissal. Her situation worsens when Krogstad delivers an ultimatum and leaves a letter exposing her crime. In desperation, Nora tells Mrs. Linde about the incriminating letter now locked in the mailbox and urges her to use whatever power that she may still have over Krogstad to persuade him to ask for it back unread. By the end of the second act, Nora sees only two possible ways out of her dilemma: Either she will save her beloved husband's reputation by committing suicide, or what she calls “the miracle” will happen, and he will magnanimously assume full responsibility for her crime. In an interview with Krogstad, Mrs. Linde succeeds in reviving his love for her, but she precipitates the final crisis by forbidding him to retract his letter.

Torvald's explosive reaction to Krogstad's letter shows Nora that the man for whom she was willing to sacrifice her life, the man capable of “the miracle,” is a fiction. Discovering that he is self-centered, petty, and unfeeling, she can no longer love him. To challenge his outmoded ideas about marriage, she becomes a rebel and informs him that she is leaving him and the children. When he admonishes her that she is duty bound to remain, she says that she has discovered a higher

duty: her duty to herself. She exits, slamming the door on a bewildered Torvald.

Part of the play's effectiveness on stage depends on Ibsen's suggestive use of props, costumes, and activities (for example, the Christmas tree, the macaroons, the game of hide-and-seek) to illustrate psychological states or to underscore symbolic meanings. In its day, *A Doll's House* was extremely controversial. While many applauded Nora's determination to "be herself," many more condemned her as "unnatural" for deserting her children. More than a century later, the play still raises questions that stimulate readers and spectators.

## AN ENEMY OF THE PEOPLE

**First produced:** *En folkefiende*, 1883 (first published, 1882; English translation, 1890)

**Type of work:** Play

*When a doctor tries to reveal that the water supply for a planned health resort is infected, he is discredited and ostracized because the truth threatens the economic stability of the community.*

In *An Enemy of the People*, Dr. Thomas Stockmann is chief medical officer at The Baths, a health resort that is soon to open. Though he first conceived the idea of developing this resort, his older brother, Peter, the mayor of the town, had the business sense and political connections to put it into effect. Ibsen uses the contrast between the two brothers to establish the ideological framework of the play: Thomas is a liberal but impractical idealist; the ultraconservative Peter is motivated chiefly by self-interest and what he calls "the good of the community." Dr. Stockmann's home is a haven for people with liberal ideas: Billing and Hovstad, who edit the town's liberal newspaper; Horster, an open-minded sea captain; and Thomas Stockmann's freethinking daughter, Petra, a schoolteacher. Petra is the first character to raise what is to become the major theme in the play, the "life-lie." When she complains that, at school, she is forced to teach children to believe in lies, Captain Horster encourages her to found a school where children will learn the truth.

The crucial issue in the play emerges when Dr. Stockmann receives a laboratory report confirming his suspicions that the water supply for The Baths is polluted. Jubilant that he has detected the contamination in time to prevent a disastrous epidemic, all the liberals offer their support and declare him a public hero. Peter Stockmann, however, intends to discredit his brother, because the enormous costs of reconstructing the water system spells financial ruin for the investors and, ultimately, for the whole town. Because he has the liberal press and the majority on his side, and, above all, because he is right, Thomas is confident of victory. The battle lines are quickly drawn, but the motives on both sides are mixed. Thomas Stockmann's wife, Katherine, sees the impending fight as a threat to the security of her family. The mayor fears financial ruin and the erosion of his political power. Hovstad is a spineless political opportunist who will espouse any cause that promises to increase his power. Katherine's surrogate father, Morten Kiil, wants revenge for having been voted off the town council. Because Thomas Stockmann and Petra are the only combatants free of self-interest, it proves easy for the mayor to swing the entire community to his side.

Unable to get his message across through the press, Thomas Stockmann calls a public meeting in Captain Horster's house, where he intends to expose the fact that the whole town's prosperity is rooted in a lie. His opponents take charge of the meeting, however, and rule all discussion of The Baths out of order. Goaded to fury, he abandons his intended subject and develops the symbolic significance of the situation: The town's spiritual sources are polluted, and the whole civic community is built over a cesspool of lies. The authorities may be stupid and inflexible, but the worst enemy of truth and freedom is the majority. He launches into a diatribe against the whole notion of a democratic society. The majority is always wrong, he claims, because most people are fools, too lazy to think for themselves and therefore easily led by demagogues. Truth is relative and always changing; by the time that truths filter down to the majority, they are so outdated that they can hardly be distinguished from lies. One such lie is that the common herd has the same right to criticize, govern, and counsel as the few intellectuals. The elitism and incipient racism of his remarks about

the relation between class and intelligence so incense the crowd that he is voted “an enemy of the people.”

The hostility of the mob does not stop with a vote of censure; the Stockmann family is assaulted on every front. The mayor and his supporters visit Thomas Stockmann and try to appeal to his self-interest in the hope of getting him to retract his report on the pollution at The Baths. The final test comes when old Morten Kiil informs him that all the money that he would have left to Katherine’s children is invested in The Baths and will be lost unless he says he was mistaken about the contamination. All these threats to his integrity convince Thomas Stockmann to abandon his plan to take his family to the United States. He realizes that he must stay in Norway and fight. He and Petra vow to open a school in Horster’s house, where they will try to train the “mongrels” to become decent and independent-minded people.

One problem that arises in interpreting this play stems from the disparity between Thomas Stockmann’s facts, which are correct, and his opinions, some of which are indeed questionable. He is frequently ridiculous, and his elitism (his talk of “mongrel” people) clashes sharply with the progressive views that he claims to cherish. Ibsen apparently undermines his protagonist in this manner because there is no reasonable spokesman for the other points of view. In adapting this play for the American stage, American playwright Arthur Miller eliminated Thomas Stockmann’s disagreeable or ridiculous traits, as well as his “fascistic” opinions.

## HEDDA GABLER

**First produced:** 1891 (first published, 1890; English translation, 1891)

**Type of work:** Play

*An unsuccessful attempt to shape the destiny of the man whom she once loved deprives a bored aristocratic lady of her last remaining sense of freedom.*

While the familiar Ibsenian patterns remain intact in *Hedda Gabler*, the conflict is no longer rooted

in ideology. Though she loved the glamorous and dissolute Eilert Løvborg, fear of scandal and of her own repressed sexuality prevented Hedda Gabler from giving her love free rein. As a last resort, she has married George Tesman, a humdrum, middle-class historian, whom she does not love. While George is astonished that he has had the good fortune to marry the daughter of the late General Gabler, Hedda is despondent to find herself trapped in the hopelessly bourgeois Tesman family. George and Hedda both have returned from their long wedding trip with expectations: George fully expects to be appointed to a professorship, and Hedda, much to her dismay, is expecting Tesman’s child. George has assumed that the appointment will automatically be his, because Eilert Løvborg, his only serious rival, has long suffered from acute alcoholism. He soon learns, however, that Eilert has stopped drinking and has published a very successful book. He is not aware, however, that Eilert is still deeply in love with Hedda.

Eilert has recently completed another book, which promises to be his masterpiece. When Thea Elvsted, the wife of Eilert’s former employer, beseeches Tesman to keep an eye on Eilert because she fears that he may start drinking again, Hedda is intrigued. Without difficulty, she gets Thea to admit that, though she has managed to reform Eilert, she has never been able to win his love because he is still haunted by the shadow of another woman. Thea is unaware that Hedda is that woman, and Hedda is extremely gratified to learn that she may still exercise great power over Eilert. She puts this power to the test when she successfully tempts him to take a drink and then to accompany George to a party. Hedda wants to shape Eilert’s destiny by freeing him from fear of alcoholism. Though she assures Thea that he will return “with vine leaves in his hair,” by which she means that his debauchery will have been translated into Dionysian creativity, she is also aware that he may instead succumb to his weakness. Either way, she will have gained control over him.

Unable to control himself, Eilert becomes so drunk at the party that he loses the manuscript of his new book. Tesman, who finds it, entrusts it to Hedda for safekeeping. When the distraught Eilert enters near the end of act 3, he tells Hedda and Thea that he has destroyed the manuscript. Thea, who regards this book as her and Eilert’s “spiritual

child,” is crushed. After Thea’s departure, Eilert confesses to Hedda that he dared not tell her that he had simply lost “their child,” and he intimates that he intends to “end it all” as soon as possible. Firmly believing that his sense of honor will not allow him to live with his failure to master his weakness, Hedda gives him one of her father’s dueling pistols and tells him to “do it beautifully.” After he leaves, she gleefully burns Eilert’s and Thea’s “child.”

Though the first account of Eilert’s death suggests that he has fulfilled Hedda’s expectations, the audience subsequently learns that he has not committed suicide at all. In fact, he has been fatally shot by accident in a brothel, where he was raving about “a lost child.” Hedda’s failure to shape his destiny brings her face-to-face with her own failure to achieve selfhood. The final degradation occurs when Judge Brack, who recognized the gun that killed Eilert as one of General Gabler’s pistols, intimates that the price of his silence is Hedda’s agreement to become his mistress. This final loss of freedom seems to motivate her to shape her own destiny. While Thea and George are patiently work-

ing at the task of reconstructing Eilert’s lost book from notes that Thea has kept, Hedda goes into the adjacent room and shoots herself in the temple.

## SUMMARY

Henrik Ibsen’s impeccable craftsmanship and his deep understanding of human psychology place him in the first rank of dramatists. His plays complement and correct one another in a dialectical manner. Though some of the ideas in the plays are now dated, he continues to hold the stage because of the vitality of his characters. By linking the dramatic device of gradual revelation of the past with the “ghosts” in the past lives of his characters, he found a way to make psychological development his main subject. In skillfully exploiting the relations between his characters and their environment, he used sets and props to suggest a psychological complexity usually considered beyond the scope of the theater. By means of these and other reforms of tired dramatic conventions, Ibsen remade the drama.

**DISCUSSION TOPICS**

- In what ways did Henrik Ibsen forge a remarkably effective preparation for his career?
- Which accounts for the fact that Ibsen wrote most of his best-known plays while living in Munich and Rome: frustration, a perspective gained by being away, an escape from “the ghosts of the past,” or some other factor?
- Was Ibsen a champion of the rebel or an admirer of just a selection of rebellious characteristics?
- Show how the structure of Ibsen's plays demonstrates his correctness in choosing the drama rather than narrative art.
- In *Hedda Gabler*, what is the significance of the oft-repeated phrase about vine leaves in Eilert's hair?
- What does it mean that Ibsen's plays “complement and correct one another in a dialectical manner”?
- The conflict in *An Enemy of the People* seems very relevant today. Would it have been even more so then if Ibsen had substantiated more effectively the opposition to Dr. Stockmann?

# EUGÈNE IONESCO

**Born:** Slatina, Romania  
November 26, 1909

**Died:** Paris, France  
March 28, 1994

*Hailed as one of the most important playwrights of the Theater of the Absurd and one of its leading defenders, Ionesco wrote plays that applied surrealist techniques to the language and the daily life of their characters in order to express his views on the human condition.*

## BIOGRAPHY

Eugène Ionesco (ee-uh-NEHS-koh) was born in Slatina, Romania, on November 26, 1909. His father, also named Eugène Ionesco, was Romanian, and his mother, Marie-Thérèse Icard Ionesco, was French. The family moved to Paris in 1911. Young Eugène lived there with his mother and his sister until 1922, when his father, who had returned to Romania several years earlier, demanded that his children be sent to him. Eugène thus became a youngster with two countries. He later pointed to that experience as a source of his skepticism because after being taught in France that French was the most beautiful language in the world and the French people were the most courageous, he learned in Bucharest that Romanian was the most beautiful language in the world and the Romanian people were the most courageous.

Ionesco majored in French at the University of Bucharest. He published literary articles and a collection of verses. He married Rodica Burileanu and made a living teaching French. In 1938, he received a scholarship to travel to France so he could write a thesis on French poetry. The thesis was never completed. When he returned to Romania, the future author of *Rhinocéros* (pb. 1959, pr. 1960; *Rhinoceros*, 1959) was horrified by the rise of fascism. He and Rodica returned to France in 1942. They settled in Paris, where Ionesco worked for a publishing firm. Their only child, Marie-France, was born in 1944.

His first play, *La Cantatrice chauve* (pr. 1950, pb. 1954; *The Bald Soprano*, 1956), was a one-act “anti-play” inspired by an English-language instruction

manual. There was no soprano in the play, and nobody was bald. The play was appreciated by only a select few who saw it as a surrealist work. The next play, *La Leçon* (pr. 1951, pb. 1954; *The Lesson*, 1955), was about a real lesson taught by a domineering professor who overwhelms and kills his young pupil. *Les Chaises* (pr. 1952, pb. 1954; *The Chairs*, 1958), a “tragic farce” in which an old couple fills the last hours of their lives with a multitude of imaginary friends and admirers, was better received by the critics. Ionesco’s early plays also include *Jacques: Ou, La Soumission* (pb. 1954, pr. 1955; *Jack: Or, The Submission*, 1958), *L’Avenir est dans les œufs: Ou, Il faut de tout pour faire un monde* (pr. 1953, pb. 1958; *The Future Is in Eggs: Or, It Takes All Sorts to Make a World*, 1960), and a series of short sketches.

Ionesco, who had played with language and with the mechanics of theater, was now in search of a visual language, more direct and stronger than words. He intensified his early plays to give movement, space, and objects their greatest impact. The results were *Victimes du devoir* (pr. 1953, pb. 1954; *Victims of Duty*, 1958) and *Amédée: Ou, Comment s’en débarrasser* (pr., pb., 1954; *Amédée: Or, How to Get Rid of It*, 1955). *Amédée* was Ionesco’s first three-act play. It takes place in an ordinary Parisian apartment in which a corpse, who grows to gigantic proportions, represents, among other things, Amédée’s dead creative instinct. In 1954, Gallimard, one of the most distinguished French publishers, published the first volume of Ionesco’s theatrical works.

A character named Bérenger appeared for the first time in *Tueur sans gages* (pr., pb. 1958; *The Killer*, 1960). Bérenger continued to be the central

figure in the subsequent plays *Rhinoceros*, *Le Piéton de l'air* (pr. 1962, pb. 1963; *A Stroll in the Air*, 1964), and *Le Roi se meurt* (pr. 1962, pb. 1963; *Exit the King*, 1963). In these plays, Béranger represents a part of Ionesco. When Béranger in *Rhinoceros* resists the rise of fanaticism represented by the beasts that invade a peaceful town, he is the part of Ionesco common to people of goodwill and sturdy personality. When Béranger is faced with death in *Exit the King*, he is the part of Ionesco common to all human beings. Béranger, however, is also a deeply intimate part of his creator when, as a French writer vacationing in England, he flies above the sunny countryside in *A Stroll in the Air*.

In *Rhinoceros*, the symbolism of the rhinoceros—accessible, coherent, and powerful—established Ionesco as a world famous dramatic author. The play was first performed in Düsseldorf, Germany, in 1959, in Paris and London in 1960, and in New York in 1961. As the first volume of his theatrical works was published in England and the second volume appeared in Paris, Ionesco's fame was confirmed. In response to those critics who denounced him as self-centered, Ionesco argued that the role of the playwright is not to defend any particular ideology but rather to provide a personal testimony of the human experience.

Ionesco continued to write short sketches, such as *Délire à deux* (pr. 1962, pb. 1963; *Frenzy for Two or More*, 1965) and *Jeux de massacre* (pr., pb. 1970; *Killing Game*, 1974; also pb. as *Wipe-out Games*, 1970). His self-discovery continued in more extensive works: *La Soif et la faim* (pr. 1964, pb. 1966; *Hunger and Thirst*, 1968), *L'Homme aux valises* (pr., pb. 1975; *Man with Bags*, 1977), and *Voyages chez les morts: Ou, Thèmes et variations* (pb. 1981; *Journeys Among the Dead: Themes and Variations*, 1985). These works, intensely autobiographical and sometimes obscure, have not achieved the success of Ionesco's earlier ones.

Ionesco also wrote a novel, a collection of short stories, screenplays, and numerous articles. His *Journal en miettes* (1967; *Fragments of a Journal*, 1968) and *Présent passé passé présent* (1968; *Present Past Past Present*, 1972) contain autobiographical material. Some of his writings on avant-garde theater have been collected in *Notes et contre-notes* (1962; *Notes and Counter-Notes*, 1964).

Ionesco was awarded the Grand Prize for Theater by the Société des Auteurs, and in 1971 he was

admitted to the prestigious Académie Française. Gallimard added his *Théâtre complet* (complete plays) to its exclusive Bibliothèque de la Pléiade series in 1991. In 2007, *The Bald Soprano* had been running uninterruptedly in Paris at the tiny La Huchette Theater for fifty-five years.

## ANALYSIS

Ionesco's bilingualism might have contributed to his mistrust of language. It distanced him from the French he used in his literary work and prompted him to find the incongruities that language contains. *The Bald Soprano* introduced the consequences of this mistrust: a language of truisms, clichés, changes of subjects, word associations, sound associations, and other plays on words, all spoken with a rhythm that can accelerate and become a cacophony or a verbal flight devoid of any sense. Ionesco spent the next thirty years experimenting with meaningless language. In his last play, *Journeys Among the Dead*, he intuited that such language is caused either by an exclusive reliance on rationality, as exemplified by the Logician in *Rhinoceros*, or, at the opposite end, a predominance of emotions that the speaker does not understand, as exemplified by the Smiths and the Martins of *The Bald Soprano*.

Meaningless language is either the talk of consciousness alone or the talk of the unconscious alone. Meaningful language comes from an integrated psyche. It has the authenticity of emotions, but it is shaped by consciousness and becomes comprehensible. The coherence of language is, therefore, closely tied to self-knowledge. For Ionesco, the slow process that leads to this intuition about language and consciousness is introspective. This introspection is explicit in *Victims of Duty*. In that play, a policeman enters a Parisian apartment and interrogates Choubert, its occupant. His pressing questions change into a brutal interrogation, and the policeman forces Choubert to look back at his past. As Choubert, a victim of duty, develops an image of descent into oneself, painful memories and strange experiences emerge from his unconscious. He dies without making sense of the elements he has uncovered.

Ionesco will pursue his search. In *Hunger and Thirst*, Jean, his protagonist, is the explorer of vast spaces, unnamed because the physical journey is also an examination of oneself and the human con-

dition. As indicated by their titles, the theme of the journey invades two of his later plays, *Man with Bags* and *Journeys Among the Dead*. *Exit the King* is also a journey and deals with the universal destination of death.

The unconscious is experienced as a foreign country in *A Stroll in the Air*. In this play, England's charming countryside at first seems to welcome a French writer—as such, a double of Ionesco—but the country later changes into the setting of terrifying nightmares. Even in their own country, Ionesco's characters feel like foreigners to their surroundings and to themselves. Mr. Martin, unaware of the reasons that made him marry his wife, needs a long, logical deduction to recognize her. The town residents in *Rhinoceros* see a beast springing out of themselves.

Ionesco's theater deals with exterior realities: the bourgeois routine of the Smiths, the empty life of an old couple, the boring existence of Bérenger, the agony of the king, and many other topics, such as education (*The Lesson*), family life (*Jack: Or, The Submission*), conjugal life (*Frenzy for Two or More*), urban life (*The Killer*), politics (*Le Maître*, pr. 1953, pb. 1958; *The Leader*, 1960), revolution (*Ce formidable bordel*, pr., pb. 1973; *A Hell of a Mess*, 1975), and tyranny (*Man with Bags*). Beyond this multiplicity of topics lies the search for the inner life of the protagonist, the human being in general, and the author himself. In *Frenzy for Two or More*, the metaphorical war between a man and his wife coincides with a real war that destroys the city. Deadly projectiles explode around the couple, but these projectiles change into ludicrous objects—broken cups, fragments of pipes, doll heads—as the hostile partners briefly remember their past and attempt to communicate. When inner life is restored, the internal war ceases and harmony might have a chance in the life of the couple, as well as in the city.

The eruption of strange elements in a banal setting is rarely as clear as it is in *Frenzy for Two or More*. It is nevertheless frequent in Ionesco's work: The clock in the Smiths' living room strikes seventeen times as Mrs. Smith announces that it is nine o'clock, Jack's fiancée has three noses, and a corpse expands in Amédée's bedroom while mushrooms grow in his living room. Sometimes, the effect is intensified by the proliferation of the objects: a young couple produces hundreds of eggs in *The Future Is in Eggs*; dozens of cups are piled up in

*Victims of Duty*; a multitude of rhinoceroses invade a town in *Rhinoceros*; and pieces of furniture fill an apartment, a building, a street, and the entire city in *Le Nouveau Locataire* (pr. 1955, pb. 1958; *The New Tenant*, 1956). There is some logic in the last example, since an apartment is being furnished. This logic, however, is eliminated by the proportions of the event—the city is paralyzed. Ionesco applies the same mechanism when he creates the accumulation of chairs in *The Chairs* or the multiplication of murders in *The Killer*.

The protagonists that produce eggs or carry chairs are led by internal forces, which they ignore and therefore cannot control. They behave like automatons. Ionesco has many ways of making puppets out of his characters. Their mechanical language and the proliferation of objects in their hands, or around them, are two of these methods; others are caricature and distancing. The old woman who raises her petticoats in the hope of looking sexy in *The Chairs*, and the king responsible for countless massacres who cries like a child in *Exit the King* are examples of caricatures. In *Victims of Duty*, Ionesco's first clearly introspective play, Choubert's descent into himself is presented as a show within the show, thus reducing the impact of the undertaking.

In Ionesco's theater, topics are serious, such as the ideological takeover of a town, or death, but they are treated lightly. Language and action, pushed to extremes, deprive the protagonists of a full credibility and plunge them into the absurd, yet they remain tragic in their human implications.

## THE BALD SOPRANO

**First produced:** *La Cantatrice chauve*, 1950  
(first published, 1954; English  
translation, 1956)

**Type of work:** Play

*An English couple engages in small talk during an evening at home. They are visited by another couple and the Fire Chief.*

The title of a play usually permits one to anticipate its content. However, in *The Bald Soprano*, nobody sings and no head is bald. In most plays, words are chosen to make the strongest possible impact.

In *The Bald Soprano*, language flows independently from meaning. A play has a plot and at times subplots. *The Bald Soprano* does not. It is subtitled an “anti-play,” and that is true.

The scene is the English living room of an English couple, the Smiths. Mr. Smith reads the newspaper. Mrs. Smith comments on the dinner they just had, as if her husband had not been there; she praises yogurt, which is good for the stomach, “appendicitis, and apotheosis.” Mr. Smith remarks that a good doctor must die with his patient. He announces the death of Bobby Watson; the same name, repeated thirty times, is applied to all the members of Bobby’s extended family.

The rest of the play is in keeping with this introductory segment. Mary, the maid, introduces the Martins. A long conversation, punctuated by “What a coincidence!,” permits the Martins to deduce that the Smiths are husband and wife. The doorbell rings three times. Nobody is there when Mrs. Smith opens the door. She concludes that every time the doorbell rings, there is nobody there. When Mr. Smith opens the door, the Fire Chief enters; he is in search of fires to extinguish. Various fables are told. Ambiguous statements about fire are made, while Mary throws herself on the Fire Chief. Clichés and false proverbs accumulate at an increasing pace, until the characters scream onomatopoeic words at each other. The noise stops; the lights turn off. When they come back on, the Martins are seated like the Smiths were in the first scene; they repeat the same sentences. The curtain falls.

The absurd language of the play was inspired years earlier, when Ionesco was in Romania and read the self-taught lessons in an English manual in which, for example, one learns the use of prepositions by discovering that the ceiling is above, the walls around, and the floor under. Such sentences stimulated Ionesco’s creativity. The title of the play was determined by chance. During a rehearsal, an actor erroneously replaced the banal expression “the blond teacher” contained in the script with

the unexpected “the bald soprano.” The error fit well with Ionesco’s intentions and he adopted it; it fit so well, in fact, that the bald soprano, absent from the first play, appears as a singing bald English girl in *A Stroll in the Air*; the other play that Ionesco situated in England.

The surprise of the audience who attended the first performances of *The Bald Soprano* is understandable. Since then, however, the play has become the prototype of what was later called the Theater of the Absurd. It is the striking integration of the techniques that Ionesco discovered in surrealist poetry, with his own vision of literature.

## THE CHAIRS

**First produced:** *Les Chaises*, 1952 (first published, 1954; English translation, 1958)

**Type of work:** Play

*An old couple prepares to deliver a message for posterity. The numerous chairs they bring to the stage to accommodate the audience remain empty.*

*The Chairs* is a one-act tragic farce. A ninety-five-year-old man and his ninety-four-year-old wife live isolated on an island. They interminably reminisce, joke, and quarrel. He plans to share his life experience with posterity and has invited a large audience to hear the orator who will speak on his behalf. It would be touching if their dialogue were meaningful, but disconnected from reality, past or present, it often derails into a mechanical blurb.

The doorbell rings, and the old man hobbles to the door. He welcomes the first guest, but the Lady is invisible. The old people are excitedly talking to no one; the chair they offer to the visitor remains empty. The episode repeats itself again and again, with the old couple bringing chairs from the wings faster and faster. This multiplication of chairs is a theatrical miracle—the striking image of void. It culminates with the invisible Emperor’s arrival. The orator, who is a real body, is ready to speak. He reaches the dais and salutes the invisible crowd. The old woman sobs, her husband trembles with emotion; they shout “Long live the Emperor,” and throw themselves out of two symmetrical windows. The orator, who has remained impassive during

the double suicide, coughs, groans, and utters his message—a few guttural sounds. The expected speech is as void as the chairs.

*The Chairs* portrays the loneliness of the elderly. Their situation borders on tragic. They have no descendant, and the offspring that the woman describes is too perfect to be true. As for the man, the apotheosis that he wants is so inflated that it can only blow up. Their conduct neutralizes the empathy they could inspire. The man is ridiculously dependent on his wife; the woman shamefully tries to be sexy. They appear to be close at first, but when the visitors arrive they go their own way, tell contradictory stories, or even lies, and flirt with the guests. Their marriage is an appearance. It is at the same moment, but separately, that they plunge to their deaths.

Ionesco progressively makes puppets out of them. He places in their mouths a language so meaningless that, in extreme cases, it is a verbal flight in which words are associated by sound rather than by meaning. The frantic and shaky transportation of chairs becomes as mechanical as the couple's language. It is a proliferation of objects without a purpose, the same concept that Ionesco used for the accumulation of eggs in *The Future Is in Eggs*. Ionesco's puppets, however, recover some dignity as representatives of the human condition. In the face of death, human activities become irrelevant. Ionesco's tragic farce is a superb expression of the insignificance of life.

## RHINOCEROS

**First produced:** 1959 as *Die Nashörner*; 1960 as *Rhinocéros* (first published, 1959, as *Rhinocéros*; English translation, 1959)

**Type of work:** Play

*A rhinoceros charges through a peaceful town. Soon most residents are attracted by the appeal of bestiality and change into rhinoceroses. Only Bérenger refuses to capitulate.*

The play begins as Bérenger and other patrons are having a drink at an outdoor café. A rhinoceros charges down the street. The characters remark about this strange incident, but soon the initial sur-

prise wears off. The same reaction is repeated when another animal gallops through the street from the opposite direction.

Act 2 begins in the office where Bérenger works. His colleagues are discussing the newspaper account of the animal incident. Mrs. Boeuf rushes in and announces that a rhinoceros has chased her and realizes that it is Mr. Boeuf transformed. Bérenger then visits his friend John, who defends the rhinoceroses, eventually turns into one, and attempts to run Bérenger down.

In act 3, Dudard, one of Bérenger's colleagues, explains the motives of the rhinoceroses, making it sound like Bérenger, who does not share his views, is abnormal. Daisy, Bérenger's girlfriend, informs him that Botard, who had supported Bérenger's views, has joined the animals' ranks. Bérenger receives only excuses and protests when he rallies the others against the bestiality that has overcome the town. Daisy herself fails to hear him; she gives in to the attraction of the herd and leaves the stage to metamorphose. Bérenger misses the force that belonging to a community provides, but he stands his ground, alone and miserable, in his humanity.

A few elements of fantasy appear in the play; for example, Mr. "Boeuf" means Mr. "Ox," and Jean plays an illusionist. However, the play is simple, even traditional, in its structure. This simplicity gives more force to the disturbing presence of beasts in an urban environment. The metamorphosis of the residents reminds one of Franz Kafka's short story *Die Verwandlung* (1915; *The Metamorphosis*, 1936). However, where Kafka's giant bug causes repulsion, Ionesco's "rhinocerotitis" is seductive. The rhinoceroses' trumpeting is perceived as music, and they are said to be as beautiful as gods.

The play represents the mindless following of others in order to be like the herd; the same appearance, the same aspirations, the same thoughts, overtake the community and provide to each individual a cozy sense of closeness. Ionesco was in-

spired to write *Rhinoceros* by the rise of fascism in Romania in the late 1930's, but he purposely refused to give a name to his herd. The play applies to fascism, Stalinism, and all the other political or religious doctrines that justify arbitrary violence in the name of an ideal. The French intelligentsia, who at the time inclined to the Left, highly approved of *Rhinoceros*. Its author was invited into their circle, but Ionesco, then and later, refused any affiliation.

The rhinoceros, enormous and seductive because of its might, blindly charging down a street, trampling kittens, destroying staircases and piercing walls, is a powerful symbol of the danger of ideologies when they turn into fanaticism. It is still a valid symbol in the twenty-first century, whether it applies to the relatively harmless dictatorship of fashion, the excesses of well-intentioned religious groups, the tyranny of political leaders, or the horrors of terrorism.

## EXIT THE KING

**First produced:** *Le Roi se meurt*, 1962 (first published, 1963; English translation, 1963)

**Type of work:** Play

*This play is the simplest and most explicit of Ionesco's works. It portrays the slow acceptance of death by King Bérenger the First.*

*Exit the King* is one long, uninterrupted scene. The kingdom has been deteriorating for some time: the heater does not work, the cows do not produce milk, and the sun is late. Queen Marguerite and the Doctor understand what is coming. They believe that they must inform the King and help him prepare for death. Queen Marie, the King's second and dearest wife, wants to protect him from the truth. Encouraged by Marie, Bérenger first denies that his death is imminent, but he must progressively face the evidence. The physician coldly presents the medical facts.

Marguerite expects the King to live his death as a "ceremony." Marie comforts and cajoles him. In a progression as precise as the various stages described by modern physicians who study the process of dying, Bérenger denies the possibility of his demise, rebels, bargains, despairs, and finally re-

signs himself to it. As he weakens and loses control, his entourage vanishes. Only Queen Marguerite remains at his side. Bérenger has ceased his struggle. He looks inside; he is relieved of the metaphorical weights he carried through life. One limb, one finger at a time, he gives himself up to the Divinity of Death represented by Marguerite. She disappears, leaving the King on his throne, as still as a statue. The scenery fades away, a gray light invades the stage, and everything vanishes in a sort of mist.

Why choose a king to describe the dying process? Because to be born and to live is to take possession of the world. To die is to lose that grip, just as Bérenger witnesses the disappearance of his entourage, his kingdom, and everything else. The secondary reason is a traditional one: Being a king enlarges the character and gives him the nobility of a new King Lear. At times, Bérenger concentrates in himself the entire history of humanity; he invented fire as well as atomic fission. At other times, he is the universe itself, the light and the clouds, as if Ionesco were prophesying the end of the world.

In Ionesco's theater, tragedy and comedy are inseparable. His tragic hero is also a mediocre bourgeois who forgets to wear his slippers. He is even a sadistic and cowardly puppet in the tradition that produced Alfred Jarry's play *Ubu Roi* (wr. 1888, pr., pb. 1896; English translation, 1951). Some scenes in which Bérenger is pulled between the contradictory commands of his entourage are performed in a slapstick style. Frequent references are made to the fact that the King's death is the subject of a play that will end shortly. These references function on two levels. From a tragic perspective, they remind the audience that the process leading to death is inexorable. In a comic perspective, they say that, in this case at least, it will only be the end of a puppet show.

## SUMMARY

Eugène Ionesco's theater carries elements of daily life to the extreme, gives them a subversive and comical dimension, and expresses the tragedy of the human condition with a wide, liberating laugh. In creating this work, Ionesco played a central role in the invention of a new kind of theater, a theater capable of reflecting the irrationality of humans and the fragility of their world. His plays seemed shocking at the time; they are now classics of the twentieth century.

Gisele C. Feal

## CHRISTOPHER ISHERWOOD

**Born:** High Lane, Cheshire, England

August 26, 1904

**Died:** Santa Monica, California

January 4, 1986

*Considered one of the finest English novelists of his talented generation, Isherwood wrote his best work on life in Berlin during the last days of the Weimar Republic.*

### BIOGRAPHY

Christopher William Bradshaw-Isherwood was born in High Lane, Cheshire, England, on August 26, 1904. His family, owners of a large Elizabethan mansion, was well established in the upper-middle class of England, and his father, Francis Bradshaw-Isherwood, rose to the rank of lieutenant colonel in the military before his death in action during World War I. His mother's name was Kathleen Machell-Smith. Isherwood's early education, first at St. Edmund's School and then at Repton School, was significant largely for the friendships that he formed with W. H. Auden and Edward Upward—both of whom would become, like Isherwood, important literary figures in the 1930's. They remained friends for life, most intensely during their Cambridge years. Isherwood wrote poetry and an unpublished novel while at Cambridge; eventually deciding on literature as a career, he purposely failed examinations and subsequently left the university without a degree. While writing *All the Conspirators* (1928), he tutored students and served as secretary to the Mangeot family. After a brief stint as a medical student, he left England to join Auden in Berlin.

The move to Berlin was the most significant of Isherwood's early life. From 1929 to 1933, Isherwood taught English and lived a marginal exist-

tence in a city that was bordering on moral and political chaos. In Berlin, he met many people, English and German, who were to serve as models for the characters in his major works. *The Memorial: Portrait of a Family* (1932), his second novel, was published while he was a resident in Berlin. His "Berlin stories" were published several years after he had left the German capital because of the Nazi takeover: *The Last of Mr. Norris* appeared in 1935; *Goodbye to Berlin*, in 1939. In between the two Berlin novels, Isherwood collaborated with Auden on two plays, *The Dog Beneath the Skin: Or, Where Is Francis?* (pb. 1935, pr. 1936) and *The Ascent of F6* (pb. 1936, pr. 1937), both influenced by German expressionist theater. In 1938, soon after the publication of Isherwood's first autobiography, *Lions and Shadows: An Education in the Twenties* (1938), he and Auden traveled to China to report on the outbreak of war there. The result of this journey was another collaboration with Auden, the excellent travel book *Journey to a War* (1939).

At the beginning of 1939, Isherwood left Europe for good and settled in California, which was to be his permanent residence until his death. The move to the United States coincides with a transition in both his life and his work and thus serves as a convenient dividing line in Isherwood's biography. One of the important results of this move was Isherwood's introduction to another British writer, Aldous Huxley, who prompted a profound change in Isherwood's religious life by introducing him to the Indian guru Swami Prabhavananda. Isherwood subsequently became a pacifist and a Vedantist.

A growing interest in Hindu philosophy occupied much of his time in the 1940's. He was the editor of the magazine *Vedanta and the West*, and along with Prabhavananda translated the Hindu religious text *Bhagavad Gītā* (1944). Isherwood was sometimes criticized for his apparent withdrawal from the conflicts confronting his native country. His move to the United States and preoccupation with Hinduism were considered the acts of an escapist. Isherwood remained faithful to the pacifist cause, however, even spending two years working for the American Friends Service Committee hostel for refugees in Pennsylvania.

The year 1945 saw the publication of Isherwood's much-admired novel *Prater Violet*. He also worked for several Hollywood studios during these years, including Metro-Goldwyn-Mayer and Warner Bros. Finally, in 1946 he became a citizen of the United States.

In the late 1940's, Isherwood traveled through South America; the result of the journey was his second travel book, *The Condor and the Cows: A South American Travel-Diary* (1949). Although he was a well-established writer by this time—his South America book had been commissioned, for example—he remained relatively unknown outside a small group of interested critics and devoted readers. In 1951, however, John Van Druten's play *I Am a Camera* (1951), based on *Goodbye to Berlin*, was performed in New York. The success of the play, and later of the 1968 Broadway musical version and 1972 film *Cabaret*, ensured renown for the novelist.

In the 1950's, Isherwood continued to work on translations of Hindu writings, including *How to Know God: The Yoga Aphorisms of Patanjali* (1953). Additionally, he published his own work, the novel *The World in the Evening*, in 1954. In 1959, he began teaching as a guest professor at Los Angeles State College. Throughout the 1960's, Isherwood received appointments at California universities, including the University of California at Los Angeles, at Riverside, and at Santa Barbara. Three works appeared in these years: *Down There on a Visit* (1962), *A Single Man* (1964), and *A Meeting by the River* (1967).

In the final years of his life, Isherwood devoted himself to autobiography and to arguing for the acceptance by society of homosexuality. The two efforts are combined in his last great work, *Christopher and His Kind, 1929-1939* (1976), a frank account of

his own homosexual awakening. Christopher Isherwood died on January 4, 1986, in Santa Monica, California.

## ANALYSIS

The aspect of Isherwood's writing that is most immediately apparent is the extent to which his fiction is all but inseparable from his autobiography. For Isherwood, the process of creation began with his own experience and observation. While he certainly invented material, even those inventions tend to be but slight variations of his actual experiences. In some of his best work, most notably *The Last of Mr. Norris* and *Goodbye to Berlin*, Isherwood uses his own name or his middle names for the protagonist.

That noted, it must also be recognized that the "Isherwood" or "Bradshaw" of the novels is never a perfectly autobiographical presentation of the author. There are significant differences, and Isherwood does not hesitate to assume a mask, even if the voice remains his. There is, for example, an aloofness and ingenuousness to the narrator that is not characteristic of Isherwood himself. The boundaries are so imprecise in Isherwood's work, however, that many readers have confused the writer and the protagonist. Isherwood has even been criticized for some of the faults that he purposely assigned to his fictional self. Likewise, his best work has sometimes been mistaken for mere journal or diary extracts strung together in a loose framework.

The more general opinion, however, is that Isherwood is one of the best writers of his generation. Isherwood stands out in part because of the lucidity and ease of his style. Along with novelist and essayist George Orwell, he is representative of the power that a colloquial or vernacular style can achieve. It was a style that he developed after early experimentation with a prose derived from modernist novelists such as Virginia Woolf and James Joyce. E. M. Forster was particularly influential in the career of the young Isherwood. Consequently, his early novels, such as *All the Conspirators* and *The Memorial*, rely on a tone of ironic understatement by which significant events are treated only slightly while trivial events are presented in full detail. Isherwood referred to this characteristic as the "tea-table technique"; that is, subjects worthy only of the tea table receive undue attention. The inten-

tion is entirely ironic. For example, Isherwood might juxtapose memories of a dead husband with anxieties over cooking and shopping, thus highlighting for the reader the way in which a fragmented postwar society has imposed triviality and isolation on its members.

Though Forster remained the most important influence in his literary career, Isherwood abandoned the techniques of modernism in favor of a more restrained and pared-down realism. Starting with *The Last of Mr. Norris*, he avoided the complexities of a fragmented story line and a jumbled chronology, along with the interior monologue of his earlier novels. Bradshaw's account of his encounters with the strange Mr. Norris is straightforward and colloquial, yet the simple diction conceals a sense of incongruity that can only be called ironic. There is always the slightest sense of mockery and denigration in Isherwood's subtle prose. Indeed, the prose is so subtle that the reader must avoid assuming, mistakenly, that the narrator is merely a neutral or transparent observer—the camera to which the narrator compares himself in *Goodbye to Berlin*. He is not merely a camera; he comments on the subjects of his vision, and the commentary is persistently, if not overtly, ironic.

The source of the irony is the sensibility of Isherwood's detached narrator. He calls little attention to himself, and he does not dramatize himself. He is an unobtrusive guide leading the reader through "the freak museum of our neurotic generation." The narrator's strong urge to be that guide provides the incentive for the documentary style of the Berlin novels. The nature of the political circumstances demands of him a lucid and objective presentation, insofar as objectivity is possible. Isherwood's changing technique exemplified some of the concerns of his generation, particularly the belief that communication was more important than aesthetics.

His work after 1939, the year that he moved to the United States, is generally thought to be inferior to his early work, at least in terms of style. Instead of his quintessential "thirties prose," considered by many to be the best of the decade, Isherwood's later style is more melodramatic and sentimental. According to many critics, the excursions into Oriental philosophy that inform his later work, *A Meeting by the River*, for example, weaken the universal appeal that was so marked in his early

novels. Not all, however, are in agreement on this particular point. Brian Finney, Isherwood's biographer, finds that his later novels compare favorably with the early ones.

The most important aspect of Isherwood's later career remains his public defense of homosexuality. *A Single Man*, for example, is a sympathetic portrait of an aging homosexual. This defense was an inevitable result of his intensely autobiographical approach to fiction. While he suppressed it in his early career, by the 1960's he no longer hedged on the issue. Isherwood had to be courageous in his frankness, since homosexuality had long been a taboo subject in literature. Eventually, he came to see it as a cause and claimed that, in defending this one minority, he was speaking out for all minorities. This sympathy for those who have been marginalized by a brutal society is the most persistent theme in Isherwood's work.

## THE LAST OF MR. NORRIS

**First published:** 1935

**Type of work:** Novel

*A young Englishman is captivated by a quirky con artist in the Berlin of the Weimar Republic.*

*The Last of Mr. Norris* (the British title is *Mr. Norris Changes Trains*), Isherwood's third novel, takes place in the year 1930. Two strangers, sharing a compartment on the train to Berlin, begin speaking to each other as the train crosses the border from Holland into Germany. The younger one is William Bradshaw, a young man looking to escape from the restraints of England to the sophisticated and dissolute German capital. The older one is Arthur Norris, a well-dressed man with expensive accoutrements. By the time they reach Berlin, the two are on friendly terms. Eventually, Bradshaw's experiences in Berlin revolve around his somewhat puzzling compatriot.

At first, Bradshaw is blind to Norris's corruption. He consistently underestimates Norris's depravity. Only very slowly does he learn that Norris is practicing blackmail and fraud in order to maintain his accustomed gentlemanly lifestyle. Through Norris, Bradshaw is introduced to the world of sexual deviation and political machina-

tion. Without a doubt, Norris is a charming character, and Bradshaw's ingenuousness is understandable. Ultimately, however, the charm is superficial, and the reader understands before the narrator does that this Norris is a crook who hides behind a mask of snobbery and wealthy appearances. Bradshaw seems incapable of reading these signs and resists detaching himself from a man who has become something of a father figure for him.

Mr. Norris's self-centered depravity is suggestive of the city in which the story takes place. The final years of the Weimar Republic are presented as years of political confrontation marked by the debasement of meaning through distorted language and deliberate lies. Near the end of the novel, the political situation comes center stage, as Bradshaw describes the showdown between Nazis and Communists. Adolf Hitler's shadow looms over the final pages. The German populace is taken in by the Nazi leader in much the same way that Bradshaw has been deceived by Norris. Norris, however, is a comic bungler whose designs are exposed and foiled. By contrast, Hitler seems even more brutal and dynamic. Isherwood's novel is a fascinating account of a personal relationship set against a society in disintegration.

## SALLY BOWLES

**First published:** 1937

**Type of work:** Novella

*A young Englishwoman meets and overcomes various setbacks in Weimar Berlin.*

*Sally Bowles* is the most renowned of Isherwood's famous "Berlin stories," a "loosely-connected sequence of diaries and sketches," as he called them, that together form the novel *Goodbye to Berlin*. Both the story and the character Sally Bowles brought Isherwood his first fame. That fame was attributable in large part to the role of Sally as played by Julie Harris in the play *I Am a Camera*.

Sally Bowles is a young Englishwoman, living in Berlin, who is befriended by the narrator (whose name is Christopher Isherwood, though he is not to be identified completely with the author). Sally is a cabaret artist of little talent but much charm. Indeed, she lives primarily by her charm, wit, and

peculiar beauty. Christopher soon learns that her Bohemian lifestyle involves entertaining gentlemen, but he does not pass judgment on her.

In fact, Christopher finds Sally to be the most attractive of his Berlin friends because watching her is like watching "a performance at the theater." Sally's performances are certainly eccentric and, to a degree, pretentious, yet these pretensions do not bother the narrator. He rather likes her masquerades and disguises. In this sense, Sally has much the same effect on Isherwood that Norris had on Bradshaw. Nevertheless, she is more ingenuous than Norris, and this ingenuousness makes her more transparent. Her charm thus mitigates her obvious dishonesty and artificiality. Sally uses people without compunction, but she is also innocent and childlike. This childishness is the source of her appeal.

In a way, Sally is a peripheral character. Her upper-class connections allow her to escape from Berlin when life there becomes tiresome or boring. While she is unquestionably one of the "lost" characters in Berlin ("The Lost" was Isherwood's working title for *Goodbye to Berlin*), she somehow manages to escape from the impending devastation that the other Berliners must confront. Great disasters leave her unchanged. Despite rejection from lovers, robberies, and an abortion, Sally remains strangely untouched, and indeed she recovers nicely from these setbacks. She is a misfit and a sexual outcast, but she is also a survivor, untouched by the disease and death attacking the Berliners. Isherwood's novella presents a successful character study and raises questions about those human qualities that can prevail in desperate and degenerate circumstances.

## GOODBYE TO BERLIN

**First published:** 1939

**Type of work:** Novel

*In the last days of the Weimar Republic, a young Englishman befriends several Germans and foreigners whose doom is inevitable.*

The world of *Goodbye to Berlin*, possibly Isherwood's finest novel, is a grim world where the decaying past is about to be transformed into a hor-

rible future. Isherwood writes of the period of transition, the period when change is ineluctable and yet few people seem to see it coming, or at least to recognize the significance of this change.

The reader is introduced to this world in the first section, "A Berlin Diary (Autumn 1930)." This first of two diaries in the novel introduces objects and people that the narrator can observe from the window of his room. The famous phrase from this diary—"I am a camera"—

establishes the technique of the "diary" and something of the narrator's character: He is passive in his perceptions (though not neutral), an observer more than an actor. A certain ironic vision of life is established as well, with an emphasis on the fragmented and discontinuous nature of the world in which the narrator finds himself.

Christopher, called "Herr Issyvoo" by the Germans, turns his attention to four characters of the Berlin scene. The four—Sally Bowles, Peter Wilkinson, Otto Nowak, and Bernhard Landauer—are

representatives of "the lost" (as Isherwood's first, unfinished version of the novel was called). These are people whom "society shuns in horror," according to Isherwood. Christopher tells their stories in a series of episodes that are unified by this theme of the lost.

The novel concludes with another "Berlin Diary," this time dated "Winter, 1932-3." By this time, Nazi brutality is everywhere in evidence, and at novel's end the reader realizes that the coming turmoil will destroy the lost characters of whom Christopher has grown so fond.

### SUMMARY

Another novelist and Christopher Isherwood's coeval, Angus Wilson, placed Isherwood at the moral center of their generation. Both terms, morality and generation, are useful in fixing Isherwood's status: His voice, so clear and precise, is the voice of morality in a world gone chaotic; perhaps more than any other novelist of his time, he speaks for the generation of writers who first achieved prominence in the 1930's. Isherwood's documentary style, combined with a reserved yet persistent moral tone, makes the Berlin stories some of the best in the English language.

Stephen Benz

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

## DISCUSSION TOPICS

- Demonstrate how the decline of Germany in the late 1920's and early 1930's affected Christopher Isherwood's literary production.
- Discuss the part other writers have played in establishing a deserved reputation for Isherwood.
- Was John Van Druten misleading his audience when he titled his play based on *Good-bye to Berlin* as *I Am a Camera*?
- What are the most valid aspects of Isherwood's interjection of personal characteristics in his literary characters?
- What are the best reasons for denying that Isherwood was an escapist?
- What justification can you see in Isherwood's using family names, such as *Bradshaw* and even *Isherwood*, in characterizations of people much more naïve and misled than himself or his family members?

# KAZUO ISHIGURO

**Born:** Nagasaki, Japan  
November 8, 1954

*Read by an international audience, Ishiguro's texts center around themes of human dignity and loyalty pledged to dubious or ambiguous causes. His novels have won major literary prizes.*

## BIOGRAPHY

Kazuo Ishiguro (ihsh-ih-GEW-roh) was born on November 8, 1954, in the Japanese city of Nagasaki, the son of Shizuo and Shizuko (née Michida) Ishiguro. In 1960, his father, an oceanographer, moved with his family to Guildford, near London, because the British government offered the scientist a job in connection with the exploration of the North Sea oil fields. Although the family initially assumed they would soon return to their native land, they found many practical reasons to stay in England, including the fact that Ishiguro's father loved the comparative lack of social obligations in his new country. The family's temporary stay became a permanent one, and Kazuo Ishiguro and his two sisters found themselves immersed in British culture.

Sent to what he described as a typical British school, Ishiguro felt fully integrated there. Reading with pleasure the novels of classic nineteenth century British writers, such as Charles Dickens and Charlotte Brontë, and growing up with the works of other influential European writers, such as Russian dramatist Anton Chekhov, Ishiguro nevertheless retained certain crucial ties to his native culture. His vision of Japan was formed by strong childhood memories, Japanese films of the 1950's, and the Japanese books that arrived every month at home, where the family conversed in Japanese. His interest in films portraying a Japanese past that he himself remembered has remained very strong, and he acknowledges these films as a major artistic influence.

In the 1970's, after completing his high school education, Ishiguro traveled and sustained himself with a variety of odd jobs. Taking his cues from his young British peers, he set out for countries, such

as the United States and Canada, that fascinated them all. He did not feel a need or desire to physically explore a Japan with which he felt connected through his imagination. After a short stint as a grouse beater for the Queen Mother at Balmoral Castle in 1973, and employment as a social worker both before and after receiving his B.A. (with honors) in English and philosophy from the University of Kent in 1978, Ishiguro decided to try his hand at writing. He was twenty-five. He had already aborted a brief and unsuccessful career as a singer and songwriter when, in 1979, he enrolled in the creative writing program at the University of East Anglia, where British novelist Malcolm Bradbury taught courses, and where Ishiguro earned an M.A. in 1980.

Having started to write short fiction in the summer before his first term at East Anglia, Ishiguro garnered immediate acclaim with his work. Three of his short stories were published in *Introduction 7: Stories by New Writers* (1981), and his first novel, *A Pale View of Hills* (1982), received the Winifred Holtby Award from the Royal Society of Literature. Although the novel was translated into thirteen languages, it failed to make a visible impact in America, where his next work, *An Artist of the Floating World* (1986), remained similarly undiscovered despite having earned the Whitbread Fiction Prize as Whitbread Book of the Year in 1986, another important British literary honor.

The financial rewards for his second novel, however, enabled Ishiguro to end his part-time work in a hostel for London's homeless and allowed him to focus exclusively on his fiction and television scripts; in the latter field, his *A Profile of Arthur J. Mason* (1984) and *The Gourmet* (1986) were well received. While working with characteristic in-

tensity on his third novel in 1986, Ishiguro married Lorna Anne MacDougall, a fellow social worker. When *The Remains of the Day* (1989) was published, the couple was still living in an unpretentious corner of London, a fine piano their most valuable possession. In 1991, their daughter Naomi was born.

*The Remains of the Day* cemented Ishiguro's international success with its triumphant reception. It became the 1989 winner of the Man Booker Prize, the United Kingdom's most prestigious literary award. Finally, the novel also marked Ishiguro's breakthrough in the United States, where it earned him sudden recognition as a major voice in the chorus of contemporary fiction. In 1993, *The Remains of the Day* was made into a motion picture, directed by James Ivory and starring Anthony Hopkins. It was nominated for eight Academy Awards.

In 1995, Ishiguro published an unconventional novel, *The Unconsoled*, that failed to convince most critics. Nevertheless, it won Ishiguro the Cheltenham Prize and was short-listed for the Whitbread Novel Award. In 1998, Ishiguro was awarded the Chevalier de l'Ordre des Arts et des Lettres from the Ministry of Culture of France, and he also received the Premio Mantova from Italy.

Ishiguro's next novel, *When We Were Orphans* (2000), was received more enthusiastically and was short-listed both for the Man Booker Prize for Fiction and the Whitbread Novel Award. *The Saddest Music in the World*, a Canadian film released in 2003, was based on a story by Ishiguro.

Ishiguro wrote the original screenplay for the *The White Countess*, a film directed by James Ivory and released in 2005. In the same year, his dystopian novel *Never Let Me Go* was published to great critical and popular acclaim. *Never Let Me Go* was short-listed for four major British literary prizes: the Man Booker Prize for Fiction, the British Book Awards Author of the Year, the Commonwealth Writers Prize (Eurasia Region, Best Book), and the James Tait Black Memorial Prize (for fiction).

## ANALYSIS

As a writer, Ishiguro has remained very modest about his fame. In particular, he has rejected claims that his first two novels, despite their setting and Japanese characters, offer a realistic picture of his home country, which he did not see between 1960 and 1989. Instead, he has insisted that it is a charac-

ter's memory of a conflict in life that held his artistic interest in the writing. Thus, the role of memory has been central in all of Ishiguro's novels, and the ambiguity and unreliability of memory is a key topic of his fiction.

Ishiguro's choice of protagonists demonstrates his basic reluctance to look for obvious links between his characters and himself, an authorial strategy that he rejects. Thus, even his Japanese characters rely for their existence primarily on the author's imagination and artistic skills, rather than on his self-observation. Neither Etsuko Sheringham, the widowed Japanese mother who moved to England with her second husband, a Briton, and who tells the story of Ishiguro's first novel, *A Pale View of Hills*, nor the old painter Masuji Ono, whose diary constitutes the text of *An Artist of the Floating World*, can be seen to represent an authorial alter ego. By making the quintessential English figure of a butler his third protagonist in *The Remains of the Day*, Ishiguro attempted a quantum leap of the imagination. In return, the brilliant success of his butler, Stevens, entangled in the question of whether he has wasted his life serving a corrupt lord, triumphantly demonstrates his author's mastery of his artistic goal of focusing on the human condition as it is revealed through the crises of diverse characters anywhere in the world.

With the pianist Ryder in *The Unconsoled*, Ishiguro created a character who inhabits a surreal world on the border between dream and reality. Through Ryder's extremely subjective and obscure narrative, the novel probes the role and responsibility of the artist vis-à-vis his or her community. Through Christopher Banks of *When We Were Orphans*, Ishiguro challenged the conventions of the crime novel. While depicted as a kind of Sherlock Holmes, Banks, like the comic-book hero Batman, turned to solving crimes after a crime perpetrated against his parents. Just before the Japanese attack on China in 1937, Banks returns to Shanghai, where he grew up before his parents were kidnapped decades earlier, making him a de facto orphan moving to London. Unlike fellow British writer J. G. Ballard, whose semiautobiographical novels *Empire of the Sun* (1984) and *The Kindness of Women* (1991) bestow an alienating perspective on the Japanese attack by being told from the viewpoint of an imaginative boy, Ishiguro alienates Banks from reality by his uncertain memory and

perception. With Kathy H., protagonist of *Never Let Me Go*, Ishiguro returned to a female first-person narrator.

Apart from Ishiguro's determination to avoid simple realism and rely instead on sheer artistic imagination and later outright fantasy when creating his fictional worlds, Ishiguro's novels are driven by their first-person narrators. The reader soon discovers that these central voices are rather unreliable in their accounts of past reactions to crises. For all of them, there lurks in the past an experience that may invalidate their projected sense of self and destroy their human dignity. What exactly it is that hovers in the dark as each novel opens is a mystery that unravels only slowly, and the process keeps the reader on edge until a final climactic revelation. Even then, however, pieces of the central mystery are still left to the reader to resolve.

In a move that would become typical of his fiction, Ishiguro opens *A Pale View of Hills* with the narrator seemingly in control, living through a brief, critical moment in the present. As small events trigger a stream of personal memories, answers emerge to questions that the narrator—like all Ishiguro's central characters—refuses to discuss openly. Accordingly, the novel moves along two temporal planes after Etsuko Sheringham is visited at her home in England by Niki, her younger daughter by her late second husband. This visit comes soon after the suicide of Niki's older, Japan-born half sister, Keiko. In a similar vein, Ono's worries in *An Artist of the Floating World* that his artistic support for the imperialists during World War II may endanger the marriage chances for his second daughter, Noriko, and the even less dramatic occasion of Stevens's first holiday after a lifetime of service in *The Remains of the Day* function as catalysts for the protagonists' surveys of their lives.

In *The Unconsoled*, Ryder is about to give a piano recital in an unnamed European city. In the first of the novel's surreal, nightmarish sequences, Ryder has lost his schedule on the plane and nobody is able, or willing, to provide him with a replacement. This situation, named Kafkaesque by a variety of not entirely positive critics, triggers Ryder's increasing confusion within a shadowy world where not just memory but also reality changes from one minute to the next, creating illogical events symbolizing Ryder's mental confusion.

In *When We Were Orphans*, Christopher Banks

appears in a more conventional world, yet when he finally reunites with his surviving mother after World War II, the event may be far less hopeful than he interprets it to be. In *Never Let Me Go*, Kathy's memories of her apparently idyllic childhood are juxtaposed with the fantastic elements of an alternate version of late 1990's British society, where clones are bred to serve as organ donors.

In a pattern that again foreshadows how later characters will interact with one another, in Ishiguro's first novel the mother and daughter communicate on a very formal, restrained level. Their polite style of talking allows neither mother nor daughter to say what is really on her mind. At the most, their discussions admit a bitter irony that may hint at the truth. Instead of discussing their problems openly, Ishiguro's pair hovers together on the abyss opened by Keiko's death. It is only through Etsuko's memories, and her haunting recurring dream about a young girl, that the extent of her pain becomes visible: Indelibly impressed in her mind is the question of whether her divorce, her subsequent marriage to a Westerner, and her departure from her native land somehow caused the desperate act of her elder daughter.

Ono and Stevens, too, have a characteristic, roundabout way of dealing with their problems, the very existence of which is unearthed only slowly. With Ryder, the reader is left confused as to the exact nature of his problems. Detective Banks persuades himself that his mother always loved him, but this may be a delusion. Kathy manages to talk to Madame and Miss Emily, the women in charge of rearing her for the cloning program, yet their polite talk fails to bring about a change or a resolution.

While *A Pale View of Hills*, which receives its title from the view of Nagasaki's hills visible from Etsuko's apartment in Japan, centers mostly on a question of personal guilt, it also contains the story of Etsuko's first father-in-law, Seiji Ogata, a former teacher now publicly denounced by one of his former students for his imperialist leanings during World War II.

This conflict of a man trying to come to terms with his past actions in a broad historical setting is the artistic center of Ishiguro's second novel, *An Artist of the Floating World*, and is also a powerful theme in *The Remains of the Day*, where Stevens's dead master is revealed to have been a Nazi sympa-

thizer. The question of fascism occurs in Ishiguro's next novels as well. In *The Unconsoled*, Ryder's artistic rival Christoff represents what critics have called musical fascism. *When We Were Orphans* addresses both British imperialism in early twentieth century China and Japan's attack on China in 1937. Only a totalitarian state could ever carry out a program to clone people as future organ donors, as described in *Never Let Me Go*.

Ishiguro has constantly changed and developed the voices of his protagonists. While Etsuko's thoughts are related to the reader with common directness, Ishiguro's next novels more ambitiously try to call attention to the fact of their narrators' subjective coloring of events. A first step to distance them is to have them write, rather than think, their narratives; the next action involves the creation of an unmistakably personal voice for each character. While Stevens's English approximates the language used by a servant to speak to the upper classes in mid-twentieth century Great Britain, Ono's voice is even more complexly constructed. The proposition, advanced by the text, is that his narrative is really a translation from the painter's original Japanese and thus reflects the limitations of his vision. Ono himself confesses to this idea as he tries to explain why he created patriotic paintings that the war party used as propaganda before and during World War II:

But then I for one never saw things too clearly. A narrow artist's perspective. . . . Why, even now, I find it hard to think of the world extending much beyond this city.

With Ryder, Ishiguro developed the point of narrative unreliability to the point of surrealism. Critics did not like Ishiguro's radical break with narrative conventions, and Christopher Banks's narrative is more smooth and reliable than Ryder's. Even Banks's rendition of reality, however, is highly subjective. Kathy more reliably relates the facts of a world that feels itself like an opaque nightmare.

After putting his characters through a mental wringer that forces and squeezes them into confronting what they have made of their lives, Ishiguro does offer them a glimpse of hope. Etsuko, purified by her memories, is able to wave good-bye to Niki with a smile. The old Japanese

men of the war generation, Ono and Ogata, win a tranquility of spirit that allows them to retire from active life with grace and leave the field to their children, even though the punishment represented through their loss of prestige and social esteem should not be underestimated. Stevens, after he has realized what his "great" service to his lord has really cost him—he has denied his affection for his father and never allowed himself to see the love in the eyes of a female colleague—finally understands what he has lost and, with typical understatement, decides on some crucial changes in his no-longer-cheerless life.

During the three days in which *The Unconsoled* takes place, Ryder's mind hovers between waking and dreaming. Here, realism alternates with surrealism in a style mindful of the work of avant-garde Japanese author Kōbō Abe. Abe's surreal novels, such as *Moetsukita chizu* (1967; *The Ruined Map*, 1969), where a detective assumes the identity of the man he is hired to find, may remind the reader of Ishiguro's deconstruction of the conventions of the mystery genre in *When We Were Orphans*. Kathy H. and her fellow clones patiently accept their inhuman fate in *Never Let Me Go* with a kind of fatalism mindful of Stevens's acceptance of his role as butler. Unlike for Stevens, there does not seem to be a change in store for Kathy. She ends her story on a note of quiet resignation.

In his literary works, Ishiguro has created an increasingly fantastic world. In his novels, his protagonists observe with keen verbal precision and deep emotional introspection an oppressive situation.

## AN ARTIST OF THE FLOATING WORLD

**First published:** 1986

**Type of work:** Novel

*After World War II, a Japanese painter, whose work had glorified the war, learns that the next generation does not blame him only because it considers him irrelevant.*

Addressing the reader like an old friend in what reads like portions of a diary, the old Japanese painter Masuji Ono, the narrator of Ishiguro's second novel, *An Artist of the Floating World*, uses the

imminent marriage negotiations for his younger daughter, Noriko, in 1948 to reflect on his life and his career as an artist. Characteristically for Ishiguro, everything that the reader learns comes directly from the first-person narrator, whose account freely wanders from the present to various instances in the past, deliberately refusing to tell a chronological story. The narrator's voice also is highly subjective and cannot be trusted blindly.

Thus, through Ono's musings the reader becomes gradually acquainted with the narrator's troubled career, which is related in a total of four diary entries spanning the years 1948 to 1950. Starting as a fashionable artist who took his themes and motifs from the underworld—the Japanese term is “Floating World”—of the bohemians, artists, and geishas of his unnamed city, Ono eventually denounced his “decadence” during the rise of imperialism in Japan in the 1930's. As a rebel against his old master Matsuda, the young Ono now painted pieces that, like his masterpiece *Complacency*, attacked what he felt was the corruption of an aimless, modern world—here represented by three drinking men—and juxtaposed it with “heroic” images, such as the band of angry young men confronting the well-dressed drinkers in his picture.

Success came almost immediately, and Ono did not have to illustrate comic books, as his master scornfully predicted. However, Ono's masterful pictures also became powerful tools of imperial propaganda. To reinforce the issue of Ono's personal guilt, Ishiguro creates a close parallel between Ono's earlier rejection by his bohemian teacher, Matsuda, who cruelly confiscates Ono's pictures when he changes artistic directions and joins the “patriotic” cause, and Ono's own denunciation of his favorite pupil to the secret police in the 1930's.

Like the former teacher, Seiji Ogata, in Ishiguro's first novel, *A Pale View of Hills* (1982), Ono supports the imperialist Committee on Unpatriotic Activities—an institution that is Ishiguro's symbol for the wrongs of a system that betrayed the idealism of those who, with exuberant naïveté, put their talents in its service. Confronted with the consequences of his patriotism, Ono now must ask himself whether he wasted or abused his talents by serving the Devil.

Ishiguro's resolution to Ono's crisis, however, is

marked by a disarming, gently ironic humanism. Finally ready to admit to his daughter's potential in-laws that he has, in fact, erred and been guilty, Ono's grand confession is brushed aside by the groom's family, who tell the old man that they regard his former political leanings as irrelevant to their son's marriage; the painter was never that important. Guilty but ignored by a young generation too busy to worry about old men, Ono can watch mirthfully as the young prepare to embark on their own lives.

## THE REMAINS OF THE DAY

**First published:** 1989

**Type of work:** Novel

*Given his first holiday by his new American master, an old British butler reflects on a lifetime of service as he travels to meet an old friend.*

Ishiguro's third novel, *The Remains of the Day*, which won Great Britain's prestigious Man Booker Prize for 1989, undertakes to demonstrate with beautiful clarity how high the human price can be for a person who has dedicated his or her life to a goal that becomes tainted. Set in southern England in the summer of 1956, the novel consists of the diary-like notes composed by Stevens, a British butler whose lifelong goal was to serve Lord Darlington. Now, after the death of the lord, the mansion, complete with its prime servant, has been taken over by an American. Offered his first vacation, Stevens sets out for Cornwall to meet Mrs. Alice Benn, who, as Miss Kenton, had worked with him in the heyday of Darlington Hall.

In the course of Stevens's travels to his final destination, his personal recollections evoke an imaginary England that is made perfect by reason of an understated greatness that simply exists, refusing pompously to announce itself. The source of Stevens's pride, contentment, and self-worth has always been that he has served at the “hub” of his great island's society; his greatest goal was always to be a perfect butler to a perfect lord.

Stevens's ideal is tested in a variety of ways as he remembers amusing anecdotes and darker experiences. When the reader is first told how William Stevens, the butler's father, had to serve a general

whose incompetence had killed his oldest son, and how he did so with “great” composure, the full price for Stevens’s ideal becomes visible. Following his father’s steps, Stevens later flawlessly serves Lord Darlington at a crucial function while his own father, whom old age saw descending in rank to that of a glorified busboy, dies in the attic, and Miss Kenton—and not Stevens—closes his eyes.

Another ambiguity is examined as the reader gradually learns that Lord Darlington—required by Stevens’s definition to be a great man, in order to bestow greatness on his butler—has fallen far short of that distinction. Moved by private pity for the defeated Germans after World War I, the lord gradually becomes an avid sympathizer with the Nazis, and his reputation is destroyed by a related scandal. By 1956, the late Lord Darlington’s name has become a badge of shame.

If Stevens is made to suffer like the millions of citizens of the Axis nations—among them Japan—who decided to trust and follow leaders who pursued aggression and atrocities until defeated in a bitter collapse, Ishiguro’s novel constitutes a highly critical examination of the price of self-neglecting, uncritical, and total service. Though Darlington’s betrayal is bitter, *The Remains of the Day* points out that even if Stevens had served a better lord, he would still have suffered.

The key is the character of Miss Kenton. Stevens’s complete failure to decipher her signals of affection bestows an exquisite sense of melancholy upon the book.

The saddest moment arrives when the two meet again in Cornwall, and she finally spells out her now-impossible love for Stevens, whose heart breaks for a moment before he accepts his fate and politely helps her onto the bus for her return to her husband. Now Stevens achieves full tragic status and realizes that his talents may well have been wasted on Lord Darlington. In a decision that echoes existential philosophy, Stevens decides to try to be a better butler to the American by improving his skill in “bantering,” light irony that he hopes may bring some human

warmth to Darlington Hall. Thus, Ishiguro gives his most tragic character a ray of hope that may guide him beyond the sadness of a life falsely sacrificed.

## NEVER LET ME GO

**First published:** 2005

**Type of work:** Novel

*Through his protagonist, Kathy H., Ishiguro reveals an alternate English society where clones are groomed to become organ donors, ultimately leading to their deaths.*

*Never Let Me Go* tranquilly opens with thirty-one-year-old Kathy H., a “carer” for “donors” who will mysteriously “complete,” that is, die, who is about to become a donor herself. Kathy seizes this moment to relate her apparently idyllic childhood at the boarding school of Hailsham, England. In the polite, reserved tone typical of Ishiguro’s first-person narrators, Kathy tells of her youth and that of her friends, cocky Ruth and misfit Tommy, who interact with a cast of fellow pupils at this apparently everyday upscale British institution. The reader of *Never Let Me Go* quickly realizes that there is a dark mystery at the root of Kathy’s recollection. Soon, the reader learns that Kathy lives in a dystopian alternate world where clones are raised to be harvested for their organs until they “complete” (die), generally after their fourth “donation.” The casual use of these euphemistic terms for barbarous acts is a strong motif of the novel.

The novel has a particularly haunting quality because Kathy, like all of her peers, quietly accepts the strange life for which they are being groomed. The title refers to Kathy’s favorite song at Hailsham. It is sung by a fictional woman singer, whom Kathy imagines is tightly holding on to her baby—a poignant fantasy, as all clones are infertile.

After graduating from Hailsham, Kathy and some of her peers are moved to the Cottages, where they live somewhat aimless lives. Ruth and Tommy become lovers while Kathy, who also loves Tommy, looks on. Their destiny catches up with them when “donations” of organs begin. Kathy cares for Ruth, a “donor,” who “completes” (dies). With Tommy next in line, he and Kathy realize their love and visit their former teacher, Madame, and Miss Emily, the headmistress of Hailsham. Miss Emily reveals the truth behind the cloning program. She also states that Hailsham was closed in favor of functional breeding centers that openly disregard a clone’s humanity. After Tommy dies, Kathy drives to Norfolk, forlornly gazing at the North Sea with a quiet, sad acceptance of her fate.

The plot may appear too far-fetched to be happening in late 1990’s England, when the novel takes place. However, read as a dystopian extrapolation of a society that grooms some of its members to serve others to their death, the novel’s theme is far less impossible. Kathy and her peers act with a quiet sense of duty. They do so in the same way that butler Stevens served Nazi-sympathizing Lord Darlington in *The Remains of the Day* or other Ishiguro

characters served Japanese militarism. In letting Kathy tell of her dystopian world, *Never Let Me Go* emerges as a poignant tale of the dangers of acquiescence and the high cost of lives wasted nobly for the wrong cause.

## SUMMARY

Kazuo Ishiguro’s desire to craft complex protagonists, whose experience is radically removed from the life of their author, has led to the creation of a remarkably diverse array of powerful literary characters who have fascinated an international audience. All of his first-person narrators tell of the primal conflict in their lives in their very own, intensely unique ways; they must all come to terms with past actions that have tainted their lives.

Despite their various shortcomings, which most often result from half-blind disregard for the consequences of their actions or the happiness of others and themselves, Ishiguro’s characters are nevertheless offered a final vision of grace that redeems rather than condemns them. This ultimate expression of a guarded optimism is a trademark of Ishiguro’s fiction.

R. C. Lutz

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

*A Pale View of Hills*, 1982  
*An Artist of the Floating World*, 1986  
*The Remains of the Day*, 1989  
*The Unconsoled*, 1995  
*When We Were Orphans*, 2000  
*Never Let Me Go*, 2005

#### SHORT FICTION:

“A Strange and Sometimes Sadness,” “Waiting for J,” and “Getting Poisoned,” in *Introduction 7: Stories by New Writers*, 1981  
“A Family Supper,” in *Firebird 2*, 1983

#### SCREENPLAY:

*The White Countess*, 2005

#### TELEPLAYS:

*A Profile of Arthur J. Mason*, 1984  
*The Gourmet*, 1986

### DISCUSSION TOPICS

- What are some common traits of two of Kazuo Ishiguro's protagonists, and how do these characters differ from each other?
- Discuss the importance of memory in two of Ishiguro's novels.
- What are the key choices made by Stevens the butler in *The Remains of the Day*, and how have they shaped his life so far?
- How do the early and later paintings of Masuji Ono differ, as described in *An Artist of the Floating World*? What are the reasons for this change?
- Are there moments when Kathy rebels, at least somewhat, against her fate in *Never Let Me Go*, and what is the outcome of these events?
- What are the effects of the notorious unreliability of one of Ishiguro's first-person narrators, such as Mr. Ryder?
- Discuss which issues torment two of Ishiguro's protagonists and how they try to solve their resulting mental pain.
- Discuss the role of fascism and militarism in two of Ishiguro's novels.

## P. D. JAMES

**Born:** Oxford, England  
August 3, 1920

*James's novels have aptly earned her the title Queen of Crime. These highly credible psychoanalytical studies of character and motive combine intricate plots, introspective voices, and a strong visual sense of place with a deep-seated philosophical grounding in contemporary moral questions.*

### BIOGRAPHY

Born in Oxford, England, on August 3, 1920, Phyllis Dorothy James attended Cambridge Girls School from 1931 to 1937, then clerked in a tax office for a few years until she found more interesting work as assistant stage manager of the Festival Theatre in Cambridge. She later was a Red Cross nurse during World War II and an assistant at the Ministry of Food. James married Ernest White, and the couple had two daughters, Clare and Jane. When White returned from the war, he was a severe schizophrenic and was permanently institutionalized, forcing James to provide for her family.

Thus, in 1946, James began her long civil service career, first as a National Health Service clerk and then, after earning diplomas in hospital administration and medical research, as a principal administrative assistant with the North West Regional Hospital Board in London. The latter position provided her with the detailed knowledge of illness, aging, and institutions that makes her novels authentic and credible. At forty-two, James published *Cover Her Face* (1962) and was immediately recognized as a major crime novelist.

James's husband died in 1964. Four years later, she took the highly competitive Home Office exams and became a senior civil servant in the criminal department, specializing in juvenile delinquency and criminal law policy. This position,

which she held until she retired in 1979, provided her with a working familiarity of forensic science laboratory routines, police procedures, and law. It also helped her understand the juvenile mind, depicted so effectively in *Innocent Blood* (1980) and *Devices and Desires* (1989). In 1979, she began writing full time but continued to serve as a fellow of the Institute of Hospital Administrators and as a London magistrate.

James was made an Officer of the Order of the British Empire in 1983, taught a detective fiction course at Boston University's Metropolitan College in 1984, and became Baroness James of Holland Park in 1991, an honor that heightened her desire for community involvement. In addition, James received the Grandmaster Award from the Mystery Writers of America in 1999. On her eightieth birthday she published her autobiography, *Time to Be in Earnest: A Fragment of Autobiography* (2000). She was awarded the W. H. Smith Literary Award for *Death in Holy Orders* (2001), the British Book Awards Crime Thriller of the Year for *The Murder Room* (2003), and the Theakston's Old Peculier Crime Novel of the Year Award for *The Lighthouse* (2005).

### ANALYSIS

A skilled novelist, eloquent and erudite, influenced by the introspective style of Jane Austen and the Victorian novelists, P. D. James is one of England's most prominent mystery writers. Her works are restrained, their internal tensions resulting from close associates facing painful and unforgiving inquiries into secret fears and obsessions. Keen and inquiring, James faces unpleasant truths about

human frailty, the complex and sometimes self-destructive relationships among people, and humankind's potential for psychic and physical violence. Kindly characters murder to protect family, hearth, or reputation, and innocent suspects prove culpable of lesser and greater transgressions. Despite credible plots, meticulously provided clues, and convincing details and motives, "Whodunit?" is secondary to ambience and character; the creation of a realistic world of professionals whose jealousies and rivalries in the close confines of narrow communities produce Byzantine relationships.

James's novels build on a strong sense of place, inspired by a desolate coastline, a sinister house, an atmospheric London neighborhood, and such closed communities as a nursing home, an isolated village or island, a publishing house, a nuclear power station, a forensic science laboratory, and a small, specialized museum—each location transformed into an organic and vital element of the crime. For example, the personnel of her hierarchical medical communities share a language and a professional mystery that leave patients vulnerable outsiders. In *A Mind to Murder* (1963), a stately Georgian home turned psychiatric outpatient clinic provides an ironic counterpoint to sinister events. Toynton Grange in *The Black Tower* (1975), a nursing home, commune, hotel, monastery, and eccentric lunatic asylum, reflects the bleak desolation of the Dorset coast. In *Devices and Desires*, a nuclear power plant dominates a coastal town and its inhabitants. *Shroud for a Nightingale* (1971) most effectively draws analogies between a nurse's training center and a Nazi prison camp to demonstrate the ambiguous nature of rules and of human beings. *The Lighthouse* is set on an island retreat for influential public figures, while *The Murder Room* takes place in and around a small private war museum on the edge of London's Hampstead Heath.

Such settings, with their narrow communities, enable James to make her murder investigations turn on relationships and routines arising from place. The initial murder in *Shroud for a Nightingale*, for example, results from student nurses who, while practicing intragastric feeding, witness a ghastly, nightmarish death beyond their capacities to cope: carbolic acid added to warm milk in the inserted tube. In *Death of an Expert Witness* (1977), a despised physiologist is murdered in his lab while

examining physical evidence from another murder. A suspect in *Devices and Desires* plunges to his death in the reactor room, the heart of a nuclear power plant whose dangerous force feeds the latent heart of darkness in those associated with it. James's writing captures the "minutiae of ordinary life": the internal rivalries, the jockeying for advancement up the bureaucratic ladder, the unhappy home lives, the daily pressures, the jealousies, the petty strife. James's later works examine dysfunctional families (in particular, parent-child relationships that go awry), the failures of social institutions, and the ambiguous mix of good and evil.

All of James's highly visual novels communicate a sense of an intricate mind at work, meticulously and precisely calculating every twist of plot. James keeps an hour-by-hour chart of her characters so that each detail fits logically and each piece of physical evidence is psychologically right. Her style is leisurely, with intricately woven sentences reflecting the complex musings of intelligent, but not always reliable, characters. Her narrator is third person—the omniscient author, a particular character, even the murderer. Her easy movement from one perspective to another adds a rich, varied texture to detailed descriptions of place and personality. Her metaphors evoke bleak wastelands; her characters casually allude to William Shakespeare, Jane Austen, and Thomas Hardy and talk of murder while taking tea, admiring a rose garden, or debating the esoteric conundrums of theological schisms. Overall, character study outweighs action, but in the final analysis the realities of human motive prove to some degree too complex to be fully known; even as they act, her characters often fail to understand themselves.

James explores complex interpersonal relationships, stress, and psychological consistency. Her respectable middle-class characters, literate and cultured, prove to be consumed by hidden emotions and desperate to preserve their facade of respectability or the reputations of those dearest to them. James's victims are often disagreeable—selfish, narcissistic, lascivious, greedy, hot-tempered, catty, or even senile; her killers appear normal on the surface but are really emotionally maimed, beset by secret torments that ultimately evoke sympathy and pity—an abused childhood, a sexual compulsion, a tragic loss, failed relationships. Her plots

frequently include apparent suicides, accidents, or natural deaths that prove to be murders and interlocking or copycat crimes.

Her main detective, Adam Dalgliesh, brings critical intelligence, sensitivity, and professionalism to his job. A “lonely man in a lonely profession,” an agnostic grounded in Anglican theology, he observes the bleakness of the human condition and sees himself as an instrument of justice. Tall, dark, morose, and sometimes testy, he is the son of a London clergyman, versed in articles of faith, but a born skeptic whose distrust of simple creeds was deepened by the tragic death of his wife in childbirth. Well-read and introspective, he internalizes his horror at unnatural death and comes to terms with it through poetry (titling one volume *Invisible Scars*) and through enforcing a civilizing legal code. Ever compassionate, he is not sentimental. A private man with personal compulsions, he avoids deep emotional attachments until his transforming encounter with Emma Lavenham, a Cambridge professor of Victorian literature, in *Death in Holy Orders*. Their relationship deepens in *The Lighthouse*, and Dalgliesh proposes marriage to Emma in *The Murder Room*. Dalgliesh is brutally honest, patient, ruthless, and unorthodox—a master interrogator with an instinct for asking the right questions to uncover evil but also an effective leader of a police detective team, bringing out the best in those under him (Inspectors Kate Miskin, Piers Tarrant, and Francis Benton-Smith, and Detective Sergeant Robbins). His determined quest for the truth of his cases speeds his rise from detective chief-inspector to commander, as in his daily life he seeks to bring order to chaos.

Cordelia Gray, the sleuth introduced in *An Unsuitable Job for a Woman* (1972), is a cordial rival to Dalgliesh, who shares his love of Jane Austen and Thomas Hardy, old churches, and fine art. Though sensitive to human responses, calm, and detached amid mayhem, Gray is Dalgliesh’s opposite in optimism and hope, remaining spunky, self-reliant, upbeat, good-natured, and capable despite a series of foster homes and her father’s suicide.

Overall, a James novel, with its dense prose, shrewdly realized characterization, and sound plotting examines human interaction, rationalization, and despair with a unique combination of compassionate understanding and uncompromising analysis.

## INNOCENT BLOOD

**First published:** 1980

**Type of work:** Novel

*An adoptee seeking self-identity discovers the painful truth of her parentage and unknowingly becomes part of a revenge plot.*

The title, *Innocent Blood*, refers to a twelve-year-old girl who is lured into the home of a pedophile, raped, and then strangled by the molester’s wife. It also suggests a second victim, eighteen-year-old Philippa Rose Palfrey, an adoptee burdened by her natural parents’ crime. Adopted before the murder occurred, the intelligent but difficult Philippa is adoptive father/sociologist Maurice Palfrey’s living proof of nurture countering genetics. Her blood is not shed, but she must confront her parents’ guilt. Ironically, she proves far more cold-blooded and ruthlessly egocentric than either parent, and her rejection of her long-suffering, docile mother results in the final bloodshed. James’s narrative skill and deft psychological analysis suggest that the final “innocent” blood shed is that of the murderess/mother, who commits suicide when rejected by the daughter she has come to love and on whom she has come to depend.

*Innocent Blood* grew out of James’s musings, on a real murder case, about a child’s knowledge of parental culpability and about the potentially disastrous effects of the Children Act of 1975, which permitted adoptees to learn the identity of their natural parents. Not a detection or a crime novel, it shares the detective story’s interest in guilt and innocence, crime and punishment, love and revenge. Despite her fine education and comfortable home, Philippa fantasizes about her real parents when irritated by her adoptive ones. In a sociological and psychological experiment of the sort she accuses Maurice of indulging in, she finds, and, for the summer months before entering Cambridge, takes in, her real mother, Mary Ducton, a murderess just released from prison. Her act purposefully thwarts Maurice, whose approval and love she seeks, and dismisses her adoptive mother, Hilda, whose timidity and lack of self-worth she scorns.

As mother and daughter share a small London flat, work together in a restaurant, spend time on “educational” tours of museums and galleries, and

seek intimate moments of self-revelation (a program Philippa establishes and her mother passively accepts), the father of the murdered child, Norman Scase, dogs their steps, bent on revenge in fulfillment of a deathbed promise to his wife. James skillfully interweaves the two plotlines—the golden youth searching for identity, the ugly, bumbling, and sweet-tempered but driven older man seeking release from a haunting obligation—drawing them closer and closer as the man becomes as obsessed with Philippa as he is with killing her mother. Ironically, at the moment of final vengeance, Scase finds his act thwarted, the murderess already dead, a victim of her own guilt and rejection by her only child. When his knife plunges into her throat, she has already stolen away the life he seeks. Philippa, recognizing her personal responsibility for her mother's death, protects Scase from the police.

James's basic argument is that identity comes from within, that parents provide few clues about their progeny, and that relinquishing necessary fantasies can bring "a kind of death." Philippa is more the daughter of Maurice than of her real parents, sharing his intellectual distancing, cold disdain for weakness, and narcissistic self-absorption. Maurice's marital and sexual conflicts are but psychological responses to Philippa. A final brief, incestuous affair frees them from their mutual obsession and allows a more normal life thereafter. One set of fantasies, purged by reality, is replaced by another; even Mary Ducton's long, careful confession reworks reality to win back her daughter. According to James, a person's account of his or her life is an interesting psychological study, but it is not reality.

Questions of guilt and innocence shade into blurred grays, with the "criminals" proving to be sad, pitiable victims of physical compulsions or of traumatic childhoods, and with the "innocents" proving disturbingly culpable. Environment outweighs heredity in molding individuals, but some sort of unique, individual personality proves to be the true final determiner.

## A TASTE FOR DEATH

**First published:** 1986

**Type of work:** Novel

*The violent deaths of an important political figure and a lowly tramp endanger a young witness and a fledgling investigator.*

The title *A Taste for Death* suggests a murderer whose appetite for power increases with each murderous act. It refers more particularly to Sir Paul Berowne, the murdered Tory minister who, weighed down with guilt at the automobile death of his first wife, had lost his taste for public life, undergone a religious conversion, abandoned a flourishing political career, and accepted death. It encompasses Detective Dalglish's questions about his and his profession's obsession with violent death, as well as Lady Barbara Berowne's taste for death (she enjoys the "power," "mystery," and "ruthlessness" of her gynecologist/surgeon/lover, Stephen Lampart, whose hands determine a patient's life or death). Even the local vicar at whose picturesque church the murders occur finds himself and his congregation infected by a taste for death.

In this dense and detailed police procedural and novel of manners, Dalglish heads a homicide squad assigned to investigate politically sensitive crimes, assisted by the conservative, opinionated, and able but jealous John Massingham and a bright new recruit, Kate Miskin, whose resourcefulness and ambition irritate Massingham but impress Dalglish. James explores the sacrifices and compromises that Miskin, as a career policewoman, must make to maintain a personal life, fulfill family obligations to her aged and contrary mother, and escape the poverty and illegitimacy that have fueled her ambition. This case involves Dalglish personally, for he not only liked the murdered Berowne, having consulted him about blackmail, but also finds that he and the victim had much in common. Both were cultured, private men, dedicated to preserving civilization and art, schooled in language and literature, and aware of ambiguous human relationships and of the need for commitment to enduring values. Interested in church architecture, nineteenth century novelists and poets, and philosophical questions of life and death, both had a cerebral, detached way of coping.

This close study of the frustrations and precision of police procedures and of the intelligence and instincts that transform the minutiae into details of great investigative moment depends on a single bloodstain under a corpse, a struck match, a moved diary, and a missing button. James's argument throughout her depiction of the investigation—the gathering of physical evidence, the taking of testimonies, the checking and rechecking of alibis—is that murder changes everyone it touches; investigators, suspects, and witnesses can never be the same. Mother, wife, mistress, friends, brother-in-law, and business associates cannot escape the questions that lay bare their secret hearts. Dalglish is aware that murder destroys privacy through “the intimate detritus” of a victim's life and “through the mouths, truthful, treacherous, faltering,

ing, reluctant” of family, friends, and enemies; he also knows that “exploitation” of a suspect's fear, vanity, insecure need to confide, and lonely grief is “at the heart of successful detection.” Disturbed by the activities of his trade, he nonetheless recognizes their necessity. Actions bring consequences and the burdens of guilt and responsibility must be accepted.

Here again James explores the effects of environment on adolescents. Kate Miskin escapes her origins through hard work and sheer grit; Barbara Berowne escapes similar limitations through cold-blooded sexuality, producing a legitimate heir. Barbara's brother, Dominic Swayne, warped by a loveless childhood and a succession of stepfathers, seduces an unattractive household servant to confirm an alibi, feigns friendship to win trust, and hides murder behind a facade of frankness to assure a continued life of luxury. Tough, competent, ten-year-old Darren Wilkes, in turn, controls his environment, despite an alcoholic, prostitute mother, by attaching himself to the kindly sixty-five-year-old spinster, Miss Emily Wharton, whose safety he guards as they provide each other with companionship. Sarah Berowne, in contrast, wealthy and aristocratic, opts for an affair with a

committed communist to embarrass her aloof, reticent father.

Ironically, the murderer helps each of these characters: killing Miskin's contrary mother but freeing Miskin from a limiting psychological and economic burden that prevented her commitment to love and career; frightening young Darren but thereby calling attention to an unnoted illness, leukemia; forcing Sarah to realize the obligations of birth and education, reevaluate her relationship to her lover, and understand that she has been a pawn of the radical left; and seemingly confirming Barbara as heir of the Berowne fortune, an inheritance that her suspicious mother-in-law and wary husband thwart.

*A Taste for Death* is, moreover, replete with convincing details of place and scene: a cold and muddy river bank, a clinically antiseptic operating room, the pleasant cottage of a writer of children's books, the tidy apartment of the upwardly mobile young Kate, the stately manor of the Tory minister, and the Romanesque basilica where the murder occurs.

## THE CHILDREN OF MEN

**First published:** 1992

**Type of work:** Novel

*In 2021, amid worldwide male infertility, a disillusioned historian defies a tyrannical government to secure the safety of the first child born since 1995.*

The phrase “children of God” suggests divine guidance, human potential, and the hope of redemption, while James's title *The Children of Men*, a derogatory phrase reminiscent of Old Testament diction, suggests human frailty, a fall from grace, impermanence, and the dark side of the human spirit—cruelty, violence, and a lust for power. In an age in which no child has been born in twenty-six years, adults burdened by guilty pasts face the nightmarish end of the human species. Human achievements lose their grandeur and their potential to inspire as they meld into the landscape. It is a time for Ozymandian contemplation, *carpe diem*, and a human accounting before the world's demise. Such are the thoughts of Oxford historian

and erudite narrator Theodore Faron, who escapes responsibility for the present by taking a slow journey, revisiting European centers of art and architecture in the interim between the two sections of James's novel. In this science-fiction vision of the very near future, James reverses their standard order to identify the first part, "Book One: Omega," and the second part, "Book Two: Alpha."

Thus, book 1 depicts a dystopian winding down, a retrenching of human civilizations, a movement from rural isolation to urban security, and an increasingly powerful and tyrannical government and military, as roving bands of bacchanalian thugs engage in sadistic sacrificial rites, and, in general, the threads of morality and social structure break. In England,

Faron's cousin, a powerful First Warden, makes life and death decisions, condemning rebellious citizens to terrifying island penal colonies where the inmates rule, approving military-assisted mass suicides, and in every instance governing with an iron fist. In effect, James's speculation queries how far national control might be extended under the guise of protecting the citizenry from terrorist-labeled activities. She also envisions heightened psychoses, as frustrated women fake pregnancies and fantasize about motherhood.

Faron's understanding of history, his delight in the Victorian past, and his love of Jane Austen (*Emma* is the book he chooses for his defiant journey with revolutionaries), provide a distanced, scholarly, ironic study of the times, and his past association with the present ruler enables him to provide a contrast in psychologies between himself and his cousin, to analyze the journey that led his cousin to this power, and to predict his behavior in the face of mystery.

The mystery of book 2, a morality tale, echoes the religious story of Mary and the Infant Jesus pursued by Herod and protected by an awed band of worshippers, in this case people willing to die themselves so that mother and child can thrive.

The action therein moves forward like a mystery as well, with traitors whose egos take dominance over philosophical commitments, and with a final murder that changes the future and forces a decent man to step into a power he has not wanted—for the good of humankind. Ironically, it is the only known fertile male who sacrifices himself for his infant. The story ends with hope for regeneration tempered by an understanding of the fallen nature of humankind that requires justice, as well as mercy. In this way, James's take on the future is in keeping with the hard truths of her detective fiction—so much awry in human nature and yet some hope based on frail, unlikely humans who stand up when it counts. The ambiguous mix of hope and cynicism at the end is meant to leave readers pondering the way in which good intentions can be turned awry in politics, as in daily life.

## DEATH IN HOLY ORDERS

**First published:** 2001

**Type of work:** Novel

*Dalglish's informal investigation of a troubling death leads to his formal investigation of the murder of an archbishop and its complex ramifications.*

The title *Death in Holy Orders* refers directly to the mystery setting, the isolated and very traditional Protestant theological seminary of St. Anselms, on the bleak East Anglian coast. The seminary is the scene of the unexplained death of a troubled young ordinand and the later murder of a self-righteous archbishop, who was determined to close down the establishment as archaic and redundant and sell its valuable artworks and relics. Both of the dead are in Holy Orders, and every clue that Inspector Dalglish and his London team uncover suggests an insider at work, wearing a seminarian's cloak, opening doors with keys left in-house, and acting in times and places that require local knowledge of schedules and habits.

For Dalglish, the setting holds special meaning, since he spent part of his youth there. He experiences a deep nostalgia for those summer days, rediscovers close ties to the former warden, the el-

derly and devout Father Martin, and finds peace and rest in this place. Thus, he feels comfortable asking questions about the troubled youth who perished beneath a sudden fall of sand from the cliff above him. James introduces the players, the conflicts, the relationships, and the building tensions with Dalglish on the spot observing, rather than coming in after murder has been clearly committed. Amid talk of religious art and of the controversy surrounding a papyrus fragment that could shake the foundations of Christianity, Dalglish suddenly finds himself in the midst of multiple murders that strike at the heart of this small, pious community. Although three deaths arouse Dalglish's intuitive suspicions, it is the murder of the archbishop that provides the impetus for calling in his London team. Once on the spot, they and he uncover some of the nasty secrets behind the innocent facades: pedophilia, incest, lesbianism, and greed, red herrings that distract from the main offense. With almost everyone lying to some degree or simply failing to tell all they know because they do not realize the significance of minor observations, progression toward a swift resolution proves difficult.

The power of this novel lies less in the uncovering of responsibility and more in the ruminative journey through multiple, interconnected lives. Through varied characters, with sensitivity and insight, James examines the painful realities of aging—the diminishing of physical abilities; the loss of memory and order in the descent to senility; the steady whittling away of human ties, yet the need for companionship; the haunting memories of past wrongs and personal failures; the decline of authority; the yielding to change; and the instinct to relive one's dreams through one's children by controlling the directions of their lives. Her young people, in turn, are thoughtless, insensitive, impulsive, and defiant but also conflicted, needy, and directionless. It is only her mature adults, like

Dalglish and Emma, who can enjoy the memories of their youth and, with maturity and hope, seize life when it unexpectedly offers fulfilling possibilities, like the love and trust they share after only brief encounters. The romance between Dalglish and Emma that begins in this book progresses through James's next two novels, *The Murder Room* and *The Lighthouse*.

## SUMMARY

P. D. James's novels are realistic studies of the hidden realities of the soul that compel forbidden acts of violence and murder. Yet despite their grim, clinical detail and their cynical, uncompromising study of behavior, they postulate, in sophisticated, literate prose, the civilizing influence of daily domestic acts and of art, architecture, poetry, and song.

A sense of irony and of existential absurdity lies behind James's depiction of a civilized English facade that crumbles only slightly in the face of multiple murders by seemingly decent human beings. Her characters are three-dimensional, living and suffering in an imperfect world, one in which evil is a tangible reality and in which the diseased, the dying, and the maladjusted are simply part of what one of her characters calls the "progressive incurable disease" that is life. James's genuine curiosity about human nature and motivations is sensitive to the density of human experience and the nuances that govern lives. She coldly dissects character and act but communicates understanding and compassion for frailty. Her knowledgeable treatment of technical procedure and forensics and her meticulously detailed descriptions of place are entirely convincing. As the Queen of Crime, James has made her crime novels uniquely effective studies of human interaction and psychology, setting very high standards for other practitioners attempting to write not simply detective fiction but true literature.

## DISCUSSION TOPICS

- Every P. D. James mystery novel includes red herrings—distractions that lead investigators away from the central crime. In a James novel you have read, identify two red herrings and explain how they distract.
- Choose a novel, like *Death in Holy Orders* or *The Murder Room*, in which teamwork is important to solving the mystery. What division of labor takes place, and what key pieces of evidence do individual members contribute?
- Despite such teamwork, personality differences and competition create tensions, like those between Kate Miskin and Francis Benton-Smith. Choose two such members of Dalgliesh's team, provide evidence of such tension, and explain the reason for it.
- In *The Children of Men*, which particular government rules or actions do the rebels protest against? Why?
- In your favorite James mystery novel, enumerate the pieces of information that lead to the identification of the murderer.
- Theodore Faron in *The Children of Men* carries Jane Austen's *Emma* (1815) around with him, and Austen is Inspector Dalgliesh's favorite author. Select one way in which a later James novel, such as *The Murder Room*, echoes an Austen novel and explain how.
- How does Kate Miskin change as a character from *A Taste for Death* to *The Murder Room*? Cite a couple of changes and illustrate them.

## RUTH PRAWER JHABVALA

**Born:** Cologne, Germany  
May 7, 1927

*A leading contemporary novelist who writes primarily of encounters between India and the West, Jhabvala is also well known for her short stories and film scripts.*

### BIOGRAPHY

Ruth Prawer Jhabvala (jahb-VAH-lah) was born on May 7, 1927, in Cologne, Germany, the daughter of a Polish Jewish lawyer, Marcus Prawer, and his wife Leonara. She wrote her first stories in German, but when the family emigrated to England in 1939, she soon started writing in English. She was aware from a very young age of being an expatriate in England, and this feeling of isolation was heightened in her adult life when she lived in India for about twenty-five years.

Ruth Prawer grew up in England, receiving her M.A. degree in English from the University of London while she tried her hand at fiction writing. She met a young Indian architect, Cyrus Jhabvala, married him, and in 1951, left England to make her home in India.

The first stage of Jhabvala's experience in India, which excited and enraptured her, included the birth of her three daughters and the publication of four novels, *To Whom She Will* (1955; published in the United States as *Amrita*, 1956), *The Nature of Passion* (1956), *Esmond in India* (1958) and *The Householder* (1960). The large circle of her husband's Indian friends and acquaintances provided Jhabvala with continued opportunities to observe Indian life at very close quarters; the results of this experience are seen in her novels and stories. Since she is always the outsider in India, she also realistically re-

creates the tensions and conflicts that arise when Indians and Westerners interact.

Jhabvala sees the conflicts between Indians and Westerners as being rooted in the complexities of culture, history, and psychology, rather than in the more obvious and superficial difference of color. After her first stage of rapture about India was over, Jhabvala visited England briefly in 1960 and on her return found that her attitude toward India had altered. Some of the sources of her discontent are revealed in her fifth novel, *Get Ready for Battle* (1962), her only novel to center completely upon India's extreme poverty, and the exploitation of its poor by the wealthy minority. Jhabvala's growing disillusionment with the India that she had started out by loving so passionately is progressively revealed in three collections of short stories published between 1960 and 1975: *Like Birds, Like Fishes, and Other Stories* (1963), *A Stronger Climate: Nine Stories* (1968), and *An Experience of India* (1971). In a preface to the third collection, Jhabvala attempts to sum up her varied reactions to India, which she believes any Westerner who spends a lot of time in the country may experience:

It goes like this: first stage, tremendous enthusiasm—everything Indian is marvelous; second stage, everything Indian not so marvelous; third stage, everything Indian abominable. For some people it ends there, for others the cycle renews itself and goes on. I have been through it so many times that now I think of myself as strapped to a wheel that goes round and round and sometimes I'm up and sometimes I'm down.

These feelings are reflected in the yearning for Europe that overcomes her Western characters in the

three novels published during this period: *A Backward Place* (1965), *A New Dominion* (1972; U.S. edition, *Travelers*, 1973), and *Heat and Dust* (1975).

Fortunately, just as India seemed to be failing the writer as a source of emotional and spiritual sustenance, she was invited to write the screenplays for films directed and produced by James Ivory and Ismail Merchant, a wildly successful association that has resulted in numerous remarkable films and many awards and recognition for the trio. Since then Jhabvala has divided her time between writing novels and writing screenplays.

After spending nearly twenty-five years in India, Jhabvala moved to New York in 1975. *How I Became a Holy Mother, and Other Stories*, a collection published in 1976, features "The Englishwoman," the story of a Westerner who, after living for many years in India, prepares to return to England: "She is eloping, leaving everything behind her—husband, children, grandchildren, thirty years of married life. Her heart is light and so is her luggage." Her subsequent work reflects her passage onward from India: *Three Continents* (1987) attempts to draw together her triple European, Indian, and American heritages, and her first "American" novel, *In Search of Love and Beauty*, was published in 1983.

In 1978, Jhabvala received the Neil Gunn International Fellowship, and in 1984, a MacArthur Foundation fellowship to support her writing. In December of 1984, she was awarded a fellowship from London University, as well as the university's honorary doctor of literature degree.

## ANALYSIS

There can be little doubt that the major and minor concerns that are interwoven in Ruth Praver Jhabvala's novels and short stories arise from her personal or observed experience, and it is always tempting to speculate on the extent to which her fiction actually reflects her own life. As an expatriate European writer stationed for most of her adult life in India, she has admitted that she sometimes includes aspects of herself in her Western characters, which has led critics to assume that the hostile attitudes toward India displayed by some of her fictional characters—such as Esmond (*Esmond in India*)—mirror her point of view. By the same token, characters like Judy (*A Backward Place*) and Olivia Rivers (*Heat and Dust*) display bonds of personal affection for India that may also reflect Jhabvala's

own commitment to the country that she adopted by marriage. It would probably be more useful, therefore, to trace how her personal experiences of the East-West encounter have enriched and molded the techniques and content of her work.

Nearly everything she has written springs from the fact that she married an Indian at the age of twenty-four and accompanied him to his country to live there for the next quarter century. Living in Delhi, the capital, she used the city extensively in her work. Its streets, squares, quarters, and suburbs are all named and located so accurately in her early fiction in particular that they can be plotted on a map. This gives her writing a special sense of validity that is remarkable, especially since it comes from the pen of an outsider.

Jhabvala's novels can be conveniently divided into three phases, the first phase marked by romantic idealism, the second by the shedding of illusions, and the third by a renewed search for wholeness. If there is any disillusionment in her first two novels, *To Whom She Will* and *The Nature of Passion*, it is in its gentlest form: the comic mismatching of lovers who discover their differences and change partners, end the liaison, or modify their expectations so that harmony can be restored. The fictional world is comfortable and appealing; it appears that these novels are meant to convey to the Western reader an India that the author loves. Jhabvala in this first phase is interested in a number of social issues: the clash between generations in a changing society, the influence of the West on middle-class India, and the lingering effects of British colonialism on Indian life. The people she portrays in her early novels usually belong to the wealthy and privileged classes, while in her later work she begins to display a sense of anger and outrage at the social inequality she sees in India.

*Esmond in India* introduces a set of darker themes that will be worked out in later novels. It presents a series of complicated relationships, at the center of which is Esmond, a villainous and bitter Englishman. *The Householder*, which can be considered the last work of this first phase, marks a return to the harmonious vision of the first two novels, but the tone is more melancholic. A tender comedy, it is a moving portrait of a struggling schoolteacher, Prem, and his delightful bride Indu. Western characters are seen through Prem's eyes.

The next phase of Jhabvala's fiction is marked by a growing uneasiness about the traditional values upheld in the earlier romantic comedies. *Get Ready for Battle* and *A Backward Place* signal a greater interest in the clash of Western and Indian values as they are embodied in the European and Indian characters and their interrelationships. Sarla Devi, the heroine of *Get Ready for Battle*, represents conscience and struggle in a world of greed and dishonesty, and her efforts are inevitably met with defeat. *A Backward Place* considers the problem of being a Western woman in India: It is significant that all three women of the novel, Judy, Clarissa, and Etta, present unsatisfactory solutions.

The third phase of her novels includes *A New Dominion*, *Heat and Dust*, *In Search of Love and Beauty*, and *Three Continents*. The last two inaugurate a new "American" phase as well. In these novels, comedy gives way to seriousness as Jhabvala explores new dimensions of emotional relationships that center on love, particularly in the characters of women and homosexual men. She shows interest in cults with male leaders. The first novel of this group works on this theme of a sinister but magnetic guru; the second (*Heat and Dust*) focuses on an Englishwoman's infatuation with a different kind of guru figure, an Indian prince who is also sinister but magnetic.

*In Search of Love and Beauty* continues the investigation of the charismatic male who attracts blind followers in the character of Leo Kellermann, a German refugee psychiatrist who runs an Academy of Potential Development for his disciples. *Three Continents*, as its title suggests, covers a lot of geographical ground; it appears to be Jhabvala's most pessimistic novel, as well as the one that has been called disappointing by critics. The weakness of the novel probably lies in the character of Harriet Wishwell, who is unreliable as the heroine-narrator of a complex tale that revolves around a woman's passionate love for a homosexual man.

Though Jhabvala's novels may have progressed towards pessimism, it cannot be said that her work represents a totally dark vision: She deals in human relationships across continents and cultures, and she points out to her readers the disillusionments that are inevitable to such complex interactions. That the shedding of illusions is a necessary factor in human relationships is the most valuable lesson offered by Jhabvala in her work, and since truth

brings light, her novels cannot be called completely dark.

## ESMOND IN INDIA

**First published:** 1958

**Type of work:** Novel

*Esmond Stillwood, an Englishman, becomes increasingly bitter and isolated as he spends several years in India and fails to establish a single successful relationship with either Indian or Westerner.*

*Esmond in India*, one of Jhabvala's earliest novels, introduces a darker set of themes that the writer continued to explore in her later work. The principal theme is the dilemma of the foreigner in India, whose initial delight in the country turns to isolation and bitterness. Clearly, this is a subject of personal concern for Jhabvala. The novel begins and ends by focusing on the character of young Shakuntala and spans a period of five months, which is the time that elapses between Shakuntala's graduation from college and her prearranged marriage with the son of her father's friend and associate. It is the life of Esmond, however, the one stranger in the midst of four interlinked Indian families, that is of primary interest. The plot of *Esmond in India* brings the four Indian households into alternate periods of intimacy and conflict, as they are all connected by blood, shared memories, or old associations, while Jhabvala appears to isolate Esmond in order to examine him most closely. He is the only Westerner among them, linked to them by a marriage of which they all disapprove. He is, for a while, married to Gulab (belonging to one of the four families) and has a son, Ravi, though his wife and son return to her mother's house by the end of the novel.

Although Esmond associates with other Westerners in India, he is isolated among them because he has no plans to leave India. He is also one of the few characters in the novel to possess a genuine knowledge and appreciation of India's culture and history, so much so that he believes that in giving lessons and lectures on Indian classical culture, he has found his true vocation. Despite his growing distress of mind, Esmond is far more intelligent

and sensitive than the people around him, including his wife Gulab. Gulab, in her initial attraction to Esmond and her later opposition to him, becomes a symbol of India in his mind. By tracing his journey from comparative calm to mounting hysteria during the five months of the novel, Jhabvala appears to be presenting the stages by which the experience of India affects the Westerner.

Esmond's personality begins to disintegrate along with his marriage, and his contempt for his wife merges with his growing distaste for India. His attempt to console himself with Shakuntala backfires, as the love and devotion she offers him finally drive him to flee to England for safety. Shakuntala's own romantic dream of a daring liaison with Esmond is undercut by the reality of her parents' plans for her and Esmond's plans for himself. Apparently East and West cannot meet, even, or perhaps especially, in romance, Jhabvala seems to imply through Esmond's experiments in India.

## HEAT AND DUST

**First published:** 1975

**Type of work:** Novel

*In parallel stories set fifty years apart, two Englishwomen in India have uncannily similar experiences in their relationships with Indian men but make different decisions about their lives.*

*Heat and Dust* is the story of two Englishwomen who travel to India, about fifty years apart in time, and record their experiences there in letters and journals. The stylistic arrangement of two parallel stories is creatively handled by means of excerpts from the narrator's journal interspersed with the details she provides from her predecessor Olivia's letters that she has in her possession. The reader needs to be alert to the constant shifts between the two tales as they trace similar developments in the lives of the two women. The major historical difference that they encounter is that while Olivia came to India during a time when it was still a part of the British empire, the narrator finds herself in a free country. The passage of time also means that there

has been some progress in the way women are able to conduct their lives. Through these differences, Jhabvala is able to convey the changes that have come about in women's lives in half a century.

In the earlier story, Olivia Rivers is bored and unhappy as the wife of a British colonial administrator in India, and though she loves her handsome husband Douglas, she welcomes the company of the Nawab, a minor Indian prince of a neighboring state, and his English houseguest Harry. Though the British community disapproves of her friendship with the untrustworthy Nawab, she is unable to curb her growing fascination about him until their closeness is sexually consummated. When she finds herself pregnant, she arranges for an abortion and in the scandal that follows chooses to go to the Nawab. She quietly lives the rest of her life in India, in her own house in the hills, leaving behind a legacy of her letters to her sister Marcia.

These letters come into the hands of the narrator, who decides to trace Olivia's story in India. Like Olivia, she ends up with two men in her life, the British Chid and her Indian landlord Inder Lal. Unlike Olivia she is married to neither, and in her progressive times, she is able to carry on her liaisons without scandal. When the narrator becomes pregnant, she decides to keep the child without informing the father, Inder Lal, and moves into the hills where Olivia went, to await her new life on her own.

Jhabvala's central intention in *Heat and Dust* is to provide a voice for women, especially in the story of Olivia. Though Olivia's story is regarded as a scandal by her own generation and hushed up, the reappearance of her detailed letters makes it possible for the narrator to offer the reader Olivia's side of the tale. By cleverly juxtapositioning Olivia's experiences in India and her own, the narrator is also able to provide a sense of how women's lives have changed in the course of the twentieth century.

## “THE HOUSEWIFE”

**First published:** 1971 (collected in *An Experience of India*, 1971)

**Type of work:** Short story

*A woman tries to balance a comfortable but dull life as a housewife with her secret passionate devotion to music, and in indulging the latter she transfers her attentions from her husband to her mysterious music teacher.*

“The Housewife,” one of Jhabvala’s best-known short stories, was first published in *An Experience of India*. It is a moving exploration of the theme of artistic commitment, discreetly embedded in a domestic drama of marital infidelity. Shakuntala, after being a loving and faithful wife for twenty-five years, begins to take singing lessons and quickly discovers that her music becomes the most important thing in her world. While she has, till now, divided her tranquil affections among her husband, daughter, and grandchild, suddenly her life seems to revolve wholly around her lessons, her practice hour each morning, the appearances or absences of her teacher, and his varied responses to her progress.

Shakuntala’s volatile moods are determined by her passion for her music, and her passion is embodied in the guru figure of her music teacher. Jhabvala subtly maps the ups and downs, the triumphs and disappointments of the creative experience. By placing the dilemma in the midst of the ordinary middle-class life of a contented housewife, she particularly raises the question of how a woman is supposed to balance her social commitments in running a household with an overwhelming creative urge. For the woman artist, the practice of her art is to be fitted with difficulty into her everyday life, and its demands test her loyalties by

competing with her concern for her family.

In Shakuntala’s case, the difficulty is compounded by the fact that her music is identified with her music teacher. The fascination of her art is complicated by the fascinations of love. The music teacher, talented, moody, and arrogant, embodies a threat to domestic order and a glimpse into the mysterious world of a life wholly devoted to art and pleasure. She revels in his appreciation of her singing and her money and his intermittent spells of indifference drive her to rashness. When he consistently fails to show up for her lessons, she seeks him out and follows him to his house, where he wastes no time in consummating their tension-filled relationship. Sexual intimacy appears to rouse Shakuntala to a state of telepathic awareness of her teacher and her art. Jhabvala ends her story with an ambiguous question that focuses on the dynamics between ordinary commitments to daily activities and the extraordinary passion for a higher art: “There was no going back from here, she knew. But who would want to go back, who would exchange this blessed state for any other?”

## SUMMARY

Ruth Praver Jhabvala has lived her life as an expatriate—in England, India, and America—and consciousness of this fact has shaped her fiction. Having spent twenty-five years in India and having produced the bulk of her novels, short stories, and film scripts there, it is her personal experience of the East-West encounter that has molded her work. Her observations of Indian life have provided most of her fictional material. Jhabvala has shown particular interest in tracing interactions between Indians and Westerners in various kinds of relationships. Her writing is marked by details of Indian life that only an outsider would notice and remember; this bestows on her fiction a unique character and vision.

## DISCUSSION TOPICS

- Is the fact that Ruth Prawer Jhabvala spent the first twelve years of her life in Germany during the rise of Nazi power reflected in her fiction?
- Compare the Western women in Jhabvala's *A Backward Place* with those in E. M. Forster's *A Passage to India* (1924).
- Is Jhabvala's "The Housewife" primarily about the nature of the housewife in the story or about housewifery in India? Can both alternatives be presented successfully?
- To what extent is Jhabvala's India representative of the East?
- What is the symbolic significance of Jhabvala's title *Heat and Dust*?

## SAMUEL JOHNSON

**Born:** Lichfield, Staffordshire, England

September 18, 1709

**Died:** London, England

December 13, 1784

*Long known principally through James Boswell's *The Life of Samuel Johnson*, L.L.D. (1791) as a talker and eccentric, Johnson is now known best for poetry and prose that make him one of the major figures of the eighteenth century.*

### BIOGRAPHY

Samuel Johnson was born to a fifty-two-year-old bookseller, Michael Johnson, and his forty-year-old wife, Sarah Johnson, on September 18, 1709, in Lichfield, Staffordshire, England. He was a precocious child who soon spent much time reading widely in his father's shop. After a typical classical education at Lichfield Grammar School, Johnson entered Pembroke College, Oxford, in the fall of 1728. When his funds ran out in December of the next year, however, he returned to Lichfield to work in his father's bookshop. Johnson's first published work, a translation into Latin of Alexander Pope's "The Messiah," appeared in 1731, the year of his father's death. Johnson was soon occupied briefly as a schoolmaster in a small town in Leicestershire and afterward in Birmingham as a translator.

At the age of twenty-four he met and married a widow, Elizabeth (Jervis) Porter, called "Tetty," twenty years his senior. Tetty reportedly described the tall, rawboned, awkward Johnson as "the most sensible man that I ever saw in my life." This astonishing marriage, which was childless, lasted until Tetty's death in 1752.

After the failure of a school that Johnson opened near Lichfield, he resolved to seek his fortune as a writer in London. Leaving Tetty behind, he set off in 1737 nearly penniless on the 120-mile trek by horse and on foot with the manuscript of an

unfinished tragedy, *Irene* (pr. 1749) under his arm, in the company of David Garrick, a former pupil who wanted to become an actor.

In the years that followed, Garrick became a famous and wealthy actor, while Johnson eked out a bare existence as a Grub Street hack, writing miscellaneous ill-paid pieces such as translations and biographical essays for Edward Cave's *Gentleman's Magazine*. Johnson's work for Cave also included approximations of parliamentary debates assembled from scraps of conversations overheard in coffeehouses and on the streets (publication of the actual debates themselves was prohibited). In these versions, Johnson achieved effective anti-Robert Walpole propaganda, reasonably accurate content, and style generally far better than the originals.

In 1738, Johnson published *London: A Poem in Imitation of the Third Satire of Juvenal*, comparing corruption in London under Walpole's ministry to that in Juvenal's degenerate Rome. Praise of the poem by Pope and other literary connoisseurs did not mean financial success for Johnson. Occasionally, he was hungry. Sometimes, in the company of other unfortunates, he walked the London streets at night or slept on bulks along the Thames because he lacked the price of a cheap lodging. These experiences left him with a clear memory of real poverty and a deep sympathy for poor people. This memory and sympathy served him well in writing *An Account of the Life of Mr. Richard Savage, Son of the Earl Rivers* (1744; commonly known as *Life of Richard Savage*), a full-length biography of an indi-

gent author and Johnson's sometime companion who had died in 1743.

Two years later, Johnson's financial condition had improved enough for him to rent a rather large three-story house at Gough Square, near Grub Street, and to send for his wife. In the top story of this house, Johnson began work on *A Dictionary of the English Language: To Which Are Prefixed, a History of the Language, and an English Grammar* (1755). This project took eight years of laboriously copying more than 116,000 suitable printed quotations, filing the papers in boxes, and doing research and writing. While the work on the dictionary was being pushed forward with the help of a succession of eight amanuenses, Johnson was also active on other literary fronts.

In 1749, he published *The Vanity of Human Wishes: The Tenth Satire of Juvenal Imitated*, perhaps the most profound of all of his poems, and, with Garrick's help, he staged his tragedy *Irene*, at last. The next year, he began *The Rambler* (1750-1752), a semiweekly periodical containing his own thoughtful essays on important human concerns, which continued until 1752, the year of Tetty's death.

With the publication of *A Dictionary of the English Language*, Johnson's fame and fortune grew. Oxford awarded him an honorary M.A. degree, and he was soon able to begin another immense project, an edition of William Shakespeare, to be published by subscription, and on another periodical, *The Idler* (1758-1760), for which he wrote essays on the human condition in a generally lighter tone than those of *The Rambler*.

Johnson was still not entirely free from money troubles. When his mother died in 1759, he needed to raise money quickly for her funeral expenses. He thus completed *Rasselas, Prince of Abyssinia* (1759), a moral tale that he seems to have begun some time before her death, for which he received one hundred pounds. In 1762, an annual pension of three hundred pounds awarded by the government made Johnson financially secure, at last. By 1763, when James Boswell, Johnson's first biographer, met him for the first time, Johnson was a celebrity, feared for his acuteness, famed as a talker, and admired for his abilities, endurance, and energy.

Although Johnson suffered from depression, from which he recovered with the help of new friends, the Thrales, he was not idle after the publi-

cation of his edition of Shakespeare and the subsequent award of an honorary LL.D. by Trinity College, Dublin, in 1765. Johnson's next major work, however, came a number of years later. In 1773, at the age of sixty-four, he undertook a strenuous journey with Boswell, who wished to show him something of his native land. This resulted in *A Journey to the Western Islands of Scotland*, published in 1775. Johnson also toured Wales with the Thrales in 1774 and accompanied them to France the next year. At this time, he received an honorary doctorate in civil law from Oxford. He continued to call himself plain "Mr. Johnson."

Johnson's last lengthy literary project, *Prefaces, Biographical and Critical, to the Works of the English Poets* (1779-1781; commonly known as *The Lives of the Poets*), occupied the years between 1777 to 1781. It consisted of biographical and critical prefaces to the reprinted works of fifty seventeenth and eighteenth century English writers. Though occasionally perfunctory, many of those prefaces featured in *The Lives of the Poets*—especially those on Abraham Cowley, John Milton, John Dryden, Isaac Watts, and Pope, among others—contain some of Johnson's most incisive criticism.

Johnson had always feared death, but in the last years of his life he decided to confront it. Among friends who died was a humble physician for whom Johnson had provided a home for many years. This man is commemorated in some of the most moving verse that Johnson ever wrote, "On the Death of Dr. Robert Levet." Johnson's own robust physical health began to break down, too, and he experienced recurrences of depression. His religious faith sustained him, but this time Mrs. Thrale was not there to nurse him through crises; a widow for a time, she had remarried against Johnson's wishes. By the fall of 1784, his sufferings from asthma and dropsy became acute. He became bedridden after returning from a trip to Oxford in late November. After praying fervently and taking leave of his friends, he died of what seems to have been complications of dropsy on December 13 in London. On December 20, Johnson's funeral took place in Westminster Abbey, where he was buried in the Poets' Corner.

## ANALYSIS

As James L. Clifford points out, critics who followed Johnson generally were not favorably im-

pressed by his writings. They decided that his work was pompous, didactic, and even bigoted. Critics now consider Johnson a teacher, moralist, and wise man who appeals strongly to readers because of his sincerity, lucidity, and vigor. No one would claim, however, that Johnson is easy reading. His vocabulary is frequently abstract and Latinate. His sentences are often long, sonorous, and muscular. They seem to demand of readers a tolerance for ample and unhurried thought. Yet although Johnson wishes his readers to understand him, he is not condescending. Rather, he tries to raise them to his own level. He provides many examples to make his points and to put them in broad moral and social context. He also makes frequent use of analogies to things that are familiar, striking, and concrete.

In all of Johnson's writings, his sympathy with weak and downtrodden people is clear. In *The Rambler*, issue 39 (1750), he sympathizes with unhappily married women. In *The Rambler*, issue 148 (August 17, 1751), he warns parents about the misuse of parental authority and cruelty toward children. In *The Rambler*, issue 114 (April 20, 1751), he speaks out against capital punishment for such crimes as robbery. In *The Rambler*, issues 170-171 (November 2 and 9, 1751), he calls for compassion toward prostitutes, many of whom were victims of circumstance. In 1777, an argument by Johnson was successful in freeing Joseph Knight, whose black skin had condemned him to slavery.

Johnson was scrupulous in his concern for the truth and did not passively accept other people's opinions. In 1762, his search for the truth made him look into the alleged appearance of the Cock Lane Ghost, and he exposed it as a fraud. In 1773, he accompanied Boswell on a strenuous journey to the Scottish Highlands to investigate the claim of James Macpherson that his publication of a long pseudoepic poem was in reality authentic folk poetry by the Gaelic poet Ossian. When Johnson wrote *The Lives of the Poets*, he did not merely rely on printed authorities for information about his subjects but tried to search for material on his own—a rare practice in his day.

Because Johnson's critical judgments on literature sometimes differ from those of mainstream received opinion, they are often assumed to be prejudiced. Indeed, Johnson says what he thinks and leaves no doubt as to why. He calls the form of John Milton's "Lycidas" (1638) "easy, vulgar and there-

fore disgusting." Yet he gives his reasons: the inherent improbability of using pastoral imagery to talk about the activities of college friends and acquaintances, and the combinations of these pastoral fictions with "the most awful and sacred truths of Christianity." That is, Milton spoke of college students as *sheep*, of their teachers as *shepherds*, and later, impiously and irreverently, of these *shepherds* as ecclesiastical pastors and saints.

Johnson's poetry addresses the same themes as his prose: human pain and difficulty, the need for morality and truth. In "On the Death of Dr. Robert Levet," a poem of nine simple quatrains, Johnson expresses his personal grief for the loss of his "obscurely wise and coarsely kind" friend. He also makes Levet's use of his modest gifts to benefit the sick poor a model for readers. Even Johnson's humorous advice to a spendthrift young heir in "To Sir John Lade, on His Coming of Age" includes both an understanding of lighthearted youth and a serious warning of dangers that might cause Sir John to "hang or drown at last." Johnson's human sympathies and his insistence on truth and morality make readers conscious of his presence in everything that he wrote. He is a compelling guide and friendly teacher who insists that readers take him seriously.

## LONDON

**First published:** 1738

**Type of work:** Poem

*London, the center of British life, is so corrupt that good people must leave it and those of genius, unrewarded, cannot survive in it.*

*London: A Poem in Imitation of the Third Satire of Juvenal*, a poem in twenty-seven stanzas of varying lengths, is written in pointed heroic couplets. An imitation of Juvenal's third satire, it revives Juvenal's complaints against flattery, fraud, perjury, theft, and rejection of old Roman virtues and applies them to the British metropolis. Like Juvenal, Johnson is rhetorical and dramatic. He, too, presents readers with a scene: A man, injured by the viciousness and folly of the city, leaving for the peace and solitude of the country, is bidding farewell to his friend.

Johnson's poem opens with a man named Thales waiting on the banks of the Thames for the boat to take him to Wales. Thales reviews his reasons for leaving town: selfishness, greed, the absence of public and private virtue, and the disappearance of true patriotism. The greatest effects of these calamities are felt by the young and the talented. Still other evils, such as arson, random violence, and even murders committed by pampered young delinquents and mischievous drunkards, are directed against the helpless poor or unsuspecting citizens. Thales can say no more because his boat has arrived. Yet he promises to come out of solitude to renew his attack on London vice when his friend is ready to leave the city.

*London* presents a problem to readers: To whom is Thales addressing his grandiose monologue, which is appropriate for a large audience? Merely to the single friend who accompanied him to the boat? It is ironic that the very people who need his message are not there to hear it. It is also possible that Johnson, to show how deeply his speaker is affected by his ordeal, has him "forget" that only one person is listening to him. Of course, outside the fictional situation of the poem, Thales has as an audience all the readers of *London*.

*London* is, in part, a public poem, a satire attacking the corrupt, long-entrenched government of Sir Robert Walpole. A typical Tory complaint repeated several times in the poem—how much London had changed since its glorious days—parallels Juvenal's lament for the death of old Roman virtue. The speaker expresses anger and disappointment for England's losses: of the "fair Justice" of King Alfred, of the heroism and sanctity of King Edward, of the bravery of King Henry (Johnson does not specify which Henry), and of the honor and commercial ascendancy of Queen Elizabeth. Instead, under Walpole, "Worth" and "Science" are ignored, insulted, attacked, and forced by their enemies to leave the capital. These include abstract representations of evil such as "the supple Gaul," "the silken Courtier," the "fiery Fop," the "frolick Drunkard," the "midnight Murderer," *Orgolio*, and *Balbo*, as well as real people, all Whigs, such as Lords Hervey, Marlborough, and Villiers. Such evil undermines the nation and even poisons the English soil.

*London* is also a private poem, which expresses Johnson's personal sense of injury in the outrages committed by a vicious society on the virtuous indi-

vidual. It also contains concrete details that tie it to Johnson's own experience. Johnson had seen two of his friends, Henry Hervey and Richard Savage, victimized and forced, like Thales in the poem, to leave London for Wales.

The poem's rhetorical structure allows the speaker to turn from observations to questions to exclamations, from panoramic descriptions of a society in moral chaos to mock exhortations to villains to do their worst, from condemnations of evil to prayers to be spared. The structure also permits the expression of a wide range of strong feelings—anger, loss, sorrow, rage, regret, indignation—and allows these feelings to build to an almost unbearable tension. Even so, the reader has an impression that great reserves of emotional power are being restrained by an immense effort. Thus, the famous lines in which Johnson describes his own unfortunate condition, "Slow rises worth, by Poverty deprest," sound mild and innocuous out of context. Yet within the poem, they indicate wrath and despair about to explode. These emotions and the themes with which they are associated appear repeatedly in Johnson's writings.

## LIFE OF RICHARD SAVAGE

**First published:** 1744

**Type of work:** Biography

*Johnson tells the story of his impoverished literary friend, Richard Savage, who asserted that he was the illegitimate son of a countess and an earl.*

In *Life of Richard Savage* (the full title is *An Account of the Life of Mr. Richard Savage, Son of the Earl Rivers*), his first full-length biography, published anonymously, Johnson describes the sensational life of a Grub Street writer and poet who was his friend and sometime companion in frolic and poverty. When Savage died in 1743, Edward Cave, the publisher, hurried to make arrangements with Johnson to write Savage's notorious story. Johnson had to work quickly. He made some attempts to consult records and examine original documents, but he was less concerned with factual accuracy than with telling the truth about the character of a man who, though unfortunate, had brought most

of his misfortunes on himself. Clearly, Johnson was aware of his friend's many shortcomings. He also wished to defend Savage's memory from malign attacks. Even more, however, he wanted to write an account that would be useful to readers both as an inspiration and as a warning.

According to Johnson's account, which believed Savage's claim to high birth, Savage's mother, Lady Macclesfield, who wished to escape from her marriage, stated that she had committed adultery and that the child she carried had been fathered by Earl Rivers. Her husband's application to Parliament to have the marriage dissolved was successful, and Lady Macclesfield's baby was declared illegitimate. When the baby was born, Rivers acknowledged his paternity but took no other notice of the child. The baby's mother, who remarried soon after her divorce, sent him to a poor woman to be reared as her own and paid no more attention to him. The baby came to be called Richard Savage. His maternal grandmother and his godmother took enough interest in him to pay for his care and his education, but because his mother stated that he had died, Rivers made no provision for him in his will. Thus, Richard Savage lost a legacy of six thousand pounds. Then, Savage's mother tried to have him sent to the American plantations and, failing that, had him apprenticed to a shoemaker. When his nurse died, Savage found among her papers evidence showing who he really was. He began an unsuccessful lifelong campaign, which alternated pleas and vilification, to be recognized and supported by his mother.

Savage must have had considerable charm, for he was helped by the writers Sir Richard Steele and Aaron Hill and the actress Anne Oldfield, who were impressed by his talent for writing and conversation. A short spurt of good fortune ended when Savage was implicated in a murder, tried, found guilty, and condemned to death. His mother obstructed his friends' efforts to get him a reprieve, but eventually he received a royal pardon.

The patronage of Lord Tyrconnel, his supposed cousin, enabled Savage to return to society and made him a literary lion. Yet Savage's frequent drunkenness, outrageous behavior, and sale of a set of books that Tyrconnel had lent him caused a split between them and the end of Tyrconnel's financial support. Savage, ever resilient, addressed Queen Charlotte as her "Volunteer Laureate" in a

poem on her birthday and succeeded in getting a small annual pension from her. When that, or any other money came his way, Savage spent it on wine and jollity, and soon he was without any money, and often without food or shelter. His friends proposed that he go to Wales, where he could write and live cheaply. After a year, however, he was back in London, living in dissipation and want. His friends, their funds and their patience exhausted, let him be taken to Newgate Prison, where at least he would have shelter from the elements. For six months, all went well. Savage was well treated by his jailers. He received visits from his friends and continued to write. In the summer of 1743, however, he became ill and died within a few weeks.

In the *Life of Richard Savage*, Johnson discusses briefly some of Savage's works, such as *The Wanderer* (1729) and *The Bastard* (1728), two poems concerned mainly with Savage's own life and misfortunes; *An Author to Be Let* (1729), a pamphlet that unwisely satirized nearly everyone in the literary establishment of the day; and two poems, *The Volunteer Laureate* (1732, the already-mentioned birthday poem addressed to the queen) and *London and Bristol Compared* (1744), which Johnson quotes in full. Savage's writings were striking, original, and dignified, says Johnson. They might be faulted for uniformity and occasional harshness of style, but they were nonetheless remarkable performances, considering the unfavorable circumstances under which they were written.

Johnson is more interested in discussing Savage's character than his writings. This bent is particularly obvious at the end of the account, where he points out Savage's virtues and abilities, as well as his vices and weaknesses. Savage did not look like a ruffian. His manner was dignified, his mind was strong and agile, his conversation was stimulating, and his judgment of literature and people was sound. He was often compassionate and generous. Yet he was a waster of his own considerable talents, a slave to his passions, and a victim of dissipation. He was unreliable. He was inordinately vain of his abilities and his writings.

Johnson does not condemn Savage or allow others, especially those "who have slumber'd away their time on the down of affluence," to speak ill of Savage or his writings. Instead, Savage's accomplishments should be an inspiration to those who also suffer deprivation or a lesson to those who do

not, showing that imprudence and dissipation “make knowledge useless, wit ridiculous, and genius contemptible.”

## THE VANITY OF HUMAN WISHES

**First published:** 1749

**Type of work:** Poem

*Human efforts can do nothing to achieve security or happiness, but heavenly wisdom can create calm and happiness that humankind cannot achieve alone.*

*The Vanity of Human Wishes: The Tenth Satire of Juvenal Imitated* was published eleven years after *London*. It, too, is a long poem. It consists of twenty-five stanzas of varying lengths, written in heroic couplets. It is also concerned with morality. Its rhetorical style is similar to that of *London*: It also has a speaker who uses the same kind of personifications, the same kind of pointed sentences, the same kind of figures of speech as Johnson’s earlier poem. Yet *The Vanity of Human Wishes* is a more philosophical poem than *London*. Its scope is larger and its manner is more mature.

The poem opens with a magniloquent invitation from a speaker stationed above and beyond the earth to “Let Observation, with extensive View/ Survey Mankind, from *China* to *Peru*” to see how, in the whole inhabited world, various patterns of destruction thwart human efforts. The eye can discern the wavering of an individual who pursues a dangerous solitary course, as well as the larger movements resulting from the sinking of whole nations. The scene encompasses the entire human condition, from humble to exalted. It also takes in the whole of human history, which, from earliest times, was preoccupied with a single question: Can human beings achieve security, fortune, and happiness? Until close to the end of the poem, the answer is no.

The reader is presented with a series of portraits, arranged in what seems to be an order of increasing mischance, of splendid and ambitious persons, such as Cardinal Thomas Wolsey, Charles XII of Sweden, and Xerxes I, who meet with defeat and shame by merest accident. These alternate

with vignettes of nameless and typical figures who are also undone by life. Life’s anonymous victims include the scholar, like Johnson himself, whose desire for knowledge and fame is destroyed by “Toil, envy, want, the patron, and the jail.” The rich old man who hopes to buy health and a fresh appetite for enjoyment instead acquires heirs who hope soon to get their hands on his estate. The ambitious mother who thought beauty, rather than virtue, would help her children to advance sees them destroyed because of it.

The multiplication of images, which is accompanied by an increasing complexity of language, also suggests rising tension. The compression of human problems in the question near the end of the poem, “Must helpless man, in ignorance sedate,/ Roll darkling down the torrent of his fate?” indicates not merely the compounded horror of the human condition but also a tension that is nearly unbearable. The distance between the speaker and the reader is diminished. Also, the distance from what the speaker and the reader see is eliminated, so that both are on the verge of the fate that they witness.

For Johnson, the only possible answer is found in resignation based on religious hope and prayer that asks for love, patience, and faith. With these three, “celestial wisdom” creates the gift of calm and happiness that the human mind cannot obtain on its own.

## RASSELAS, PRINCE OF ABYSSINIA

**First published:** 1759

**Type of work:** Philosophical tale

*Rasselas leaves his birthplace, the Happy Valley, to find a life that will ensure happiness, but he decides at length that he has searched in vain.*

*Rasselas, Prince of Abyssinia*, Johnson’s most famous work, was written rapidly to pay the expenses of his mother’s funeral and published anonymously. It tells in forty-nine brief chapters what seems at first to be a simple story with a clear moral. A young prince, Rasselas, is imprisoned in his Abyssinian birthplace, the Happy Valley. It is a paradise

surrounded by mountains, which, once left, cannot be reentered. Although his life seems perfect, Rasselas is nonetheless bored and unhappy. He manages to escape from his home together with his tutor, Imlac, his sister, Nekayah, and her maid, Pekuah. They set out for Cairo on a quest for a kind of life that will bring happiness.

Rasselas soon discovers that happiness cannot be found among pleasure-seeking young men, learned older men, Stoic philosophers, hermits, or heads of government. His sister, Nekayah, who looked for happiness in private life, found only empty-headed cheerfulness in the daughters of the families that she visited, discord between parents and children, and often discord between spouses. Imlac then proposes that they visit the Pyramids to look for the secret of happiness in the past. When they arrive, Nekayah's maid, Pekuah, afraid of being closed in forever, balks at entering and so is left outside while the others make their explorations. Yet when Rasselas, Nekayah, and Imlac emerge into daylight, Pekuah is missing. She has been kidnapped by Arab horsemen. For the first time, Rasselas, and especially Nekayah, experience real loss and genuine unhappiness.

After seven months, Pekuah is returned unharmed to her mistress. The group happily returns again to Cairo. There, Rasselas announces an intention to devote himself to the life of a scholar. Imlac tells about a scholar whom he knows, an astronomer who seems happy but, upon closer acquaintance, proves to be mad and to believe firmly that he is in control of the weather and the seasons. The astronomer, in fact, is attempting to name Imlac his successor as controller of weather and the seasons. After the young people meet the old astronomer and converse with him, however, his sanity, and also his unhappiness, returns.

What they had seen and done outside the Happy Valley had given Rasselas, Nekayah, and Pekuah a measure of experience that they had not had before and desires they knew could not be fulfilled. At

the end of the tale, in "The Conclusion, in Which Nothing Is Concluded," Pekuah wishes to become prioress of an order of pious women; Nekayah, to found a college of learned women; Rasselas, to become a just ruler. None of these is immediately within grasp, so the three, together with Imlac and the old astronomer, decide to return to Abyssinia as soon as possible. They will not, however, be able to reenter the Happy Valley.

*Rasselas* is not a novel. It is not concerned with so-called real life, but with symbolic action. Its central problem, how and where happiness can be found, is never directly answered, but instead it is considered and reconsidered with increasing refinement from different viewpoints. Its characters, for all of their admirable goals and delicate tastes, are not rounded persons but representative types. They are aids in complicating and clarifying happiness. They show that efforts to obtain happiness are futile, but also that, as in *The Vanity of Human Wishes*, happiness can be conferred or received as a gift.

In *Rasselas*, Johnson is, of course, the teller of the tale and often, perhaps, in the figure of Imlac, the wise man. Imlac is comically enthusiastic about his learned interests and would talk forever if not stopped. Yet he is also the character in the tale best equipped to find a solution to the problem of happiness. Imlac is a quintessential teacher, tireless, and, like Johnson, generous. He donates the results of a whole lifetime of activity and thought for Rasselas's benefit. He sees to it that Rasselas and his party avoid obvious foolishness, that they experience whatever good is at hand, and that they consider all available possibilities before they make decisions.

*Rasselas* has often been compared with Voltaire's *Candide: Ou, Optimisme* (1759; *Candide: Or, All for the Best*, 1759; also as *Candide, Or, The Optimist*, 1762), another philosophical tale dating from 1759 and concerned with the problem of finding happiness. Voltaire recommends "cultivating one's garden" as a solution to humankind's difficulties. He does not promise bliss as an outcome of this activity, but rather contentment. Yet Johnson is more pessimistic and more scrupulous than Voltaire. In *Rasselas*, humankind is in a more precarious situation than in *Candide*, more like that of "helpless Man" at the end of *The Vanity of Human Wishes*, but without the possibility of a religious solution to the problem. In

*Rasselas*, nothing is entirely within human control, not even the cultivation of a small parcel of land. Impossibilities are everywhere, and trouble can lurk even in the most featureless landscape.

### SUMMARY

No longer considered as a man notable merely because of his eccentric personal mannerisms and interesting talks, Samuel Johnson at last has come into his own as one of the greatest English writers of the eighteenth century. His range is broad. He is a large-souled poet, an incisive essayist, a careful and energetic editor, a pioneer in the art of biography, and a profound moralist. His achievements also include the first *A Dictionary of the English Language* based on scientific principles and a body of literary criticism, which later critics ignore at their peril.

Johnson's special appeal lies in his psychological depth, his integrity, and his love and pity for humankind. These qualities continue to speak to the minds and hearts of readers.

Margaret Duggan

### BIBLIOGRAPHY

#### By the Author

##### LONG FICTION:

*Rasselas, Prince of Abyssinia: A Tale* by S. Johnson, 1759 (originally pb. as *The Prince of Abissinia: A Tale*)

##### SHORT FICTION:

Essays in *The Rambler*, 1750-1752

*The Adventurer*, 1753-1754

Essays in *The Idler*, 1758-1760

##### POETRY:

*London: A Poem in Imitation of the Third Satire of Juvenal*, 1738

*The Vanity of Human Wishes: The Tenth Satire of Juvenal Imitated*, 1749

*Poems: The Yale Edition of the Works of Samuel Johnson*, 1965 (volume 6; E. L. McAdam, Jr., and George Milne, editors)

##### DRAMA:

*Irene: A Tragedy*, pr. 1749

##### NONFICTION:

*A Compleat Vindication of the Licensers of the Stage*, 1739

*Marmer Norfolciense*, 1739

*The Life of Admiral Blake*, 1740

*An Account of the Life of Mr. Richard Savage, Son of the Earl Rivers*, 1744 (better known as *Life of Richard Savage*)

*An Account of the Life of John Philip Barretier*, 1744

*Miscellaneous Observations on the Tragedy of Macbeth*, 1745

### DISCUSSION TOPICS

- Compare Samuel Johnson's motivation in his works concerning, respectively, Richard Savage and Dr. Robert Levet.
- Juvenalian satire was important in the eighteenth century. Compile a list of Juvenalian elements in Johnson's *London* and *The Vanity of Human Wishes*.
- Examine the lexicographical achievement of Johnson. Mention practices still used and those no longer attempted by dictionary makers.
- What traits of Johnson's personality made him an outstanding subject for the kind of biography James Boswell was able to write?
- Examine Johnson's assessment of human nature as revealed in his essays.
- How does Johnson show himself to be "more scrupulous" in *Rasselas* than Voltaire in *Candide* (1759)?

- The Plan of a Dictionary of the English Language*, 1747  
*A Dictionary of the English Language: To Which Are Prefixed, a History of the Language, and an English Grammar*, 1755 (2 volumes)  
Preface and notes to *The Plays of William Shakespeare*, 1765 (8 volumes)  
*The False Alarm*, 1770  
*Thoughts on the Late Transactions Respecting Falkland's Islands*, 1771  
*The Patriot: Addressed to the Electors of Great Britain*, 1774  
*Taxation No Tyranny: An Answer to the Resolutions and Address of the American Congress*, 1775  
*A Journey to the Western Islands of Scotland*, 1775  
*Prefaces, Biographical and Critical, to the Works of the English Poets*, 1779-1781 (10 volumes; also known as *The Lives of the Poets*)  
*The Critical Opinions of Samuel Johnson*, 1923, 1961 (Joseph Epes Brown, editor) 1965 (volume 6; E. L. McAdam, Jr., and George Milne, editors)  
*The Supplicating Voice: Spiritual Writings of Samuel Johnson*, 2005 (John F. Thornton and Susan B. Varenne, editors)

TRANSLATIONS:

- A Voyage to Abyssinia*, 1735 (of Jerome Lobo's novel)  
*Commentary on Pope's "Essay on Man,"* 1738-1739 (of Jean Pierre de Crousaz)

MISCELLANEOUS:

- The Works of Samuel Johnson*, 1787-1789  
*The Yale Edition of the Works of Samuel Johnson*, 1958-1990 (16 volumes)

## ELIZABETH JOLLEY

**Born:** Birmingham, Warwickshire (now in West Midlands), England  
June 4, 1923

**Died:** Perth, Western Australia, Australia  
February 13, 2007

*A preeminent Australian writer, Jolley is known primarily for her novels; she also achieved distinction for numerous short stories, radio plays, and personal essays.*

### BIOGRAPHY

Monica Elizabeth Jolley was born in Birmingham, Warwickshire, England, on June 4, 1923. Her mother, Margarethe von Fehr, had been teaching in Vienna when she met Charles Knight, a science teacher and Quaker relief worker, just after World War I. The couple moved to England, where Elizabeth and her sister were born and lived in the industrial Midlands area. The fact that her father had been imprisoned during the war for refusing to fight, strongly influenced Jolley's values, as did her early schooling, first at home and later at a Quaker boarding school near Oxford.

Jolley trained as a nurse at St. Thomas Hospital in London and Queen Elizabeth Hospital in Birmingham. She worked at various hospitals, including an orthopedic hospital during World War II. She married Leonard Jolley, a librarian, and in 1959 the couple and their three children immigrated to Australia, where Leonard helped to establish the library of the University of Western Australia in Perth. Jolley had been writing since childhood, and as an adult she worked as a real estate agent, domestic worker, lecturer, and tutor and conducted writing workshops in prisons and community centers. She also raised geese and cultivated a small orchard.

Jolley's first published works were short stories, collected in *Five Acre Virgin, and Other Stories* in 1976 and in *The Travelling Entertainer, and Other Stories* in

1979. With the publication in 1980 of her first novel, *Palomino*, Jolley won recognition as a novelist of unusual originality and unconventional tragic-comedy. She published many other novels between 1981 and 2001, including *Miss Peabody's Inheritance* (1983), *Foxybaby* (1985), *The Well* (1986), *The Sugar Mother* (1988), *Cabin Fever* (1990), *The Orchard Thieves* (1995), and *An Innocent Gentleman* (2001).

*Central Mischief: Elizabeth Jolley on Writing, Her Past, and Herself*, a collection of her essays and other nonfiction writing, appeared in 1992. In addition to numerous awards for stories and for a radio drama, Jolley won the Western Australian Week Awards, was named senior fellow of the Literature Board of the Australia Council, received the South Wales Premier's Prize for fiction, earned an Australian Bicentennial Authority National Literary Commission to write *The Sugar Mother*, and was awarded an honorary doctorate from Western Australia Institute of Technology. She died on February 13, 2007.

### ANALYSIS

A close observer of people and a skillful creator of plot, Jolley once said that she always began her fiction with her characters. In an interview conducted by Ray Willbanks in 1991, Jolley described the way her fiction developed, explaining that she did not write anything until she had "her people." She then placed these people into a confrontation or some other circumstance and continued from there. The conflict in Jolley's novels often results when one of the characters demands too much, or

does not give enough, or when a relationship is challenged from without. "I'm very interested to observe that there are many relationships that really cannot stand an intruder," Jolley said. She added that such intrusion could occur in numerous circumstances—in ordinary superficial relations, in families, or in a close relationship.

These principles were put to work in all of Jolley's fiction. For example, in *The Sugar Mother*, a stuffy, middle-aged professor is married to a high-spirited, insensitive obstetrician who refuses to have a child, even though the professor desperately wants one. The conflict deepens when the wife goes abroad on a yearlong fellowship. Intruders enter the story at this point—a buxom, seemingly innocent young woman and her wickedly conniving mother, who confuses the word "surrogate" with "sugar." When the pair impose themselves on the unwitting professor with a scheme to provide him with the child he wants, a bizarre situation ensues, both comic and tragic.

Jolley is especially concerned with the outsider, the misfit, the exile, the lonely, and the solitary. In her experience, Australia abounded in such types, and she found them in her native England as well. Her fiction is filled with people whose seemingly ordinary lives are quietly desperate and tragic. The story "Supermarket Pavanne," for example, tells of the solitary life of Miss Mallone, who kidnaps a small lost boy and embarks on a fantasy that never makes quite clear what is imaginary, what is real, what is sane, and what is not.

Jolley described her fictional method as one of writing short pieces of dialogue, snatches of scenes, and brief descriptions of people or places on separate small pieces of paper. She collected these papers in manila folders in no particular order until she was ready to assemble and arrange the bits and pieces into a kind of structure, like a map. As she went along, she discovered more about her characters, what happens to them, what they say or think. Often much rearranging, adding, subtracting, and changing occurred before the final work took shape, and that work usually was nonlinear because Jolley liked to play with chronological order. There might be references and cross-references, foreshadowings and flashbacks, repetitions and variations.

Nature and landscape are of primary importance in Jolley's fiction. The barren bush, the thou-

sands of acres of wheatfields, the weather, trees, and plants—all are ordinary, yet very significant in paralleling characters' thoughts and feelings. Examples of such elements can be found in almost everything Jolley has written.

Jolley often mixes the real with the imaginary, such as fantasy, untruthfulness, deliberate deceit, or total lack of awareness of what is happening to another character. She is fond of the framing device, of telling stories within stories. For example, in the novel *Foxybaby*, Miss Alma Porch is hired to direct a drama workshop at a summer weight-loss program deep in the sparsely inhabited wheatfields of Western Australia. Miss Porch uses her own unfinished story as a text. As she recounts her story to her pupils for them to act out, they become absorbed in it, and their lives are intermingled with the lives of the characters in the story that Miss Porch is making up as she goes along.

In *Foxybaby*, Jolley's mixing of the poignant and the ridiculous gets full play. Many of her books contain this element, which may startle, disturb, and even shock. Jolley's awareness of the comic side of tragedy is one of her most distinctive trademarks.

Jolley enables her readers to participate in her fiction, as do the characters in *Foxybaby*. Her works often have open endings, enabling the reader to create his or her own resolution to the story. This device, according to the author, "leaves the reader with something to hope for." This method may initially puzzle and dissatisfy readers, but once they realize what Jolley is doing and why, their enjoyment and entertainment grow as they are allowed—in fact, invited—to take part in the story in an active, imaginative way. The novel *Cabin Fever* uses many of the devices and techniques described above—the lonely, bewildered, entrapped main character; the shifting of time from one dimension to another; narration in the form of dialogue and interior monologue; and the entirely open ending.

In "Self Portrait," a kind of epilogue to a collection of her stories, Jolley explained why the theme of exile was important to her, detailing some of her earliest memories. Her mother had come from Austria shortly after World War I. Jolley recalls her mother's contempt for England, which she had imagined as being composed of castles and country estates, but which instead was urban, industrial, dirty, and mean. "Perhaps my vicarious experience of homesickness and exile started, without any

knowledge or understanding, from the early memories of incomprehensible unhappiness,” Jolley wrote.

Being sent away to boarding school at the age of eleven made her an outsider and exile as well. Other experiences—in training hospitals, in her newly adopted country, in her varied kinds of work—intensified her feelings of isolation. “Perhaps the writer,” Jolley wrote, “in writing, overcomes and accepts feelings of exclusion.” She insisted that she did not write about people she had known or events she had witnessed, but clearly her experiences colored her attitudes, just as her omnivorous reading led to her love of the English language, which she used in a spare, straightforward, seemingly simple and artless style. In her memories and in her manila folders, Jolley stored the images of coal mines, the Cotswolds, the Scottish moors, and her Australian surroundings. She felt that encountering and accepting strange territory was a necessary part of learning to be a writer.

In any appraisal of twentieth century fiction, Jolley is judged as one of the leading fiction writers of the last quarter of the twentieth century. On her death in 2007, she was compared to such notable authors as Flannery O’Connor, Edgar Allan Poe, Evelyn Waugh, and Barbara Pym.

## “THE PERFORMANCE”

**First published:** 1979 (collected in *The Travelling Entertainer, and Other Stories*, 1979)

**Type of work:** Short story

*In a hospital for the emotionally ill, a troubled man tells a sympathetic fellow patient about his life without realizing how much love and selflessness his story reveals about him.*

“The Performance” is included in the collection *The Travelling Entertainer, and Other Stories*. Jolley wrote and published many short stories before her first novel, *Palomino*, found a publisher; by then she was a popular writer of short fiction. Her stories have appeared in more than twenty anthologies.

“The Performance” contains many of the elements that are characteristic of Jolley’s writing. To begin, she uses a framing device: a narrator who is

ostensibly recounting the tale told to him by a confused, anxious man who has just been admitted to the hospital. The narrator tells just enough about himself to give the reader some understanding of his personality and the trouble that has brought him to the hospital (to be “cured” of homosexuality). The way the narrator responds to the man is a kind of performance, a term that is used again and again with a number of meanings; it is the central metaphor of the story.

The structure of the story is also typical of Jolley. The man does not recount events in strict sequence but skips around in time, with one memory reminding him of another. Jolley weaves her story as if it were made up of different strands of yarn—the present, the recent past, the distant past, and the present again, with several permutations of this pattern. It is not until the end of the story that the narrator begins to get a glimmer of understanding of what the man has been trying to tell him.

First, the man talks about his conviction that every work carries its own measure of responsibility, a key idea in the story. Little by little, in a confused and troubled way, he tells of his wife, Charmian, who is a teacher, one who gets ready to teach as if she were preparing for a performance. She is young, full of vitality and excitement, but the man realizes that she thinks of him as “dilapidated, a derelict.” He is only fifty-one, but because his wife treats him like an old man, he feels like one. He is a postman who is having trouble delivering the mail before darkness falls, so he begins to hide it and lose it.

Formerly, the man was a farmer, and he tells of the terrible time when his mother was killed by a branch that he was cutting. He naturally felt responsible. He deeply misses the farm that he once owned. Sometimes he goes back to the deserted place, saying that his feelings “exceed the boundaries of any possible performance.” In addition to his wife, his children live as if their lives were a performance, a competition.

Finally, he tells of a poor, very old woman, rumored to be a witch, who used to ask him every day if he had a letter for her from her son in England. The letter finally arrived, but the old woman was no longer able to comprehend, inhabiting a crazy world of her own until she was run over and crushed by a car. The man feels responsible because he did not look out for her, as he felt respon-

sible for his mother's death, and as he feels responsible for meeting his wife's need for him to be an audience, even though she no longer loves him. Despite the complex structure of the story, it has perfect clarity and coherence, with a strongly delineated main character and an underlying tone of deep disappointment and courage.

As in much of Jolley's work, the ending is open. It is left to the reader to imagine what will happen to the man. He has told his new friend a tale of exile, loneliness, sorrow, and despair. His own story is a kind of performance. Yet his words are so simple and his feelings so strong that the reader is left pondering the possibilities that remain for this kindly, selfless, extremely likable man.

### MISS PEABODY'S INHERITANCE

**First published:** 1983

**Type of work:** Novel

*A spinster's dull, grim life is transformed when she begins a correspondence with a writer who sends her pages from her novel-in-progress, leading to a confusion between reality and fantasy.*

*Miss Peabody's Inheritance* is Elizabeth Jolley's fourth novel. It was an instant critical and popular success, being short-listed for the New South Wales Premier's Prize, a signal achievement even though it did not win the top award.

Dorothy Peabody is a sixtyish typist in a large London firm, where she has worked for almost forty years. Her uneventful life is a dreary round of caring for her demanding, bedridden mother, riding a train to London, working mindlessly all day, taking another train home, and repeating the previous night's chores of getting her mother ready for the night, after the neighbor who cared for her during the day has departed.

Nothing varies this dull existence until Dorothy writes an adulatory letter to an Australian writer named Diana Hopewell, author of *Angels on Horseback*, a trashy romance with vaguely erotic undertones that Dorothy does not understand. Astonishingly, Miss Hopewell replies, describing her exciting life on a beautiful farm, interspersing pages from her work-in-progress, and asking Dor-

othy about her personal life. A lively correspondence ensues, and Dorothy's depressing life becomes exciting and suspenseful as she looks forward to receiving the letters and answering them.

The novel has multiple narrators, none of them reliable, as Jolley uses the novel-within-a-novel structure to tell three separate stories—what Miss Hopewell tells of her life, what Dorothy replies, and the excerpts from Diana's book about three middle-aged unmarried ladies of very respectable demeanor in public but dubious morals in private. The three women embark on their annual holiday in Europe, encumbered by a shy, motherless sixteen-year-old girl who has nowhere to go when school is closed for vacation (one of the ladies being a headmistress).

The sections dealing with the three women and their young companion are written in the present tense, giving the reader a sense of actuality and immediacy. As Dorothy Peabody reads and rereads these sections, she gradually comes to believe that what she is reading is actually happening. As fantasy impinges on her own life, she begins to behave in ways that are totally unlike her. The sudden death of her mother hardly creates a ripple in her routine, to which she has added joining the office workers in their Friday gatherings at a nearby pub. Not surprisingly, Dorothy cannot handle alcohol, and her behavior at these social affairs becomes more and more erratic and weird, culminating in an arrest for drunkenness. As a result, Mr. Bains, second-in-command at the office, offers Dorothy a three-month holiday, believing that the death of her mother has deranged her.

Dorothy has been looking for the three women friends, who are supposed to be winding up their holiday in London. When she fails to find them and realizes that they are probably on their way home now, she accepts Mr. Bains's offer and embarks for Australia to visit her novelist friend. On the plane, she writes her last letter to her friend. The next scene reveals that Diana Hopewell has just died, in the middle of a sentence. There is no beautiful ranch, just a nursing home and a kindly matron who consoles Dorothy in her disappointment, which does not last long. She realizes that she need not make the effort to go to see Diana's farm. All she needs to do is get hold of a typewriter, gather up the pages of the novel that Miss Hope-

well bequeathed to her, and “enter into her inheritance.”

“So much depends in the writing of a novel,” Diana Hopewell had written, “on the impact of the imagination on someone else.” In this sentence, Jolley states clearly the controlling idea of the novel about Miss Peabody. Earlier in the story, Diana had written to Dorothy, “If you feel emotionally involved that is natural. . . . The writing is packed, it is dense writing, emotions on several levels packed in. It is, I hope, a novel of existence and feeling. A reader can be as involved as he wishes and some readers will fight off this involvement. Don’t worry. Read on.” Obviously Miss Hopewell’s is not the only novelist’s voice speaking.

In this early novel, as in those that followed, Jolley aims to involve the reader who is willing to participate in the novel, and she demonstrates her ability to gather the reader into the story so that such involvement is possible. Again, the ending is open. Will Miss Peabody finish the novel or will she sink into dementia? One cannot help wondering as well about those improbably respectable women and the young girl who shocked them by falling in love with, and becoming engaged to, the elderly father of one of her schoolmates.

## CABIN FEVER

**First published:** 1990

**Type of work:** Novel

*An eminent psychological consultant is unable to leave her hotel room on the twenty-fourth floor as she relives her troubled and miserable past.*

In *Cabin Fever*, Jolley recounts the life of a young woman named Vera Wright. Telling the story entirely from the point of view of the first-person narrator, Jolley explores the nature of memory, as she has done in many of her novels. In this book she shows her mastery of the narrative devices she has developed, as well as the natural, straightforward style that is characteristic of her writing.

The book opens in the present, with Vera Wright sitting in her room on the twenty-fourth floor of a hotel in New York, where she is scheduled to deliver a paper at a conference entitled “Perspectives on Moral Insanity.” Other papers listed in the pro-

gram include “Symptoms of Panic Disorder” and “New Discoveries About Diabetes and Anorexia.” Vera appears to be suffering from some of the symptoms that she is supposed to objectively discuss at this conference of physicians, psychiatrists, social workers, nurses, and other health care workers. She knows that she should be meeting and talking with her fellow conferees, but instead she seems to be paralyzed by memories: her parents, her friends at the hospital where she trained to be a nurse, her first lover, and various people for whom she worked while trying to rear her daughter. These jobs include assisting in a home for new mothers, working in a progressive boarding school, and finally acting as a live-in housekeeper for a fifty-eight-year-old professor and his much older sister.

The foregoing summary suggests a neat, chronological succession of characters and incidents, but the story is told in the way that memory works. As Jolley herself writes: “The revival,” (of persons, places, incidents), “is not in any particular order, and one recalled picture, attaching itself to another, is not recognizably connected to another in spite of its being brought to the surface in the wake of the first recollection.” Thus the story is told in a circuitous fashion, with no semblance of chronological order, and yet, because the main components of Vera’s life are mentioned and described and dramatized through dialogue and her own musings, the story begins to be clear and the experiences she underwent are gradually made comprehensible.

Vera’s parents are major figures in her memory. Her mother is a disappointed, critical, anxious woman, while her father is gentle, loving, and kind. (Jolley described her own parents in much the same way.) Two other important people are Dr. Jonathon Metcalf and his wife Magda, who use Vera for their own perverted and selfish pleasure, though she never seems to realize this.

Aside from the remembered (and one suspects sometimes imagined) conversations, the entire story consists of interior monologue and recollections, through which the reader comes to admire Vera’s courage, determination, naïveté, and humor.

The book ends as it began, with Vera still self-imprisoned in her hotel room. She remembers (or imagines?) talking to someone coming to keep an

appointment that they “take the path through the pines from the station. It is both a shortcut and a pleasant little walk. A remedy.” These are the last words in the book, leaving the reader to ponder. While much of the novel seems clear enough, many questions remain unanswered. There is, for example, an untold part to Vera’s story—how she overcame her poverty and helplessness, acquired the education necessary to become an important personage in her field, and reached the stature of one to whom “people come to consult . . . about what worries them.” Are the woman in the hotel room and the young Vera Wright the same person? In the early pages of the book, the narrator remarks, “a ruthless self-examination is needed.” This idea is not clearly connected to what precedes or follows it, yet it seems to be a related and significant clue to what the book is about.

Jolley invites the reader to participate in the story, to allow one’s own imagination and insight to operate in a collaboration with the author, adding speculation and reflection to enhance the overall effect of the novel.

## THE WELL

**First published:** 1986

**Type of work:** Novel

*Hester Harper, a lame spinster who cares for her ailing father, brings Katherine, an orphan, into her father’s house to live with them. Following the father’s death, the two women become involved in a bizarre, almost supernatural, event.*

Hester Harper has a distinct limp. She leads an isolated existence on the farm of her father, who when the story opens is an old man. He soon dies. Perhaps to relieve her isolation and loneliness, possibly for more arcane reasons, such as a suppressed lesbianism, she brings an orphan, Katherine, into her father’s house. Jolley often wrote about people who have lost their mothers, as she had lost hers.

When Hester’s father dies, she and Katherine continue to live together in his house. They have a compatible relationship, but it is somewhat compromised by a fantastic event. The two women have gone to a dance and are on their way home follow-

ing it. Hester is driving, and in the darkness she runs down something in the road, presumably a man. The two women, unnerved by what has happened, dump the limp object Hester has run down into a well that is no longer used as a source of water. It becomes a symbol of suppressed sexuality.

Jolley depicts with incredible detail and psychological accuracy the panic, verging on hysteria, the two women experience after this traumatic occurrence. After dropping the object into the well, Hester then concludes that they have hit a man who has stolen money from her. She thereupon orders Katherine to descend into the well to retrieve her missing money.

Katherine refuses to go down into the well. She tells Hester that the man they have disposed of is still alive. In fact, Katherine has spoken with him, and, in a bizarre twist, he has proposed marriage to her. As in much of Jolley’s writing, reality gives way to fantastic events well outside the normal bounds of reality, but Jolley handles this departure from normality deftly, so that in crossing the line, she does not lose her readers.

## SUMMARY

In a sense, all of Elizabeth Jolley’s fiction is about how one’s feelings about people, places, and facts affect one’s perception of them. This subjectivity extends even to the reader’s perception of the story. The elements that constitute Jolley’s writing include narrative methods that do not follow a chronological line and characters who tend to be outsiders—exiles, misfits, the questionably sane, and lonely, disregarded, apparently ordinary people. Humor, as well as pathos, is a strong characteristic of Jolley’s writing; she once said, “I can’t help seeing the ridiculous side of everything.” A simple, natural, straightforward style tends to contrast with the eccentric, bizarre, or weird characters that inhabit much of her work. Jolley hoped that her readers would be creative, imaginative people. Reading Jolley is not a passive activity, but it is a very rewarding one.

## BEN JONSON

**Born:** London, England  
June 11, 1573

**Died:** London, England  
August 6, 1637

*A celebrated playwright and poet, Jonson is best known for his satirical comedies, lucid lyrics, and incisive critical opinions.*

### BIOGRAPHY

Benjamin Jonson, posthumous son of a minister, was born in or near London, England, on June 11, 1573. He received an excellent foundation in classical letters at Westminster School under headmaster William Camden, a famous scholar. Although unable to continue his education at a university, he was an avid reader and on his own became a serious student of classical language and literature. For a time, Jonson followed his stepfather's bricklaying trade, but in 1591 he went to the Low Countries to fight in the army. According to his own account, he bravely killed a foe in view of both the English and enemy camps.

Jonson returned to London in 1592, and two years later married Anne Lewis. In the next year or two, he began a career as actor and playwright. He soon got into trouble. In 1597, he was jailed for his part in *The Isle of Dogs* (pr. 1597), a play that the authorities considered subversive, and the next year killed a fellow actor, Gabriel Spencer, in a duel. His goods were confiscated, and he was branded on the thumb and jailed. While in prison, he converted to Roman Catholicism but later returned to the Anglican faith.

By the start of the seventeenth century, Jonson's reputation as a satirical comedian was well established. He rejected the fashionable romantic comedy and, starting with *Every Man in His Humour* (pb. 1601), staged in 1598, began writing scathing at-

tacks on human vices such as greed, lust, and envy. *Every Man in His Humour* was followed by *Every Man out of His Humour* (pr. 1599, pb. 1600), *Cynthia's Revels: Or, The Fountain of Self-Love* (pr. c. 1600-1601; pb. 1601), and *Poetaster: Or, His Arraignment* (pr. 1601, pb. 1602), all in the new satirical vein.

Jonson wrote for both adult and children's acting companies, and from 1600 to 1602 he participated in the famous war of the theaters, a conflict involving the Elizabethan playwrights John Marston, Thomas Dekker, and Jonson. He also became well known for his courtly masques created in collaboration with the architect Inigo Jones. Although best at writing satirical comedy, Jonson also wrote tragedy, producing two of significance, *Sejanus His Fall* (pr. 1603, pb. 1605; commonly known as *Sejanus*) and *Catiline His Conspiracy* (pr., pb. 1611; commonly known as *Catiline*), which use classical models.

In 1605, with James I on the throne, Jonson was back in jail. He voluntarily joined his collaborators on *Eastward Ho!* (pr., pb. 1605), which had been found offensive for its ridicule of Scots. That same year, he assisted the Privy Council in its inquiries into the Gunpowder Plot, an ill-devised Catholic scheme to blow up Parliament.

The richest period of Jonson's dramatic writing was between 1605, when *Volpone: Or the Fox* (pr. 1605, pb. 1607) was first produced, and 1616, when his collected plays and poetry were published in *The Workes of Benjamin Jonson. Epicæne: Or, The Silent Woman* (pr. 1609, pb. 1616), *The Alchemist* (pr. 1610, pb. 1612), *Bartholomew Fair* (pr. 1614, pb. 1631), and *The Devil Is an Ass* (pr. 1616, pb. 1631) were all penned in that decade.

Jonson then abandoned writing plays for almost ten years. A royal pension allowed him some leisure time for other activities. In 1618, he took a walking tour of Scotland and visited the poet William Drummond of Hawthornden, in whom he confided some of his more biting critical opinions. The following year, recognizing Jonson as a scholar and writer of importance, Oxford granted him an honorary degree.

In 1625, two years after a fire had destroyed his library, Jonson returned to writing plays. He did not, however, regain his earlier form. His most famous dramatic works belong to the fruitful period between 1598 and 1616. His last well-known comedy, *The Staple of News* (pr. 1626, pb. 1631), was produced in 1626, at the very start of his return to playwriting. From then until his death, he wrote what his detractors termed his “dotages,” but one fragmentary work, *The Sad Shepherd: Or, A Tale of Robin Hood*, published posthumously in 1640, is an engaging piece.

In 1628, when he was appointed city chronicler, Jonson was struck with paralysis, probably from a stroke. Thereafter, he largely remained confined to his quarters, where dedicated followers gathered and formed the “Sons of Ben.” These were mostly poets, influenced by Jonson’s verse, which they imitated. The period of his later masques, written for the court of Charles I from 1625 to 1635, was marked by a strained relationship with Jones. In 1631, they quarreled bitterly and ended their collaboration for good. Jonson’s reputation as an affable intellectual and arbiter of literary taste remained intact until his death on August 6, 1637, in London. He was buried in the Poets’ Corner of Westminster Abbey under the epitaph, “O Rare Ben Jonson,” testifying to the high esteem in which his contemporaries held him.

## ANALYSIS

One well-worn critical notion is that, although readers admire Ben Jonson, they love William Shakespeare. Jonson’s dramatic output in fact rivaled Shakespeare’s. He wrote nineteen plays, collaborated in several others, and crafted twenty-four courtly masques and entertainments. Yet despite Jonson’s great reputation among his contemporaries, his star has long been eclipsed by the phenomenal achievement of his great fellow dramatist and friend. Granted, Shakespeare’s genius is

unmatched by any of his contemporaries except in isolated instances, but no other lesser genius has been treated to such unfavorable comparisons with Shakespeare as Jonson has. He was to a degree responsible for this turn of events. An outspoken critic, Jonson passed on some negative assessments of his older friend’s work that ultimately made him the target of unjust criticism by many admirers of Shakespeare.

In the prologue to the second version of *Every Man in His Humour*, Jonson presented a critical manifesto that has been wrongly interpreted as a personal attack on Shakespeare conceived in petty jealousy. Although Jonson does allude to Shakespeare’s use of the chorus in his *Henry V* (pr. c. 1598-1599, pb. 1600) plays, his real concern is with the violation of logic characteristic of the popular chronicle play, which, complained Jonson, would often cover the entire span of a character’s life in an obvious violation of classical rules. Jonson was simply rejecting the history play in general, preferring comedy, which could mirror the times and “sport with human follies, not with crimes.”

Clearly, Jonson’s neoclassical bias led him to rebuke the practices of the stage that went against his sense of propriety and reason. Jonson’s comedy, because it is didactic, naturally gravitates toward satire. Its purpose, to make people laugh at their own foolishness, is corrective; hence, in Jonson’s greatest plays, including *Volpone* and *The Alchemist*, the main characters are either tricksters who cheat fools or fools themselves. Jonson’s comic mode is thus very different from that of Shakespeare, who is only satirical incidentally.

Jonson also believed that the overdrawn, exaggerated, and flowery speech of many characters was too wearisome, and he preached writing in language that people actually used, including slang heard in the street. That demand would also put him at artistic odds with Shakespeare, who framed different styles of expression for an extraordinary range of characters. Jonson, while embracing the concept of the dramatic unities of time, place, and action, did not always follow it. In contrast, Shakespeare, who either did not entertain the idea or simply rejected it on some occasions, as in *The Tempest* (pr. 1611, pb. 1623), practiced it to perfection.

In his best dramatic work, Jonson is a brilliant craftsman. His comedies are intrigue plays with complex designs, and for sheer stage razzle-dazzle,

they have few rivals. Jonson parades before the audience a succession of fools, brilliantly drawn and comically driven by some obsessive vice or “humor” that makes them fair game for crafty swindlers who prey on their weaknesses. That design becomes central in several of Jonson’s comedies, but the playwright’s genius was such that it never becomes merely formulaic.

Jonson’s susceptibility to criticism lies not in an inability to depict characters but in his disinterest in depicting sympathetic ones. Since his purpose was satirical, he seldom moves his focus away from tricksters and fools toward the more genial types found in the festive comedies of Shakespeare. Shakespeare’s comedies are triumphant and affirm life. Jonson’s comedies take a sour look at it. Within that limitation, and on his own terms, Jonson is a master playwright. His best works offer comic delight in their design. Once set in motion by the tricksters and driven by their own foolishness, the victims move with increasing rapidity through successive scenes until the action gets beyond the tricksters’ control. Resourceful though they may be, the overreaching tricksters end up being victimized by their own greed.

While Jonson is better known as a dramatist than lyrical poet, in the fashion of his own age, he undoubtedly viewed his poetry as his highest literary achievement. He is the primary figure in one of two major movements in poetry in the first half of the seventeenth century. The other movement, the so-called Metaphysical school, followed in the footsteps of John Donne. The “tribe” or “sons” of Ben emulated what Jonson preached and for the most part practiced.

Whereas the modern reader might have trouble reading Jonson’s comedies, which suffer somewhat from their topical word use, that same reader should find much of Jonson’s lyrical poetry remarkably clear. Unlike Donne and other Metaphysical poets, Jonson and his followers strove for clarity, symmetry, and simplicity in verse, which is classical in form and spirit. Except in a few pieces affecting the Metaphysical mode, Jonson’s poetry is free of the strained imagery and intricate thought of Donne and his followers.

Marked by decorum and restraint, Jonson’s lyrics are public and objective, cool and rational, urbane and polished. Many of his pieces are terse, notably his songs, epigrams, and epitaphs. They are

also didactic, sometimes satirical, even, at times, self-mocking. Marked by understatement and irony and purged of all emotional excess, some of his lyrics achieve an objective detachment that makes them seem cold. It is their pared down, uncomplicated statement that gives many of Jonson’s lyrics their modern tone.

Seconded by his critical opinions circulated among members of his group, Jonson’s poetry introduced a public poetry that would for a time gain ascendancy over the more private, subjective, and obscure verse of the Metaphysical poets. An important seminal figure in the classical movement, Jonson’s artistic tastes make him a parent of the neo-Augustan Age.

## VOLPONE

**First produced:** 1605 (first published, 1607)

**Type of work:** Play

*A Venetian “magnifico” who pretends to be dying in order to cheat greedy fortune hunters is undone by his own vanity.*

No work is more firmly bound to Jonson’s name than his great satirical verse comedy *Volpone*. It achieves the mastery of purpose claimed by the playwright and reflects his devotion to classical theories, but it remains a distressing comedy that defies easy interpretation.

The play’s predication is, however, quite simple. Volpone and his servant Mosca pretend that Volpone is dying and encourage Venetian fortune hunters to vie for Volpone’s favor in hopes of being named his heir. All visit Volpone, prompted by Mosca to bring gifts to convince Volpone of their kind concern for his health. Volpone is, of course, perfectly well, but he and Mosca put on such a good act that the legacy hunters are completely fooled. The greedy victims include Corbaccio, an old, deaf miser; Voltore, a conniving lawyer; Corvino, a rich merchant who jealously guards his young, attractive wife, Celia; and Lady Would-be, the wife of a ridiculous English knight.

Complications arise when Mosca convinces Corbaccio to claim that he is drawing up a new will disinheriting his son, Bonario, and naming Volpone his heir. After Corbaccio agrees, Mosca

taunts Bonario and challenges him to go to Volpone's house to overhear Corbaccio confirm the fact. Meanwhile, Volpone, who has been scheming to seduce Corvino's wife, has Mosca talk the foolish merchant into leaving Celia alone with Volpone, who then attempts to force himself on her. Bonario catches him in the act, rescues Celia, and denounces Volpone and Mosca.

Fearful that the game is ended, Volpone throws himself down in despair, but Mosca devises a new scheme to escape trouble. He convinces Corbaccio that his son is out to kill him, tells the suspicious Voltore that Bonario has made Celia swear that Volpone had raped her, and gets Corvino to denounce Celia as a lewd woman. Celia and Bonario, totally innocent, are brought to court, and through the testimony of the legacy hunters and Voltore's cunning, are found guilty in an obvious travesty of justice.

The pair of tricksters then go too far. Determined to vex the fools further, they spread the news that Volpone has died. Each would-be heir then comes to Volpone's house to claim the magnifico's legacy, only to be told that Mosca is the heir. Mosca knows that Volpone himself is now vulnerable and quickly makes plans to cheat him.

Seeking revenge on Mosca, the would-be heirs return to the court to claim that Bonario and Celia have been falsely charged and that Mosca has practiced criminal deceptions. Mosca is called to court, and when he refuses to confirm that Volpone is actually alive, he impels Volpone, disguised as an officer of the court, to reveal himself rather than be tricked. At last discovering the truth, the judges sentence both the tricksters and the fools to appropriate but very harsh, uncomic punishments. Mosca is to be whipped and sent to the galleys. Volpone, his wealth confiscated and given to a hospital for incurables, is to be imprisoned until he does in fact become sick and lame.

Jonson's work is based on a popular beast fable of the fox that feigned death, but its complexity

can be fully explained only by reference to the Roman institution of legacy hunting and such diverse works as *Aesop's Fables*, the Bible, and Desiderius Erasmus's *Morice encomium* (1511; *The Praise of Folly*, 1549). The comedy can also be seen as a morality play within its beast-fable guise. Volpone, like the fox pretending to be dead, traps unwary birds of prey, who are, of course, greedy men hoping to benefit from his death. Jonson's theme and real concern is the unnaturalness of sin. His strong moral intent is driven home by a constant reference to the beast fable in the speeches of Volpone and Mosca.

The dramatist's artistic purpose, as the play's prologue confirms, is to entertain and enlighten the audience while observing the unities of time, place, and action. Strictly speaking, however, Jonson violates his own artistic rules. The action all takes place in Venice within the course of a single day, but classical symmetry is destroyed by the inclusion of a subplot involving Sir Politic Would-be and his fellow Englishman, Peregrine.

The setting of the play, Venice, was probably chosen by Jonson for its reputation as a city full of carnival-like attractions, much like Jonson's own London. Volpone's household includes abnormal human pets, and at one point he disguises himself as a mountebank or quack to catch a glimpse of Celia. It is a Venice teeming with Renaissance life, zestful and curious, a magnet for English travelers such as Peregrine and the Would-bes.

The atmosphere is right for the deceit and trickery practiced by Volpone and Mosca on the callous, hypocritical legacy hunters. Volpone is, of course, no less perverse than his victims. In fact, his opening salutation to his gold, which he venerates as a saint, grotesquely distorts normal human values. As long as his victims are greedy fools, however, Volpone's ingenuity makes him more rogue than villain. Only when Bonario and Celia become enmeshed in his intrigue does he grow ripe for the comic unmasking that marks the play's grim finale.

*Volpone* works through an admirable use of sustained dramatic irony, which is a powerful theatrical device. The audience, recognizing the deceptions practiced by Volpone and Mosca, delights in their clever manipulation of their victims. The irony leads to some hilarious moments, as, for example, when Mosca prompts Corvino to vilify Volpone to his face after convincing him that the

fox is nearly in a coma, or the scene in which Mosca must yell at the deaf and feeble Corbaccio to get him to understand anything at all.

Threaded through the play, the farcical subplot of Sir Politic and Peregrine offers a humorous counterpoint to the fierce, unrelenting satire on compulsive greed in the main plot. In Sir Pol, Jonson pokes fun at harmless fanatics who find conspiracy afoot everywhere. Among other fantastic disclosures, Sir Pol tells Peregrine that he knows how to sell Venice to the Turks. After Peregrine becomes convinced that Sir Politic is actually a pimp for his wife, Lady Pol, he decides to get revenge on him. In the disguise of a merchant, he leads Sir Pol to believe that Peregrine is really a Venetian secret agent who now plans to arrest him. He then helps Sir Pol hide inside a ridiculous contraption made of a tortoise shell before revealing his true self and mocking the silly knight.

Sir Pol's asinine delusions and his fanciful "projects" are in the tradition of burlesque and mimicry, appropriate to the parrot, his beast-fable counterpart. Lady Pol, in the fortune hunt, is more directly related to the main plot, but she, too, is a mimic, aping the dress and manners of Venice and trying the Italian seduction game as if it were a mere extension of Venetian fashions. The topicality of the Sir Politic plot makes it easy to overlook its important function in the play. It contrasts English folly with Italian vice and adds texture and density to the whole. It also clarifies the relationship between vice and folly, showing how each is a species of the unnatural, which is, after all, Jonson's central, unifying theme.

## THE ALCHEMIST

**First produced:** 1610 (first published, 1612)

**Type of work:** Play

*A trio of London sharpers trick their greedy victims through clever manipulation and alchemical gibberish and mock rites.*

Like *Volpone*, *The Alchemist*, also in verse, has a complex intrigue plot with a radial design. In both plays, there is a central place where deceit is practiced on a procession of fools. In *The Alchemist*, the setting is Lovewit's London house, where, in

Lovewit's absence, his butler Jeremy has invited a cheater, Subtle, and his whore, Doll, to set up shop as tricksters on a profit-sharing basis.

At the beginning of the play, Subtle and Jeremy haggle over their respective cuts, and Doll manages to restore peace at the moment that the first of the fools, Dapper, enters. He is a clerk whom Jeremy, as Captain Face, has encouraged to consult with "Doctor" Subtle. Dapper wants a familiar spirit to help him win at gambling. After telling him that he is related to the Queen of Fairy, the tricksters whisk him out in order to welcome the next victim, Drugger, a tobacconist who wants to use magic for arranging his shop properly. After he leaves, the tricksters spot Sir Epicure Mammon approaching. Jeremy quickly changes into his disguise as Lungs, Subtle's alchemical assistant, to welcome the knight and his friend, Surly.

What Sir Epicure wants, and Jeremy and Subtle have promised to deliver, is the "philosopher's stone," the end result of the alchemical process. The stone is supposed to have great power, offering its owner eternal youth and the ability to transform base metals into gold. Sir Epicure is a believer, but Surly is not, and no amount of alchemical mumbo jumbo changes his mind. Meanwhile, Sir Epicure is led to believe that Doll is a lord's sister driven mad by scholarship.

After getting rid of Sir Epicure and Surly, the tricksters bring in the Puritan Ananias, who wants the philosopher's stone to aid his cause. Ananias refuses to pay any more money without first seeing some results, and Jeremy indignantly throws him out. Drugger then returns and tells Subtle and Jeremy about Dame Pliant, a rich widow, and her brother, Kastril, prompting Subtle and Jeremy's great interest.

After Ananias returns with Tribulation Wholestone, and they are sent off to settle an ethical point, the other clients start parading in too quickly. For a moment, Subtle and Jeremy get rid of all but Dapper, whom they prepare for a visit from

the Queen of Fairy. They blindfold him, tie him to a chair, take his money, and begin pinching him as fairies. Interrupted by Sir Epicure knocking at the door, the rascals gag Dapper with gingerbread and lock him in a privy closet.

Jeremy as Lungs introduces Sir Epicure to Doll, then changes into his Captain Face uniform to welcome Kastril and Dame Pliant. Almost immediately Surly arrives, disguised as a Spanish don who speaks no English, which induces Subtle and Jeremy to insult him and openly confess their intentions to fleece him. Surly wants to see Doll, but since she is busy with Sir Epicure, they introduce him to Dame Pliant.

At this point, matters get totally out of control. Sir Epicure blunders by alluding to the philosopher's stone, which makes Doll spout passages from an obscure scholarly work. Jeremy, as Lungs, tries to quiet her, and Subtle, always feigning piety, pretends to be deeply affronted by Sir Epicure's lust. Meanwhile, Surly removes his Spanish disguise, denounces the tricksters, and proposes marriage to Dame Pliant. Jeremy, who as Face had been giving Kastril fighting lessons, tries to get him to challenge Surly, but Kastril will not fight. Ananias and Drugger arrive to add to the rout, and, as if to underscore the insanity, the alchemical project explodes.

The play draws to its complex unwinding with the return of Lovewit, who hears complaints from his neighbors. Jeremy at first tries to cover for the tricksters, but several of their victims return to confirm the neighbors' account of their going and coming. With the help of his chastised butler, Lovewit takes full advantage of the situation. Jeremy drives off Doll and Subtle, claiming their booty for his master. Lovewit then marries Dame Pliant, and when officers come to search his house, he promises that he will return the goods of any victims who certify how they lost them. Since the fools are unwilling to disclose their stupidity, Lovewit keeps everything.

As in *Volpone*, in *The Alchemist* Jonson investigates the relationship between tricksters and their victims. Yet the two plays are very different in tone. *The Alchemist* lacks the decadent atmosphere of the earlier play. The perversion of the opening scene in *Volpone* gives way in *The Alchemist* to the bawdy an-

tics of Subtle and Face, and the comic thrust never succumbs so completely to the moral degeneration that marks the darker moments of the former work. Unlike *Volpone*, *The Alchemist* seems to lack an organic, unified, and complete plot. Plot implies development in character or idea, but in *The Alchemist* characters undergo no changes, and the tricksters pay no penalty except the loss of their ill-gotten gains. The play develops as a series of redundant episodes in which the same theme is implicit from start to finish. Unlike *Volpone* and *Mosca*, however, the intriguers in *The Alchemist* deceive only fools deserving of their fate, and they therefore pay no harsh penalty.

The foolish victims are not interdependent. They duplicate and mirror each other, but they do not interact. They come together only by accident, not to work in concert, as Voltore, Corbaccio, and Corvino do in the trial scenes in *Volpone*. The only concerted efforts, always unstable, are made by the tricksters—Subtle, Face, and Doll. Characters of tremendous zest, they give the play its great appeal. All three share with *Volpone* and *Mosca* one important trait; greedy themselves, they also are comic overreachers who do not know when to quit. Although deft and resourceful, they cannot prevent their scheme from running beyond their control.

The central referent of the play is alchemy and its "grand work." It is a perfect emblem for the play's action, a metaphor for the bulging confidence scheme. By design, the play is tumultuous, with quick costume swapping and breathless sleight-of-hand activity that picks up, goes amiss, and finally undoes the trio of swindlers.

Jonson's dramatic technique, duplication, is carefully patterned in the play. Each of the fools approaches Jeremy and Subtle in the same way. Variety is found only in the nature of their problems. In each case, Jeremy and Subtle promise results, then subject the victim to deliberate neglect before the final cheating. The repeated pattern is a simple but clever dramatic device. To reduce the central import of *The Alchemist* to a blunt attack on human greed is to oversimplify its theme. As in *Volpone*, Jonson is attacking a human depravity that offends against God's creation, and his target is not merely a single vice but any impiety or false idol that perverts nature.

### “ON MY FIRST SON”

**First published:** 1616 (collected in *Epigrams*, 1616)

**Type of work:** Poem

*The poet addresses his deceased son in a brief elegy that includes an appropriate epitaph.*

In “On My First Son,” Jonson addresses his first-born son, also named Benjamin, who died of the plague in 1603. The poem is an epigram, modeled on those of the Roman poet Martial. It starts as a valediction or farewell using a poetic apostrophe, but it quickly becomes apparent that the son’s departure is eternal and that the poet is lamenting his death.

Jonson’s ideas in the poem reflect the influence of his models. Classical epitaphs often reiterated the idea of life as a sort of borrowing from fate. The poet claims that his son has only been “lent” to him, and with the boy’s death, fate has merely exacted payment of the debt “on the just day.” Also classical in origin is the implicit notion that excessive good luck could kindle the jealousy of the gods, and that knowing this, a wise man should not be too fond of what he loves.

Despite these classical underpinnings, Jonson’s poem does not violate Christian orthodoxy. In attempting to console himself, the grieving father notes that death is an enviable state, free of the ravages of the world and the flesh and an escape from old age. Jonson says that his sin lay in placing too much “hope” in his son, implying that his grief arises from selfish and presumptuous expectations. The poet ends by vowing never to like too much that which he loves.

A compact poem, “On My First Son” consists of only twelve lines in the form of six rhymed couplets. It compresses its thought with great economy of statement and tightly controlled syntax. The poem even threads in a brief epitaph—“here doth lie/ Ben Jonson his best piece of poetry”—which in its simplicity and ironic understatement suggests a profound depth of feeling. Jonson’s reserve at this point quickly dissolves into a sincere and poignant reflection that is the thematic center for the whole piece.

### “TO THE MEMORY OF MY BELOVED MASTER WILLIAM SHAKESPEARE, AND WHAT HE HATH LEFT US”

**First published:** 1623 (collected in *The Works of Benjamin Jonson*, 1640-1641)

**Type of work:** Poem

*The poet offers generous praise of William Shakespeare in lines commemorating his genius and his art.*

Jonson’s eighty-line tribute to Shakespeare, “To the Memory of My Beloved Master William Shakespeare, and What He Hath Left Us,” was written to accompany that dramatist’s plays in the famous 1623 edition prepared by Shakespeare’s friends and fellow actors, John Heminge and Henry Condell. The poem is generous in its praise and argues that, despite whatever private reservations he might have had, Jonson wanted to go on public record as one of Shakespeare’s greatest admirers.

The eulogy starts by addressing Shakespeare directly, in an apostrophe, but midway through the poem it shifts to address the English nation. The country, personified as Britain, should “triumph” in Shakespeare, a genius “not of an age, but for all time!” In this middle section, Shakespeare is spoken of in the third person, but Jonson subtly shifts once more to address his deceased friend before the poem’s conclusion.

In the first half, Jonson surveys possible motives for his lavish praise and rejects “silliest ignorance,” “blind affection,” and “crafty malice,” with the implication that his motives are pure, based on sound critical judgment. He does make the rather infamous statement that Shakespeare had “small Latin, and less Greek.” Out of context, that observation may seem condemnatory, but Jonson’s implication is that Shakespeare’s genius is of such an order that he exceeds the greatest writers of “insolent Greece” and “haughty Rome” without being beholden to them for his art—a remarkable admission from an avowed classicist.

A central theme of the poem, one repeatedly used in Shakespeare’s own sonnets, is that art offers its creator immortality. Shakespeare, claims Jonson, will live as long as “we have wits to read, and

praise to give.” The idea of art’s transcendent capability leads to the finale of the poem, an apotheosis or poetic immortalizing, which, in the elegiac tradition, transfixes the subject in the heavens as a constellation, the “star of poets.” That is high public praise from a writer whose natural bias lay against poetic excess. Jonson’s great skill gives it and other lavish statements of praise a sincere ring, and the result is one of the finest poetic eulogies in the English language.

### SUMMARY

For forty years, Ben Jonson was the preeminent literary force in England. He was the leading comic dramatist of Jacobean England, the most highly esteemed creator of masques, a celebrated poet, a cultivator of new literary talent, and an arbiter of his day’s literary taste.

Centuries after Jonson’s death, his dramatic and poetic legacy remains significant. Such plays as *The Alchemist* and *Volpone* are still being produced. Moreover, Jonson’s more ambitious poems are, along with his lyrics, now viewed as the products of an inspired genius. Among English authors, there are few whose works have weathered the passage of time as successfully as have those of Jonson.

*John W. Fiero*

### DISCUSSION TOPICS

- Ben Jonson’s comedies have often been compared to William Shakespeare’s. One observation has been that the audience laughs at Jonson’s characters and laughs with Shakespeare’s characters. Does this assertion seem to be generally true?
- Which human vices does Jonson satirize most effectively?
- What was a masque, and why was it a significant form of entertainment in Jonson’s time?
- Jonson was a poet whose expression of personal feeling is more profound than it sometimes seems. Examine this statement with respect to “On My First Son” and other Jonson lyrics.
- What makes Jonson’s praise of Shakespeare particularly significant among the many tributes to Shakespeare?

## JAMES JOYCE

**Born:** Dublin, Ireland  
February 2, 1882

**Died:** Zurich, Switzerland  
January 13, 1941

*Joyce perfected the short story and the novel of education and then revolutionized fiction, especially the novel, with *Ulysses*.*

### BIOGRAPHY

James Augustine Joyce was born into a respectable, if improvident, middle-class family in Dublin, Ireland, on February 2, 1882. He was sent to Clongowes Wood College, a Jesuit boarding school, at the age of six; he entered Belvedere College in 1893. In 1898, he entered another Jesuit institution, University College, Dublin. Joyce was an excellent student but his rebellious nature was becoming clear after he published "The Day of the Rabblement," an attack on the new Irish theater, and refused to sign a petition against the heresy in William Butler Yeats's "Countess Cathleen."

Joyce went to Paris in 1902 to study medicine but had to return to Ireland in 1903 when his mother was dying. During this period, he began an autobiographical novel that later became *Stephen Hero* (1944); some early stories that he published were later revised into the collection *Dubliners* (1914). In 1904, Joyce met Nora Barnacle, the woman who was to become his wife. Nora was from Galway and was employed as a chambermaid. She lacked Joyce's education and social background, but he later claimed that she made him a man. She went abroad with him shortly after their meeting and lived with him until his death. In 1905, Joyce left Ireland for good; he went to Trieste and settled there. Over the next few years, he completed the stories that became *Dubliners*. Although it was initially refused publication because of obscene pas-

sages in a number of its stories, *Dubliners* was finally published in 1914.

In 1913, Joyce was introduced to the poet Ezra Pound. Pound put Joyce in touch with people who could give him financial support and gave him access to a number of modernist journals. During these years, Joyce had been reshaping his early autobiographical novel into the posthumously published *Stephen Hero*. It was first published in a journal with which Pound was connected, *The Egoist*, in 1914 and in book form in 1916 as *A Portrait of the Artist as a Young Man*. Joyce now had two major works in print and a growing reputation as a modernist writer, yet he would never achieve popular success. He still had difficulties in supporting himself and his family. Language tutoring brought in little money and his books even less.

Joyce began the most important work of his career, *Ulysses* (1922), in 1914. *Ulysses* was to transform the novel and modern literature with its many innovations. The early writing of the novel was slow, but Joyce began to serialize the early chapters in another Pound-influenced journal, the *Little Review*, in 1918.

In 1915, Joyce and his family moved to Zurich to escape the problems caused by World War I. He still had great difficulty in finding enough money to keep his household going. He was also having the first serious problems with his eyesight, which would lead to his eventual blindness. After the war was over, Joyce moved to Paris at the suggestion of Pound. It was through Pound that Joyce found a benefactor, Harriet Weaver, who helped support him both before and after he had completed *Ulysses*. In 1922, *Ulysses* was published, and it was quickly

recognized by discerning critics as a great—indeed, a landmark—book.

The next year, 1923, Joyce began work on *Finnegans Wake* (1939), then known as “Work in Progress.” It was to be his most controversial book. Many of Joyce’s most ardent supporters were dismayed at this final development in his fiction. Joyce was, however, sure of his own genius and direction and continued with the creation and serial publication of the book.

In the mid-1930’s, Joyce was spending more time in Zurich than in Paris. His daughter, Lucia, was having severe mental problems, so he called on some of the noteworthy psychiatrists in Switzerland. In addition, Joyce’s eyesight was failing, and he wished to consult a doctor in Zurich about this problem. In 1939, *Finnegans Wake* was finally published, and a few critics did attempt to elucidate the text, but the reception was decidedly less favorable than that of *Ulysses*. Soon after that, France fell to Germany, and Joyce was forced to take up residence in Zurich, Switzerland. He died there on January 13, 1941.

## ANALYSIS

Joyce is a master of style, and readers can find a different one for each of his major works. In *Dubliners*, he adopts a narrow and (for Joyce) conventional realistic approach. In addition, each story is told in the style of the protagonist; the narrator does not impose a style. *A Portrait of the Artist as a Young Man*, however, uses a much richer and more romantic style, since it is told through the consciousness of an emerging artist. Stephen Dedalus meditates on words and finds that he is attracted not by their meaning but by their sound and rhythm. In such scenes as Stephen discovering his vocation upon the beach and his declaration of his artistic purpose, the style is raised to a very lofty plane. When Stephen creates his villanelle, both the poem and the commentary are in the vein of high Romanticism. *Ulysses* is much more varied; there is the intellectual style of Stephen and the plain style of Bloom, but readers find midway into the book that stylistic experimentation dominates the book. There is, for example, a chapter, “Sirens,” done in musical prose rhythms and filled with allusions to music. There is the parody style of

“Cyclops” and the history of English prose style from Anglo-Saxon to the twentieth century in “Oxen of the Sun.” It seems as if plot and character are subordinated to style as the end of the book approaches.

There are a few important themes evident in the major works. One is women’s betrayal. Joyce was fascinated by betrayal and returned to it many times. In *A Portrait of the Artist as a Young Man*, for example, he uses the betrayal of Stephen’s beloved as a necessary prelude to his flight from Ireland in order to become an artist. Women help him find his vocation and are the subject of his art, but their betrayal is necessary for his freedom. In *Ulysses*, women are once more unfaithful. Molly Bloom betrays her husband and Stephen discusses Anne Shakespeare’s betrayal of her husband, William. In addition, Stephen’s mother is haunting him and preventing his growth.

Another important theme in Joyce is Dublin (or Ireland in general); it is a place that is described as a net, a trap that imprisons or restrains the characters. Nearly all of them long for some escape but none really succeeds in finding it. Even Stephen Dedalus, Joyce’s alter ego, is forced to return to the Dublin he had left behind to become an artist. Others dream about a fuller life, but all such dreams are dashed. If there is a spiritual liberation of the country, it can come only through the artist, who alone has the vision to renew the people.

Joyce is unusual in that he never repeats himself. He works on a genre until he exhausts the possibilities for his art. He undertakes the genre of the short story and perfects the mode. Indeed, much of modern story technique is based on Joyce’s “epiphany,” a depiction of the essence of the character and the situation, and his objective narration. He then tries the novel of education and perfects the study of a sensitive individual consciousness. The growth of that consciousness from baby talk and mere sound to the villanelle and poetic prose is dazzling. Joyce then turns to a novel based on a Greek myth and re-creates that novel. Now the novel can break the plot or subordinate it to style; it also becomes a truly encyclopedic work containing theology, social commentary, and fantasy, as well as the more usual novelistic interests of plot and character.

## DUBLINERS

**First published:** 1914

**Type of work:** Short stories

*This collection comprises satiric pictures of life in Dublin that expose the paralysis of will of each of the protagonists in the collection.*

*Dubliners* is not a collection of short stories that were written at various periods and with various themes. It is clearly meant to be a unified work of art. Joyce said that he chose Dublin as the setting because it was “the center of paralysis.” Yet he also stated that his purpose was to depict “the eventual spiritual liberation of my country.” Such a “liberation” could occur only if the *Dubliners* were to shed the myths about Ireland and face their true situation.

The stories of *Dubliners* are cunningly arranged. The first three stories clearly constitute a unit; they portray the life of a child in Dublin and are filled with disillusionment and a recognition of failure. “Araby” describes a failed quest as a nameless boy promises to go to a bazaar called Araby to buy a gift for a young girl. The boy is a dreamer who ignores daily life to dwell upon his beloved. It is significant that he invests her with religious imagery when he speaks of a “chalice” he is protecting. He also does not see her clearly; she is always a brown shape to him, and he worships his idea of her rather than her true self.

On the day of his planned visit to Araby, his uncle is late, and it seems that the boy will not be able to go. Finally, the uncle enters, drunk, and gives him money. It is late when the boy arrives at the bazaar, and he finds not the magic and mystery of his dreams but a woman flirting with two men at a counter. He hears a voice announce that the light is out—a metaphor for the extinguishing of his quest. The epiphany is very harsh: “Gazing up into the darkness I saw myself as a creature driven and derided by vanity; and my eyes burned with anguish and anger.” The boy feels ashamed of his earlier dreams; he, like the other *Dubliners*, is incomplete. His dreams have been smashed and he is filled with self-loathing.

The next stories deal with young and mature people in Dublin. They suffer from a paralysis of the will as well as a failure to fulfill plans or com-

plete escapes or projects. In “Eveline” the main character has found a beau, Frank, who wishes to take her to Buenos Aires against the opposition of her father. She sits in a dusty room and weighs the claims of both sides. Most of her meditation deals with her father and her home. It is a familiar if grim place; the father is a drunk who makes Eveline give him all the money she earns at her job. She can recall only a few positive images of her father. In contrast, Frank is “very kind, manly, open-hearted.” He loves music and will give Eveline an honorable place as his wife. Eveline seems to decide between the two when she thinks of the fate of her mother: “that life of commonplace sacrifices closing in final craziness.” In panic, she chooses Frank; he will save her. At the end of the story, however, she cannot answer the call of Frank to join him on the ship. She remains in a state of paralysis between Frank and her home. Her fears of being drowned and her obligations to her family overcome the freedom promised by Frank. She cannot escape Dublin and is described as being “passive, like a helpless animal.” “Eveline” is a quintessential *Dubliners* story. The dream of a fuller life is betrayed by fear and paralysis of the will.

The last group of stories deals with institutions: “Ivy Day in the Committee Room” with politics, “A Mother” with the musical world of Dublin, and “Grace” with religion.

The last story in the collection, “The Dead,” seems to stand alone as a kind of coda. The story itself is very detailed in its presentation of a middle-class and educated world. The protagonist, Gabriel, is Gabriel Conroy. The reader hears Gabriel’s inner thoughts as he meditates on Ireland and his place in it. He is an inner exile in Dublin who takes his vacations on the Continent, writes a review of a British poet, Browning, and has little use for the Irish Literary Revival of language and culture. The structure of the story is the destruction of his aloofness and egotism.

The first of the assaults on Gabriel’s egotism is with the servant Lily. Gabriel makes social conversation with Lily primarily, it seems, to enhance his own image. He pretends to be genuinely interested in Lily and manages to offend her. “‘O, then,’ said Gabriel gaily, ‘I suppose we’ll be going to your wedding one of these fine days with your young man, eh?’” Lily is angered and complains of men who fail to meet their commitments. Gabriel is embar-

rassed at this outburst and later feels that he has used the wrong tone with her.

The next assault on Gabriel is made by Miss Ivors. Miss Ivors is a nationalist and criticizes Gabriel for writing his review in a pro-British journal. She also criticizes him for going to the Continent to learn foreign languages when he has his own language to learn. "O, to tell you the truth," Gabriel suddenly responds, "I'm sick of my own country, sick of it!" Gabriel is especially upset because Miss Ivors has criticized him in front of other people.

The last confrontation is the most important and is with his wife, Gretta. After the party is over, Gabriel has romantic feelings about his wife. She, however, seems to be distant and tired. He draws her to him, but she resists his advances. Finally, she reveals that she was thinking not of Gabriel but of a young man she knew in Galway. Gabriel tries to belittle this relationship but does not succeed. Instead, he suddenly begins to realize who he is and what his relationship with his wife has been. He now sees himself as a "ludicrous figure" who has idealized his "clownish lusts." When Gretta reveals that the young man, Michael Furey, died for her, Gabriel's egotism and his world are destroyed. He feels that some "impalpable and vindictive being was coming against him." Gabriel then passes through stages to reach his final state. He becomes a prophet who announces the death of his aunt, Julia Morkan. He begins to shed "generous tears" as he thinks of the death of Michael Furey. Furey had died for love, and although Gabriel has never felt love before, "he knew that such a feeling must be love."

The last movement of the story is very difficult to interpret. Gabriel recognizes that it is time "to set out on his journey westward." That journey can be interpreted as either toward life or toward death. A journey to the west is traditionally associated with death, but all of the positive characters—Gretta, Furey—come from the west. In addition, Gabriel feels his own identity and all of Ireland "fading out into a grey impalpable world." The last sentence speaks of the snow falling "like the descent of their last end, upon all the living and the dead." The ending of the story is seen in positive terms by some critics as a figurative rebirth for Gabriel. Others see it as the destruction of Gabriel and the world of Dublin, literally a last judgment. Still others see it as ambiguous, making it impossi-

ble for the reader to decide whether the ending is positive or negative. Yet another interpretation is that Gabriel is a prophet who points the way to the eventual "spiritual liberation" of Dublin through the love that he, Gabriel, recognizes but cannot feel. Thus, the ending signifies a cleansing of society in order to rebuild it on new principles.

## A PORTRAIT OF THE ARTIST AS A YOUNG MAN

**First published:** 1914-1915 (serial), 1916 (book)

**Type of work:** Novel

*This novel examines the growth, development, and emergence of the artist in detail.*

*A Portrait of the Artist as a Young Man* is a bildungsroman, a novel of education; in this case, it is the growth of the artist from his earliest childhood to his declaration of his proper role as an artist, a "priest of the eternal imagination." The novel begins with the earliest experience of the protagonist, Stephen Dedalus. His world is a world of sensations, especially of touch and smell. Later those sensations will be connected to words, and by the end of the book he recognizes that words have an independent existence. He also recognizes the demands that he submit, to "apologize," as his father and Aunt Dante demand. Throughout the novel, Stephen is continually evading most of the demands that are placed on him. An artist must be free.

The next section takes place at a Jesuit boarding school, Clongowes; the concluding incident in the chapter also takes place there. Stephen had lost his glasses and was, therefore, unable to do his lesson. Father Dolan, however, refuses to accept his explanation. Stephen goes to the rector, Father Conmee, to seek redress. Conmee at first suggests that Father Dolan did not know of the lost glasses, but Stephen insists that he did know. Finally, Conmee reluctantly agrees to order Dolan not to punish Stephen the next day. The chapter ends with Stephen declared a hero by his classmates; he now feels "happy and free." Each chapter of the book ends in some kind of triumph for Stephen. The beginning of the following chapters, however, shows a decline.

The second chapter continues the development of Stephen as he experiences a change in his situation. His father's finances decline and he leaves Clongowes and becomes a day student at another Jesuit school, Belvedere. He also begins to be interested in women. He is involved with the young Ellen and dreams about the fictional Mercedes, who will initiate and transform him. He imagines an encounter with Mercedes when "weakness and timidity and inexperience would fall from him." Stephen's initiation, however, is more sordid. He feels lust rather than love and wishes to fall into sin with a real woman and not an idealized figure from fiction. He goes to the red-light district of Dublin to seek that encounter. The chapter ends with Stephen and a prostitute. She embraces him, and he feels "joy and relief." He will not, however, kiss her; he wishes to retain his aloof independence but finally surrenders and submits. It is, however, a necessary fall; Joyce's artist must fall in order to create "life out of life."

The beginning of the chapter is a decided decline. Stephen does not feel transformed but degraded by his sexual encounter. He feels like a beast instead of a man. Then a retreat is announced at school; Stephen is to hear powerful sermons by a Jesuit. He is immediately affected; he feels that the words are aimed directly at him. He also thinks of a way out; the Virgin will take his hand and that of an innocent young girl, Emma, and lead him to forgiveness and an innocent love. It will not, however, be that easy for Stephen; he is forced to confront his sin and his fate by the Jesuit preacher. The preacher speaks of hell and its terrible punishments. He cites the condemnation of Lucifer, who, like Stephen, will not serve or submit. His description of hell sounds remarkably like Clongowes. The smells and companions of the preacher's hell are exactly like Stephen's memories of his first school. The effect on Stephen is immediate. He calls for help that evening in his bedroom and vomits in disgust at what he has done. He believes that he has lost his inno-

cence and turned himself into a beast. He confesses his sin and once more submits, although this time it is to the Church rather than a prostitute. The last scene of the chapter parallels the earlier one; he takes the host as he had taken the kiss. Yet the Church is not to be Stephen's final choice; it is only a stage in his development.

There is a marked change in the beginning of the next chapter. Stephen has become religious, but his life afterward tends to be dry and mechanical. He imagines himself as a spiritual accountant adding up his devotions. He is then approached by the rector to see if he aspires to the priesthood, particularly for the Jesuit order. At first, he is attracted to the image of himself as a Jesuit, but he quickly dismisses it when he imagines himself back in the cold and smells of Clongowes. In addition, he discovers that his place is "wandering among the snares of the world."

The novel then brings Stephen back to the disorder of his home. He begins to recall a beautiful phrase he has memorized and realizes that it is not the meaning or the "colors" of the words that please him but their sound pattern or rhythm. Stephen as a developing artist has developed his relationship with words from the identification of sound and meaning to a love of syntactic patterns for their own sake.

At the end of the chapter, Stephen comes upon a young girl on the beach. She is described as "a strange and beautiful seabird." His response is one of "profane joy." Her image passes into him, and he announces his vocation. "To life, to err, to fall, to triumph, to recreate life out of life!" It is the most important of the many triumphant chapter endings. Stephen realizes that his place is in the fallen world rather than that of the priesthood. He now knows what his vocation is but has not yet actually created a work of art to certify his role as an artist. At this point, he is a potential artist, and a very young one.

The first part of chapter 6 is devoted to Stephen's discussion of the aesthetic he has developed; it is a prelude to the actual creation of a poem in the second part of the chapter. Stephen's aesthetic is rather sophisticated and can be related to many of Joyce's own works. He speaks of the stages of an artist's work: from lyric to epic to dramatic. The artist begins, as Stephen does, with self-expression and continues to "refine himself out of

existence.” The aim is an impersonal art that Joyce develops in *Ulysses*. He also spells out the three elements needed in a work of art: “wholeness, harmony, and radiance.”

The poem that Stephen writes is a villanelle, a highly artificial form; many critics have condemned it and see Stephen as the type of artist that Joyce would reject. They see a considerable amount of distance between Joyce and his protagonist. Others, however, see Stephen as a young but genuine artist.

The last section of the chapter is filled with images of flight as Stephen prepares to leave Ireland and its “nets” of patriotism and church. The true artist needs to be independent, which is impossible for Stephen in Ireland. One other ironic note is found at the close of the chapter. Stephen sees his beloved, to whom he had just written a poem, being caressed by his friend, Davin. Joyce, obsessed with the betrayal of friends and lovers, wrote about it in nearly every one of his major works.

The last part of the book is a series of journal entries by Stephen. The narrator has disappeared. The entries speak of Stephen’s beloved, the images of the road and his departure, and the type of art Stephen is to pursue. The last two entries speak of Stephen’s exalted role as an artist: “I go to encounter for the millionth time the reality of experience and to forge in the smith of my soul the uncreated conscience of my race.” The aim is not merely to create individual works but to bring about a “spiritual liberation.”

## ULYSSES

**First published:** 1922

**Type of work:** Novel

*The novel re-creates the Odyssey in one day in the life of Dublin as the protagonists meet and complete an imperfect quest.*

*Ulysses* is based on Homer’s *Odyssey* (c. 725 B.C.E.; English translation, 1614) but compresses the action of the earlier epic into one day. The basic narrative of the *Odyssey* is maintained: Leopold Bloom, the modern counterpart to Ulysses, returns home to his wife and son and then overcomes the suitors and reclaims his place. Stephen Dedalus, the coun-

terpart to Telemachus, needs to grow into a man and be united with his absent father.

The first section of the book, the “Telemachiad,” deals with Stephen. Stephen has returned to Ireland from Paris to face the death of his mother and is haunted by the ghost of his mother and oppressed by the demands of his real father. He needs to purge his mother’s ghost and find a new father. Stephen is oppressed, as is Telemachus, by the usurpers in the tower where he lives. Stephen’s thoughts are abstruse, philosophical, and filled with guilt; he no longer seems to be a potential artist. He wanders around Dublin in search of some relief. One noteworthy episode takes place in the National Library, where Stephen expounds his theory of William Shakespeare’s *Hamlet, Prince of Denmark* (pr. 1600-1601, pb. 1603), which is really a theory that is directly related to Joyce’s own life and work. Stephen also goes to visit a newspaper and tells two of the editors his short story “A Pisgah Prophecy,” which is similar to early stories in *Dubliners*. The proposing of a theory and creation of a literary work by Stephen is also found in *A Portrait of the Artist as a Young Man*. Perhaps Stephen is beginning to fulfill his claim to be a true artist.

Leopold Bloom is an ordinary man with an extraordinary curiosity about everything around him. He, like Stephen, has problems within his family. His wife, Molly, is unfaithful to him and today has received a note from the notorious Blazes Boylan telling her that he will visit her. In addition, Bloom’s son, Rudy, died fourteen years before, rendering Bloom impotent. If Stephen needs a father, Bloom needs a son. They will travel through Dublin and occasionally cross paths before their meeting and tenuous union in the last part of the book.

Bloom is a fairly complaisant husband; he never confronts Molly about Boylan and has his own deceptions as a compensation. He has received a letter from Martha Clifford, with whom he is conducting an extended flirtation. On his travels, he ob-

serves and interacts with the Dubliners. The anti-Semitism and hostility against the Jewish Bloom is seen a number of times. The most important conflict he has about his Jewishness is depicted in the "Cyclops" episode, in which he defends himself forcefully against racial attacks.

The union between Bloom and Stephen begins in the "Circe" chapter. Bloom is humiliated and exalted in the chapter; he is abused by women for his weakness and oddities, while Stephen is drunk and is about to squander or lose his money. Bloom has followed him from a maternity hospital and acts like a father in saving Stephen's money and defending him against charges by the police. He is going to bring him home, where Stephen will teach Molly Italian pronunciation and have a place to stay. Stephen, who seems to have purged his mother's ghost by swinging his walking stick at it in "Circe," is obviously meant to replace the dead Rudy and restore Bloom's virility, but he seems unconvinced by Bloom's offer. There is a wonderful scene between Bloom and Stephen in the next chapter, "Ithaca," where they urinate together and share a cup of cocoa. Some union of father and son does take place. Stephen, however, declines Bloom's offer. He has changed since the beginning of the novel, but not completely. Bloom has also

changed, but not completely. He still has his problem with impotence and Molly's adulteries. The book provides only provisional solutions for the complex problems of the two characters.

The last chapter, "Penelope," is the famous monologue of Molly Bloom. Molly does speak of some of the changes in the book. Bloom has now ordered her to make him bacon and eggs in the morning. She speaks of the sexual encounter with Boylan but asserts that Bloom had more "spunk" in him. Above all, she recalls the first sexual experience with Bloom on Howth, where she gave her "Yes." For all its incompleteness, the book ends with the affirmation by Molly and significant changes in the main characters.

### SUMMARY

James Joyce is a preeminent modernist writer and a great innovator. He altered forever the way the world thinks of fiction. He added a subtlety to the well-plotted short story, provided a richness of detail and an intensity to the central consciousness of the novel of education, and turned the novel into an epic, a form capable of including diverse materials and styles. He did nothing less than transform modern literature.

James Sullivan

## DISCUSSION TOPICS

- Why is it unwise to make generalizations about James Joyce's style?
- "Epiphany" is one of a number of religious terms that Joyce appropriated. Discuss how he adapted it to his literary needs.
- Which of Joyce's ideas and depictions of Dublin would you expect the Irish to favor and which to resist?
- What is your interpretation of Stephen's intention to "forge in the smithy of my soul the uncreated conscience of my race"?
- What does *Ulysses* gain by being based on Homer's *Odyssey*?
- Do the difficulties of *Finnegans Wake* make it inaccessible to anyone who is not a literary scholar?

# ISMAIL KADARE

**Born:** Gjirokaštër, Albania  
January 28, 1936

*Kadare, the winner of the inaugural Man Booker International Prize for contemporary fiction in 2005, portrays the Albanian people, past and present, focusing on their senseless suffering under rigid regimes and making a strong case for enlightenment and human rights.*

## BIOGRAPHY

Ismail Kadare (ka-DA-reh) was born and grew up in Gjirokaštër in southwestern Albania, close to the Greek border. His family were nonpracticing Muslims. His father, Halit, was a civil servant who served court documents; his mother, Hatixhe, came from a wealthy family. The parents had a large house with many rooms where their three children could play. Kadare's sister, Kadrie, earned a degree in Russian language and literature; his brother, Shahin, is an oncologist.

When Ismail was five, World War II brought the first of a series of invading armies to Gjirokaštër. Eventually, the Communists gained control of Albania. Enver Hoxha, who was also born in Gjirokaštër, was the first secretary of the Albanian Workers Party from 1943 until his death in 1985. Under Hoxha's strict Stalinist regime, many books were banned, telephone conversations were monitored, there was no free press, and all opposition was ruthlessly suppressed. It was a difficult climate in which to become a world-class writer.

Kadare began writing poetry at an early age. His first collection, *Frymëzimet djaloshare* (youthful inspiration), appeared in 1954. In the 1960's he was known primarily as a lyric poet, and he continued publishing volumes of poetry until 1976. His prose, like his poetry, is very lyrical.

After completing high school in Gjirokaštër, Kadare went to the newly founded State University in the capital, Tirana, where he obtained his degree in Albanian language and literature in 1958. He was then sent to the Maxim Gorky Institute for World Literature in Moscow, but he was repatriated in 1961 following Hoxha's break with the Soviet Union.

In Communist Albania, Kadare supported the Communist Party just enough to remain acceptable. He survived by writing ambiguously, never directly criticizing totalitarianism. Hoxha recognized Kadare's talent and promoted him nationally and abroad, allowing him to travel with his wife outside the country. Kadare's first novel, *Gjenerali i ushtrisë së vdekur* (1963; *The General of the Dead Army*, 1971), was also his breakthrough to the West when it appeared in 1970 in an excellent French translation by Jusuf Vrioni.

Although Kadare enjoyed a privileged position in Albania, his career was not without setbacks. In 1975, after the Communist Party interpreted one of his poems as an incitement to revolt, he was banished from the capital and forbidden to publish for three years. In 1981, the Communists considered his novel *Nëpunësi i pallatit të ëndrrave* (1981; *The Palace of Dreams*, 1993) a thinly veiled criticism of the conditions in Albania and banned it. In 1986, when he realized that the Albanian government remained as oppressive under Ramiz Alia as it had been under Hoxha, Kadare and his French publisher, Claude Durand, began smuggling disguised manuscripts out of Albania and storing them in a safe in the Banque de la Cité in Paris, to be accessed by Durand if anything should happen to the author. At the end of October, 1990, Kadare and his family sought political asylum in France. His unexpected departure was an embarrassment for Albania and helped bring about the collapse of communism later that year.

Kadare was made an honorary member of the Institut de France (1988), was awarded the Prix mondial Cino del Duca (1992), was elected an associate member of L'Academie des Sciences Morales

et Politiques (1996), received the Herder-Preis in Hamburg (1998), and won the inaugural Man Booker International Prize (2005).

Kadare married Elena Gusho in 1963. In 1970, she was the first woman author to have a novel published in Albania. In 1990, the couple settled in Paris in an apartment in the Latin Quarter overlooking the Luxembourg Gardens. They have two daughters: Gresa has her doctorate in genetics from the Sorbonne, and Besa has a degree in journalism.

### ANALYSIS

The Albanian people trace their origins back to the Illyrians and have a rich oral tradition. In Kadare's writing, he often portrays the past with the same immediacy as the present. Old stories allow him to remind Albanians of their cultural heritage while focusing on universal truths that outlive all political systems. Kadare sees himself primarily as a storyteller, as a modern Homer. Both he and the semilegendary Greek poet come from the same part of the world.

One of his most beautiful stories, "Kush e solli Doruntinë" (1980; "Doruntine," 1988), is set one thousand years ago. The main character explores and rejects all possible logical explanations for a mysterious event, eventually coming to the startling conclusion that Doruntine was, in fact, brought home to her lonely mother by her dead brother, Constantine. When Constantine supported Doruntine's engagement to a man who lived far away, Constantine gave their mother his word of honor that he would bring Doruntine back to visit, not knowing that he and his eight brothers would soon be killed in a war. Three years later, his word of honor, the *besa*, proves stronger than death itself. Doruntine remembers only a long ride through the night sky with her arms around a horseman who smelled of clay, and the earth on Constantine's grave is freshly disturbed.

Kadare does not glorify the past. In *Prilli i Thyer* (1980; *Broken April*, 1990), he deals with the *besa* in a more realistic setting, showing how the northern Albanians' unquestioning belief in the rules of the *Kanun*, the code of behavior passed down through the centuries, led to the continuation of blood feuds that took the lives of countless young men. In this, Kadare was in agreement with the Communist regime, which took measures to suppress the *Kanun*.

Kadare keeps details of brutality and torture to a minimum, and their scarcity makes his scenes of cruelty all the more memorable. Kadare's description of the horrible human sacrifice in *Ura me tri harqe* (1978; *The Three-Arched Bridge*, 1995) has a historical basis and is obviously a topic that continues to occupy the thoughts of those who live in the region. Nobel Prize-winning author Ivo Andrić told the story differently in *Na Drini ćuprija*, (1945; *The Bridge on the Drina*, 1959). With hindsight, the local people could see that the bridge built in Serbia in the 1360's and 1370's facilitated the invasion of the Turks and led to the Battle of Kosovo between Serbia and the Ottoman Empire in 1389, an event to which Kadare refers repeatedly in his works.

Aside from the historical significance of the tale, Kadare's literary portrayal of the events surrounding the building of the bridge, as seen through the eyes of the monk, Gjon, is a good example of Kadare's ability to set up an extremely complex situation and to show how people in every age feel insecure when they have only partial information, some of which seems to be misinformation. Gjon only begins to suspect the magnitude of the threat to Albania after the bridge is completed, by which time it is too late because the Turks are on the way. The reader can only empathize with Gjon, for when the master builder hands him the mathematical formulas used in the bridge's construction, the monk has no idea what the symbols mean. Such is the human condition.

Ever since reading William Shakespeare's *Macbeth* (pr. 1606, pb. 1623) when he was eleven, Kadare has been interested in carefully plotted murders, and the communist regimes of China and Albania provided him with two high-profile cases whose instigators took the secret details to their graves. In *Koncert në Fund të Dimrit* (1988; *The Concert*, 1994), Kadare deals with the rumors circulating around the death of Mao Zedong's designated successor, Lin Biao, before writing a comparative analysis entitled "Macbeth's Last Winter: Synopsis for Another Version of the Tragedy." This is a brilliant piece of writing. Mao was against all Western literature, but Kadare shows that Mao's plot to kill Lin Biao arose from similar feelings of paranoia and inferiority as those experienced by Shakespeare's Macbeth.

In *Pasardhësi*, (2003; *The Successor*, 2005), written after the fall of communism, Kadare deals with the

death of Enver Hoxha's designated successor, Mehmet Shehu, under mysterious circumstances. In the final chapter, Shehu appears as a ghost who occasionally encounters the ghost of Lin Biao. Kadare is a writer at home in the past and the present, in this world and in the beyond.

## THE GENERAL OF THE DEAD ARMY

**First published:** *Gjenerali i ushtrisë së vdekur*, 1963 (English translation, 1971)

**Type of work:** Novel

*An unnamed general becomes increasingly disillusioned while on a mission to dig up the remains of his country's soldiers who fell in action in Albania.*

*The General of the Dead Army* was Kadare's first novel and contains the distillate of his views on war. As a child, he saw his hometown, Gjirokastër, occupied by Italians, Greeks, and Germans during World War II; all of them eventually had to withdraw. However, Kadare does not write from the viewpoint of his own people, the Albanians, but from the viewpoint of a foreign general sent to Albania twenty years later to repatriate the bodies of his country's fallen soldiers. There is still a lesson to be taught. As the general gradually learns of the invading forces' ignominious actions, he is sickened by his senseless undertaking and, indeed, by war itself.

The exhumation of the dead soldiers is called into question in numerous ways. Soldiers honored their fallen comrades by burying them deep in the earth, so their corpses could not be eaten by dogs and jackals. Such graves were a labor of love, often dug at night using weapons as shovels. Why should the general disturb those graves? The fallen soldiers belong where they fell, with their comrades in arms. In flashbacks, Kadare shows soldiers deliberately "losing" their metal identification tags, even giving them away. The soldiers' emphasis was on life, not on death.

Since most of the corpses are now reduced to six or seven pounds of phosphorus and calcium, the decomposed remains are put in numbered blue nylon bags. Ironically, the only soldier's corpse that was presented to the general in a coffin was turned down because he was not equipped to handle anything that large. The dead bodies cause another death, for although the remains were rigorously disinfected, the main grave digger, an elderly Albanian called Reiz, dies from a raging infection after getting a scratch on his hand.

The general is handed the diary of a deserter, a twenty-two-year-old who makes a compelling case for having chosen life as a farmhand over raping and hanging the villagers, whose homes his Iron Division was burning. The young man derived a sense of peace from the sight of the man-made canals that ran between the fields, and enjoyed seven months with a farming family before he was murdered by his own country's Blue Battalion. By including the representative diary in chapter 11, Kadare presents an attractive alternative to war, an alternative that was chosen by hundreds of men who had come as invaders.

One of the bodies the general is supposed to find and repatriate is that of Colonel Z, whose family has erected a sumptuous marble tomb for him. According to his mother, Colonel Z had every virtue and was sensitive to beauty of every kind. In the course of the novel, however, it emerges that Colonel Z's Blue Battalion committed countless atrocities. In the final year of the general's search, he comes to the town where Colonel Z was last seen. Daytime inquiries yield no information, but in the evening the shameful truth comes to light. For unspeakable behavior, Colonel Z was murdered by a local woman, who hurls a sack of bones at the general's feet. The general is no sooner safely out of the town than he kicks the sack into a fast-flowing river.

*The General of the Dead Army* is a thought-provoking novel and has been filmed twice, as *Il generale dell'armata morte* (1983), directed by Luciano Tovoli, and *La Vie et rien d'autre* (1989), directed by Bernard Tavernier.

## CHRONICLE IN STONE

**First published:** *Kronikë në gurë*, 1971  
(English translation, 1987)

**Type of work:** Novel

*A young boy describes the rapidly changing scene as his hometown is occupied by one foreign force after another during World War II.*

*Chronicle in Stone* is a charming and humorous novel told from the fanciful viewpoint of a child who sees what people do but is not old enough to understand the context of their actions. The steep and ancient city of stone where he lives is not named, but it is surely Kadare's birthplace, Gjiro-kastër. In the last scene, the narrator returns to the city as an adult, realizes he has been figuratively stumbling over its stones ever since he left, and strongly senses the invisible presence of the people he loved.

Kadare makes extensive use of images of sight, and, by extension, insight. The ladies of the neighborhood are shocked when Isa Voco starts wearing glasses. They look through his lenses and see only a distorted world. Isa, however, goes on to join the Resistance. He assassinates the Italian garrison commander and is captured and tortured. By the time he is brought out to be hanged, he is missing one leg but still wearing his glasses, which are the only thing that seem alive on his battered face. In other words, the viewpoint held by the Resistance remains intact. Isa's friend and accomplice, Javer, avenges his death without getting caught and successfully carries out numerous guerrilla attacks.

Ironically, the first-person narrator also needs glasses, but none of the adults thinks of having his eyes tested. He takes a single lens from his grandmother's trunk and holds it to one eye when he goes to a film or otherwise needs to see. His lens stands for the viewpoint of the writer, which brings everything into focus.

Kadare captures the essence of each character with deft descriptions, and most characters are portrayed with affection, such as Kako Pino. Kako has skillfully applied brides' makeup for more than sixty years. She is a thin lady who dresses in black and carries her implements in a red bag. In conversation, Kako repeats hypnotically, "It's the end of the world." That is Kako's leitmotif, and she says it countless times in the course of the novel. At the end of the novel, the Germans are suspicious of the contents of her red bag and hang her, thinking she is a saboteur. In a touching stylistic tribute to Kako, the narrator continues her voice, setting the unsaid words in a paragraph of their own: "The end of the world."

Kadare makes effective use of Greek mythology. He describes how when the lights come back on after an air raid, Aqif Kashahu's pale daughter has her thin arms around the neck of a fair-haired young man who kisses her. No one knows who he is. Aqif grabs his daughter by the hair and drags her upstairs and out of the house. She is never seen again. During a subsequent air raid, the fair-haired young man takes the young narrator aside and tells him that pregnant girls are either strangled or thrown down a well. The fair-haired young man starts breaking into homes to discover whether Aqif's daughter was drowned in a cistern. The Italians arrest the housebreaker, but they show understanding for his story. When they confront Aqif about his daughter, he says that she is visiting distant cousins. Each chapter in the novel is followed by a fragment of a chronicle written by Xivo Gavo, an old man who lives in the city. In Xivo's words, the fair-haired young man was Orpheus, seeking his Eurydice. Kadare thus shows that each person's story is timeless.

## THE CONCERT

**First published:** *Koncert në Fund të Dimrit*,  
1988 (English translation, 1994)

**Type of work:** Novel

*As relations between Albania and China deteriorate, Albanians have to deal with more and more problems in their everyday lives.*

Kadare worked on *The Concert* from 1978 to 1988. It is his longest novel, and it conveys the apprehension felt by the Albanian citizens under Enver Hoxha's strict Communist regime, where anyone could quickly fall out of favor. The novel deals with the last years of Albania's political alliance with China, from Chairman Mao Zedong's eightieth year to his death in 1976. During those years, Mao was determined to humiliate the Albanians for having dared to question his decision to entertain the president of the United States. The title refers to a rare concert given by the Chinese for their foreign visitors on the Day of the Birds, a concert that filled everyone with dread. Its meaning became clear when China subsequently withdrew all support for Albania.

The main plot line illustrates the difference between Albanian and Chinese communism. Arian Krasniqi is an Albanian officer who refuses to obey Minister D's order, suggested to him by the Chinese, to encircle the Communist Party committee with tanks. For his disobedience, Krasniqi is expelled from the party and imprisoned. However, Krasniqi is vindicated by Enver Hoxha himself, who states in a public address that to encircle a party committee with tanks is tantamount to rehearsing for a military putsch and that such orders will never be carried out in Albania, no matter who issues them. Minister D then has no option but to release the tank officer and prepare his auto-critique for the party.

One of the most interesting aspects of *The Con-*

*cert* is Kadare's extended treatment of the mysterious murder of Lin Biao, Mao's second in command. Whether because of Mao's senility or because of conflicting plans that were then combined, Lin Biao's murder emerges as an unparalleled case of overkill. Clues are scattered throughout the novel. In chapter 15, one of the Albanian authors, Skënder Bermema, compiles the theories into a nine-part synopsis entitled "The Truth About the Death of Lin Biao" before setting up the truly enlightening comparison to William Shakespeare's *Macbeth*.

Mao took draconian measures to stamp out intellectualism and individualism in China and intended to weaken Western minds through the mass export of Chinese marijuana. A Chinese committee designs the model new man, Lei Fen, who is twenty-five years old, a soldier peasant who remains a bachelor and loves only his mother, and who dies by accident. Although a token leftist militant Albanian, Juan Maria Krams, embraces the idea of the new man and the abolishment of history, culture, and religion, Europe remains the greatest threat to Mao's China because of its freethinking people. The extreme repression in Communist China is illustrated early in the novel. Gjergj Dibra, an Albanian diplomatic envoy, finds it impossible to carry on a normal conversation in China because there are empty words and tedious slogans for every occasion.

By comparing the European and the Chinese communist systems, Kadare manages to make a strong case for free thought, justice, and human rights. He had difficulty getting the novel published in Albania until after the fall of communism. *The Concert* was first published in French in 1989 and was chosen by the literary magazine *Lire* as the best novel of 1991.

### SUMMARY

The magnitude of Ismail Kadare's work is just beginning to be recognized in the English-speaking world as his works appear in translation. His rare ability to tell a good story is combined with sophisticated literary techniques that reward detailed study. More secondary literature is sure to follow. Although Kadare wrote in a repressive regime until 1990, he did not compromise his artistic or ethical standards but wrote true literature of universal appeal.

Jean M. Snook

## FRANZ KAFKA

**Born:** Prague, Bohemia, Austro-Hungarian Empire  
(now in Czech Republic)  
July 3, 1883

**Died:** Kierling, Klosterneuburg, near Vienna, Austria  
June 3, 1924

*Notable for their spare, unadorned prose style, Kafka's short stories and three novels lead deep into the subconscious and expose the fears from which all people suffer to some extent.*

### BIOGRAPHY

Franz Kafka (KAHF-kah) was born on July 3, 1883, in Prague (now in the Czech Republic), the first child born to Hermann and Julie Kafka. A second son died in infancy, leaving Franz as the only son, with three younger sisters. Kafka reacted negatively to his paternal forebears. His grandfather had been a butcher, something that Kafka found so repugnant that he became a vegetarian. His works contain descriptions of meat and wounds that reflect this revulsion. His father was in business and owned his own shop, and Kafka was bothered by his father's gruff and insulting treatment of his employees. This recollection is perhaps reflected in *Die Verwandlung* (1915; *The Metamorphosis*, 1936), in Gregor Samsa's description of the hostile and suspicious chief clerk. Kafka's mother was unable to give him the attention that he would have liked, since she also worked in the store, but Kafka felt more affinity with her side of the family, particularly with his bachelor uncles, one of whom, Siegfried Lowy, was a country doctor.

Despite his childhood fears of failure, Kafka progressed effortlessly through school and went on to earn his doctorate in law at the German University in Prague. After a brief placement with one firm, which he left because of the abusive language in the office, Kafka found his permanent employment with the Workers' Accident Insurance Insti-

tute, where his function was deemed so essential that he could not be drafted for active service in World War I.

The war years were among the most tumultuous and productive in Kafka's life. In Europe, there was a pervasive atmosphere of decadence and disillusionment. Five hundred years of Habsburg rule were drawing to a close, and the war would culminate in the collapse of the Austro-Hungarian Empire.

During these years, Kafka spent much time agonizing over his relationship to Felice Bauer, whom he had met in August, 1912, and to whom he had proposed in June, 1913. It was mainly an epistolary association. Bauer did not live in Prague, and she and Kafka often had disagreements when they met. Reflecting the prejudices of his background, Kafka regarded marriage and a family of one's own as *de rigueur* in one sense, but he was also increasingly aware of his calling as a writer, and he did not see how he could find the time to combine the two. In July, 1914, he and Bauer broke off their engagement, but the letters continued, and in July, 1916, they became informally engaged again. This second engagement was made official in July, 1917, and broken off again in December of the same year. It was during his preoccupation with Bauer that Kafka wrote, among other things, *The Metamorphosis*, *Der Prozess* (1925; *The Trial*, 1937), and a short-story collection, *Ein Landarzt: Kleine Erzählungen* (1919; *The Country Doctor: A Collection of Fourteen Short Stories*, 1945).

Kafka's stated reason for breaking off the sec-

ond engagement was that he had been diagnosed with tuberculosis. He had suffered a severe hemorrhage, leading the cleaning lady to comment that he was not long for this world. In fact, he lived another seven years, and aside from taking several leaves of absence and then early retirement from his firm, he did not slow his pace at all.

He met other women. In 1919, he became engaged to Julie Wohryzek, who also had tuberculosis, but broke off this engagement when they did not get the lease for the apartment that they had wanted. In 1920, he had an affair with Milena Jesenká-Polak, who was translating his stories into Czech. She was intellectually and artistically compatible with him, but she broke off the relationship, saying she could not leave her husband despite his harsh treatment of her. In July, 1922, Kafka went to stay with his youngest and closest sister, Ottla, at her home in the country. It was there that he wrote the first nine chapters of *Das Schloss* (1926; *The Castle*, 1930) in a matter of a few weeks. Only in the last year of his life, in September, 1923, did Kafka finally overcome his considerable inhibitions and move in with a woman in Berlin. He was forty; Dora Dymant was nineteen.

Kafka bequeathed his literary estate to his friend and fellow writer Max Brod, instructing him to continue the work Dora had begun of burning the manuscripts. Brod instead ensured that all of Kafka's remaining works, diaries, and letters were published. Kafka died on June 3, 1924, at the sanatorium in Kierling, near Vienna, Austria.

## ANALYSIS

Kafka is probably the only author who has treated such profound subject matter without couching it in poetic language. His unadorned style, consistently simple syntax, and workmanlike prose present the subject matter in such a lucid and accessible manner that the works speak persuasively to the inner psyche. They remain disturbing and enlightening excursions into the nature of the self that are valid for all time.

The human psyche is Kafka's main topic, not political or social commentary, and not specifically autobiography, although clearly his was the mind he knew best. While it is helpful for the reader to have some knowledge of his biography, of Prague, of the time in which Kafka lived, and of concurrent intellectual developments, it is not essential. The

works transcend Kafka's immediate situation. They have been translated into numerous languages and are effortlessly understood as masterpieces by every culture in which they are read.

If one wishes to place Kafka's works in intellectual history, the two concurrent developments that show the closest similarities with his style are psychoanalysis and science fiction. Psychoanalysis, pioneered by Sigmund Freud and Carl Jung, emphasized the importance of dreams, which spring from the subconscious, for revealing the deeper reality of life. Many of Kafka's works have a dreamlike quality and, according to him, seemed to write themselves. The magnificent short story "Das Urteil" (1913, 1916; "The Sentence," 1928; better known as "The Judgment," 1945), for example, was written in one sitting during an evening in September, 1912. Although very pleased with the work, Kafka did not know what it meant. He did not consciously attempt to create symbolic works, and that is precisely why they are so rewarding to experience. Kafka intuitively knew what was right, but he left it to others to decipher his work.

Science fiction, in a more deliberate manner, imports the same departure from linear reality that characterizes dreams. Time and space may be infinitely contracted or expanded, and it is not unusual for mythical beasts to appear. A founder of science fiction, the man who invented the word "robot," was Karel Čapek, also a Czech. H. G. Wells was writing in Britain at the same time. In Kafka's short story "Ein Landarzt" ("The Country Doctor"), for example, unearthly horses transport the doctor a distance of ten miles in an instant, but the return journey is interminable. Such effects, though, are subsidiary to Kafka's main topic. Although on the verge of speculative fiction, he is not writing about the supernatural per se but about the human psyche, the utterly natural.

Kafka was also unavoidably influenced by the *spiritus mundi*, the zeitgeist, or spirit of his time, but not in such a way as to date his works. As a Jew in a city where there were race riots, as the subject of a dynasty in decline, Kafka captured the prevailing feeling of uncertainty and helplessness, and he observed without judgment. No doubt his extensive legal training was also operative in forming his technique of impartially describing conflicting viewpoints. Even in Kafka's cathartic *Brief an den Vater* (wr. 1919, pb. 1952; *Letter to His Father*, 1954)—

which he delivered to his mother—he was able to understand in all fairness how his behavior must have seemed from his father’s point of view. Thus, the characters in his works are seldom portrayed bluntly as either good or bad, right or wrong. They are three-dimensional and as complex as any human being. Even the antagonists may turn out to be right. Kafka’s stories are not written with the interpretive wisdom of hindsight but with the urgency and uncertainty of current experience.

The omission of a clear verdict on any specific character or situation also enables Kafka’s works to be understood on more than one level. Frequently, his apparent catastrophes are not catastrophes at all but liberating measures necessary for transcendence. It is always the hardworking white-collar professional who meets his demise: the businessman Georg Bendemann in “The Judgment,” the banker Josef K. in *The Trial*, and the doctor in “The Country Doctor.” Taken purely as story, these appear to be tragic fates. The men fall victim to forces beyond their control and either self-destruct, or allow themselves to be destroyed, or cannot prevent themselves from being destroyed. Their common type, however, indicates that they may, on another level, be representative of someone who needed to be removed, of Kafka the lawyer, who repeatedly took precious time away from Kafka the writer, who was in ascendance. As in the later Greek dramas, the tragedy of the flesh can be read as the beginning of the ascendance of the spirit, or, perhaps more appropriately to Kafka, the self. The spirit of the artist rises phoenixlike from the absurd and often contrived demise of the businessperson. Kafka often expressed the wish to dedicate himself to his writing, and it seems he portrayed its fulfillment in some of his works.

To understand the rich, multiplex statements about the reality of the self in Kafka, it is frequently necessary to see several characters as different aspects of the main protagonist. A modified psychoanalytical approach may prove useful in this context. In “The Judgment,” for example, one can see a weak ego (the friend in Russia) torn between the desires of the id (Georg Bendemann) and the dictates of the superego (the father figure). Eventually, the id is suppressed (drowned), the superego may relax (collapse), and, by implication, the ego will flourish (be able to write).

All this sounds oppressively grim, and indeed,

on first reading, many of Kafka’s works do seem horrible and depressing. The fatalism of most of his characters, though, which Kafka only began to counter with *The Castle*, is always offset in tone by careful choreography and by a splendid sense of humor that appreciates the ridiculous in all that humanity does. When reading his stories aloud, Kafka and his listeners were frequently overcome with laughter. It is his ethereal laughter that melts “the frost of this most unhappy of ages” (“The Country Doctor”), ensuring not only endless fascination with Kafka but also his relevance for all time.

## THE TRIAL

**First published:** *Der Prozess*, 1925 (English translation, 1937)

**Type of work:** Novel

*Arrested on his thirtieth birthday, Josef K. battles with an unusual court for a year before allowing himself to be executed without a proper trial.*

*The Trial* was begun in July, 1914, when Kafka turned thirty-one. He had just broken off his first engagement to Felice Bauer. He had also been unable to write any literature for more than a year, and he was feeling simultaneously frustrated by this writer’s block and guilty for having been unfair to either Bauer or himself (depending on how one looked at it). Out of this inner turmoil arose *The Trial*, which was completed within six months.

Like all Kafka’s writing, *The Trial* achieves a fine balance between the real and the imagistic, containing enough references to everyday life that the reader is initially tempted to confront the content of the surface story with logical argumentation. Were this a standard crime story, one would say that K., who was a banker by profession, misses three excellent opportunities to save himself. At the beginning of the novel, when arrested without being told why, K. neglects to contact his friend the public prosecutor. In the middle of the novel, when it would help to get away for a while, K. turns down his uncle’s invitation to stay with him in the country. At the end of the novel, K. avoids the policeman, who clearly wants to intervene.

The premise of fantasy, though, is that it details

inner reality. Kafka was involved in coming to terms with himself, and he presents the reader with strong evidence that K. and the court are one and the same. Names are always significant in Kafka's works, and one of the two warders who arrests Josef K. on his thirtieth birthday is called Franz—that is, the reader is to understand, Franz Kafka. Josef K. subsequently complains to the Examining Magistrate about the man's behavior and is surprised, on leaving the bank an evening or two later, to hear moaning coming from behind a door he has never opened. To K.'s astonishment, there are the two warders about to be flogged by a third man with a birch, and K. watches as Franz is flogged senseless. On his way home the next day, K. opens the door of the room again: "What he saw, instead of the darkness he had been expecting, destroyed his self-possession completely. Everything was exactly the same, just as he had found it the evening before when he opened the door. The old files and ink-bottles just inside the door, the Flogger with his birch, the warders still completely undressed." Clearly, it is all in K.'s mind, for he must be present for the scene to continue.

What is happening to K., then, is an inner sorting of priorities. What is on "trial" is Kafka's own lack of existential authenticity. At the time that he wrote *The Trial*, Kafka had already realized that Bauer would have been more of a hindrance in his life than a help. Her counterpart in the novel is Fräulein Bürstner (same initials), who does not wish to get involved with K. The other aspect of Kafka's life that necessarily continued to interfere

with his writing was his professional work as a lawyer with the Workers' Accident Insurance Institute. This situation is analogous to K.'s workaday existence in the bank. Kafka the writer must have derived great satisfaction from placing on trial and sentencing to death that aspect of his life that was guilty of wasting his time, but that he nevertheless needed.

*Der Prozess* is translated into English as "the trial" or "the process." In fact, no trial takes place in the

novel, so the reader might do well to consider the other meaning of the title. Hegelian and post-Hegelian German philosophy, with which Kafka was familiar, made use of the Greek terms "process" and "praxis" to describe contrasting modes of existence. "Process" imports the notion of an implacable system wherein one is acted upon by forces one does not understand and cannot alter. Surely this is the case of Josef K. in *The Trial*. "Praxis," the opposite of "process," is an act of taking control of one's own destiny, and that is what the more mature protagonist of the same name, K., undertakes to do in Kafka's later novel, *The Castle*.

## THE CASTLE

**First published:** *Das Schloss*, 1926 (English translation, 1930)

**Type of work:** Novel

*K. is summoned by the Castle to work as a land surveyor, but, on arrival, he is unable to determine why he was called.*

*The Castle* is unfinished. It breaks off after the twentieth chapter, with alternative versions in the manuscript indicating that the plot could have continued in two different directions. Critics have tended to be led by Max Brod's report of how Kafka once told him the novel was to end: The Land-Surveyor was to find only partial satisfaction and die exhausted by his struggle. If this is taken as a foregone conclusion, the interpretation is necessarily partial to the dark and depressing aspects of the novel. From an impartial reading of the story, though, it seems equally possible that K., the outsider, could usher in the triumph of reason over the hopelessly entangled and inefficient bureaucracy of the Castle.

The first reading, which ends with K.'s defeat, is consistent with many of Kafka's earlier works and seems to echo the short parable "Vor dem Gesetz" (1915; "Before the Law," 1930) included in *The Trial*, in which the man from the country exhausts all of his resources and eventually dies in the futile attempt to gain admittance to the Law. An essential difference between the characters in the earlier works and the protagonist in the last novel, though, is that K. neither reveres nor is intimidated by the

Castle and its agents, and he has a refreshing tendency to speak his mind. Kafka wrote *The Castle* during the last two years of his life, during which he overcame many inhibitions. It is this new spirit and confidence that seems to speak through K. in the second reading, which emphasizes his chances of success.

It is difficult for the objective reader to take the Castle seriously. Desirable apparently only because it is inaccessible to the common individual, it is a disappointment from the start, to K.'s eyes not a castle at all but "only a wretched-looking town, a huddle of village houses, whose sole merit, if any, lay in being built of stone; but the plaster had long since flaked off and the stone seemed to be crumbling away." Furthermore, there is little evidence of the Castle's having actually done anything for the people in the village. Its "gentlemen" are unprincipled and adept only at keeping the best for themselves. First the Mayor's house, then the Herrenhof are shown to be awash in paperwork, with files hopelessly outdated and no order to the system.

How, then, does the crumbling Castle manage to retain its control over the villagers, indeed command their respect, devotion, and services? First, it maintains a cloak of secrecy around its activities, if any, and tolerates no outsiders. It is a closed system whose preeminence goes unchallenged. Second, it terrorizes those who refuse to be exploited, as evidenced by Amalia's case. Third, it moves quickly to try to bring any active newcomers alongside. K. is told that no surveying will be necessary and is presented with two ridiculous assistants whose purpose is to keep him distracted. Then he is sent a letter congratulating him on the fine land surveying he and his assistants are doing, thereby tempting him to do nothing but maintain appearances, like the rest of the Castle's employees.

From the start, though, K. does not seem like the sort to surrender. In the second chapter, in a significant flashback to his childhood, K. remembers how he was one of the few boys who managed to climb the high wall around the graveyard. "The sense of that triumph had seemed to him then a victory for life." This scene establishes his personality.

In the village, K. refuses to be browbeaten and manipulated, and he persists in trying to force an interview with Klammer to get to the root of why he was summoned. In the thirteenth chapter, one of the students approaches and offers help, believing

that K. in the distant future will "excel everybody." Finally, in the eighteenth chapter, K. barges in on Bürgel, one of the "gentlemen" secretaries in the Herrenhof, only to fall asleep to the drone of Bürgel's voice. Critics who subscribe to a defeatist reading of *The Castle* interpret K.'s falling asleep as a great opportunity lost, for K. could conceivably have gained access to the Castle through Bürgel, whose name is the diminutive of the German word *Burg*, or castle. By this point in the novel, though, the Castle and its representatives have been exposed as so corrupt that K.'s overwhelming desire to sleep can be seen as a natural defense mechanism. K. dreams that he has already achieved a great victory by fighting against and banishing a naked secretary built like a Greek god, and this dream seems to be prophetic. There is every indication that K. will overcome the Castle.

The main interpretive question is what the Castle represents. Surely it embodies the reality of all persons and institutions girded in cloaks of illusory authority, from the church to the village teacher, and lampoons the tricks and devices of those whose interests are served by the perpetration of grand fraud. Kafka was concerned with eternal verities, which was what made him a great writer. The K. in this work has identified the mysterious "Law" and its authority structures by which the K. of *The Trial* was oppressed, and he finds that it is a sham and a chimera. He laughs at it.

## THE METAMORPHOSIS

**First published:** *Die Verwandlung*, 1915  
(English translation, 1936)

**Type of work:** Short story

*Commercial salesman Gregor Samsa awakens one morning to find himself turned into a large bug. This situation forces his dependent family to become self-sufficient.*

*The Metamorphosis* is Kafka's longest story and one of his most frequently analyzed works. Tripartite in form, it traces the months from Gregor Samsa's unique metamorphosis to his death from dehydration, injury, and general neglect. Gregor's health declines as the health of his father, mother,

and sister improves. His metamorphosis from the sole breadwinner to an utterly dependent and undesirable creature prompts the metamorphosis of his sluggish family into hardworking, happier people.

The point is often made that, although it is Gregor who takes on a grotesque form, the real ugliness in the story lies in his family's attitude toward and treatment of him, in their assumption that he is responsible for the debt incurred by his father. As the parents and sister selfishly exploit the best years of Gregor's youth, any possibility he might have of marrying and establishing a family of his own is reduced to his making a fretwork frame for a magazine picture of a woman. They have used him up.

Likewise, his employer shows no appreciation for Gregor's humanity and seems bent only on getting the maximum return from his employee. After five years without missing a day, Gregor needs only to miss one train to have the chief clerk threaten him with dismissal. They also use him up.

The integrity of Gregor's self is under attack from all sides. Not even his bedroom is a safe retreat. It has doors in all three inside walls, enabling his mother, his father, and his sister to question him simultaneously. No wonder, then, that Gregor revolts. He takes on a form that makes his further exploitation impossible.

Kafka explicitly forbade any artistic illustration of the bug for the book cover. That would have given too mundane a form to a transformation that signifies a revolt of the subconscious, a breakthrough after a long period of self-denial. Gregor entertains the idea that the same may happen to the chief clerk himself some day.

Significantly, the title of the story is not *The Bug* but *The Metamorphosis*. The emphasis is on the change itself, on exploring who one really is and what one really likes to do, on being guided by one's own urges, with no worry concerning where they will lead. Gregor discovers that he feels most comfortable squeezed under the sofa or hanging upside down from the ceiling. His voice changes, so that his speech is unintelligible to humans. He is ravenously hungry, but not for human food. He is moved as never before by his sister's violin playing. "Was he an animal, that music had such an effect upon him? He felt as if the way were opening before him to the unknown nourishment he craved." Gregor's new sensitivity to music and the new

sound of his words are clear indications that the story may be read as the self-discovery of the artist.

Kafka does not downplay the risk inherent in eccentric self-expression. Part 1 of the story ends with Gregor's sustaining an injury along his side as his mulish father forces him back into his room. Part 2 ends with Gregor sustaining a more serious, perhaps fatal wound, as his father pelts him with apples. Part 3 ends with Gregor dead, covered with refuse and dust, and disposed of by the cleaning lady. The danger, clearly, of voluntary or involuntary nonconformity is that one may be misunderstood, mistreated, or entirely rejected. Before his metamorphosis, though, Gregor was no better off than after it. While the manifestation of his uniqueness was considered by some to be grotesque, it was an advance over his former routine.

## THE COUNTRY DOCTOR

**First published:** *Ein Landarzt*, 1919 (English translation, 1945)

**Type of work:** Short stories

*These fifteen stories reflect on the human condition, on the uncertain spirit of the time during World War I, and on the nature of the artist.*

*The Country Doctor: A Collection of Fourteen Short Stories* is a collection of stories written between 1914 and 1917. The order of the stories was determined by Kafka, who decided to withdraw the fifteenth story, "Der Kübelreiter" ("The Bucket Rider"), before publication.

The questions addressed in the stories are existential. Human society is so far removed from the natural state that it at times seems to have become lost in its own rules and bureaucracy. Old institutions no longer command respect and take up too much precious time. Behind these general obser-

vations, which were certainly true in the declining days of the Habsburg monarchy, there is in Kafka's works always the autobiographical element, the realization that his writing was the most important thing in his life, and the resentment of his professional obligations as a lawyer and of his fiancé Bauer as diversions from his main objective.

Kafka's story sequence establishes a framework whereby the collection opens with a story of a horse in a law firm and ends with one in which an ape delivers "Ein Bericht für eine Akademie" ("A Report to an Academy"). This framework operates to strip away any veneer of respect one may still entertain for these institutions, and, in a masterful kind of "reverse anthropomorphism," it compares humans unfavorably with animals. What is done to animals is not to their benefit. The female chimpanzee has "the insane look of the half-broken animal in her eye." By extension, Kafka seems to be questioning the benefit of what humankind is doing to itself, of the jobs that keep people occupied through the best years of their lives, causing them to conform to hierarchical constructs that deny and suppress their inner selves.

Yet the thought of usurping civilization's rigorous and often dehumanizing controls and structures gives rise to the fear of a relapse into barbarianism. "Ein altes Blatt" ("An Old Manuscript") describes what happened when the nomads assumed power. "Schakale und Araber" ("Jackals and Arabs") cleverly portrays the logical fallacies inherent in the plans for most uprisings, and it identifies the real problem as the nature of the beast rather than the situation.

Some of the stories portray characters overcome by inertia, while others deal with the inability to overcome mortality. Offsetting these, however, are the two death stories that seem, ironically, infused with energy and a sense of purpose. In "Ein Brudermord" ("A Fratricide"), the man who is killed is the one who is a conscientious office worker. Is Kafka wishfully clearing his time-consuming professional life out of the way? In as immediate a style, "Ein Traum" ("A Dream") portrays the burial alive of Josef K., who is also the protagonist in Kafka's novel *The Trial*. While Josef is

alive, the artist engraving the tomb has difficulty writing, but as soon as Josef is wafted down into a great hole, his own name races across the tombstone "in great flourishes." An autobiographical reading of these stories is that Kafka's involvement in his own life lacks authenticity for him and that aspects of his self need to be excised. The indication of where he belongs is given in the brilliant short piece "The Bucket Rider." In it, a freezing man comes to the realization that there is no help for him in this world, and he ascends by supernatural means into the "regions of the ice mountains." This image is a metaphysical removal from the world.

Kafka withdrew "The Bucket Rider" from the collection, perhaps because its message was more elaborately stated in the title story, "The Country Doctor." In this story, the most beautiful and most fantastic of all, Kafka symbolically discards both the profession and the fiancé. The doctor loses his practice and his maid. Instead, he is transported by supernatural means to the bedside of a sick boy, who has a blossom in his side, an unsightly wound that he brought into the world as his only dowry and of which he will die. That is the gift of the artist, which is of consuming magnificence, transporting its owner into the world of the spirit.

## SUMMARY

Franz Kafka is uncontestedly one of the strongest, most original literary voices of the twentieth century. His unpretentious prose, while seemingly rooted in the everyday, penetrates deeply into the reality of the human psyche. All rings true on the psychological level, bizarre though the scenes and circumstances of the narrative may be. Moral precepts shimmer in the distorting light of multiple interpretations, for the works are absolute and support many different interpretations.

Like dreams, Kafka's writing is both fantastic and vividly entertaining and evokes powerful emotional responses ranging from fear to sustained laughter. He was unique, a sovereign artist, a writer for all time.

Jean M. Snook

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

*Der Prozess*, 1925 (*The Trial*, 1937)

*Das Schloss*, 1926 (*The Castle*, 1930)

*Amerika*, 1927 (*America*, 1938; better known as *Amerika*, 1946)

#### SHORT FICTION:

*Betrachtung*, 1913 (*Meditation*, 1948)

*Das Urteil*, 1913, 1916 (*The Sentence*, 1928; also as *The Judgment*, 1945)

*Die Verwandlung*, 1915 (*The Metamorphosis*, 1936)

"In der Strafkolonie," 1919 ("In the Penal Colony," 1941)

*Ein Landarzt: Kleine Erzählungen*, 1919 (*The Country Doctor: A Collection of Fourteen Short Stories*, 1945)

*Ein Hungerkünstler: Vier Geschichten*, 1924 (*A Hunger Artist*, 1948)

*Beim Bau der Chinesischen Mauer: Ungedruckte Erzählungen und Prosa aus dem Nachlass*, 1931 (*The Great Wall of China, and Other Pieces*, 1933)

*Erzählungen*, 1946 (*The Complete Stories*, 1971)

*The Penal Colony: Stories and Short Pieces*, 1948

*Selected Short Stories*, 1952

#### NONFICTION:

*Brief an den Vater*, wr. 1919, pb. 1952 (*Letter to His Father*, 1954)

*The Diaries of Franz Kafka*, 1948-1949

*Tagebücher, 1910-1923*, 1951

*Briefe an Milena*, 1952 (*Letters to Milena*, 1953)

*Briefe, 1902-1924*, 1958

*Briefe an Felice*, 1967 (*Letters to Felice*, 1974)

*Briefe an Ottla und die Familie*, 1974 (*Letters to Ottla and the Family*, 1982)

#### MISCELLANEOUS:

*Hochzeitsvorbereitungen auf dem Lande und andere Prosa aus dem Nachlass*, 1953 (*Dearest Father: Stories and Other Writings*, 1954; also known as *Wedding Preparations in the Country, and Other Posthumous Prose Writings*, 1954)

## DISCUSSION TOPICS

- Is *The Trial* merely motivated by Franz Kafka's interest in the law or does it depend significantly on his legal training?
- What are the obstacles to effective communication among Kafka's characters?
- How did Kafka's difficulties with his own father affect his depiction of fathers?
- Does Kafka's fiction reflect an existentialist denial of all absolute principles?
- Can any of the stories of *The Country Doctor* be regarded as optimistic?
- Why do the reactions of fear and laughter seem to converge for Kafka's readers?

## YASUNARI KAWABATA

**Born:** Ōsaka, Japan  
June 11, 1899

**Died:** Zushi, Japan  
April 16, 1972

*Long recognized in Japan as a literary innovator, Kawabata was awarded the Nobel Prize in Literature in 1968, the first Japanese writer to be so honored.*

### BIOGRAPHY

Yasunari Kawabata (kah-wah-bah-tah) was born in Ōsaka, Japan, on June 11, 1899. When Kawabata was two years old, his father died. His mother died the following year, and Kawabata and his sister went to live with his maternal grandparents. Kawabata's grandmother's death in 1906 was followed two years later by the death of his sister, his only sibling, leaving him alone with his grandfather. Following his grandfather's death in 1914, Kawabata moved into a middle-school dormitory in Ōsaka, where he stayed until moving in with relatives to attend high school in Tokyo.

In 1920, Kawabata entered Tokyo Imperial University to study English literature. In his second year, however, he decided to major in Japanese literature. While still in college, Kawabata came to the attention of Kan Kikuchi, a noted editor and author. Kikuchi was so taken with the younger man that he secured a position for Kawabata on the staff of the literary journal *Bungei shunju* (literature of the times) and provided Kawabata with the use of his home. After graduating from Tokyo University in 1924, Kawabata and several other young writers who had been associated with *Bungei shunju* founded their own literary journal, *Bungei jidai* (literary age). The new journal was seen as the official publication of the Shinkankakuha (Neo-Perceptionist) movement. Writers of the Neo-Perceptionist movement were heavily influenced by such Western writers as James Joyce and Gertrude Stein.

Following some early publications in college, Kawabata's first literary breakthrough came with the publication of *Izu no odoriko* (1926; *The Izu Dancer*, 1955). This novel would provide a model for much of Kawabata's later fiction: an autobiographical protagonist and an unattainable, virginal love.

In the early 1930's, Kawabata began to experiment in his short fiction with the stream-of-consciousness technique developed by Joyce. Kawabata also experimented with Surrealism in his short fiction and poetry. During this period, Kawabata worked on several literary magazines, including the influential *Bungakkai* (literary world). He also began to develop many of his "palm-of-the-hand stories." He started writing these very short stories during the 1920's and published 146 of them over the course of his literary career. Kawabata married in 1931, and he and his wife Hideko adopted a daughter in 1943.

In 1934, Kawabata began work on *Yukiguni* (serial, 1935-1937; book, 1947; *Snow Country*, 1956). Between 1934 and 1937, Kawabata published various chapters of *Snow Country* in a series of magazines. He added a chapter in 1939, another in 1940, and a final chapter in 1947 when the novel was published. That each of the early chapters can stand on its own merit is a testament to both Kawabata's skill as a writer and his belief that the novel could end at any point.

During World War II, Kawabata spent much of his time writing self-reflexive childhood reminiscences and studying *Genji monogatari* (c. 1004; *The Tale of Genji*, 1925-1933), Murasaki Shikibu's classic

insider's view of the eleventh century Japanese royal court. While Kawabata was able to retain his apolitical beliefs during the war, he did travel extensively in occupied Manchuria and served on several government-sponsored literary projects.

Kawabata became president of the Japanese chapter of the International Association of Poets, Playwrights, Editors, Essayists, and Novelists (PEN) in 1948 and served in that capacity for seventeen years. The late 1940's and early 1950's were productive years for him. He completed two novels, *Sembazuru* (serial, 1949-1951; book, 1952; *Thousand Cranes*, 1958) and *Yama no oto* (serial, 1949-1954; book, 1954; *The Sound of the Mountain*, 1970) and found time to assist a new generation of Japanese authors, most notably Yukio Mishima. Kawabata was also beginning to gain an international following during this time through English and German translations of his fiction.

The 1960's provided an equally busy time for Kawabata as he toured American universities and campaigned at home for conservative political candidates. He was also, of course, still writing. Upon the publication of *Kyoto (The Old Capital)*, 1987) in 1962, Kawabata checked himself into a hospital to recover from a drug dependency developed over the course of writing the novel. In 1968, Kawabata, who had already received every major Japanese award for literature, was awarded the Nobel Prize in Literature. The Nobel Committee cited *Snow Country*, *Thousand Cranes*, and *The Old Capital* as being the basis for their decision.

On April 16, 1972, in Zushi, Japan, Kawabata took his life, leaving no note.

## ANALYSIS

When Kawabata was awarded the Nobel Prize, many Japanese readers reacted with the same confusion expressed by American readers when William Faulkner was awarded the same prize in 1949. The native audiences for both writers were surprised that an author whom they found so difficult to understand could be appreciated by foreign audiences. Kawabata earned his reputation for being inaccessible through his early experiments with Western-based literary techniques such as stream of consciousness and Surrealism. Even after he moved beyond his flirtation with Western literary styles, he confounded Japanese writers with his fondness for plotless, open-ended stories and his

fragmentary, anecdotal "palm-of-the-hand stories."

The characteristic open-endedness and incompleteness of Kawabata's fiction, combined with the failure of many of his major characters to attain their goals, led some critics to label him a nihilist. Kawabata complained that such critics missed the point of his fiction: "I have never written a story that has . . . nihilism as its main theme. What seems so is in truth a kind of longing for vitality." Makoto Ueda, a critic and scholar of Japanese literature, has suggested that Kawabata's fondness for incomplete endings and open-ended stories is the result of Kawabata's desire to capture the free-flowing nature of life, not a desire to suggest a lack of meaning or completeness for life.

Ueda has noted that the chief characteristics of Kawabata's fiction are beauty, sincerity, and sadness. These three characteristics are not, however, separate entities. Rather, they are intertwined. For example, in *Snow Country*, Yoko's voice is described several times as being so beautiful that it is sad, and even her nose is described as being beautiful with an element of sadness. Beauty also incorporates an element of sincerity, for one who is sincere and pure of heart has a spiritual beauty. Certainly, Kawabata was interested in the outward beauty of landscapes and people, but he was more concerned with the beauty of tradition and emotions.

Kawabata believed that three groups were best prepared to recognize pure beauty. First, little children, because of their innocence, inexperience, and purity of soul, were incapable of seeing ugliness in the world. Second, young women who had not yet experienced life or physical love, who still believed in spiritual, asexual love, were capable of recognizing pure beauty. Finally, dying men were capable of recognizing pure beauty because their closeness to death helped them to transcend the desire for sexual love.

Kawabata's conception of the beauty of pure love can be seen in his first major literary work, *The Izu Dancer*. *The Izu Dancer* is structured around a female dancer and a young student who comes upon the traveling troupe to which the dancer belongs and is immediately attracted to the girl. The young man happens to see the dancer emerge from a bath in a stream, and he is relieved to discover that she is actually a child. His relief is the result of being released from the sexual tension implied by a male/

female relationship. Now he will be able to enjoy love in its purest, most unattainable form and travel freely with the dancers until it is time for him to return to school.

The beauty of tradition is also apparent in Kawabata's fiction. The ancient tea ceremony and the equally historic game of Go figure prominently in two of Kawabata's major novels, *Meijin* (serial, 1942-1954; book, 1954; *The Master of Go*, 1972) and *Thousand Cranes*. Kawabata was as much concerned with the beauty, purity, and simplicity of these Japanese traditions as he was with the characters of the novels for which the traditions provide the structure.

Kawabata believed that the writer's goal should be to create in literature a life of unusual beauty, simplicity, and truth. He recognized that this would be an artificial world, an ideal world, yet he also believed that it was a world that needed to be created. Kawabata believed that a "pure life" was one devoted to the pursuit of an ideal. Recognizing that few dreams are ever realized, Kawabata believed that attaining the ideal, whatever form it may take, was not as important as the pursuit itself. For him, the ideal often took the form of a pure, virginal love, a love that, by its very nature, was unattainable because humankind's desire for physical love ultimately results in the destruction of virginity. Kawabata's use of the unattainable virgin has been linked to his engagement to a fifteen-year-old in the early 1920's.

Death is also present in much of Kawabata's fiction, for anyone who seeks the essence (purity) of life must be willing to risk everything, even death, in pursuit of the ideal. Also, death that occurs before spiritual love can be breached, as in the case of the young man who is the center of Yoko and Komako's lives in *Snow Country*, assures the continuation of the spiritual love. Yoko, for example, states that she will never be able to nurse or mourn another man as she has nursed and mourned the music teacher's son. *The Sound of the Mountain* is reflective of Kawabata's concern with his own mortality. Although he was only in his early fifties while he was writing the novel, death had been an important part of his life from the earliest days.

## SNOW COUNTRY

**First published:** *Yukiguni*, 1935-1937, serial; 1947, book (English translation, 1956)

**Type of work:** Novel

*An independently wealthy man makes three visits to his mistress in the mountain country of Japan in search of an elusive dream that remains unfulfilled.*

"The train came out of the long tunnel into the snow country." Through the opening line of *Snow Country*, the central character, Shimamura, and the reader are transported back in time. The snow country of the novel has only recently been linked to modern Japan by the railroad. Indeed, as Shimamura notes as he returns to Tokyo after his second visit, "the train . . . was not from the same world as the trains one finds on the main lines."

Shimamura's world, represented by Tokyo, is a world being invaded by Western influences in architecture and lifestyles. The world on the other side of the mountains from Tokyo is a world of rice harvests, winter carnivals, houses built in the style of the old regime, and Chijimi linen that can be traced back to antiquity. Clearly, when Shimamura travels to the snow country, he is leaving behind the decadence of modern Japan and returning to a Japan of the past, a Japan that values simplicity and purity. Shimamura himself acknowledges that he must return to the mountains to regain some of the honesty that is lost by living in Tokyo. Despite his professed desire for honesty, however, Shimamura is more concerned with illusion than with reality. In the opening section of the novel, he views Yoko through her reflection in the mirrorlike window of the train car, but what he sees is an image "floating" in the glass, not Yoko herself.

Shimamura's fascination with occidental ballet is also representative of his desire to maintain a dis-

tance between reality and illusion, as if closeness to a dream destroys the dream. In fact, that is exactly what has happened to him with his earlier fascination with the dance-drama of Kabuki theater. As he researched and studied Kabuki dance and became acquainted with individual dancers, he became dissatisfied with the object of his obsession and turned his attentions to ballet. In this new study, he is determined to maintain the distance between illusion and reality by never watching a ballet performance. He will content himself with studying ballet through books and photographs, assuring that the new dream cannot be destroyed.

Shimamura's relationship with Komako is also built around the pursuit of a dream, a spiritual relationship with a woman. This dream is nearly realized during their first meeting, related through a flashback as Shimamura is traveling toward a second meeting in the mountains. Shimamura and Komako's first meeting is in the spring, a time of hope and promise. When Shimamura first meets Komako, he is attracted to her physically, but he moves quickly to separate her in his mind from a woman to be used for physical pleasure. He sees a purity in her that creates a feeling of revulsion for his physical desires. Komako also recognizes that they may be on the verge of something pure and magical and points out to him that relationships between men and women last longer if they remain "just friends." Physical desire (aided by some *sake*) overpowers the couple's good intentions, however, and the possibility of a purely spiritual relationship is destroyed. The remaining sections of the novel center around Komako's "fall from grace" and Shimamura's interest in the "unspoiled" Yoko.

Shimamura's second visit to the mountain village begins with an air of optimism, for while he has been away from Komako, he has felt closer to her and hopes to recapture something from their first encounter. Once again, he is attracted more to possibilities than to realities. The openness of that first meeting, however, cannot be recaptured; it has been destroyed by the physical relationship. This meeting takes place in the winter, symbolizing the arrested state of their relationship.

Komako is presented in a different light during the second meeting. She is no longer the young woman whom Shimamura met six months earlier; she is now a geisha in the full sense of the word. Nevertheless, Shimamura still finds a purity in her

because she has become a geisha to help pay the medical bills of her former fiancé, who is dying, and to avoid being trapped in a loveless marriage to an old man who has proposed to her. Komako, however, recognizes that there is no longer the possibility for anything but a sexual relationship between Shimamura and herself. Consequently, she drinks heavily when she is engaged to attend parties in her role as a geisha.

When Shimamura returns to the snow country for his third visit, it is autumn, a foreshadowing of the end of the relationship. During the third visit, Komako is drinking even more heavily and strikes out verbally against Yoko, telling Shimamura that the younger girl is insane. Komako is aware of Shimamura's attraction to Yoko and the possibility of pure love that the younger girl represents.

Yoko, ironically, is the character who comes closest to realizing the dream of a pure, asexual love. Yoko served as a nurse for Komako's former fiancé and has spent every day since his death tending his grave. Now she tells Shimamura she is ready to go to Tokyo; she knows she will never love another man in the same way. She has captured the purity of love that Shimamura and Komako had been seeking. Her apparent death at the end of the novel ensures that there will be no other men in her life.

The novel ends, characteristically for Kawabata, with nothing resolved for the main characters. It is not even certain that Yoko has died from her leap off the burning warehouse.

## THOUSAND CRANES

**First published:** *Sembazuru*, 1949-1951, serial; 1952, book (English translation, 1958)

**Type of work:** Novel

*A young Tokyo bachelor attempts to reconcile his life to the realities of postwar Japan and the traditions of the past.*

The ancient Japanese tea ceremony, which provides the backdrop of *Thousand Cranes*, is as important as the two motifs intertwined throughout the novel: the loss of values in postwar Japan and the elusive search for love.

The tea ceremony itself is symbolic of Japan's

drift away from tradition and historical values. Kikuji Mitani, the protagonist, seems indifferent to his father's collection of antique tea bowls and the tea ceremony itself. His office mates share his lack of interest in the ceremony. Chikako Kurimoto, a former mistress of Kikuji's late father and a teacher of the tea ceremony, wistfully tells Kikuji that fewer and fewer young girls seem to be interested in learning the ways of the tea ceremony. Chikako also notes that the tea ceremony has also been tainted by foreign observers, such as some Americans who visited recently.

The two young women who are of interest to Kikuji in the novel have close ties to the tea ceremony. Chikako is trying to arrange a marriage between Kikuji and Yukiko Inamura. Yukiko, as a student of Chikako's, is tied to the past. Fumiko Ota, a former student of the tea ceremony who is often seen in European dress, is linked to the present. Consequently, as Chikako tries to pressure Kikuji to accept an arranged marriage to Yukiko, and as he tries to define his feelings for Fumiko, he is not merely choosing between two women—he is choosing between the Japan of the past and modern Japan.

Kikuji lives alone in his father's house, both his parents having died. It is a house of the past, in architecture and furnishings—even the maid is a remnant from his father's days. Kikuji continually talks of selling the house and allows it to fall into disrepair. The house represents the traditions of the past, and Kikuji is unsure of the validity of these traditions in postwar Japan. He works in a modern building and leaves his house in Western-style suits, only changing into a kimono when he returns home.

When Chikako arranges a tea ceremony to bring Kikuji and Yukiko together, he is attracted by the latter's beauty. Yet he is also offended by the tradition of arranged marriages and the role that Chikako is trying to play in his life. Despite his attraction to Yukiko, Kikuji realizes that there will always be a distance between them because of her

ties to the past and because of his ambivalent feelings for the past.

Chikako's tea ceremony also brings Kikuji together with Mrs. Ota and her daughter Fumiko. Fumiko, like Kikuji, is torn between the past and present. She has avoided learning the tea ceremony and is often found wearing European clothes. After her mother's suicide, she makes a formal break with the past by selling her mother's house.

Kikuji's growing alienation from the past can be seen in his use of the antique water pitcher that Fumiko gives him after her mother's death. The pitcher was created for use in the tea ceremony, but Kikuji uses it to hold Western flowers. Near the end of the novel, Chikako, frustrated with her inability to control Kikuji's life, accuses him of being ignorant of Japanese thinking—the worst insult that she can think of making.

Kikuji's dissatisfaction in the novel is not limited to his search for a cultural identity; his dissatisfaction is also related to an inability to find love. When Kikuji was eight years old, his father took him on a visit to Chikako's—his father's mistress at the time. Kikuji saw an ugly birthmark on Chikako's breast and now associates ugliness with sex. He sees Chikako's venomous behavior toward Mrs. Ota and Fumiko as an ugliness derived from her sexual relationship with his father. Even as an adult bachelor, Kikuji feels "soiled" after sexual encounters.

Fumiko also sees ugliness in sex. She blames her mother's adulterous relationship with Kikuji's father for the early deaths of Kikuji's father and mother. She even believes her mother's suicide is the result of her mother not being able "to stand her own ugliness," an ugliness that stems both from her mother's relationship with Kikuji and from her mother's seduction of Kikuji. Fumiko's own suicide at the end of the novel is linked by Kikuji to guilt that she may be feeling over her sexual surrender to him.

Ironically, Fumiko's death comes after she has symbolically broken with the past by selling her mother's house and by shattering a three-hundred-year-old tea bowl that her mother had owned. Her death is also ironic because through his sexual encounter with Fumiko, Kikuji has "escaped the curse and paralysis" that have dominated his life. Unfortunately, he fails to explain this freedom to Fumiko. When he goes to tell her the next morn-

ing, he discovers that it is too late. His indecisiveness the night before has allowed true happiness to escape him.

### SUMMARY

Yasunari Kawabata's true gift as a writer, the gift recognized and cited by the Nobel Prize Committee, was his appreciation of Japanese traditions and his ability to explore the interrelationships between the past, present, and future through the language and literary traditions of the twentieth century. While similar themes ran through much of Kawabata's works, each piece of his fiction has its own unique character and style, be it the attention paid to a physical description of a black water lily or a psychological study of human indifference.

Ronald E. Smith

### DISCUSSION TOPICS

- What is ironic about the difficulty English-speaking audiences had in understanding the work of Yasunari Kawabata, an avid student of English and American writers?
- Consider the validity of Kawabata's explanation of the "incompleteness" of his stories.
- Does Kawabata's notion of love bear any resemblance to that of Dante?
- What does Shimamura learn in the snow country?
- Has Kawabata's ability to explore Japanese traditions influenced Western as well as Japanese readers?

## NIKOS KAZANTZAKIS

**Born:** Heraklion, Crete, Ottoman Empire (now in Greece)

February 18, 1883

**Died:** Freiburg, West Germany (now in Germany)

October 26, 1957

*Kazantzakis, through his examination of the nature of human freedom and the concept of God in a variety of literary works and forms, is the most important Greek writer of the twentieth century and a formidable figure on the world literary stage.*

### BIOGRAPHY

Nikos Kazantzakis (kah-zuhn-TZAH-kees) was born in Heraklion on the Greek island of Crete on February 18, 1883, at a time when that island was under the control of the Ottoman Turks. Rebels fought against the Turks during Kazantzakis's childhood, and they were finally successful in 1898. Once Kazantzakis's family fled to Greece for safety in the midst of the violence of revolution, and as a teenager Kazantzakis was sent to the island of Naxos for the purposes of both schooling and personal safety. Thus, Kazantzakis was born into a world of struggle and movement; struggle became the dominant theme of his writing and movement the theme of his life.

In 1902, young Kazantzakis moved from Crete to Athens to study law, but by 1906 his literary career had also begun with his first novel, *Ophis kai krino* (1906; *Serpent and Lily*, 1980), and the political play *Xemeronei* (pr. 1907; day is breaking), which was produced the next year and which won acclaim for Kazantzakis. In 1907, Kazantzakis moved to Paris to begin graduate study in philosophy. While there, he encountered the works of two philosophers whose ideas were to influence greatly the rest of his career: the German Friedrich Nietzsche, who believed that human beings must violate the rules and conventions of the past in order to break through to a new consciousness; and the Frenchman Henri Bergson, who thought that time is relative to the human condition and not measured by an abstract standard and that the life force (*élan vital*) is constantly fighting to assert itself through a resistant matter. By 1909, Kazantzakis had finished

his dissertation on Nietzsche and returned to Crete, where he became one of the leaders of a literary group that championed the use of the ordinary (demotic) Greek spoken by common people in place of the more formal Greek favored by older literary artists. Kazantzakis and his colleagues hoped thereby to revive the literature of Greece.

Kazantzakis spent the next fifteen years traveling all over Greece and central Europe, becoming involved with many political schemes designed to overthrow the old capitalistic and imperial order, jumping from one philosophical viewpoint to the next, having many experiences that would inform his later works, but writing comparatively little. In 1911, he married Galatea Alexiou, whom he had met while living in Athens. In 1912, war broke out in the Balkans, and Kazantzakis volunteered for duty but wound up assisting the prime minister. Then, in a complete reversal of the path that he had been following, in 1914 and 1915 Kazantzakis toured Greece with a friend, poet Angelos Sikelianós. A highlight of their trip was a visit to Mount Athos, a famous monastery that was one of many where they stayed. Kazantzakis lived alone in a bare monk's cell for months. As a result of this journey and his reading of Dante, Leo Tolstoy, and Western and Eastern religious scriptures, Kazantzakis decided that political change was not the answer to humankind's problems and began to think instead in religious terms, even considering starting a new religion. In 1917, Kazantzakis failed in an effort to mine lignite coal, but during the effort he met a life-affirming worker, George Zorbas. This adventure was to serve as the basis for his most fa-

mous novel, *Vios kai politela tou Alexe Zormpa* (1946; *Zorba the Greek*, 1952). In 1917, Kazantzakis traveled to Switzerland, and he stayed there for the next two years.

Kazantzakis was brought back to political struggle in 1919, when the Greek government assigned him to help repatriate thousands of Greeks who were being persecuted by the Bolsheviks in the Russian Caucasus region. He also took part in the meetings of the World War I peace conference at Versailles and worked in northern Greece resettling refugees from the Caucasus, an experience that he used in the novel *Ho Christos xanastauronetai* (1951; *The Greek Passion*, 1954; also known as *Christ Recrucified*). Disillusioned again by strife in Greece, Kazantzakis left the country in 1920 and spent the decade moving about Europe, visiting or living and working in Paris, Germany, Vienna, Italy, the Soviet Union, Palestine, Cyprus, Egypt, and Czechoslovakia, frequently returning to Greece while writing articles, translations, and reference works for a living. During this period, he divorced his first wife, met Eléni Samfou, who was to become his companion and second wife, and suffered several painful and debilitating attacks of the facial eczema that was to plague him for the rest of his life. He also became enamored of communism (the reason for his visits to Russia), became involved in more political turmoil in Greece, and began work on the volume that he regarded as his most important, his continuation of Homer's epic, *Odyseia* (1938; *The Odyssey: A Modern Sequel*, 1958).

Kazantzakis's wanderlust continued into the 1930's, including a trip to Japan and China, but he finally established a home on the Greek island of Aegina. During this period, he became known to a wider reading audience through his travel articles and books. During World War II, he was confined to Greece because of the German occupation, and in 1945 he returned to politics as a socialist and married Eléni Samfou. Civil war broke out in Greece at the end of World War II, and in 1946, because of controversy generated by both his politics and his writings, he left Greece for England and later Paris, where he worked as a translator for the United Nations Educational, Scientific, and Cultural Organization (UNESCO). Later, he and his wife moved to Antibes, France, where he lived for the rest of his life, since opposition to his politics and literary works prevented his return to Greece.

This time was also a period of intense creative activity, during which Kazantzakis wrote and translated several plays and wrote the novels *The Greek Passion*, *Hoi aderphophades* (1963; *The Fratricides*, 1964), *Ho Kapetan Michales* (1953; *Freedom or Death*, 1956; also known as *Freedom and Death: A Novel*), and *Ho teleutaïos peirasmós* (1955; *The Last Temptation of Christ*, 1960; also known as *The Last Temptation*). The last novel is his most controversial because it presents Jesus Christ as beset by sexual and psychological problems and incurred the censure of both the Greek Orthodox and Roman Catholic churches.

Meanwhile, Kazantzakis's health was failing as his reputation continued to grow. The facial eczema attacked him again, and in 1953 an infection led to the loss of an eye, but doctors also pinpointed the source of the eczema as a lymphatic disorder, which, during a hospitalization in Germany the next year, was diagnosed as benign lymphatic leukemia. In 1956, he received the Peace Prize in Vienna and narrowly lost the Nobel Prize in Literature to Juan Ramón Jiménez. The next year, Kazantzakis had an adverse reaction to a vaccination during a trip to the Far East and was rushed to the hospital in Germany where his leukemia had been diagnosed. He died of Asiatic influenza in Freiburg, West Germany (now in Germany), on October 26, 1957. He was buried in his native Crete in spite of the opposition of the Greek Orthodox church. He was still working to the end; the last books that he completed were the novel *Ho phthochoules tou Theou* (1956; *Saint Francis*, 1962; also known as *God's Pauper: St. Francis of Assisi*) and the autobiography *Anafora ston Greko: Myhistorema* (1961; *Report to Greco*, 1965).

## ANALYSIS

There is no more typical event in Kazantzakis's life than his attempt, while living in Vladimir Ilych Lenin's Russia in 1922, to unite and reconcile the political activism and materialism of communism with the asceticism and spirituality of Buddhism, an effort discussed in his philosophical book *Salvatores Dei: Asketike* (1927; *The Saviors of God: Spiritual Exercises*, 1960). Judged from outside Kazantzakis's worldview, such an endeavor seems hopeless, pointless, and doomed to failure from the outset. Yet the effort to yoke the extremes of human experience appears over and over in Kazan-

tzakis's work. Odysseus in his *The Odyssey* is both a sacker of cities and a seeker after spiritual peace. The protagonist of *The Greek Passion*, chosen to portray Jesus in a Passion play, begins to assume that role in life and becomes not a man of peace but a revolutionary. Finally, Christ himself in *The Last Temptation of Christ* is unsure whether he should lead a religious revolt or abandon the struggle for an ordinary life with a home and family; beset by doubts, he is still trying to understand the nature of his mission even as he hangs on the Cross.

The inversion of everyday logic and human behavior that is basic to Kazantzakis's thinking appears even in the titles of his books. God is not the Savior of humanity, men and women are the saviors of God (in *The Saviors of God*). Kazantzakis thought of all creation, all existence, as a divine project in which the Holy Spirit, residing in the hearts and minds of humanity, must fight to overcome the resistance of the flesh, which always wants to take the easy way out, give in to its appetites, and surrender in the face of egotistic greed and oppression. God cannot save humankind, for it is the embodiment, the incarnation, of the Spirit of God. It is for humanity to speak and act in terms of that Spirit and thereby save God. The British title of Kazantzakis's novel about Cretan rebellion against the Turks, *Freedom or Death*, is *Freedom and Death*, a pairing more appropriate for the writer's viewpoint. The doomed Cretans fight against impossible odds because that is the only way to assert the divine spirit of freedom and the unity of all life. Few are willing to undertake such a struggle, so their effort is bound to end in death. In that death, they reach the zenith of their exercise of freedom, so the appropriate title is not freedom *or* death, which implies that humanity has a choice between these conditions, but freedom *and* death, which grimly acknowledges the inevitable conclusion of such an attempt. For Kazantzakis, relationships are never stated in "either/or" terms, such as "either politics or religion" or "either the world or God," but in "and/and" terms. In order to understand, for example, politics or religion, the modern human must try to act upon the truths of each at the same time. To act as if only one side of the pair exists is to act on only partial knowledge and therefore really to be blind. The true answer is not "politics or religion" but "politics and religion," and, one should add, everything else, too. Kazantzakis tried to in-

clude as much experience in his life and literary works as he could possibly gather. To those who disagree with his philosophy, Kazantzakis was a madman racing over the globe in search of impossible fulfillment; to his admirers, he lived and wrote a quest for a new definition of the relationships between humans and fellow humans and between humankind and God.

## ZORBA THE GREEK

**First published:** *Vios kai politela tou Alexe Zormpa*, 1946 (English translation, 1952)

**Type of work:** Novel

*A shy and unassertive scholar meets a lusty peasant who renews the scholar's faith in humanity and transforms his life.*

*Zorba the Greek* is based on Kazantzakis's friendship with a real person, George Zorba, who helped the author in an ill-fated scheme to mine lignite in Greece. In the novel, the first-person narrator, known as "The Boss" (a title that Zorba gives him), who is a slightly changed version of Kazantzakis himself, journeys not to Greece but to Crete to mine the coal. Zorba, who fascinates and captivates The Boss the moment that they meet, keeps urging his employer to cast aside convention and live life more fully. He demonstrates how to do this

by dancing, playing his guitarlike *santuri*, and spouting life-affirming philosophy and declarations about the nature of God, which are usually jokes and riddles. For example, Zorba explains the chaos of the physical world by pointing out that fishers pray to God to make fish blind so that they will swim into the nets; the fish pray to God to make the fishers blind

so that they will cast their nets in the wrong places. Since God is the God of both fishers and fish, sometimes God listens to the prayers of the fish and

sometimes to the prayers of the fishers, so sometimes fish are caught and sometimes they are not.

Zorba is also a confidence man, but a good-hearted one; the tables are turned on him by women, for part of the way in which he affirms life is to romance every woman who seems a likely partner, sometimes getting fooled himself and in the process losing much of The Boss's money. The most poignant episode in the book stems from Zorba's sexual appetite. Zorba had befriended an old widow who had once been a coquette, and when she is about to die, The Boss tries to get Zorba to marry her to give her a sense of fulfillment.

At the end of the novel, Zorba's get-rich scheme for transporting coal—a trestle system down the side of a mountain—literally collapses, and The Boss prepares to return to the mainland. Zorba says farewell to The Boss by telling him that he has a good heart but that he lacks one thing to be totally his own man—folly. One must, in other words, be a little crazy to be free.

The novel was adapted for film in 1964, with Anthony Quinn as Zorba and Alan Bates as The Boss, and directed by Michael Cacoyannis. The success of this film helped bring Kazantzakis's work to a wider audience.

## THE LAST TEMPTATION OF CHRIST

**First published:** *Ho teleutaios peirasmós*, 1955  
(English translation, 1960)

**Type of work:** Novel

*Jesus Christ resists his most powerful temptation, the desire to lead a normal human life, and dies on the Cross, fulfilling his destiny of spiritually uniting humanity and God.*

*The Last Temptation of Christ* starts near the end of the life of Jesus of Nazareth and recounts the main events of the familiar Gospel story: Jesus assumes his mission, preaches, gathers disciples, is baptized by John the Baptist, goes to Jerusalem at Passover, is betrayed by Judas, is tried, condemned, and crucified, and finally dies on the Cross. Other details are presented either unconventionally or ambiguously. Pontius Pilate's interview with Jesus is in two

parts, one before Passover and not in connection with Jesus' trial; Jesus apparently raises Lazarus from the dead, but Jesus' involvement in this event is reported by the characters rather than described authorially by Kazantzakis. Peter dreams that he walked on the waves at Jesus' command and tells Matthew, who includes the story as a real event in his account of Christ's life. Jesus is enraged at this and other inaccuracies in Matthew's manuscript, which the publican is writing so that the details of Jesus' life will correspond with the predictions of the Old Testament prophets, but Matthew says that he is directed by an angel.

Although the tone of the novel is serious, this method of reporting the story of Jesus may be a reminder that, in his other works, Kazantzakis describes God as sometimes inconsistent and possessing a sense of humor. Kazantzakis may have de-emphasized Jesus' connection with Judaic tradition in order to underscore the point that, as a human being as well as God, he would have to have had the doubts that any human would have about his or her path in life.

These doubts are the source of the "last temptation" of the title. While enduring the agony of the Cross, Jesus swoons and dreams that he has awakened into a life in which he escaped the torment of the religious zealot, married, and fathered children. This "life" turns out to be a fantasy placed in his mind by Satan; his disciples return and accuse him of being a traitor by denying his mission, rejecting the Cross, and negating the truth of the power of the divine Spirit, which they wish to spread throughout the world. Summoning his strength, Jesus awakens from his dream, dies, and in that death brings freedom to himself and humankind. The novel ends at this point rather than with the Resurrection because Kazantzakis thought that Christ's death fulfilled both prophecy and his spiritual role; nothing more was needed.

Few novels have caused more outrage; religious figures of several faiths condemned the book as both blasphemous and heretical, and literary crit-

ics found the wild swings in Jesus' character and in the attitudes of others toward him either baffling or rendering the novel flawed and episodic. Kazantzakis clearly regards Jesus as the Son of God and Savior of humankind, but his presentation of Christ does not fit any conventional religious view. In 1989, Martin Scorsese directed a film version that was faithful to the novel and even more controversial than the book on which it was based.

### SUMMARY

Nikos Kazantzakis created works of art not as a sterile aesthetic exercise but as part of a lifelong effort to unify God, humanity, and the physical world. His works are important for those seeking to find a new viewpoint that will free humanity from the greed and selfishness that have characterized past centuries.

*Jim Baird*

### DISCUSSION TOPICS

- Identify the means by which Nikos Kazantzakis was able to vivify Greek literature.
- Did the 1964 film *Zorba the Greek* interpret Kazantzakis's novel accurately?
- Have recent studies of Kazantzakis's work modified the outrage that greeted *The Last Temptation of Christ*?
- Is Kazantzakis's career a validation of the pursuit of impractical ideas?
- Can conventional Christians learn anything about religion from Kazantzakis?

## JOHN KEATS

**Born:** Moorfields, London, England  
October 31, 1795

**Died:** Rome, Papal States (now in Italy)  
February 23, 1821

*One of the second generation of Romantic poets, Keats elevated the ode form to a new level of lyrical expression and came to symbolize the supreme literary craftsman.*

### BIOGRAPHY

Born in London, England, on October 31, 1795, John Keats (keets) was the son of Frances and Thomas Keats, the manager of a livery stable in the north of London. The oldest of four children, two brothers and a sister, Keats was eight years old when his father fell from a horse and suddenly died. The death of Keats's father and his mother's sudden decision to remarry had a dramatic effect on the poet's life. When Alice Jennings, Keats's maternal grandmother, heard of her daughter's decision to marry again, she arranged to have the Keats children come live with her and her husband, John Jennings. This move eventually resulted in the children moving to a different suburb of the city, Enfield, where Keats and his brother, George, began school. This development was a key moment in Keats's early life.

The Enfield school, which was run by the Reverend John Clarke, not only introduced Keats to the various pleasures of literature, which of course was to become the consuming passion of his life, but also brought the young poet into contact with the Reverend Clarke's precocious and well-read son, Charles Cowden Clarke. Charles Clarke, who was eight years older than Keats and who eventually became an important writer, too, quickly established himself as Keats's mentor and friend. It was through his new friend that Keats encountered

many of the books that were to play an important role in his poetry.

In March, 1810, Keats's mother died of tuberculosis. This event was not the sudden blow that his father's earlier death had been, but it was no less traumatic. It is difficult to know precisely how this loss shaped the young man's character, but it is quite likely that this event, combined with the earlier death of his father, deepened the poet's sense of the tragic nature of human existence. As a result, the transitoriness and pain of life are themes that run throughout his poems and letters. Indeed, he would eventually develop the belief that suffering and death are essential to the growth of the human soul, for it is death and suffering that awakens one to the intense beauty of life. People only come to feel the glory of life and the wonder of existence when it is suddenly taken from them, Keats concluded.

At the age of fourteen, Keats became the head of the Keats family. He might have remained in school and gone on to receive a university education, since there was a provision in a trust fund set up by his grandmother that would cover those costs. Yet because of legal complications and the incompetency of Richard Abbey, a London tea merchant who was assigned as guardian for the children upon the death of their mother, Keats was denied his inheritance and, instead, apprenticed to Thomas Hammond, a local apothecary-surgeon. For the next four years, Keats studied medicine with Hammond. This intense training in medicine was relieved only by occasional visits to the nearby Charles Clarke to borrow books and discuss literature.

In 1815, at the age of nineteen, Keats moved to London proper to do his student internship at Guy's Hospital, where he lived and worked for the next two years. It is difficult to overestimate the impression that Guy's must have made on the young poet, whose first responsibility at the hospital was dressing surgical wounds. The sights and sounds of the operating and recovery rooms must have been extremely poignant, particularly since these rooms were filled with patients who had been surgically treated without the benefit of anesthetics. Keats had already experienced the deep emotions of suffering and loss through the death of both parents; now, he was to see that same agony and death displayed on a much larger scale and on a more regular basis in his daily rounds at the hospital.

During his two years at Guy's, Keats became increasingly convinced that poetry was to be his life's work. Life and death were the dominant concerns of his days, but reading and writing were the governing passions of his nights. Long days at the hospital were regularly followed by evenings of writing verse, reading books borrowed from Clarke, and discussing literature with friends and fellow medical students. It is important to note, however, that art was not a refuge for Keats from the agony of life, although he did look to poetry as a way of escaping the unpleasantness of his daily existence. To the contrary, poetry was the supreme expression of the intense experience of living in a world of pain and sorrow, pleasure and joy, the passing and the permanent. It is during this period that Keats produced his first significant poem, "On First Looking into Chapman's Homer." It is also during this time that Clarke introduced Keats to Leigh Hunt, a popular essayist of the day, to John Reynolds, a poet, and to Benjamin Haydon, an increasingly important painter. These contacts further persuaded Keats that his true vocation was literature, not surgery. Keats left Guy's Hospital in 1817 to dedicate himself exclusively to the writing of poetry. This year also marks the publication of his first book of poetry, *Poems* (1817).

That same year, Keats moved in with his brothers, George and Tom, who now lived in the London suburb of Hampstead. There he finished his second volume of poetry, *Endymion: A Poetic Romance* (1818), the mythological story of a mortal shepherd's love for the immortal goddess Diana. Having finished this project, Keats spent the summer

of 1818 on a walking tour through the Lake District and Scotland. His return brought with it three painful discoveries. First, he was diagnosed to be in the early stages of tuberculosis, which was the same disease that had killed his mother and would, in less than three years, claim his own life. Second, and even more jarring, he found that the critics had not liked the two volumes of poetry that he had recently published. Although the impact of these negative criticisms has been overstated, it is probably true that Keats's conviction that his fame as a poet would never last can be traced to these early reviews of his work. Third, in the same year that Keats was diagnosed with tuberculosis, he would watch his youngest brother, Tom, also die of the same disease. Shaken but determined to continue writing, Keats moved to Wentworth Place in 1819. There he met Fanny Brawne, his first love, to whom he was engaged in October of that year.

In 1819, Keats wrote all of his greatest poetry. In that single year, he wrote "Lamia," "The Eve of St. Agnes," all the great odes ("Ode on Indolence," "Ode on a Grecian Urn," "Ode to Psyche," "Ode to a Nightingale," "Ode on Melancholy," and "To Autumn"), as well as the Miltonic fragment "Hyperion," which he would later rework as *The Fall of Hyperion: A Dream* (1856). No other single year in literary history has seen such an outpouring of poetic genius, particularly by such a young poet.

The results of this great year were published in 1819 and on into 1820, the year that both marks the extraordinary heights of Keats's artistic career and foretells the imminent end of his short but remarkable life. The worsening tuberculosis made it almost impossible to continue working. When the doctors finally ordered the poet to seek a warmer climate (a common prescription in that day for sufferers of this disease), Joseph Severn, Keats's close friend, accompanied him to Rome. They sailed on September 18, 1820. A few weeks after arriving in Rome, Keats suffered a serious relapse. On February 23, 1821, he died, in Rome, at the age of twenty-five. Buried in the Protestant Cemetery in Rome, he had arranged to have the following words inscribed upon his tombstone: "Here lies one whose name was writ in water."

## ANALYSIS

Keats was a poet, and it is in his poetry that he gave the fullest expression to his genius. Yet before

turning to the poetry, it may be useful first to address some of the central concerns of the poet, as expressed in his various letters to family and friends. It is in these letters, for example, that he tried to articulate his philosophies of art and life, asking and answering such questions as, What is the true character of a poet? What is the proper role of the poet in society? What is the relationship between art and life? and What is the function of the imagination?

In his letter of October 27, 1818, to Richard Woodhouse, a friend and supporter, Keats offers one of his earliest attempts to define what a poet is. Keats begins by declaring that a poet has no self or identity. A poet, like a chameleon, absorbs the colorations of the outside world, becoming one with the things seen, heard, and touched. Keats's point is that, for poets to comprehend their subjects fully, to enter into the life of things around them, they must free themselves from their own limited experiences of the world—their own biases, emotions, and points of view—and merge with that which they hope to understand and describe. This sympathetic understanding, as opposed to a reasoned understanding, depends not upon logic or even intellect but rather upon imagination. Through the imagination, then, the poet is projected into the subject and lives according to its essential qualities. From this notion of the poet comes one of Keats's most significant contributions to poetic theory, the idea of Negative Capability. This idea extends the above beliefs about escaping the self to form a philosophy about the poetic character and its proper relationship to the world. In his December 21, 1817, letter to his brothers, George and Tom, Keats defined Negative Capability quite simply as “when a man is capable of being in uncertainties, mysteries, doubts, without any irritable reaching after fact and reason.” For Keats, in other words, poetic knowledge comes from accepting the inexplicable mysteries of the world. The poet should not force the world to make sense, for to do that is to reduce and simplify the world and to equate that reduction and simplification with a true understanding. A more profound understanding comes when the poet lives in conjunction with doubt and uncertainty. Again, Keats rejects reason and logic as suitable agents of truth, preferring instead to rely upon imagination and feeling. This preference may help to explain what Keats means when he

writes at the end of his important poem “Ode on a Grecian Urn” that “‘Beauty is truth, truth beauty,’—that is all/ Ye know on earth, and all ye need to know.” The truth that Keats finds in beauty is not the truth that the scientist or historian seeks to discover and document. For Keats, the essential truth of something, a sunset, for example, can be grasped only through a full appreciation of its beauty. As Keats explains in his letter to George and Tom: “with a great poet the sense of Beauty overcomes every other consideration, or rather obliterates all consideration.”

This notion of the poet and what constitutes true knowledge goes a long way toward explaining why Keats wrote the kind of poetry that he did. Keats's purpose as a poet is not to teach the reader the so-called truths of this world, in any conventional sense of that word. Nor, Keats argues, is it the poet's business to bully the reader into accepting a ready-made set of conclusions. Poetry, in other words, should “proclaim” nothing. Instead, the ambition of the poet is to arouse the readers' imaginative faculties so that they may participate in the larger existence of creation. As exercises in imagination, Keats's poems seek to lift their readers out of their contracted worlds and raise them to a level of awareness and understanding that is at peace with complexity, ambiguity, contradiction, and mystery. That is the stuff of life; or at least it was the stuff of Keats's difficult life. All attempts to escape that condition through “an irritable reaching after fact and reason” can only result in a sorry self-deception and a diminishment of human experience.

## ENDYMION: A POETIC ROMANCE

**First published:** 1818

**Type of work:** Poem

*Taken from Greek mythology, this poem is the story of a mortal shepherd's quest for immortality through his ideal love, the goddess Diana.*

*Endymion: A Poetic Romance*, Keats's first major work, represents the poet's first sustained attempt to explore the relationship between the real world of human experience and the ethereal world of an

idealized existence. Divided into four books, the poem traces Endymion's progress from his initial desire to rise above his earthly existence by cultivating his love for Diana, the goddess of the moon, who represents ideal love, to his gradual reconciliation, in the end, to his mortal condition and the love that he feels for an Indian maiden whom he meets during his quest. Upon realizing the dangers of trying to deny his own human nature, Endymion suddenly discovers that the Indian maiden, his mortal counterpart, is really Diana, his immortal desire, in disguise. In the end, Endymion learns that he can only rise above his mortal nature and achieve some kind of idealized existence if he first accepts "his natural sphere." Keats's point, as in other poems, is that any attempt to achieve an abstract ideal must begin

with an acceptance of concrete human experience.

Book 1, which opens with the often-quoted line, "A thing of beauty is a joy for ever," describes the source of Endymion's discontent with his life as a local chieftain. His life as a man of action and worldly concerns is disrupted by a dream in

which he imagines himself carried through the skies by a goddess. When she finally returns him to earth, he suddenly finds that his surroundings no longer seem beautiful or satisfying. Having experienced the ethereal world of abstract beauty, Endymion is unable to appreciate the physical beauty of the world around him.

Books 2, 3, and 4, which take place under the earth, at the bottom of the sea, and in the sky, trace Endymion's quest for the goddess of his dream. During his journey, he encounters various characters, the last of whom is Glaucus, who is chained to the bottom of the sea. Glaucus, like Endymion, had once been satisfied with his existence as a mortal, but, aroused by "distemper'd longings," he had transformed himself into a sea-god. When he rejected the seductions of the sea witch, Circe, she chained him to the bottom of the sea for a thousand years. One condition of Glaucus's release is that he and Endymion must locate the bodies of all

the lovers who have drowned at sea and restore them to life. Only by engaging once again in the world of mortal actions can Glaucus escape the dreadful consequences of trying to escape his own mortality.

In book 4, Endymion reenacts the lesson of Glaucus. Having met an Indian maiden, Endymion is torn between his love for this mortal woman and his idealized love for his immortal goddess. Eventually, he admonishes himself for rejecting his own concrete humanity in favor of "his first soft poppy dream." In the end, he learns the essential lesson of his life—that to reject his own humanity is to reject all humanity and the things of this earth.

When Endymion discovers in the end that the Indian maiden is really Diana in disguise, he achieves through this synthesis of these two figures the final wisdom of his life and of Keats's poem: that any desire to achieve the ideal must begin not with a rejection of the mortal world but rather with an acceptance of the human condition. It is through an intense appreciation for the concrete and common things of this world that one penetrates the ethereal and idealized world within and beyond.

## "ODE TO A NIGHTINGALE"

**First published:** 1819 (collected in "*Lamia*," "*Isabella*," "*The Eve of St. Agnes*," and *Other Poems*, 1820)

**Type of work:** Poem

*In this meditation on the song of the nightingale, Keats explores the power of the imagination to free him from the human condition.*

"Ode to a Nightingale," along with "Ode on Indolence," "Ode on a Grecian Urn," "Ode on Melancholy," and "To Autumn," all of which were written between March and September of 1819, document Keats's ongoing struggle to reconcile himself to his own mortality. The deaths of his father (1804) and mother (1810), combined with the imminent death of his brother, Tom, who was in the last stages of tuberculosis, as well as the recent diagnosis of his own contraction of tuberculosis, brought the poet to consider the transient na-

ture of human existence and to search for some form of permanence in nature or in art. The song of the nightingale, which is seen as a kind of natural poet, offers Keats such a symbol of permanence. The poem records Keats's struggle to merge his life with the immortal song of that bird and thereby escape, at least temporarily, his own mortality.

The poem can be divided into three movements or parts. The first part, stanzas 1 to 3, describes the narrator's anguish upon hearing the immortal song of the bird in the distance. The "full-throated ease" with which it sings completely captures the poet's attention, causing him to forget, temporarily, his own mortality. That happiness, however, is short lived, for it quickly becomes the occasion for the poet to remember his own temporary existence.

The pain of that recognition is what generates the desire for escape through wine in the second stanza. Through wine, the poet may find some release from the pain invoked by the bird's song. Clearly, the poet sees the wine as an agent of nature, which further suggests that he sees nature as a source of escape from his own mortality, a common notion among many Romantic poets. The poet reasons that if he can forget his impending death, he will be able to join the bird and subsequently escape what the bird has never known: "The weariness, the fever, and the fret/ Here, where men sit and hear each other groan."

In stanza 4, which begins the second movement, the poet rejects wine and turns instead to "the viewless wings of Poesy." Wine enables him to forget, but it dulls the senses and obstructs vision. Poetry, on the other hand, engages the imagination, enlivens the senses, and empowers the poet to transcend himself and become one with the bird. "Already with thee!" the poet announces his imaginative oneness with the bird.

Stanzas 5, 6, and 7 describe the poet's close union with the bird. The poet "cannot see" what flowers are at his feet, but his imagination can create the scene unavailable to his eyes, including

such minute and hidden details as the "Fast fading violets cover'd up in leaves." As his imagination works to re-create the bird's world, the poet's attention is temporarily diverted from "The weariness, the fever, and the fret" of human existence.

Vision gives way to sound in stanza 6, where the poet reveals that he has long been "half in love with easeful Death." The transcendental experience of the previous stanza leads him to recall past times when he had wanted to escape his mortal condition. "To cease upon the midnight with no pain" now seems particularly inviting. Yet, as the poet notes at the end of stanza 6, were he to die, he would be surrendering to the very thing that he hopes to escape—mortality. Moreover, to die is to become deaf to the song of the bird, "To thy high requiem become a sod." There the poet discovers the painful paradox of human existence: Life is a source of great pain and anguish, and yet, oddly enough, to escape the pain and anguish through death is to lose the very thing that makes death desirable. To die is to forfeit all access to beauty and joy.

The final turn comes in the last stanza where the spell is broken, the poet is imaginatively disengaged from the bird, and he returns to the mortal world "Where palsy shakes a few, sad, last gray hairs,/ Where youth grows pale, and spectre-thin, and dies." The poet concedes that "the fancy cannot cheat so well/ As she is fam'd to do" and is left to wonder if what he has experienced was in fact a visionary moment of transcendence or only a "waking dream." In either case, the poem ends on the ironic note that, although the poet believes that he is trapped within the mortal world of death and change, in fact, like the nightingale whose immortal song is heard by succeeding generations, the poet, through his poetry, has achieved a kind of immortality after all. The poem, like the bird's song, will be heard by future generations, and with each hearing or reading, the spirit of John Keats will live again.

## “ODE ON A GRECIAN URN”

**First published:** 1820 (collected in “*Lamia*,” “*Isabella*,” “*The Eve of St. Agnes*,” and *Other Poems*, 1820)

**Type of work:** Poem

*In a world of change and uncertainty, art offers the poet a symbol of permanence and timeless truth.*

“Ode on a Grecian Urn” addresses many of the same concerns that occupied Keats in “Ode to a Nightingale,” except that in this poem he turns his attention from the natural poetry of the bird to the human artistry of the urn. Unable to escape his sense of life’s transience through the immortal song of the bird, Keats looks to the timeless truth embodied in the urn. Keats once again encounters the paradox that is central to all of his art: To achieve immortality is to rid oneself of change, but it is change, not stasis, that produces the contrasts necessary for all that is good.

In the first stanza, the poet contemplates first the urn as a whole, which he characterizes as a “historian,” and then turns his attention to the detailed scene engraved onto the side of the urn. The urn first is described as an “unravish’d bride of quietness,” calling attention to the fact that it is only when the poet begins to think about the urn that it begins to tell its story. The urn cannot speak, in other words, until it is spoken to. That is a significant point, for it leads to the conclusion that the immortal urn exists in any meaningful way only when it comes into contact with, and is activated by, the inquiring intelligence of a mortal observer. Immortality, the poet again seems to be saying, depends in some fundamental way upon its opposite.

He then begins asking the urn questions about the people portrayed on the side of the urn. He wonders who they are, “deities or mortals, or of both,” and speculates about the location of the engraved scene, “In Tempe or the dales of Arcady?” The setting is obviously ancient Greece, a time when mortals and gods often interacted. From the very beginning, therefore, the poet is concerned with the issue of immortality, both as it is represented by the immortal urn and by the godlike characters whose “legend” is engraved on the side.

Stanza 2 shifts from questions to observations. The first observation stems from the experience of the first stanza. Having tried to experience imaginatively the scene before him, the poet reaches the conclusion that the imagination, when engaged by art, produces an experience that is superior to reality. The sounds of the pipes are sweet, to be sure, but the sounds supplied by the imagination “Are sweeter,” because the imagination can alter and improve upon actual experience. Not bound by the material world, the imagination is capable of conjuring up sights, sounds, and emotions far beyond one’s physical human capabilities. It would seem, therefore, that Keats is suggesting that the world of the imagination, which is the world of art, is preferable to the world of actuality. In the ideal world of art, where life need not conform to the limitations of flesh and blood, everything is as it should be; there the leaves never fall from the trees, no one ever dies, youth never fades, and lovers are forever young and forever in love. Keats comes to that realization through the scene before him: Although the lover, poised to kill his beloved, will never actually complete the act, nevertheless it is not a loss, since his beloved “cannot fade, though thou hast not thy bliss,/ For ever wilt thou love, and she be fair!”

This praise for the perfection and permanence of art continues through stanzas 3 and most of 4 until the poet pauses to wonder about the “little town by river or sea shore” that has been vacated by the people portrayed on the urn. In attending this celebration of life, they have left their village forever, never to return. In this detail the poet discovers a complication in his admiration for permanence, for even as the lovers will always be young and in love, so in turn will the village always be empty and silent with “not a soul to tell/ Why thou art desolate.” There is a shift in tone from the celebratory mood of the previous two stanzas to a somber, almost sad picture of the deserted town and its eternal silence. The celebration of life on the urn has its counterpart in the unspoken death of the

village. Again Keats brings life and death together, but in this case both are made immortal through art. Keats's point is that if there is much that is desirable in the immortality of his lovers and their eternal celebration of love and life, there is also much that is undesirable in this idealized world; not only will the lover never actually kiss his beloved (they will always remain right on the verge of touching each other's lips) but also everything that surrounds this event likewise will be frozen in time, including the abandoned village.

In the end, the poet sees the urn as a friend to humanity, but that friendship resides less in the particular truth that the urn has to teach humankind and more in the fact that the message is truth, and truth (whether joyful or painful) is beautiful. The questions of whether the permanence of art is good or bad, whether immortality is better than mortality, or whether stasis is preferable to change are all set aside in the end in favor of a statement

about the lasting importance of truth—all truth—and the capacity of art to convey that truth from one generation to the next. Whether or not one agrees with Keats's poem is ultimately unimportant; what is important is that his poem discloses a truth, the great and enduring gift of art.

### SUMMARY

Although John Keats died believing that he would be forgotten by future generations of readers, he is now regarded as one of the great poets of the English language. The felicitousness of his phrasing, the sensuality of his diction, and the richness of his imagery, combined with his profound understanding of the intimate relationship between life and art, make Keats, like William Shakespeare before him, a model to those who look to poetry for an aesthetic apprehension of human experience.

## THOMAS KENEALLY

**Born:** Wauchope, New South Wales, Australia  
October 7, 1935

*Keneally is one of Australia's major literary figures and social commentators; he is best known as the author of the novel Schindler's List, which was made into an acclaimed film.*

### BIOGRAPHY

Thomas Keneally (kuh-NEE-lee) was born to Edmund and Elsie Keneally in New South Wales, Australia. The Keneally family—Irish and Roman Catholic—moved from the small town of Wauchope to Homebush, a suburb of Sydney, when Keneally was just an infant, and he was educated at the Christian Brothers' school in Strathfield. Both devout and studious, Keneally went immediately from school into the seminary, and from 1953 to 1959 he prepared for a career as a Catholic priest. He left the seminary only a short time before he was to be ordained. Keneally has explained his decision to do so as the result of the strain of pursuing "sanctity according to the Irish." More specifically, he had come to despair that the Church would ever change to meet the needs of modern Australian society.

After completing his education at St. Patrick's College, he became a high school teacher in a Catholic school in Sydney, but teaching did not satisfy him, and he took up the study of law. On vacation in 1962 and 1963, Keneally began his first novel. Prior to this time, he had done very little serious writing, except for some poetry and a few short stories. In 1963, an Australian magazine, *The Bulletin*, accepted some of his short fiction, and in 1964 his first novel, *The Place at Whitton*, a mix of murder and gothic romance, was published. By 1965, when his second novel, *The Fear*, appeared, Keneally was fully committed to the precarious objective of making his living as a writer. In the same

year he married Judith Martin, a former nun; they had two children, Margaret and Jane.

Keneally received recognition as a writer from early in his career; in 1967, he was the recipient of his first Commonwealth Literary Fund Award for his novel, published that same year, about convict life in Australia, *Bring Larks and Heroes*. In 1968, he received the award again for his comic novel of life in a Catholic seminary, *Three Cheers for the Paraclete* (1968), which also won a Miles Franklin Award. This novel gained him international recognition, and it was subsequently translated into six languages. He has, since that time, been considered a novelist of international reputation.

Keneally has always had an interest in the theater and has done some acting. He was a lecturer in drama from 1969 to 1970 at the University of New England in Armidale, New South Wales. In 1970, he followed the pattern of many Australian writers and spent time in London, England, where *A Dutiful Daughter* (1971) was published; it became a Book-of-the-Month-Club choice in the United States. In 1972, one of his most admired novels, *The Chant of Jimmy Blacksmith*, his study of the tragic plight of an Australian aboriginal, was published. It was later turned into a fine film in which Keneally had a small but powerful part as a priest.

From early on, Keneally has written fiction that has a strong allegiance to historical facts. His novel *Blood Red, Sister Rose* (1974), for example, is entirely based on the life of Joan of Arc. His move away from specifically Australian themes was to prove increasingly fruitful in the years to come, and his interest in foreign events and settings was aided by his developing habit of spending long periods abroad, in both Europe and America. By the mid-1970's,

Keneally was established as a serious writer, but he had some personal misgivings about the value of that reputation. His ambition was to write novels of literary quality, and he had done so, but he was not making much money. He was living from novel to novel and worried about the fact that his children were entering their early teens and that he would soon incur extra expenses. He had always had an easy gift for narrative, as several of his novels, however serious, had revealed, and he set out to emphasize that gift, with the hope of breaking into the best-seller lists. His 1976 novel, *Season in Purgatory*, which is based on a true story of partisan activities in Yugoslavia in World War II, was his next attempt. It received good reviews, but it did not sell enough to free Keneally from financial worry. He wryly told one friend that the reviews that he received in such journals as *Newsweek* were flattering but harmful since the reviewers suggested that this was the kind of intelligent, sensitive work that all adventure novels should emulate. The public stayed away from a work so described, and the book had only a modest sale.

Ironically enough, Keneally's writing is very accessible and entertaining, but he has never become a writer of best sellers, with one major exception. Before 1982, Keneally's novels were short-listed on three occasions for the Man Booker Prize but did not win. In 1982, *Schindler's Ark* (as it was originally called) took the prize, despite the fact that there was some uncertainty about whether it really was a novel, since it depended so heavily upon historical fact. Not only did the novel pick up added sales as a result of the award, but the film rights to the book were purchased by director Steven Spielberg, and the novel was published in America under the title *Schindler's List*. However, nothing was done with the property for several years, and in the interim Keneally continued to publish novels and to become increasingly interested in social and political problems in and out of Australia. He remained an important defender of aboriginal rights and a leading supporter of the proposition that Australia should sever its ties to the British monarchy; the latter topic was the focus of his 1993 book, *Our Republic*.

In the early 1990's, his career took an upward turn when Spielberg finally got around to making *Schindler's List* and the film became a major theatrical event throughout the world. From 1991 to

1994, partially because of the success of the film, Keneally was invited to serve as a visiting professor at the University of California at Irvine. During this American sojourn, he published *The Place Where Souls Are Born: A Journey to the Southwest* (1992), a nonfiction treatment of a trip that he and his family took through the Southwest; in this extended piece of travel writing, Keneally responds to the landscape and to the native peoples of the American West in ways reminiscent of his relationship to the terrain and indigenous population of the Australian Outback.

Oddly enough, despite the recognition that *Schindler's List* eventually earned for Keneally in America, his other books, many of which remain in print in Australia and the United Kingdom, seem to be largely ignored in the United States, where the Spielberg film is most admired. This may be another example of the frequent resistance on the part of the general American public to books by foreigners, even if they write in English, or it may be simply an example of bad marketing, but it is very difficult to find any Keneally book except for *Schindler's List* in American bookstores.

Throughout the 1990's and early twenty-first century, Keneally continued to regularly publish novels, still of excellent quality, and often about current events. He was firmly established as one of the leading public commentators on national and international events in Australia, where his natural charm, wit, and capacity to tell a lively story were much appreciated.

## ANALYSIS

Most novelists tend to find a niche tonally, thematically, and stylistically in which they feel comfortable and which best exemplifies their strengths as writers. Keneally started his career as a writer of Australian themes, but he did not stick to that pattern. What is different about him as a writer is that he provides the reader with opportunities to think about his work in many different ways because he never writes the same novel twice. Even novelists of very high quality tend to stick to one sort of work, but Keneally is a restless writer, and one can never be sure what he will write next. He is an extremely sensitive commentator on the Australian scene, not only in terms of its colonial legacy, as explored in *Bring Larks and Heroes*, his novel *The Playmaker* (1987), and *The Chant of Jimmy Blacksmith*, with its

concern for the plight of the natives, but also in terms of contemporary Australian life in works such as *Three Cheers for the Paraclete* and *The Cut-Rate Kingdom* (1980), a wry tale of Australian politics during World War II, when the country was in serious danger of falling into the hands of the Japanese.

The Australian theme can, however, be extended beyond the continent in interesting ways, as it is in his two novels about Antarctic exploration. In *The Survivor* (1969) and *A Victim of the Aurora* (1977), Keneally's natural curiosity, intense enthusiasm for researching his projects, and inclination to see characters under stress as likely to indulge in bizarre conduct take the novels beyond the level of simple adventure narrative into much wider and richer areas. It is, in fact, his zest for research that helps Keneally avoid the label of provincialism that besets so many novelists who explore what is termed "the Commonwealth theme."

Keneally is a novelist who might well be considered a historical writer. Sadly, such a label tends to suggest adventure at the expense of accuracy or literary quality, but this is not the case with Keneally, although if he may be considered to occupy any literary niche, this would be it. *Blood Red, Sister Rose* is the first example of his move into non-Australian historical themes, but it is not the last. *Gossip from the Forest* (1975) relates what happened in the forest of Compiègne, where meetings were held to negotiate the 1918 peace treaty between the Allies and the Germans. His 1979 novel, *Confederates*, is about the Civil War campaign in Virginia in 1862. *The Tyrant's Novel*, published in 2003, takes place in an oil-rich Middle Eastern nation where a dictator, modeled after Saddam Hussein, has hired a ghostwriter to pen a work that will extol his questionably beneficent rule and help lift the international sanctions against his country. Narrated in retrospect by the coerced novelist who eventually abandons this project, which blurs the line between fact and fiction in sinister ways, the tale is, in part, Keneally's personal indictment of how individuals seeking refuge in the West are often ill treated by their host countries.

Keneally's natural sympathy for the underdog

has sometimes threatened the artistic balance between narrative and message. For example, his novel *To Asmara* (1989), set in Ethiopia in the late 1980's, tells the story of the battle between the Ethiopian majority and the Eritrean rebels. It starts out by exploring the reactions of several well-meaning foreigners to the disaster. Keneally conducted research, spent some time in the country, and came away not only distressed by what he saw but also outraged by the way in which the Eritrean cause had been misrepresented by the world press and political leaders. He was determined to redress the situation through his novel, and it is an interesting case of how the message, however valid, gets in the way of the final artistic success of the book. The novel raises the intriguing question of how far a work of fiction should go in attempting to change public opinion. Keneally's 1991 novel, *Flying Hero Class*, a story of an airline hijacking by Palestinians on a flight from New York to Frankfurt, seems to indicate a response to the criticism of *To Asmara*, since *Flying Hero Class* seems reluctant to make any judgment regarding either side of the Palestinian crisis.

From very early on in his career, Keneally used his narrative gift to explore serious moral problems from an intelligent, somewhat skeptical, and liberal point of view. As a result, his work has not been simply a matter of a rattling good tale well told but also an inquiry, usually of some subtlety, into the ways in which self-interest, hypocrisy, pomposity, and cruelty make monsters of human beings. This exercise is often carried on with a light dusting of wit and a talent for comedy. Such humor serves as a foil for the moments of intense emotional pain that are also a mark of his work. The range of feeling in his work is very wide.

It is not possible to talk about Keneally as one sort of novelist. He is a regional writer and an international writer. He is sometimes a satirist, sometimes a political commentator, and sometimes a crusader for the underprivileged and the abused. Sometimes he can be a simple adventure writer, and sometimes he creates worlds of gothic incredibility. Stylistically he is very conservative, but when it comes to subject matter and setting, he is impossible to anticipate.

## THE CUT-RATE KINGDOM

**First published:** 1980

**Type of work:** Novel

*The novel mixes Australian politics, the terror of World War II in the Pacific, and love in the seats of power.*

This work exemplifies Keneally's ability to mix his interest in his native land, Australia, with two other interests: his enthusiasm for detailed historical research and his fascination with how characters, good or bad, respond to pressure. The historical frame for the novel is World War II. It is sometimes forgotten that Australia was seriously threatened by the possibility of invasion by the Japanese during that war. The Japanese had considerable success early in the conflict and had earned a reputation as fearsome warriors and barbarous conquerors. The novel is written in the context of the fear not only of invasion but also of certain defeat and what that would mean to the Australian population.

The story is told by "Paper" Tyson, a journalist with some of the social gifts of Keneally himself. He is easygoing, worldly-wise, and generous. He is a longtime friend of the Labor prime minister of Australia, Johnny Mulhall. The choice of Tyson as the voice of the novel is important, since his point of view shapes the way in which the reader responds to the book. Tyson, a veteran of World War I, during which he lost a leg at Gallipoli, is mature and possessed of a deep sense of Australian history and politics. He provides a moral, intellectual, and sometimes emotional context for the complicated unrest of a nation on the edge of terror. The enemy is ripping through New Guinea, an easy jump away from the Australian mainland. In capturing the level of suspense created by the country's collective fear of invasion, the novel is of considerable power, but it goes further in exploring the problems of the enemies within. These are the prowling politicians "greased with animus" and the arrogant American military, camped in the country as if on a battleship offshore from the hard fighting. There is an American general with a corncob pipe and his eye on the presidency of the United States who is muscling his way into the Aus-

tralian war effort. Keneally's satiric depiction of the infuriating pomposity of Douglas MacArthur, the commander of Allied forces in the South Pacific, provides some comic relief.

Without alienating their American allies, the Australians attempt to retain some independence, and it is in this area that Keneally explores the theme of national identity and character. Internal politics are also examined as the socialist Prime Minister Mulhall fights American pressures on one side and his own party on the other while the war gobbles up Australian boys and military conscription becomes a necessity. His detractors see the working-class boys as simply cannon fodder; the Australians' feeling of being used is exacerbated by the general perception that America is treating Australia as a "cut-rate kingdom."

These large public questions influence Tyson and Mulhall in their private lives too. Their love affairs, and those of others, affect the way power is used at the highest levels of the government. If the novel shows that politics and love should not mix, it also reveals the way in which Keneally can blend several themes at the same time, develop a period feel, describe the terror of the New Guinea battlefields, and satirize the social and intellectual aridity of Canberra, where the politicians, the military, the promoters, and their hangers-on push and shove for power, profit, and pleasure.

## TO ASMARA

**First published:** 1989

**Type of work:** Novel

*An Australian journalist, a celebrity photographer, and a titled Englishwoman investigate the Ethiopian civil war and find they were wrong in their assumptions.*

Keneally has often taken on themes which have moved him not simply because of their artistic potential but because they have touched him personally. Usually this impetus does not create a problem, though sometimes if he feels very strongly about a subject he may develop his ideas in a non-fiction format, as he did for *Outback* (1983).

It must be acknowledged that a novel is not necessarily a success simply because it expresses admi-

nable ideas or champions humane solutions to difficult moral problems. As a work of art, it is more than its content. Keneally has, usually, wanted to send a message in his novels, but he has also understood the necessity of incorporating that message into the story. This novel, however, poses the question of whether or not he has been successful in balancing the need to make a moral point with the responsibility to tell a good tale. Certainly the elements for a good story are there. The narrator is an Australian journalist, intelligent and open minded. Hurting from a failed marriage and, as a result, sensitive to the pain of others, he is determined to find out why Ethiopia is a running sore of national despair and suicidal conduct. He flies into the country, as does a celebrity photographer, who is risking his career by insisting on working in Ethiopia, with which the world is bored and wants to hear as little about as possible. A beautiful, titled Englishwoman arrives at the same time, concerned with the African custom of genital mutilation of girls. To add to the group, the photographer's estranged daughter turns up to confront her father. There is also a weary, jaded American relief worker who is a constant source of trouble.

These characters explore two aspects of the Ethiopian disaster of the late 1980's. One is the appalling nature of the war, and the other, almost as serious to Keneally, is the way in which the story was sometimes mistakenly, sometimes deliberately, misreported to the world. The Eritreans, living in the

northern provinces, were, in fact, forcibly joined to Ethiopia by outside powers several years previously, contrary to their own wishes. Their refusal to be governed as Ethiopians was not simply a power struggle but an attempt to free themselves from a union that they had not made and that they never wanted. What made Keneally even more incensed at their plight was the way in which this

information was deliberately suppressed, distorted, or simply misreported by the world press and by the world's power brokers.

The novel is not only about the way that an African nation or two nations tear themselves apart. It is also about how the rich nations of the world have been, often mindlessly, involved in encouraging such mayhem. The novel shows the way in which information is wantonly manipulated by the press, without any concern for truth or fairness, in order to feed the mild curiosity of rich societies that do not much care to get the facts straight. It is a very angry book, and that anger may have gotten in the way of Keneally's achieving an artistic fusion between the novel's main ideas and the characters that move through the seared landscape.

## SCHINDLER'S LIST

**First published:** *Schindler's Ark*, 1982

**Type of work:** Novel

*An amoral, dishonest businessman, using Jewish laborers to make military equipment for the German army in World War II, decides to do the right thing.*

After the release of Steven Spielberg's enormously successful film in 1993, it is unlikely that many people do not know the story of Oskar Schindler, a Sudetan German confidence man who uses his connections with the German SS military organization to feather his own nest. He sets himself up as a military supplier in Krakow, Poland, in 1939, in order to take advantage of the expropriation of Jewish businesses, staffing his factory with Jews whom he can use as slave labor. Little by little he takes responsibility for the workers' lives, with a minimum of interference from the German authorities. First, he houses them in his own compound to save them from constantly being taken out of the ghettos for other work, which would interfere with their factory time. What starts out as effective business practice becomes a peculiar kind of cruel paternalism. Everything changes, however, when the workforce is threatened with transfer to the extermination camps. Schindler, seemingly without much thought or moral intent, begins to thwart the SS in its attempts to drag his workers into the boxcars. He does not save them all; in fact, he saves only a few of the hundreds who pass through his shop, but the Jews who survived

the war never forgot him. This feckless, morally dubious, and often unsavory confidence man became one of the most beloved heroes of the Holocaust.

Keneally found this true story by chance, when a Jewish survivor, Poldek Pfefferberg, told him about this strange German and urged him to write the tale. Keneally researched the historical events assiduously; any other writer might have decided to present the narrative in a nonfiction format, but, as he himself asserts, his strength is in storytelling, and the novel is his natural form of expression. This does not mean that there is much about the novel that is the product of his imagination. Indeed, one of the common criticisms of the work is its reliance on facts, and some critics have suggested that it is really not a novel at all.

The truth of the matter, however, is that for all of its meticulous detail, Keneally's main interest in the story is in Schindler himself. Keneally, who has some experience as a screenwriter, prepared a film script for Spielberg, who, significantly enough, declined to use it. The reason appeared to be that Spielberg wanted the emphasis to be placed on the plight of the workers, as it is in the film. The screenplay prepared by Keneally evidently focused more on the character of Schindler, who seemed not quite to know why he was acting so nobly. The heart of the novel, for all the particularity lavished on the intense squallor of the workers' living conditions and the terrifying cruelty of their German captors, is a character without a moral center who indulges, without any attempt to understand or articulate what he is doing, in a series of mortally dangerous acts of magnanimity. The novel is rich with incident, but at the same time it is propelled by the mystery of human morality.

## HOMEBUSH BOY

**First published:** 1995

**Type of work:** Nonfiction

*This amusing and gently self-deprecating personal memoir focuses on a single year in the author's life.*

In this tightly focused autobiography, Keneally looks back on this sixteenth year, a pivotal period of time in his life, signaling the end of his boyhood and the initial recognition of adult responsibilities. The narrative, filtered through the consciousness of the adult writer, manages to retain much of the flavor of youth. On the one hand, Keneally confesses to the reader that much of the energy that he expended on spiritual and aesthetic investigations during his teenage years was probably the result of sublimated sex, whose mysteries his rigid Catholic upbringing kept hidden from him; on the other hand, Keneally's evocation of such landmark events as the first school dance summons up vivid images of adolescent wonderment, particularly the sights and sounds of what is generally perceived to be the relatively innocent decade of the 1950's.

While acknowledging the sacrifices that his dapper father and ambitious mother made in sending him to a Catholic school, Keneally focuses much more attention on the contributions made by his teachers and peers to his adolescent identity. His teachers fall into two basic categories, defined by their ability to think outside the box. On the one hand, there are educators like Brother Buster Clare, who teach only to the test and discourage independent learning; on the other hand, there are those like Brother Dinny McGahan, English teacher and track coach, who introduces the author to texts outside the established curriculum, particularly the works of contemporary writers, and inspires Keneally to broaden his horizons, whether competing for the Newman Society Essay Prize or learning the true meaning of sportsmanship on the playing field.

Among his fellow students, Keneally singles out those whose idiosyncrasies lead him to question the status quo. Of special interest are Mangan, a stubborn, dreamy dilettante whose stated goal is to become a Trappist monk, and Matt Tierney, the first blind boy in Australia to attempt the leaving

certificate, the tangible evidence of high school graduation, doubly handicapped by his lack of sight and his albinism.

It is Keneally's volunteering to become Tierney's study companion that introduces the author to the injustice that often besets those outside the social norm, a condition that he will rail against in later life. In Tierney's case, for example, even though he possesses a keen mind and an athletic body, the authorities, by virtue of his blindness, restrict his participation in sporting events and initially deny him the right to pursue a public college education.

In presenting his own story, Keneally exhibits much of the same insight regarding human psychology that makes his fictional characters believable representations of their flesh and blood counterparts. A good example would be how he uses his own climactic decision to enter the seminary as an implicit acknowledgment of how complicated human motivation can get. In the last section of his memoir, Keneally accepts an invitation to study for

the priesthood, partially out of a youthful allegiance to the church, partially in response to persistent coercion from the clergy, and partially because the girl of his dreams, Bernadette Curran, has taken herself off the dating market by announcing that she wants to become a nun.

By joining the author as he revisits a pivotal year in his own development, readers will discover some of the roots of Keneally's subsequent authorial agenda and vicariously rediscover some of the innocence of youth.

### SUMMARY

Thomas Keneally has produced novels, often based on historical fact, that tell the story of the many by focusing on the lives and experiences of the few. He believes that novels should offer moral commentary on human triumphs and human failures—but not without some sense of the sometimes amusing and sometimes ridiculous nature of human conduct.

*Charles Pullen; updated by S. Thomas Mack*

## IMRE KERTÉSZ

**Born:** Budapest, Hungary  
November 9, 1929

*In his novels, Kertész, a Holocaust survivor, matter-of-factly describes life in the concentration camps in which he was imprisoned, placing the Holocaust and its aftermath in an historical and philosophical context.*

### BIOGRAPHY

Imre Kertész (KEHR-tays) was born to a Hungarian Jewish couple in Budapest on November 9, 1929. His father owned a small factory and his mother was a housewife. In 1944, between 500,000 and 600,000 Hungarian Jews and Gypsies were belatedly sent to Nazi labor camps after the German army occupied Hungary, a wavering ally, in the spring of that year.

Kertész was fourteen years old when, on June 30, 1944, he was rounded up on a city bus with others wearing the mandatory yellow Star of David on their clothing. In a freight car carrying sixty people, he was first sent to the Auschwitz concentration camp in occupied Poland and then to the Zeitz and Buchenwald camps in Germany. Earlier, his father had been shipped to the Mathausen labor camp in Austria. The year young Kertész spent in the concentration camps was to be the signal event in his life and later writings.

Liberated by American forces in May, 1945, Kertész returned to Budapest to find that his father had died at Mathausen, his stepmother had remarried, and strangers were now living in the family's former home. Even more shocking to the repatriated Kertész, according to his autobiographical novel *Sorstalanság* (1975; *Fateless*, 1992), was the indifference, even hostility, Hungarians showed to the returning prisoner, who was still wearing his striped camp uniform, as he searched for his mother. Being a secular Jew, he had never given much thought to his Jewishness until, he explained, it was foisted on him by the Holocaust. Even in the concentration camps he was sometimes derided because he did not speak Yiddish, the language of Eastern European Jewry, or Hebrew, the language of their faith.

After completing high school in 1948, Kertész found work with a newspaper, *Világosság*, in 1949, but he lost his job in 1951, when the newspaper adopted a strictly Communist and Stalinist editorial policy. By then, Hungary had a large Soviet military presence and was part of the Soviet empire. Kertész did a mandatory stint in the Hungarian army. Upon his release, he survived financially as a freelance radio reporter and eventually wrote librettos for musical comedies. He later became a Hungarian translator for German publishing houses specializing in the works of Friedrich Nietzsche, Arthur Schnitzler, Ludwig Wittgenstein, Sigmund Freud, Thomas Bernhard, and other German-language writers, some of whom influenced his own work. In 1953, he married his first wife, Albina, who died of cancer in 1995. The couple was childless because Albina was unable to bear a child.

Kertész decided to remain in Hungary in the fall of 1956, when Hungarians revolted against the country's Communist government and its Soviet-imposed policies. He later explained that leaving the country would have ended his aspirations to write in his mother tongue. When he was in East Germany in 1962, Kertész revisited the concentration camp at Buchenwald and found things much changed since his departure in 1945.

Kertész worked on the manuscript of his first and best-known novel, *Fateless*, for thirteen years and eventually found a publisher in 1975, by which time Hungary had become more liberal than its previous hardline Stalinist incarnation. Still, very few Hungarians knew of or read the book. *Fateless* is Kertész's own story of an adolescent's coming-of-age in the midst of humanity's ever-recurring cycles of barbarism. Like Kertész, the boy, György

Köves, survives the Holocaust and later survives his liberation by blending into anonymity and silence during Communist rule.

Kertész authored several other novels and non-fiction books, a few of which were translated into English and other languages.

With the fall of communism and the Soviet Union from 1989 through 1991, Kertész took advantage of his new freedom to travel to Israel, Western Europe, and the United States, where his second wife, Magda, had lived since she escaped from Hungary in 1956. Magda Kertész is fluent in English and has been an articulate spokeswoman and translator for her husband.

Kertész was catapulted into fame and relative affluence in October, 2002, when he was awarded the Nobel Prize in Literature. When Kertész, the first Hungarian to win the prize, returned to Budapest after being honored in Sweden in December, 2002, he was greeted as a hero. Some seventy thousand copies of *Fateless* were sold within a few weeks, and the Hungarian parliament revoked the tax that would have been due on his \$1.1 million award.

Despite the fact that Kertész continued to characterize himself as a secular Jew, he still blamed Hungarian society for its participation in the systematic elimination of much of the country's Jewish minority during World War II. Even after his triumphant return to Hungary, he spent as much time as he could in his Berlin apartment rather than at his Budapest home, since, in his judgment, the Germans have accepted their responsibility for the Holocaust much more readily than the Hungarians, and he believes that Hungary is still suffering from a continuing latent anti-Semitism.

## ANALYSIS

Imre Kertész's first novel, *Fateless*, is a fairly conventional, chronological narrative of an adolescent boy's reminiscences. It begins with the family's preparations for and farewells to their father after he receives notification that he will be taken to the Mathausen labor camp in Austria. The emphasis is on plain, unsentimental detail in a novel

where the young and unsophisticated narrator tries to understand his situation in the concentration camps to which he is dispatched and where death is a constant possibility. The tale, however, has a dreamlike quality and at times is upbeat as its author allows that everyday life in the camps contains moments of happiness—even as the youth adapts to a radically threatening reality, where individuals are ciphers and where survival becomes a collective act.

In contrast, another one of Kertész's novels, *Kaddis a meg nem született gyermekért* (1990; *Kaddish for a Child Not Born*, 1997), is a breathless, obsessive, unrelenting monologue. It is part meditation, part memoir, part highly abstract, nonchronological, and inconclusive narrative in the first person touching on a series of scenes, images, and issues, all written in a somber tone about a man who refuses to father a child in a world that has produced, and can again produce, an Auschwitz. The work gives the impression of being written in one long paragraph and in endless sentences. It is a novel of repetition, ambiguity, and uncertainty narrated by a middle-aged Holocaust survivor, his life work being the translation of experience into fiction.

*Felszámolás* (2003; *Liquidation*, 2004) is an investigation into the suicide of an Auschwitz survivor focusing on a play of the same name within the novel. Along the way, important details about the private lives of some of the leading characters come to light. Despite some humorous touches, the book is brooding and exudes melancholy.

Viewing the Holocaust in the context of the Communist rule that followed Nazism, Kertész concludes that the totalitarianism that both events typified was not peculiar to the Nazi or Communist regimes but was a general and human condition. Thus for Kertész, the concentration camps of the Holocaust were not a coincidence but a logical and unavoidable consequence of European culture—especially in Hungary, where extreme nationalism and anti-Semitism had resurfaced several times and where laws defining work and other quotas for Jews preceded the Nazi occupation of 1944.

## FATELESS

**First published:** *Sorstalanság*, 1975 (English translation, 1992; also as *Fatelessness*, 2004)

**Type of work:** Novel

*A Hungarian Jew recounts his adolescence spent as a prisoner in three concentration camps during the last months of the Holocaust.*

The book's title refers to the fact that there was no certainty in the destiny of those sent to the Nazi labor/extermination camps. It is a disturbing novel about a guileless Hungarian Jewish boy's experience in the last months of World War II, including the freezing winter of 1944-1945, at the Auschwitz, Zeitz, and Buchenwald camps. As such, it is a highly autobiographical tale about the coming-of-age and survival of an innocent youth, whose lack of sophistication makes him focus on everyday questions of existence rather than on his dismal and threatening environment.

Upon arrival at Auschwitz, the most notorious camp in occupied Poland, the boy is advised by other prisoners to add a couple of years to his declared age so he may be assigned to a work detail rather than be "eliminated" as excess baggage as a matter of course. The narrator, György Köves (Imre Kertész), dwells on the minutiae of daily camp life, also of concern to his captors, so that perpetrators and victims are perversely though unintentionally bonded. For example, the narrator is constantly worried about his daily turnip and kohl-rabi soup, concerned whether his portion will be ladled out from the top of the urn, so he will get mostly broth, or whether he will be lucky enough to receive his share from the bottom, where there are vegetables, and, on a lucky day, even a potato or a piece of sausage.

In the camps he tries to adjust to his situation by imposing the logic of a bright, sensitive teenager. His moments of joy are derived from some of his idle time between the end of the working day and the evening roll call, and, more generally, his happiness stems from the solidarity he feels with some

of his fellow inmates. He is especially happy that the medical personnel among the political prisoners, who enjoy more privileges than the others, are willing to assign him a hospital bed and treat his severely infected, injured knee before the officials discover that he has become a disposable resource. Joy also flows from his occasional thoughts of possible freedom.

In fact, Köves even feels some rapport with his German captors, whose presence is sensed only remotely in the camp, since the immediate supervision of prisoners was often left to other prisoners—intermittently brutal Kapos—in exchange for privileges granted to them. The boy sees the Germans as being caught, just as himself, in the inevitable web of history or the universal dictates of human nature comprising both good and evil. The novel is effective because it makes no attempt to sensationalize, editorialize, or embellish but describes reality as the boy sees it.

On his return to Budapest in 1945, the adolescent's former neighbors and friends, even some Jews, urge him to put the ordeal out of his mind, advice that baffles him since "what happened had happened." He also cannot relate to the words of a sympathetic journalist, who says he should feel outraged for having spent time in "the lowest circle of hell." As for the overall reaction of citizens to that episode in Hungarian history, at times it makes Köves (Kertész) nostalgic for the solidarity he experienced in the labor camps. Thus, at the end of the novel the adolescent is left to ponder the meaning of his experience, for which Kertész finds additional voice, insight, and analysis in his later novels.

*Fateless* is a carefully crafted novel, with the author trying hard to say things the right way. It is a simple narrative by a young boy who does not have a complete grasp of where history had taken him.

## KADDISH FOR A CHILD NOT BORN

**First published:** *Kaddis a meg nem született gyermekért*, 1990 (English translation, 1997; also as *Kaddish for an Unborn Child*, 2004)

**Type of work:** Novel

*A middle-aged Hungarian Jewish writer, a survivor of the Holocaust, refuses to father a child in an uncertain and brutal world.*

The protagonist of this novel, a middle-aged writer and concentration camp survivor, addresses himself to the child he would not have. In his imagination, he is reciting Kaddish, the Jewish prayer for the dead, for his unborn child. He figures that the horrifying events of the Holocaust, given his historical evolution as well as the evil streak in human nature, could recur, as he explains to a friend at a writers' retreat. He does not wish to bring into the world a child who could experience the same fate (or fatelessness), since in his view the Holocaust was only one example of an extreme form of domination by a public authority at the expense of individuals' lives, self-respect, and freedom—a pathology of modern society and not an isolated case of Nazi Germany victimizing Jews. "What happened to me, my childhood, must never happen to another child," he muses.

As he reviews his life he considers his many disappointments, such as his marriage, which failed because of his refusal to accede to his wife's longing for a child, and his unsuccessful literary career. His sense of void is enhanced when he contemplates the picture of his former spouse's attractive children from her second marriage, children that could have been his own.

Both the narrator and his former wife are Jewish. Unable to fully come to terms with that aspect of his identity, especially as the narrator lacks the emotional and spiritual ties to his Jewish heritage, he is left to consider writing as the only creative act of which he is ostensibly capable. He is unsuccessful even at that. In the midst of long metaphysical musings, his stream of consciousness is peppered with the intermittently recurring word "no," the defining trope of the novel, as the author keeps recalling his refusal to have children years earlier.

However, his wife, who admits that the narrator had taught her how to live with herself, now wants more—not just marriage but also family.

*Kaddish* is a bumpy novel, but there is purpose in Kertész's choice of language, innumerable repetitions, and emphasis on the contradictory. The tone is introspective yet unsentimental.

## LIQUIDATION

**First published:** *Felszámolás*, 2003 (English translation, 2004)

**Type of work:** Novel

*A middle-aged Jewish survivor of Auschwitz, who was born in this concentration camp, commits suicide after his accurate prediction of his friends' future.*

This book is about the termination (or liquidation) of various things. About the time of the fall of Communism in Eastern Europe, B., also called Bee, is a well-known writer who was born in and survived the Nazis' Auschwitz concentration camp in occupied Poland during World War II. He also lived through the Communist aftermath of the Holocaust. Now, however, he has committed suicide with a morphine overdose. The letter "B" and four numerals tattooed on his thigh, instead of his tiny arm when he was a baby, testifies to his origins.

Fellow workers come to his friend Kingbitter's office to discuss B.'s literary affairs. Among the papers that Kingbitter has salvaged from Communist authorities is the manuscript of a play entitled *Liquidation*. As he reads the script to his colleagues at the office, Kingbitter is amazed at the prescient way in which B. foretells the personal and political crises that Kingbitter and B.'s other close friends now face. These include the liquidation of the bankrupt, state-owned publishing house—a remnant of the Communist era—where they work, which has been considering the publication of B.'s literary efforts. Because of these events and B.'s liquidation of his life, as well as the liquidation of his full-length manuscript (allegedly at B.'s orders to his girlfriend), and, more generally because of the liquidation of the art of literature in favor of dilettantism and ideological spin during Communism, the

members of the group are left with a sense of lost identity, despair, and chaos to confront their moment in history.

Kingbitter, who is managing B.'s literary estate, is desperate to understand his friend's suicide and searches for the longer manuscript (never found), of which the play, he believes, is a synopsis. In his search for the lost novel, he contacts Sarah, who was B.'s lover at the end of his life, and then Judit, B.'s former wife. Their marriage had broken up when B. told his spouse that because of Auschwitz she should not want him to father a child. His wife is driven to divorce him, since she does not want to see the world as a place filled with murderers but rather as a place where it is also possible to live.

Kingbitter, the consummate editor, tries to make sense out of B.'s life, personal and literary. Along the way, however, he finds that his friend's life has in fact

been more intimately linked to his own than he had realized. For example, Kingbitter now discovers that the two friends had been involved with their respective women. Another character of some note is Kürti, also employed by the publishing house, a cuckolded and embittered intellec-

tual, who has similarly suffered from history's cruelties. In short, the novel is about life's losers.

Kertész seems to create a fragmented plot as a way to address the fate of those who have none following the Holocaust and four decades of Communist totalitarianism. There are few substantive answers and the seemingly incoherent organization of the work highlights that fact. The author restates one of the basic themes in most of his Holocaust writings, namely, that "Auschwitz has been hanging around the world since long ago, perhaps for centuries." The play *Liquidation* lacks cohesion, as does the novel of the same name, because its fragmented construction is meant to reflect the incoherent chaos of the world. However, Kertész's main theme echoes that of his earlier novels: The Holocaust is not inexplicable; rather, it is a given within which there are other givens.

#### SUMMARY

The Holocaust and the subsequent rise of Communist totalitarianism are the major themes of Imre Kertész's work. While specifics may change, he believes such events will recur because they are generated by ever-present ideological, cultural, historical, and human reasons. Some individuals caught in these events are able to survive, while others do not, their lives liquidated by a totalitarian public authority or by their own hands. To Kertész, the Holocaust is not a morality tale but merely a specific example of history's many cruelties.

Peter B. Heller

## DISCUSSION TOPICS

- In *Fateless*, is it credible that the routines of daily life, such as the kind of soup that would be available on a particular day, would be more important than the constant possibility of death in the concentration camp?
- In awarding Imre Kertész the Nobel Prize in Literature in 2002, the Swedish Academy stated that Kertész received the award "for writing that upholds the fragile experience of the individual against the barbaric arbitrariness of history." Is that a good description of Kertész's view of the Holocaust?
- How can one explain the indifference, even hostility, of the Hungarian people in the street at the sight of György Köves, the narrator of *Fateless*, in his striped prison garb, hungry and unkempt, having just returned from a concentration camp? Could it be a sense of guilt or shame, or, as Kertész suggests, continuing, unexpressed, latent anti-Semitism?
- Do you agree or disagree with Kertész's opinion that there will be other Auschwitzes in the future? On what grounds do you do so?
- Is it credible that the adolescent narrator in *Fateless* should have experienced moments of happiness in concentration camps or that he should even have felt nostalgic for the camps?
- Kertész is one of the dwindling number of survivors of the Holocaust, many dying a natural death and a few committing suicide. With the passage of time and the reduction in firsthand accounts, such as those of Kertész, will the impact of the Holocaust on public awareness and public memory fade?

Library of Congress

## SØREN KIERKEGAARD

**Born:** Copenhagen, Denmark  
May 5, 1813

**Died:** Copenhagen, Denmark  
November 11, 1855

*In a number of pseudonymous literary and philosophical works, Kierkegaard created an oeuvre that has profoundly influenced the development of both Scandinavian literature and European philosophy.*

### BIOGRAPHY

Søren Aabye Kierkegaard (KEER-kuh-gahrd) was born on May 5, 1813, at the family home in Copenhagen, Denmark, to Michael Pedersen Kierkegaard and Ane Sørensdatter Lund. His father was a Jutlander of peasant stock, who, through hard work, had become a well-respected hosier. His mother was a distant cousin of her husband, who had been the family maid prior to the death of Michael's first wife and had then gotten pregnant out of wedlock by her master. Michael was deeply religious and had a strong sense of guilt, believing that God would punish him by not allowing any of his seven children to live beyond the age of thirty-three, the age reached by Jesus Christ.

As the youngest child in the family, Søren grew up with a full measure of his father's morbid religious beliefs. However, he also had the benefit of his father's acute intellect and the academic example of his older brother Peter, who studied theology, obtained a German doctorate, and later became a Lutheran bishop. There were many deaths in the family, however, as five of his siblings as well as his mother died early. Søren responded to the heavy atmosphere in his home by developing a flair for irony.

Kierkegaard prepared for university studies by attending the School of Civic Virtue. Intended for the ministry by his father, he began his study of the-

ology in 1830, but he was more interested in philosophy and literature. His literary debut was an essay, *Af en endnu Levendes Papirer* (1938; *Early Polemical Writings*, 1990), a critique of a novel by Hans Christian Andersen, published a month after the death of his father on August 9, 1838. Three years later he received an M.A. degree with a dissertation entitled *Om Begrebet Ironi med stadigt Hensyn til Socrates* (1841; *The Concept of Irony with Constant Reference to Socrates*, 1965), which was criticized by his examiners for being excessively literary.

In 1837, Kierkegaard met a young woman named Regine Olsen, to whom he was immediately attracted, and they were formally engaged in 1840. By all accounts Regine loved him deeply and struggled to hold on to him when he broke off the engagement less than a year later. Kierkegaard believed that his pervasive melancholy made him unsuited to marriage, but he returned to the experience in some of his most significant literary and philosophical works.

After breaking the engagement, Kierkegaard traveled to Berlin, ostensibly to hear the lectures of the German philosopher Friedrich Wilhelm Joseph von Schelling. Most of his time there was spent, however, on a project that became his most significant philosophical and literary work, the two-part *Enten-Eller* (1843; *Either/Or*, 1944). This work marks the beginning of a thirteen-year-long period of great productivity, during which time Kierkegaard also kept a detailed journal, a habit he kept throughout his life. *Either/Or* discusses two stages of existence, the aesthetic and the ethical,

which are further analyzed in *Stadier paa Livets Vei* (1845; *Stages on Life's Way*, 1940). *Gjentagelsen* (1843; *Repetition*, 1933), narrated by the pseudonymous Constantin Constantius, continues Kierkegaard's psychological exploration of the aesthetic. At the same time, Kierkegaard also published *Frygt og Bæven* (1843; *Fear and Trembling*, 1939), in which Abraham's intended sacrifice of his son Isaac is analyzed as a means of obtaining the kind of faith that transcends reason.

The most important literary device used by Kierkegaard in these works consists of a series of pseudonyms, of which there are sometimes several within the same work. Along with his pseudonymous works Kierkegaard also published a series of theological discourses under his own name, however, and these amplify and clarify many of the points that are made in his literary and philosophical texts.

One of Kierkegaard's main concerns in all of his writings was the paradox of faith, which was further discussed in *Philosophiske Smuler* (1844; *Philosophical Fragments*, 1936). Original sin is the topic of *Begrebet Angest* (1844; *The Concept of Dread*, 1944). *Afsluttende uvidenskabelig Efterskrift* (1846; *Concluding Unscientific Postscript*, 1941), a sequel to *Philosophical Fragments*, proposes that truth is determined subjectively because only individuals are able to gain true religious faith through a personal consciousness of sin.

During his most productive years there were few external events in Kierkegaard's life. He lived on the money that he had inherited from his father, frequently attending the theater and incurring substantial expenditures publishing his books. He played elaborate games to preserve the fiction that he was not, in fact, the author of his pseudonymous works. The pseudonymous part of his oeuvre came to an end, however, when in 1845 he attacked a Copenhagen satirical magazine, *Corsaren*, suggesting that he would be a fitting target for its satire. After a series of vehement attacks on his person, Kierkegaard largely withdrew from human society and focused on his religious writing.

*Kjerlighedens Gjerninger* (1847; *Works of Love*, 1946) suggests that the paramount duty of human beings is to act according to the will of God. *Sygdommen til Døden* (1849; *The Sickness unto Death*, 1941) discusses various types of despair, which are said to flow from ignoring God's will. *Indøvelse i Christendom* (1850; *Training in Christianity*, 1941)

presents martyrdom as a necessary component of true faith. At this time, Kierkegaard became very critical of the Danish church, which he accused of being rationalistic and lukewarm in a series of pamphlets with the title *Øieblikket* (1855).

Kierkegaard became ill and entered the Royal Frederik's Hospital on October 2, 1855, where he died six weeks later. Both his final journal entries and *Synspunktet for min Forfatter-Virksomhed* (written in 1848 and 1849, but published posthumously in 1859; *The Point of View for My Work as an Author*, 1939) maintain that the purpose of all of his writings, including the aesthetic ones, was ultimately religious.

## ANALYSIS

Kierkegaard's earliest literary works, including his dissertation, should be regarded as apprentice pieces that are of greater interest to specialists than to general readers. This is also true for his religious works, which strongly attest to the author's personal faith and theological background, but which exhibit neither the literary sophistication nor the philosophical subtleties that characterize his pseudonymous oeuvre.

The chief formal characteristic of the pseudonymous works is Kierkegaard's use of a large number of different fictitious characters that both serve as the putative authors or editors of entire books or parts of books and function as literary characters in dialogue with each other. This technique allows Kierkegaard to both make his works aesthetically attractive and to present his ideas in a lively and engaging manner.

Without question, the two-part *Either/Or* (1843) is Kierkegaard's most important literary work, although *Concluding Unscientific Postscript* is his most significant work of philosophy. Kierkegaard pretends that *Either/Or* has been edited by a certain Victor Eremita, who, like Kierkegaard himself, lives in Copenhagen. On a certain occasion Eremita discovers a manuscript in a secret compartment in a desk that he has recently purchased, and he publishes it with the title *Either/Or*. The first part contains writings of an aesthetic nature, while the second part consists of ethical rejoinders written by a judge named William.

*Either/Or* emphasizes the need to make choices in human relations and brings the aesthetic and the ethical approaches to life into dialogue with

one another. The dialectical aspect of the text is elevated to a major principle of organization in Kierkegaard's next book, *Fear and Trembling*, which is subtitled *Dialectical Lyric* and is supposed to have been written by one Johannes de Silentio (Silent John) as an inquiry into the story of Abraham in the Hebrew Bible. Its main purpose is to arrive at an understanding of faith as a phenomenon. His final pseudonymous work of 1843 is *Repetition*, which was supposedly authored by an aesthete named Constantin Constantius.

The following year, 1844, saw the publication of three more pseudonymous works, *Philosophical Fragments* by Johannes Climacus, *The Concept of Dread* by Vigilius Haufniensis, and *Forord: Morskabslæsning for enkelte Stænder efter Tid og Leilighed* (1844; *Prefaces: Light Reading for Certain Classes as the Occasion May Require*, 1989) by Nicolaus Notabene. While the first of these works considers the serious philosophical question of how to anchor an eternal consciousness in a historical point of departure, the form of *Philosophical Fragments* is reminiscent of that of vaudeville or opera. *Fear and Trembling* appears to be a serious inquiry into the concept of original sin, but its form is that of an inquiry along the lines of Hegelian phenomenology. *Prefaces* is a collection of prefaces to books never written. Literary devices such as these leave the reader unable to draw a firm line between seriousness and irony in Kierkegaard's texts.

When *Stages on Life's Way* appeared in 1845, Kierkegaard returned to both the technique and the concerns of *Either/Or* by offering several different studies in developmental psychology through a compilation of various texts made by a character named Hilarius Bogbinder. The first segment, "In Vino Veritas," is authored by the pseudonym William Afham (William by Him) and brings a number of previously introduced pseudonyms together for an imaginary banquet. At the end of their banquet they come across Judge William, known as "B" in *Either/Or*, who provides further reflections on marriage in a manuscript that is stolen from him. "Skyldig?" / "Ikke-Skyldig?" ("Guilty?" / "Not Guilty?"), supposedly written by a certain Frater Taciturnus, next discusses whether it is ethically defensible to break an engagement. The book concludes with a long letter to the reader in which Frater Taciturnus discusses the religious implications of the previous section.

At least formally, *Concluding Unscientific Postscript* is a postscript to *Philosophical Fragments* and therefore supposedly written by Johannes Climacus. There is a serious lack of balance between the lengths of the two works, however. Clearly, the *Postscript* part of the title is ironically meant, while the *Concluding* part is not, for Kierkegaard was summing up his philosophical beliefs by proposing that the truth about being is something that each individual has to obtain. In a final explanation appended to *Postscript*, Kierkegaard also formally acknowledged what most people in Danish literary circles already knew—that he was the author of the works produced by his various pseudonyms.

Kierkegaard returned to the use of a pseudonym, however, when he published *The Sickness unto Death*, a catalog of despair and sin, under the name Anti-Climacus. The same pseudonym was used the following year, when *Training in Christianity* was published. Anti-Climacus was given a name that gives him priority over Johannes Climacus, as Kierkegaard wanted to emphasize that religion was more important than philosophy and literature.

## EITHER/OR

**First published:** *Enten-Eller*, 1843 (English translation, 1944)

**Type of work:** Essays

*By juxtaposing a series of aesthetic essays with two lengthy ethical rejoinders, Kierkegaard details the differences between aesthetic and ethical approaches to life.*

Without question, the two-part *Either/Or* is Kierkegaard's most important literary work. Kierkegaard pretends that *Either/Or* has been edited by a certain Victor Eremita, who, like Kierkegaard himself, lives in Copenhagen and likes to go for trips in the countryside. Having recently acquired a used writing desk, Eremita discovers a manuscript in a secret compartment while looking for money to take with him on a journey. The manuscript turns out to be worth more than any amount of money, though, for it is a collection of valuable aesthetic essays, one of which is a long novel-like piece entitled "Forførerens Dagbog" ("The Seducer's Diary"), supposedly written by someone called Johannes

the Seducer. There are, furthermore, two long essays written by an ethicist in response to the writings of the aesthete, which argue that aestheticism is but a developmental stage that must be replaced by a commitment to an ethical form of life, typified by marriage, of which a public engagement is a precursor.

*Either/Or* was published in two parts, of which the first part (the *Either*) contains Victor Eremita's introduction, as well as the aesthetic writings. A series of aphorisms entitled "Diapsalmata" sets the tone for the volume, while several long aesthetic essays discuss such works as Wolfgang Amadeus Mozart's opera *Don Giovanni* (1787) and Johann Wolfgang von Goethe's two-part tragedy *Faust* (1808-1833). While arguing that *Don Giovanni* is the most perfect opera ever created, the title character interests the aesthete because he is an immediate seducer, someone who seduces women indiscriminately in a completely goal-oriented manner. Faust, by contrast, is a reflective seducer who emphasizes the process more than the goal. The aesthete—or "A" as Victor Eremita calls him—regards Giovanni and Faust as two fundamental types of the seducer, who again is the type that serves as Eremita's archetypal aesthete. Johannes, the narrator-protagonist of "The Seducer's Diary," fits the mold of the reflective seducer as he carries out his schemes chiefly in order to be able to later recollect his conquests.

Other aspects of the seducer's character are an avoidance of responsibility and a pathological fear of boredom. One of the funniest essays in *Either/Or* is entitled "Vexel-Driften" ("Crop Rotation"), in which it is shown how boring people can be useful as entertainment. The character named A is contradicted, however, by a judge named William who has provided two lengthy essays, in the form of letters addressed to A and published in the second part of the book (the *Or*), in defense of marriage as an ethical alternative to the irresponsible behavior of the aesthete. William maintains that there is, in fact, greater aesthetic validity in marriage than in

a life of serial seduction, and that the aesthete will eventually discover that the contradictions within the aesthetic sphere of existence will force him to abandon this reckless lifestyle in favor of an ethical mode of living. Otherwise, says William, the aesthete will either lose his sanity or commit suicide.

Much as the aesthetic sphere of existence is ruled by the avoidance of boredom, the ethical sphere is focused on doing one's duty. Ethicists thus make better members of society than aesthetes, but they are also fundamentally much happier, at least according to William and presumably Kierkegaard as well.

## FEAR AND TREMBLING

**First published:** *Frygt og Bæven*, 1843  
(English translation, 1939)

**Type of work:** Nonfiction

*Through an examination of the ethical implications of the biblical story of Abraham and Isaac, religious faith is found to be paradoxical.*

In his two-part work *Either/Or* Kierkegaard had examined the aesthetic and the ethical approaches to living, concluding that the ethical stage should be given priority over the aesthetic. In *Fear and Trembling* he inquires into the relationship between the ethical and the religious.

Kierkegaard chose as his example of religiously motivated behavior an extreme case, the biblical narrative of Abraham's abortive sacrifice of his son Isaac. In the biblical story, Isaac is a son promised Abraham through which all the families of the earth would be blessed as Abraham's descendants would be spread throughout the earth, bringing with them a message of true faith. The blessing of a legal heir had been denied Abraham and his wife Sarah until they were both advanced far beyond the normal childbearing years, but Isaac was finally born. When God spoke to Abraham and commanded him to offer his son as a sacrifice on Mount Moriah, Abraham had to choose between obedience and disobedience to God.

When viewed from an ethical perspective, there is never any justification for shedding innocent

blood. Kierkegaard points out that to the ethical mind Abraham is about to become a murderer, and his intended deed is that much worse because he is about to kill his son. Clearly, faith must be of a completely different order than reason if Abraham's actions are to be considered justified. It is true that Abraham's hand was stayed at the very moment when he was about to plunge the sacrificial knife into Isaac, but his intentions were, ethically speaking, those of a murderer.

Kierkegaard asks what readers of the biblical story—and of *Fear and Trembling*—can learn about faith from the account of Abraham and Isaac. The most important lesson is that faith is beyond reason and that faith has such explosive power that it cannot be domesticated. Faith will always be paradoxical.

## THE SICKNESS UNTO DEATH

**First published:** *Sygdommen til Døden*, 1849  
(English translation, 1941)

**Type of work:** Nonfiction

*Through an analysis of the self and its relationship with the divine, various forms of despair are equated with sin.*

A dense and difficult work, *The Sickness unto Death* is presented as having been written by a pseudonym, Anti-Climacus, a name that is related to Johannes Climacus, the putative author of *Philosophical Fragments* and the *Concluding Unscientific Postscript*. The prefix “Anti” denotes that Anti-Climacus comes before and has priority to Johannes Climacus, and that *The Sickness unto Death* deals with higher concerns than do the books written by Climacus. Religious faith is of greater significance than either philosophy or literature.

*The Sickness unto Death* begins with a definition of

the human self. The self, says Kierkegaard, consists in the relations between its various parts, as well as in the relations between these relations. The self's highest relation to itself constitutes spirit, and the self's highest relation to an entity outside of itself is its relation to God. The relations within the self need to be in balance, and there are three such relations that have supreme significance. The finite aspect must be in balance with the infinite, meaning that human beings must understand that they are answerable both to a finite human order—another term for this might be “society”—and an infinite and divine one. The self also contains a relation between the temporal and the eternal, meaning that people both have an origin in time and a future in eternity; they are born at particular historical moments but are designed to exist forever. The third relation is that between freedom—which is also conceived of as possibility—and necessity. God has given his children agency, that is, the power to make and act upon free choices, but God also rules according to eternal law, and human beings should use their freedom of choice to conform to God's expectations of them.

Despair results from imbalances between these various polarities of the self, and despair is essentially sin. For example, a person who is completely focused on blind obedience to divine commands may neglect to use his or her agency productively. Conversely, those who use divinely granted freedom to lead anarchic lives may deeply hurt themselves and others. An improper balance between the temporal and the eternal is equally destructive. Those who forget their eternal dimension and focus solely on the things of this world may get powerful and rich, but they will have no treasures in heaven. Conversely, those who are consumed by thoughts of heavenly bliss may forget the need to act with prudence in this world. People who understand their finitude may be good members of society while neglecting their spiritual needs, while those who see only their infinite possibilities in the life hereafter may shirk their obligations to others in this life.

As Kierkegaard catalogs various forms of despair in *The Sickness unto Death*, he is aware that most people are resistant to his analysis of sin and its causes. While emphasizing that human beings have a duty to make choices, Kierkegaard also argues that people are made a certain way by God and must make

the choices that are appropriate to the individuality they have been given.

### SUMMARY

Søren Kierkegaard possessed an exceedingly fertile mind that generated a large number of literary, philosophical, and religious works during a thirteen-year-long period. He is particularly well known for the pseudonymous part of his oeuvre, in which he offered a typology of humankind's approaches to living that contrasts the aesthetic and the ethical modes of existence, giving priority to the latter. Kierkegaard's primary commitment was religious, as shown by the works *Fear and Trembling* and *The Sickness unto Death*, in which such phenomena as religious faith and despair are analyzed. Above all, however, he was a consummate artist and stylist, who handled his various pseudonyms with great flair and whose native Danish is both supple and humorous.

Jan Sjøvik

### DISCUSSION TOPICS

- What kind of choices are presented to the reader by the author of *Either/Or*?
- What are the characteristics of the aesthetic sphere of existence according to Søren Kierkegaard?
- Why is duty so important to the Kierkegaardian ethicist?
- How would one look at a broken engagement from an aesthetic point of view? What would the ethicist see in a broken engagement?
- What, according to Kierkegaard, is it possible to learn about faith from the biblical story of Abraham?
- What kind of relationship does Kierkegaard see between sin and despair?

## W. P. KINSELLA

**Born:** Edmonton, Alberta, Canada  
May 25, 1935

*Canadian author Kinsella has been celebrated for his novels and story collections about baseball and contemporary Canadian Indians.*

### BIOGRAPHY

William Patrick Kinsella was born on May 25, 1935, in Edmonton, Alberta, Canada, the son of John Matthew, a contractor, and Olive Mary, a printer. Kinsella's father was a semiprofessional baseball player who taught his son to love the game at an early age, establishing a fascination with the American pastime that would define the Canadian author's reputation as a writer. Kinsella, an only child, grew up in almost total isolation on a farm in northern Alberta. He was homeschooled until the fifth grade and began writing stories about fictional characters who doubled as his friends.

Before embarking on a career as a writer, Kinsella worked as a government clerk, claims investigator, account executive, and restaurant owner. At the age of thirty-five, he began attending the University of Victoria, where he went on to receive his B.A. in creative writing. From 1974 to 1976, he worked as a taxicab driver in Victoria. In 1976, he was accepted to study at the prestigious Iowa Writers' Workshop at the University of Iowa, and he received his M.F.A. from the university in 1978. While enrolled in the Writers' Workshop, Kinsella was an instructor at the University of Iowa. After finishing up there, he accepted a job as an assistant professor of English and creative writing at the University of Calgary, and he stayed there from 1978 to 1983.

Kinsella sold his first pieces of writing regularly to magazines. In 1977, a collection of stories, *Dance Me Outside*, was published by Oberon Press in Ottawa, Ontario. *Scars* was published in 1978, and *Shoeless Joe Jackson Comes to Iowa*, a short-story collection, followed in 1980. *Born Indian*, the collection that includes "Fiona the First" (which won honorable mention in the annual series *Best American Short Stories*, 1980), appeared in 1981, and *Shoeless Joe*, a 1982 novel based on the title story from *Shoeless Joe Jackson Comes to Iowa*, was the first of Kinsella's books published in the United States. *Shoeless Joe* was Kinsella's breakthrough book, and its success allowed him to leave behind teaching and pursue writing full time. Now widely esteemed, he was invited to give readings at American universities and colleges, a practice which paid very well. He won the Houghton Mifflin literary fellowship, the Books in Canada award for first novels, and the Canadian Author's Association prize, all for *Shoeless Joe*.

*The Moccasin Telegraph* (later republished as *The Moccasin Telegraph, and Other Stories*), a story collection for which Kinsella won the Writers Guild of Alberta O'Hagan novel medal, was issued in 1983. *The Thrill of the Grass* (1984) and *The Alligator Report* (1985), two more story collections, followed. *The Iowa Baseball Confederacy*, Kinsella's second baseball book, was published in 1986. In 1987, he received the Alberta Achievement Award for Excellence in Literature and the Stephen Leacock Medal for Humor for *The Fencepost Chronicles* (1986). He also won the 1987 Author of the Year Award from the Canadian Booksellers Association.

*Red Wolf, Red Wolf* (1987) and *The Further Adventures of Slugger McBatt* (1988), two more story collections that won Kinsella critical acclaim, were fol-

lowed by the 1989 film adaptation of *Shoeless Joe*, which was released by Universal Pictures as *Field of Dreams*. The film was nominated for best picture, best score, and best adapted screenplay awards from the Academy of Motion Picture Arts and Sciences. Also in 1989, Kinsella and his third wife, Ann Knight, published a book of poems called *Rainbow Warehouse* (1989). *The Miss Hobbema Pageant*, another collection of stories about the Cree Indian Reserve in Hobbema, Alberta, was released in 1989.

Kinsella took a short hiatus after the success of the film but appeared back on the scene in 1991 with a novel, *Box Socials*, and yet another story collection, *The Dixon Cornbelt League, and Other Baseball Stories* (1993) soon followed. *Brother Frank's Gospel Hour, and Other Stories* appeared in 1994, and *Dance Me Outside* was produced as a motion picture by Norman Jewison in 1995. Kinsella continued his prolific output as the twentieth century ended and the twenty-first century began, publishing several more novels and story collections, including *The Winter Helen Dropped By* (1995), *If Wishes Were Horses* (1996), *Magic Time* (1998), *The Secret of the Northern Lights* (1998), *Japanese Baseball, and Other Stories* (2000), and *Baseball Fantastic: Stories* (2000), for which he was editor, contributor, and author of the introduction.

Kinsella has been married four times. He married Myrna Salls in 1957, and they were divorced in 1963. In 1965, he married Mildred Irene Clay, and they were divorced in 1978. That same year he married Ann Ilene Knight, a writer, and they remained married until 1997. Finally, he married Barbara L. Turner in 1997. Kinsella has three children, all from his first marriage, to Salls: Shannon, Lyndsey, and Erin. He received a D.Litt from Laurentian University, Ontario, in 1990, and a D.Litt from the University of Victoria in 1991. In 1994, he was made an Officer of the Order of Canada, and in 2005, he was awarded the Order of British Columbia. His stories have appeared in several anthologies, including *Best Canadian Short Stories*, *Pushcart Prize V*, and *The Penguin Book of Modern Canadian Short Stories*. He splits his time between White Rock, British Columbia, and Palm Springs, California.

## ANALYSIS

Kinsella turned to writing late in life, publishing his first story collection at the age of forty-two. Since then, however, he has become one of North

America's most prolific authors, winning numerous awards and receiving critical acclaim for his stories about western Canadian Cree Indians and the mystical and magical realms of baseball. Still, he is probably best known for the 1989 film adaption of his novel *Shoeless Joe*, which was released as *Field of Dreams*, an apt and telling title.

Kinsella's first literary success came in 1974, when he started publishing the stories that would appear in *Dance Me Outside*, pieces that dealt predominantly with a young Cree Indian named Silas Ermineskin. Silas is the character that Kinsella comes back to most in his stories about the Cree Nation, but he has assembled quite a cast of characters on the reserve, and he tells their tales in more than one hundred stories, which are collected in *Dance Me Outside*, *Scars*, *Born Indian*, *The Moccasin Telegraph*, and *Other Stories*, *The Fencepost Chronicles*, *Brother Frank's Gospel Hour*, and *Other Stories*, and several other books. In his tales about the Cree Nation, Kinsella focuses on issues of truth and hypocrisy, frustration and endurance, love and hatred. The stories are hard-edged yet sensitive, and they are often very comical. Though Kinsella is not a Canadian Indian, he has been widely praised for his portrayal of the western Canadian Cree Nation. It has often been said that Kinsella's vision of contemporary Canadian Indian life is authentic and accurate, though he certainly has his detractors.

One of the stylistic marks that sets Kinsella's work about the Cree Nation apart is the voice that he adapts. Silas, for instance, tells his tales in broken English that provides vivid imagery and recalls the tone of Silas's literary ancestor, Mark Twain's Huckleberry Finn. The grimness of the subject matter is often complemented by the lightheartedness of Silas's tone. In *The Moccasin Telegraph*, and *Other Stories*, Silas tells eighteen tales set on the Ermineskin Reservation that revolve around attempts by his friends and family to reconcile traditional customs with modern innovations. Again, Silas's voice and vision allow for an interesting take on everyday absurdities. In *The Fencepost Chronicles*, Silas is back as the narrator, but his best friend, Fencepost Frank, is the main character of the stories; in *Brother Frank's Gospel Hour*, and *Other Stories*, Kinsella closely considers the growing relationship between Silas and Frank. Again, Kinsella utilizes Silas's unworried tone to relate stories that range from witty to weighty.

Kinsella's other major works deal predominantly with the game of baseball. While his work about Canadian Indians has garnered him critical attention, his stories and novels with baseball as their dominant motif have gained Kinsella his most considerable recognition. *Shoeless Joe*, probably Kinsella's best-known and most-enduring work, blends comic fantasy and Magical Realism in a story that deals with issues of faith, belief, dreams, innocence, and human communion. Its success is evidence that these timeless themes make the work appealing to a wide audience. In *Shoeless Joe*, Ray Kinsella, the Iowa farmer at the center of the novel, is thrust into a supernatural situation where he encounters the ghost of Shoeless Joe Jackson, the famous ballplayer who was banned from baseball for his involvement in the Chicago Black Sox scandal of 1919. While other writers might allow the fantastic elements of the story to overwhelm the reader, the author never loses sight of the book's major theme: the loss of youthful innocence. *The Iowa Baseball Confederacy* also deals with youthful ideals and explores human relationships in the light of a mystical baseball experience.

The same elements that have allowed for Kinsella's success, however, have caused others to respond negatively to his work. In his baseball books especially, Kinsella has been accused of extreme sentimentality. Even critics who have acknowledged *Shoeless Joe* as a great baseball book complain that Kinsella's later baseball writing is overly nostalgic and highly derivative of his best early work. In the end, though, the measure of what readers get out of Kinsella's work will be determined by what they bring to it. The baseball fiction will be exceptionally easy for avid baseball fans to swallow, while others may reject the saccharine vision of the sport as pure and awe-inspiring. Similarly, Kinsella's books about the Cree Nation are also the subject of mixed criticism. While the majority of critics have praised Kinsella for his daring and accurate portrayal of Canadian Indians, others have dismissed his attempts at writing about Canadian Indian culture as arrogant and unnecessary. Interestingly, some commentators have criticized Kinsella's Ermineskin books for being overly sympathetic toward Canadian Indians and blatantly unfair to Caucasians. In any case, Kinsella's literary reputation continues to grow, and he is often the subject of heated critical debates.

## SHOELESS JOE

**First published:** 1982

**Type of work:** Novel

*A comic fantasy about an Iowa farmer who builds a ballpark in his cornfield and summons the spirit of baseball legend Shoeless Joe Jackson.*

A novel-length baseball fable that details the adventures of an Iowa farmer named Ray Kinsella who builds a baseball diamond in his cornfield in the hope of bringing disgraced baseball legend Shoeless Joe Jackson back to life, *Shoeless Joe* is based on the title story from Kinsella's 1980 story collection *Shoeless Joe Jackson Comes to Iowa* and is the author's first novel. If some critics accuse the book of sentimentality, it is because *Shoeless Joe* has none of the elements—sex, violence, and obscenity—that have become so commonplace in contemporary literature and popular culture. Instead, to paraphrase Kinsella, the book is intended to make an affirmative statement about life.

The book begins as Ray sits out on the veranda of his farm home in eastern Iowa and hears the voice of a baseball announcer say, "If you build it, he will come." Ray immediately has a vision of the ballpark that he is being asked to conceive and sets out to realize it. Ray completes the park, and Shoeless Joe Jackson, the Chicago White Sox (later nicknamed the Black Sox) star player who was banned from baseball when it was revealed that his team threw the 1919 World Series, appears to Ray. They talk, and, soon after, Jackson brings back other ghost players.

As the story continues, Ray hears the voice of the baseball announcer again. This time the voice says, "Ease his pain," and Ray somehow understands that he must kidnap reclusive author J. D. Salinger and take him to see a baseball game at Fenway Park. While at Fenway, Ray and Salinger, who at first figures Ray is crazy, receive yet another mysterious message about the next leg of their journey. They

must track down a minor figure from baseball history, Archibald "Moonlight" Graham, who played only a half-inning in his major-league career. Here, Kinsella expertly blends his knowledge of obscure baseball lore with his fictional characters and recreations of historical figures, making for a charming mix of fantasy and reality.

Kinsella's reputation was cemented by the success of this book. He gained further fame when the book was adapted into the 1989 film *Field of Dreams*, starring Kevin Costner, James Earl Jones, and Ray Liotta. The book is a subtle meditation on baseball, on the sin and sacrifice of Joe Jackson, on the relationship between fathers and sons, and on the nature of belief and faith. In the end, it recalls the work of famed American director Frank Capra, particularly *It's a Wonderful Life* (1946), as Ray comes to realize that baseball can bring people together in small things.

### THE MOCCASIN TELEGRAPH, AND OTHER STORIES

**First published:** 1983

**Type of work:** Short stories

*This collection brings together fifteen tales set on the Ermineskin Reservation in western Canada, narrated by eighteen-year-old Silas Ermineskin.*

Reminiscent of Sherwood Anderson's classic *Winesburg, Ohio* (1919), the tales in *The Moccasin Telegraph, and Other Stories* are narrated by Silas Ermineskin, an eighteen-year-old Cree Indian from Hobbema, Alberta, who Kinsella previously utilized as a narrator in *Dance Me Outside*, *Scars*, and *Born Indian*. Silas, like Twain's Huckleberry Finn, is a born storyteller, and he uses tough and funny broken English to narrate hilarious and heart-breaking stories about life on the reservation. The characters from the Cree Nation grapple with issues concerning tradition and the modern world, and Kinsella is deeply engaged by the question of what remains of native wisdom in Canadian Indian culture.

Silas studies tractor repair at the Wetaskiwin Tech School and is also apprenticed to Mad Etta, a four-hundred-pound Medicine Lady who doles out

wisdom from a tree-trunk chair. He has ties to both the contemporary Caucasian world and to the life on the reserve, a conflict which proves central to stories such as "The Ballad of the Public Trustee," "Where the Wild Things Are," "The Mother's Dance," and "The Queen's Hat." Silas is often at the center of the mischief that occurs in these tales, but he is seemingly more concerned with the actions of his friends, particularly Fencepost Frank, a disobedient would-be con artist, and Mad Etta. Kinsella again expertly intermingles the tragic with the comic, and these stories become more about how the Cree people survive difficult situations through humor, trickery, love, and an appreciation of native wisdom. The stories also contemplate the bigotry that many North American Indians still encounter, and this too is dealt with in an enthralling and comical way.

### THE IOWA BASEBALL CONFEDERACY

**First published:** 1986

**Type of work:** Novel

*Gideon Clarke attempts to prove to the world that the 1908 Chicago Cubs played an exhibition game against the all-stars of the mythical Iowa Baseball Confederacy.*

*The Iowa Baseball Confederacy* again has baseball as its dominant motif. This time, though, Kinsella injects even more elements of magic and mystery, as the reader learns that to be obsessed with baseball is to achieve a sort of mystical state. The narrator, Gideon Clarke, whose love of baseball was passed down to him by his father, not only is obsessed with a mysterious and mythical baseball event but also is ultimately given access to a magical realm. Clarke, like his father before him, is out to prove to the world that the Chicago Cubs traveled to Onamata, Iowa, in the summer of 1908 for an exhibition

game against the all-stars of the Iowa Baseball Confederacy, an amateur league. The game, which the Cubs figured would not be much of a game at all, lasted in excess of two thousand innings and was played in an almost constant downpour. Since the game appears in no record books, the offices of the Cubs (and pretty much everyone else) have written Clarke off as insane. No one seems to acknowledge the game or even the confederacy. However, Clarke is convinced that the game was played. He believes so strongly, in fact, in the existence of the confederacy and the marathon game they played against the Cubs that he devotes his entire life to setting the record straight.

Kinsella is also concerned here with the rapprochement of fixed forces like love and sadness, sacrifice and anger, and hunger and faith. The book is not only full of lyrical descriptions of America's national pastime and not solely concerned with the magical game between the Cubs and the Confederacy, but it is, like much of Kinsella's work, also lighthearted and funny, a book as much about time travel as it is about baseball, as much about human communion as it is about magic. It is a poignant and heartfelt work.

### **BROTHER FRANK'S GOSPEL HOUR, AND OTHER STORIES**

**First published:** 1994

**Type of work:** Short stories

*This collection again chronicles the adventures of Silas Ermineskin, a Cree writer, and his comical partner, Frank Fencepost.*

In this book, Kinsella revisits the characters from the Ermineskin series. The evolving relationship between Silas, who has become a writer, and his buddy Frank is the focus of this collection. The characters have grown since they appeared in *The Fencepost Chronicles* and *The Miss Hobbema Pageant*,

but they are no less raucous. Kinsella follows his lovable misfits as they swindle their way across western Canada, generally wreaking havoc.

"Bull" chronicles Frank's battle with the Alberta Supreme Court in a uproarious cattle-insemination case. Frank, a witty con artist, is also at the center of the title story, in which he turns a government-sponsored gospel radio show upside down. In "Miracle on Manitoba Street," Frank again concocts an illicit scheme as he visits a Montana reservation and carves the image of the Virgin Mary into a Frigidaire, convincing the locals that it is a miracle, one that they should have to pay to see. "Dream Catcher," one of Kinsella's more serious stories, explores the realities of child abuse, as Silas's twelve-year-old sister is assaulted. "Ice Man" raises questions about gender and identity, as Jason Twelve Trees tries to take part in a cooking competition while his father presses him to become a mechanic. Finally, "The Rain Birds" is a story that is deeply concerned with environmental issues, particularly the effects of corporate farming on the human and natural environment in western Canada. For the most part, critics have embraced *Brother Frank's Gospel Hour, and Other Stories*, praising it for its honest portrayal of human flaws and shortcomings and calling it a showcase for the creativity of the human spirit.

### **SUMMARY**

W. P. Kinsella has earned recognition for his short-story collections dealing with modern-day Canadian Indians and for his novels and stories about baseball. He has a whimsical style in which magic and reality intermingle, and he is deeply concerned with the rejuvenating forces of love, sacrifice, and humor. A determined writer who did not publish his first book until he was forty-two, Kinsella is a prime example of how a writer can endure hardships to come out on top. He is a refreshing, honest, and important voice in North American literature.

## DISCUSSION TOPICS

- What is the relationship between nostalgia and magic in W. P. Kinsella's work?
- Does Kinsella seem to have an optimistic or a pessimistic view of the world?
- Kinsella often plays around with time and time travel. What does he accomplish by doing this?
- Race is at the center of Kinsella's work. How do you feel about his portrayal of Canadian Indians?
- A North American Indian character in Kinsella's *The Iowa Baseball Confederacy* says, "Baseball is the one single thing that the white man has done right." How does this statement relate to Kinsella's literary vision?
- What are the unifying elements in Kinsella's fiction between baseball and Canadian Indian culture?
- *Shoeless Joe* is Kinsella's best-known work, but it is by no means canonical. Why do you think Kinsella has not received the same sort of consideration as writers like Bernard Malamud and John Updike, who have also written about baseball?

## RUDYARD KIPLING

**Born:** Bombay, India

December 30, 1865

**Died:** Hampstead, London, England

January 18, 1936

*One of the most controversial British writers by the beginning of the twentieth century, Kipling is loved for his romantic treatment of India and hated for his imperialistic view of the Indian people.*

### BIOGRAPHY

Rudyard Kipling was born in Bombay, India, on December 30, 1865. His father, John Kipling, was a middle-class craftsman and designer who had received a post at a school of art in Bombay, probably with the help of his wife's brother-in-law, the Pre-Raphaelite painter Sir Edward Coley Burne-Jones. Kipling's mother's name was Alice Macdonald. By all reports, the young Kipling was spoiled by his parents and their Indian servants. When he was five years old, however, his parents began to fear that he was growing more Indian than English, so they brought him and his younger sister back to England, where they were boarded with a Captain Holloway and his wife, who were strangers to the Kiplings.

According to Kipling's own account, in his autobiography as well as in fictional accounts in his works, he was not happy during this period, particularly after the death of Captain Holloway. For whatever reason, Mrs. Holloway did not like him and frequently punished him for what she saw as his headstrong and spoiled behavior. Because of her Calvinist threats of hellfire and damnation, Kipling called the house in the little seaside town the House of Desolation. His life was made even more miserable by his worsening eyesight, which caused his schoolwork to suffer.

In 1878, his mother returned to England to spend some time with her children, but once again

she left for India, this time leaving Kipling in the United Services College boarding school in North Devon, where he stayed until 1882. Because the school had been recently founded primarily for the sons of military officers who could not afford to send them anywhere else, however, it quickly developed a reputation for being a place for bullies and toughs, as Kipling's fictional *Stalky and Co.* (1899) makes abundantly, sometimes obnoxiously, clear.

Since the school was primarily established to get boys past the military examinations rather than into Oxford or Cambridge, Kipling, an omnivorous reader but not the best of students, did not continue his education but left England at the age of seventeen to rejoin his parents in India and to take a position on the staff of an English newspaper, *The Civil and Military Gazette*, in Lahore. Kipling wrote news articles as well as topical fiction for the paper until 1887, when he was transferred to a larger paper, *The Pioneer*, in Allahabad. His job there was to edit the weekly magazine supplement, in which one of his own stories usually appeared. He published his first collection of stories written for the Lahore newspaper, *Plain Tales from the Hills*, in 1888. Also during this time, he wrote a number of other stories, such as *Wee Willie Winkie*, and *Other Child Stories* (1888) and *The Phantom Rickshaw*, and *Other Tales* (1888), which were published in what was called the Railway Series.

In 1889, Kipling went back to London by way of America, and the following year British magazine editors began publishing the Railway Series, which was well received. Kipling enjoyed great success

and was very prolific during this London period. He published *Barrack-Room Ballads, and Other Verses* (1892), a collection of poems that includes such well-known works as “Gunga Din” and “Mandalay,” as well as his first novel, the autobiographical *The Light That Failed* (1890), and some of his most highly respected short stories, such as “Without Benefit of Clergy.”

In 1892, Kipling married Caroline Balestier, sister of Wolcott Balestier, with whom he had collaborated on the romance *The Naulahka: A Story of East and West* (1892). When their honeymoon was cut short by the failure of Kipling’s bank, they went to stay with Caroline’s family in Brattleboro, Vermont, where they lived for four years and where Kipling wrote *The Jungle Book* (1894), *Captains Courageous: A Story of the Grand Banks* (1897), and the first draft of *Kim* (1901). When Kipling became involved in a bitter squabble over money with Caroline’s younger brother Beatty, he had to return to England in 1896. In 1907, he became the first English writer to win the Nobel Prize in Literature.

Kipling and his family lived for five years near Rottingdean, not far from Brighton, and then moved to a mansion in rural Sussex. They spent each winter in South Africa, where Kipling met influential British political figures and became even more convinced of the God-given mission of the British to govern over “blacks” and “browns” (as the people of color were called there). After the Boer War, during which he helped edit a newspaper for the British troops, Kipling became more vocal about his imperialism and consequently more alienated from many of his compatriots, who did not share his views. After losing his son in battle during World War I, his hatred of the Germans gave rise to one of his most memorable short stories, “Mary Postgate.” Suffering ill health during his final years, particularly because of an ulcer that he feared was cancer, Kipling remained the conservative reactionary until his death on January 18, 1936, in London, not long after he had turned seventy. He was buried in Poet’s Corner in Westminster Abbey.

## ANALYSIS

Although Robert Louis Stevenson was the first British writer to build his career on the short-story form, Kipling was the first to stimulate a considerable amount of criticism, much of it adverse, because of his short fiction. In fact, much of the nega-

tive criticism that Kipling received is precisely the same kind of criticism that has often been lodged against the short-story form in general—for example, that it focuses only on episodes, that it is too concerned with technique, that it is too dependent on tricks, and that it often lacks a moral force.

Henry James was perhaps the first to note that the young Kipling realized very early the uniqueness of the short story, seeing what chances the form offered for “touching life in a thousand different pieces . . . each a specimen and an illustration.” Yet it is just this appreciation for the episode, according to Edmund Wilson, that prevented Kipling from becoming a great novelist:

You can make an effective short story, as Kipling so often does, about somebody’s scoring off somebody else; but this is not enough for a great novelist, who must show us large social forces, or uncontrollable lines of destiny, or antagonistic impulses of the human spirit, struggling with one another.

Moreover, it is not simply because Kipling could not “graduate,” as it were, to the novel that critics have found fault with him. Critic Randall Jarrell says that Kipling lacks a “dispassionate moral understanding,” that his morality is too one-sided, and that he does not have the ability both to understand things and to understand that there is nothing to be done about them. Short-story writer Frank O’Connor confesses his embarrassment in discussing Kipling’s stories in comparison with those of storytellers such as Anton Chekhov and Guy de Maupassant, for he believes that Kipling is too conscious of the individual reader as an audience who must be affected.

C. S. Lewis also recoiled from Kipling for similar reasons. Complaining about what he calls the excess of Kipling’s art, he complains that Kipling constantly shortened and honed his stories by blotting out passages with India ink. Ultimately, says Lewis, the story is often shortened too much, and, as a result, “the style tends to be too continuously and obtrusively brilliant” with no “leisureliness.” Similarly, Wilson says that it is the paradox of Kipling’s career that he “should have extended the conquests of his craftsmanship in proportion to the shrinking of the range of his dramatic imagination. As his responses to human beings become duller, his sensitivity to his medium increased.”

Such remarks either ignore or fail to take seriously the fact that the short tale practiced by Kipling is not designed to focus on character but rather on fable, on the meaning of an episode in an ideal form. Bonamy Dobrée, in one of the best-known critical efforts to revive interest in Kipling as an artist, has noted this fabular aspect of Kipling's stories, suggesting that as Kipling's mastery of the short-story form increased, he became more and more inclined to introduce an element of fable. "Great realist as he was, it is impossible to see what he was really saying unless the fabular element is at least glimpsed."

Yet the fabular element, so common to the short-story form, often is criticized as being limiting in Kipling, as indeed over the years such an element has been a central source of adverse criticism of short fiction generally. It has been suggested that while Kipling's desire to have complete control of his form and medium can lead to impressive achievements in fantasy and fable, it can also lead to a simplification and distortion. In the short story, it is the fable that is the focus; characters exist for the sake of the story. Kipling was perhaps the first English writer to embrace these characteristics of the short-story form wholeheartedly; thus, his stories are perfect representations of the transition point between the old-fashioned tale of the nineteenth century and the modern British short story.

### "THE STRANGE RIDE OF MORROWBIE JUKES"

**First published:** 1885 (collected in *The Phantom 'Rickshaw, and Other Tales*, 1888)

**Type of work:** Short story

*This work is a combination adventure story and social parable in which a man finds himself trapped in an otherworldly realm somewhere between life and death.*

"The Strange Ride of Morrowbie Jukes" is based on a conventional type of gothic story popular during the early part of the nineteenth century. It is a form that Edgar Allan Poe adapted for his own use and thus made part of the foundation of the short-story form. Kipling's treatment of this genre begins

with the familiar literary convention of being presented as a true story; the central character and storyteller, Jukes, was a civil engineer and thus not a man to take the trouble to invent imaginary tales. When Jukes's story begins, the motivation for his journey to the mysterious realm is supplied in a typically ambiguous gothic way: Jukes has a fever and is light-headed and hallucinatory. When he madly chases a dog into the desert, his horse stumbles and falls. When Jukes regains consciousness, he finds himself in a horseshoe-shaped crater of sand so steep that he cannot climb out. The only way out is across the river where the horseshoe opens out, but that way is guarded by an invisible sentry with a rifle and by a bed of quicksand.

Jukes discovers that he is not alone in the crater; a small band of ragged natives appear, one of whom he recognizes as a telegraph master, Gunga Dass. It is from Gunga Dass that he learns where he is—a sort of wasteland holding place where those who have been in a cataleptic trance are taken until they die in actuality. In existence for at least a century, the hidden village is legendary; no one ever escapes except by death. Thus, the unfortunates who end up there are examples of the "living dead," for even though they live, they are as good as dead and buried. It is part of Kipling's parable pattern that the unfortunates are primarily native Indians of the lower caste.

Much of the story centers on Jukes's helpless situation and his sense of humiliation that, although he is a sahib, a representative of the dominant race, in this place he is like a child completely at the mercy of the natives. Ironically, it is by means of death that Jukes discovers a way to save his life. Finding the body of another sahib who has died there before, Jukes discovers a notebook with directions for bypassing the quicksand. Although he knows that the white man was killed by Gunga Dass, he has not counted on the treachery of the Indian toward himself. Gunga Dass knocks him unconscious and leaves him there to die. Immediately thereafter, Jukes's escape, much like the escape of a character in a story by Poe, is abruptly effected when one of his servants finds him and pulls him out of his sandy trap.

On one hand, the story seems little more than a gothic adventure story of a strange journey, a dreamlike experience with no real meaning. On the other hand, the situation of the white sahib

caught between two worlds, the world of life and the world of death, and at the mercy of Gunga Dass, has symbolic significance even though its surface plot is pure action-adventure. It turns the usual Kipling story of the white man's dominance over the brown man on its head and suggests that, in the world of the living dead, it is the scavenger who survives. Jukes does not earn his escape as Gunga Dass does, but he is pulled out of the hidden valley as if he were abruptly awakened from a bad dream.

## "THE MAN WHO WOULD BE KING"

**First published:** 1888 (collected in *The Phantom 'Rickshaw, and Other Tales*, 1888)

**Type of work:** Short story

*Two white men set themselves up as rulers of a hidden country, but their own pride brings about their downfall.*

One of Kipling's most Joseph Conrad-like stories is one of his earliest pieces, "The Man Who Would Be King," which Henry James called an "extraordinary tale" and which many critics have suggested is a typical Kipling social parable about British imperialism in India. One critic, Walter Allen, calls it a "great and heroic story," but he says that Kipling evades the metaphysical issues implicit in the story. Although "The Man Who Would Be King" does not contain the philosophic generalizations of Conrad's *Heart of Darkness* (1899, serial; 1902, book), and is perhaps not as subtle a piece of symbolist fiction, it is nonetheless a coherent piece of fabular fiction carefully constructed and thematically significant.

The secret of the story is its tone; indeed, tone and style are everything in the work. The story focuses primarily on the crucial difference between a tale told by a narrator who merely reports a story and a narrator who has lived the story he tells. The first-person, primary narrator is a journalist whose job it is to report the doings of "real kings," whereas Peachey Carnehan, the inner narrator, has as his task the reporting of the events of a "pretend king." The primary narrator (Kipling) tells the story of Peachey and Daniel Davrot, which, although it is fiction, is presented as if it were reality. The second-

ary narrator (Peachey) tells a story of Peachey and Davrot in which the two characters project themselves out of the "as-if" real world of the story into the purely projected and fictional world of their adventure.

The tone of the tale reflects the journalist-narrator's bemused attitude toward the pair of unlikely heroes and his incredulity about their "idiotic adventure." "The beginning of everything," he says, is his meeting with Peachey in a railway train, where he learns that the two are posing as correspondents for the newspaper for which the narrator is indeed a real correspondent. Role-playing is an important motif in the story, for indeed Peachey and Davrot are always playing roles; they are essentially vagabonds and loafers with no real identity of their own. After the narrator returns to his office and becomes "respectable," Peachey and Davrot interrupt this respectability to tell him of their fantastic plan and to try to obtain from him a factual framework for the country where they hope to become kings. "We have come to you to know about this country, to read a book about it, and to be shown maps," says Carnehan. "We want you to tell us that we are fools and to show us your books." The mythic proportions of the two men—or rather their storybook proportions, for "mythic" is too serious a word here for the grotesque adventurers—are indicated by the narrator's amused awareness that Davrot's red beard seems to fill half the room and Carnehan's huge shoulders the other half.

The actual adventure begins with additional role-playing as Davrot pretends to be a mad priest (an ironic image that he indeed is to fulfill later) marching forward with whirligigs (playful crosses) to sell as charms to the savages. The narrator again becomes "respectable" and turns his attention to the obituaries of real kings in Europe until three years later, when Peachey returns, a "whining cripple," to confront the narrator with his story that he and Davrot have been crowned kings in Kafiristan, exclaiming, "you've been sitting here ever since—oh, Lord!"

Peachey's inserted story thus stands in contrast to the pedestrian story of the narrator's situation and is contrasted with it by its fantastic, storylike nature in which Peachey and Davrot have indeed set themselves up as fictional kings in a real country.

The storylike nature of the adventure is indicated first of all by Peachey's frequent confusing of himself with Davrot and by his frequent reference to himself in the third person:

There was a party called Peachey Taliaferro Carnehan that was with Davrot. Shall I tell you about him? He died out there in the cold. Slap from the bridge fell old Peachey, turning and twisting in the air like a penny whirligig.

Moreover, Peachey and Davrot often speak to the people Davrot calls the "lost tribe" in biblical language. The purpose of these biblical allusions is to give Peachey's tale an authoritative story framework, indeed the most basic and dignified story framework in Western culture. Davrot becomes king by moving from fighting to craft via Masonic ritual, a ritual that reaffirms Davrot's superior position and controls his followers. Since Davrot has projected himself into the role of god as king, however, and thus assumes a position in the kingdom as the fulfillment of prophecy and legend, he is bound to this particular role. It is only when he wishes to escape the preestablished role and marry a native girl that his world falls apart. When he is bitten by his frightened intended bride, the cry of the people, "Neither God nor Devil, but a man," breaks the spell and propels Davrot and Peachey back into reality again.

The fact that Peachey and Davrot are really double figures is indicated not only by Peachey's reference to himself as suffering Davrot's fate but also by the fact that, if Davrot is the ambiguous god-man, then it is Peachey who must be crucified. Kipling finds it necessary of course to make this split, for the god-man must not only die but also be resurrected. Peachey is the resurrected figure who brings the head of Davrot, still with its crown, back to tell the tale to the narrator. Peachey's final madness and death, and the mysterious disappearance of the crowned head, are the ironic fulfillment of a final escape from external reality.

It seems clear from the seriocomic tone and the parodic use of biblical story and language that what

Kipling is attempting in "The Man Who Would be King" is a burlesque version of a basic dichotomy in the nature of story itself. The narrator, who deals with real events in the world, tells a story of someone, who in turn tells a story of fantastic events in which the real world is transformed into the fabular nature of story. Davrot and Peachey project themselves into a purely story-world, but once they are accepted there, they cannot break the code of the roles that they have assumed. When they do make such an effort, the story they have created, and thus the roles they have played, become apparent as fictional roles only and crumble like a pack of cards. The man who would be a king can be a king only in the pretend world of story itself, and then only as long as story-world or story-reality is maintained. A story character cannot be human, for when he or she attempts to become real—when the character begins to take his or her story status as true reality—the story ends. It is little wonder that "The Man Who Would be King" has such a comic tone, for truly what Kipling is playing with here is not the nature of empires but the nature of story. If one wishes to read this tale as a parable of the tenuous and fictionally imposed nature of British imperialism, then such a reading is possible, but only because the story is primarily about the essentially tenuous nature of the fable world itself.

### "MRS. BATHURST"

**First published:** 1904 (collected in *Traffics and Discoveries*, 1904)

**Type of work:** Short story

*Four men are baffled by the relationship between a sailor who deserts the navy and the widowed keeper of a New Zealand hotel who follows him to England.*

"Mrs. Bathurst" is one of the most cryptic and puzzling of all Kipling's stories. Part of what makes the story such a mystery is the method by which it is told, for it is presented almost completely as a dialogue among four men. Furthermore, the dialogue is so clipped and cryptic that it is often difficult to follow. The principal characters are Petty Officer Pycroft, his friend Sergeant Pritchard of

the marines, the narrator, and his friend Inspector Hooper of the South African railways. Pyecroft and Pritchard tell the other two men the story about Warrant Officer Vickery, who deserted the service with only eighteen months left before his discharge, and his mysterious relationship with Mrs. Bathurst, a young widow who managed a hotel in New Zealand.

The central story of Vickery and Mrs. Bathurst is prefaced by a brief account about the officer Boy Niven, who lured a small group of sailors and marines into the woods for no other reason than for personal publicity. At the end of this inconclusive and seemingly irrelevant little tale, the conversation moves to Vickery and his mysterious desertion so close to his discharge. The first ambiguous reference to Vickery is to his nickname "Click," in reference to the four false teeth on his lower left jaw that were not set properly and thus made a clicking sound when he talked fast. At the reference to the false teeth, Inspector Hooper is meaningfully described with his hand in his waistcoat pocket, although at this point it is certainly not clear why Hooper should have Vickery's false teeth on his person.

When the topic of Mrs. Bathurst is introduced, most of the conversation is between Pyecroft, who is telling the tale, and Pritchard, who knows the lady and vouches for her kindness and integrity. He cannot believe that she is the cause of a married man and father like Vickery deserting the service. In a key phrase in the story, however, Hooper, after hearing of Mrs. Bathurst's ladylike behavior, says, "I don't see her somehow." To see Mrs. Bathurst becomes the challenge of the story. Even though both Pyecroft and Pritchard say they have seen her only once or twice, they can remember her vividly. Pyecroft says, "That's the secret. 'Tisn't beauty, so to speak, nor good talk necessarily. It's just It. Some women'll stay in a man's memory if they once walk down a street."

Kipling's puzzling story is, in some ways, about this kind of fascination, for all four of the men can remember having met one or two women of that nature, and all agree that if a man gets struck with that kind of woman, he goes crazy. What gives the story its particular turn of the screw is the "dark and bloody mystery" of Vickery's own vision of Mrs. Bathurst. Pyecroft tells of Vickery's insisting that he accompany him to a showing of an early motion

picture, the cinematograph, in Cape Town, South Africa. Pyecroft knows that something strange is involved, for he says the look of Vickery's face reminded him of "those things in bottles in those herbalistic shops at Plymouth—preserved in spirits of wine. White an' crumply things—previous to birth as you might say."

What makes Pyecroft's description of the experience at the cinematograph so crucial to the story is the particular nature of early audience response to the new film technology. While watching a film, early viewers often mistook it momentarily for reality. In the particular film scene that Vickery wants Pyecroft to see, the London Mail train is shown arriving at the station and the passengers getting out "just like life." As they walk toward the camera, and thus seemingly toward the film viewers, they walk right out of the picture. Pyecroft sees Mrs. Bathurst come straight toward them, looking at them in a blind way without seeing and then melting out of the picture "like a shadow jumpin' over a candle." Vickery says, "it's the woman herself," and he urges Pyecroft to come with him to see her again the next night. For five consecutive nights, they go to see the film to watch Mrs. Bathurst make her forty-five-second walk toward them with that blind look in her eyes.

Although Pyecroft declares that Vickery is insane, he says that Vickery told him that Mrs. Bathurst was in England looking for him. Vickery tells Pyecroft that, whereas he only had to watch, "I'm it." Moreover, he tells Pyecroft to remember that he is not a murderer, that his wife died in childbirth six weeks after he left England on his last voyage. When the listeners to Pyecroft's story ask for the rest of it, he replies, "the rest is silence." All that is known for sure is that Vickery deserted and disappeared.

The story ends with the men considering the possible meaning of Vickery's experience. Hooper says, "I wonder what it was," and Pyecroft replies, "I've made my 'ead ache in that direction many a long night." Once again, when Pyecroft mentions hearing Vickery's clicking teeth, Hooper's hand goes significantly to his waistcoat pocket. It is Hooper who ends the story with a grisly little tale of his own about two tramps he saw standing by the railway in the interior. Having been struck by lightning, the two were burned to charcoal and fell to bits when Hooper touched them. The man who

was standing up had the false teeth, says Hooper; the other was squatting down and watching him. Both of them fell to pieces when he touched them, Hooper explains. The story ends with Pyecroft saying that after having seen Vickery's face for five consecutive nights, he thanks God that he is dead.

Critics have long puzzled over this story, complaining that Kipling cut too much out of it and thus left it stripped of any explanatory detail. Although one knows that the standing pile of ashes is Vickery, one can only guess that the other one is Mrs. Bathurst herself, since no other character has been introduced in the story. "Mrs. Bathurst" focuses on the unexplainable mystery of human fascination, but it is the mystery of the cinema that serves as the central metaphor, for as Vickery watches the film night after night, he is in that curious situation experienced by all filmgoers of being a viewer who cannot himself be seen. Moreover, as he tells Pyecroft, he is not merely a viewer but is the missing character in the film, for he insists that Mrs. Bathurst has gone to England to find him. Instead of playing a told story over and over again, as is the usual short-story convention, the film creates the illusion of the actual event being repeated. What is so unbearable to Vickery is that Mrs. Bathurst's search for him seems to be repeated over and over again. Although it obviously took place in the past, every time he sees it, it seems to be taking place in the present. Making the story depend on dialogue rather than on narration, Kipling not only makes the cinema scene the central metaphor of the story but also makes cinema technique the means by which the story is told.

## SUMMARY

Rudyard Kipling was one of the most popular British authors at the start of the twentieth century, the most widely read author since Charles Dickens. His position as an artist, however, is not as assured as his popular success. He has been criticized for his jingoistic imperialism that smacks of later fascism, and he has been soundly criticized for being more concerned with fictional technique than with the human emotions of his characters. He has been compared, perhaps unfairly, with the great writer Joseph Conrad; both men were writing at roughly the same time. Although there are surface similarities between the two, in that both focus on strange and exotic realms either at sea or on other continents, Conrad, with his ambiguities and subtleties and his profound exploration of human evil and isolation, seems a true symbolist genius, whereas Kipling often seems merely a good storyteller.

To take a negative approach to the work of Kipling because he is a storyteller rather than a philosophic novelist, however, is to be guilty of the pervasive bias against short fiction as not being as important as the novel. A large number of Kipling's stories, such as "Without Benefit of Clergy," "Mary Postgate," "The Gardener," and "Baa Baa, Black Sheep," as well as "Mrs. Bathurst" and "The Man Who Would Be King," are significant transition works that signal the beginnings of the modern short story.

*Poems, 1886-1929*, 1929

## DISCUSSION TOPICS

- Has Rudyard Kipling's reputation as a "British Empire" man damaged his literary reputation?
- Was Kipling too concerned with technique in his fiction?
- Does it make sense to criticize "The Man Who Would Be King" because it lacks elements of Joseph Conrad's *Heart of Darkness* (1899, serial; 1902, book)?
- Does Kipling's verse deserve more attention than it now gets?
- Does Kipling have unusual insight into India and its people?

# HEINRICH VON KLEIST

**Born:** Frankfurt-on-the-Oder, Prussia (now in Germany)  
October 18, 1777

**Died:** Wannsee bei Potsdam, Prussia (now in Germany)  
November 21, 1811

*Kleist ranks as one of the best novella writers of the modern period. His plays, which are considered romantic in tenor, and his short fiction, which combines historical realism with fantastic elements, emphasize the power of human passion and focus on psychological conflict, as well as on conflict between the individual and society.*

## BIOGRAPHY

Heinrich von Kleist (klist) was born in 1777 into an aristocratic family of Prussian army officers. When he entered the army himself at fourteen years of age, after attending a French Calvinist school in Berlin, his mother and father had already died. He saw action in the Coalition Wars in 1794 and was promoted before resigning. His ambition led him to study disparate subjects at universities in Frankfurt-on-the-Oder and Königsberg, to travel widely, to live a romantic life in the Swiss countryside, and even to try to enlist in Napoleon I's army in 1803. That last unsuccessful adventure preceded a mental and physical breakdown from which he took six months to recover. In view of his background and the turbulence of this era of the French Revolution and Napoleonic Wars, it is understandable that military battle figures prominently in Kleist's works. War is central to the plots of three of his plays; two novellas also deal with revolution or rebellion.

The existential crisis Kleist experienced in 1801, often called the Kant crisis, caused him to despair of ever knowing the truth through study. Desiring to become an author, he stopped looking for civil service jobs and broke his engagement to a noblewoman. Instead, his deep attachments to women centered on Marie von Kleist, a relative by marriage, and on Ulrike, his half sister, both of whom came to his aid when he was ill or in financial trouble.

While he embraced Jean-Jacques Rousseau's concepts of individual freedom, the centrality of

emotion, and the goodness of nature, Kleist turned against Napoleon I after Napoleon's victory against Prussia in 1806. Kleist went on to write patriotic poetry and essays for archconservative newspapers. Arrested mistakenly as a spy in 1807, Kleist spent six months in French prison. His play *Prinz Friedrich von Homburg* (pr., pb. 1821; *The Prince of Homburg*, 1875), celebrating Prussian military history, is in part a reaction to Napoleon's victory.

Although he had written some plays before 1806, his most intense literary activity began afterward. Fragments of his plays and novellas appeared in his literary journal *Phoebus*. All eight of his stories were completed and published in this period. Some of his plays were staged with limited success. While he lived, Kleist's ambition to win the highest literary laurels fell tragically short, but today his reputation as a major writer is secure.

Kleist's career was dogged by prolonged illnesses, financial straits, and lack of success. He often appealed to relatives for money and was faulted for quarreling with collaborators. Between 1804 and 1806 he was bedridden so often that he finally asked to be released from his hard-won civil service position for health reasons. Financial troubles ended his literary magazine around the same time that his comedy, *Der zerbrochne Krug* (pr. 1808, pb. 1811; *The Broken Jug*, 1930), failed in its premier performance, which greatly demoralized him. In the last year of his life, money worries overwhelmed him. He lost his pension and was pressed by debtors. Censorship ended the short but successful run of the last newspaper Kleist edited. As a

final resort after failing to obtain other writing jobs, he had to appeal to the king to obtain a military post. However, wherever he turned, he could not find the money to buy the required uniform. After a short acquaintance with a woman dying of cancer, Kleist shot both her and himself. His tragic suicide helped bring him to the attention of the world and made him a Romantic icon of suffering, misunderstood genius.

### ANALYSIS

Kleist's first and last literary works were plays. While he usually composed in blank verse, he experimented with an amazing variety of forms. After agonizing difficulties with his first two dramatic efforts, he developed a polished, self-confident technique. He turned out classical five-act plays as well as unorthodox one-act plays, covered mythological as well as patriotic historical subjects, and wrote a village farce as well as a romantic comedy. As an example of his dramatic range, one can contrast his *Amphitryon* (pb. 1807, pr. 1899; English translation, 1962), which imitates the French classical drama of Molière, with his *Penthesilea* (pb. 1808, pr. 1876; English translation, 1959), which is decidedly anti-classical in its form, as well as in its depiction of character. Like William Shakespeare's comedies, Kleist's include serious moments that sometimes border on the tragic. The fact that metaphysical debate and the use of trials or formal interrogations are characteristic of Kleist's plays points to an important theme in his work: the difficulty of reconciling divergent viewpoints and of discovering the truth.

Since the early nineteenth century, Kleist has been considered a master of the novella form he developed from Giovanni Boccaccio's model. Kleist completed only eight of these stories because he began writing them only in the last five years of his life. As is typical of the novella, description is kept to a minimum, character is revealed by action, and events constrain choices, as well as drive the fast-paced narrative forward. Tightly structured with complex sentences, Kleist's stories report much of the dialogue in indirect speech, which can create ironic distance. Kleist is famous for his dramatic openings, with their frequent riddles, as well as his unexpected and sometimes inconclusive endings. The modern, skeptical narrative stance presents a choice of viewpoints for interpreting

events. Despite ample use of historical events and characters, Kleist's stories also contain fantastic elements that can seem hard to reconcile with the realistic details and the sober, objective style of narration.

Through his conscious use of polarities in morality, character, and fate, Kleist externalizes intractable conflict and hones the paradoxes and ironies that he frequently employs. Whereas the sparks of passion fly as the opposites touch, the emotive force is deflected either into humor or into despair as the polarities increasingly diverge or undercut one another. Appearance contradicts reality and a protagonist's needs and desires seem impossible to achieve in the given society or under the particular government. Unlike German Romantics, who share his focus on subjectivity and the emotions, Kleist shines a dubious light on religion and can be relentlessly logical. His works have a great deal to say about the theory and practice of war, as well as about the pitfalls of legal systems and the administration of justice. Kleist provides as rich a field for psychological analyses as he does for social criticism.

Language skepticism pervades Kleist's works. It is a sign of his critique of Enlightenment rationality; however, his works also show the perils of extreme passion. Typically, characters fall silent for long periods or misunderstand what is said. The profusion of dashes in his dialogues marks the unfinished utterances of the characters. Bodily signals, such as blushing, sudden pallor, or fainting, provide better cues to the internal situation of the character than much of what they say. Kleist endows hand gestures, kneeling, and head movements with symbolic meaning and places them at turning points or scenes of extreme emotive power.

The strength and complexity of Kleist's women figures, such as Penthesilea and the Marquise of O——, continue to attract readers and playgoers; twentieth century psychoanalytic and feminist criticism has been particularly active in interpreting his work. Decisive and resourceful in love, the women characters also sometimes experience a desire for fame, participate in political action, or give eloquent voice to existential conflicts. This set of motivations and problems was usually seen only in male protagonists during the nineteenth century.

Prominent themes in Kleist's works include er-

rors of judgment, avoidance of facing up to reality, and a longing for death that is quasi-Romantic. Jumping to conclusions or being honestly mistaken about facts, rather than being tricked, causes his characters to generate the opposite of what they intend. Since Kleist's tragic heroes refuse to accept reality, they might be admired as idealists whose pursuit of the impossible inspires the audience, whereas the comic heroes of this type provoke laughter. It is a mark of Kleist's talent that a character in a given situation can be taken comically, or tragically, or both ways simultaneously. Although perhaps a consequence of failure, the death wish can be read alternately as an implied fulfillment, or as a move to preserve a perfection that has been achieved but is in danger of being compromised by the inexorable march of time.

## PENTHESILEA

**First published:** 1808, first produced, 1876  
(English translation, 1959)

**Type of work:** Play

*Having undermined her people's military campaign against the Greeks, Queen Penthesilea kills Achilles, the man she loves, in a mad rage, and then, dying, severs her ties with the Amazons.*

Rejected by past critics for its sadomasochistic extremes and for the alleged insanity of its protagonist, *Penthesilea* is valued today for its exploration of gender roles and the psychology of eroticism and violence. There is more disagreement on how to understand this play than for any of Kleist's other works. Since so much of the text reports offstage action and the battles are as chaotic as the soul of the protagonist, *Penthesilea* is seldom produced. The plot runs counter to classical legends, where Amazons never fall in love and are always defeated by male heroes.

In the opening scenes, Queen Penthesilea and Achilles feel mutual attraction, yet desire to subdue one another in battle. The Amazons and the Greeks view these desires as contrary to reason and custom. After their first armed contest, which is inconclusive, Penthesilea and Achilles announce

plans to pursue one another and therefore to contravene the real goals of each army. While some Amazons want to continue the fight to win more captives, others argue that an enamored Penthesilea is not fit to wage war and risks losing the captives they have already won.

The High Priestess's prediction that Penthesilea will be defeated by her inner foe, rather than by Achilles, proves true. When Penthesilea lies at Achilles' feet after their second battle, her Amazon friend convinces him to postpone telling the queen of her defeat. Hearing the false report that Achilles is now her prisoner, an ecstatic Penthesilea orders the victory hymn.

A long dialogue ensues in which Achilles inquires about the history of the Amazons. Their ancestors had prayed for revenge to the war god Mars after they were forced into marriage by the murders of their menfolk. Their first queen had died ripping away one breast to prove to Mars that the women could wield a bow. To reproduce, warrior virgins bring the men they have captured in battle home to a love feast. After a month of orgies, the men are loaded with gifts and dismissed. Though Achilles finds these customs unnatural, he is now determined to make Penthesilea his queen. As the Greeks approach and he orders Penthesilea to go with them, she learns that Achilles has conquered her.

While the Greeks drag Achilles away against his will, the Amazons rescue their queen. This angers Penthesilea, who feels she belongs to the victor. However, on learning that by saving her the Amazons have lost all their captives, she blushes with shame. When a challenge to single combat arrives from Achilles, Penthesilea is outraged, believing this proves that he does not love her. Achilles, confident of the queen's love, tells his men he will only pretend to fight to give her an easy victory.

Despite attempts of the Amazons to prevent it, Penthesilea sets out with dogs and elephants against Achilles. After her arrow fells the unarmed

hero, she joins the animals in a feeding frenzy on his corpse. The Amazons are appalled at Penthesilea's brutality. Roused from her stupor, the queen, elated to have defeated Achilles, feels ripe for death, yet she objects to the mutilation of Achilles' corpse. Dumbfounded to hear that she is the perpetrator, she excuses herself by saying that in love there is little difference between kissing and biting. After renouncing Amazon law, she follows Achilles by dying of remorse for her deed.

## THE MARQUISE OF O——

**First published:** *Die Marquise von O——*,  
1808 (English translation, 1960)

**Type of work:** Novella

*An unexpected pregnancy, career obligations, and the paradox of reputation as opposed to actual virtue complicate the life of a widowed marquise and the Russian count who wants to marry her.*

Although a comedy with several amusing scenes, this tale illustrates serious themes in Kleist's works: the crisis of trust and the inaccessibility of vital knowledge. The riddle of rape, its moral implications, and the father-daughter relationship in this story have been controversial. Like other Kleist narratives, this one opens with an enigma: a newspaper announcement in which a woman asks that her child's father, who impregnated her without her knowledge, make himself known so that she can marry him. A long flashback follows to explain how the marquise came to write this.

The marquise's calm life with her family was rudely interrupted when Russians bombarded the citadel where they lived. Close to being sexually assaulted by enemy soldiers, she was rescued by a Russian count, who brought the fainting woman to a safe place. The Russian army left the next morning, denying the marquise a chance to thank her savior in person.

The count suddenly reappears twice to court the marquise. The first is a surprise because he is believed to have been killed in battle; the second is also a surprise because he enters her garden surreptitiously. His respectful, polite demeanor re-

mains in tension with expressions of emotion, such as blushing and abrupt gestures. The demands of his military career and social conventions constantly thwart his desire to wed the marquise.

Despite her decision not to remarry on principle, there are indications that the marquise feels attracted to the count. Her equilibrium is upset not only by his wooing but also by her own fainting and nausea spells reminiscent of pregnancy. After hearing from a doctor and a midwife that she is pregnant, she is first insulted and then desperate. Catapulted into crisis, she suffers because her body's condition contradicts her innocent conscience, because her mother condemns her as a deceitful liar, and because her father disowns her and demands she vacate the house.

After this nadir, she begins to be active and angry rather than suffering and depressed. Insisting that her children accompany her and against her father's command, she moves into her late husband's estate and begins fixing it up. She resolves to cherish the coming child, though she is bothered that in the world's eyes it will be illegitimate. At this point she pens the announcement in the paper.

The count's next two proposals are angrily rebuked by the marquise, who reviles him and runs away. He had renewed his suit after hearing about her pregnancy and her parents disowning her; after that, he turns up in answer to the newspaper advertisement.

Before the unknown father is scheduled to appear, the marquise is reconciled with her parents. Visiting to test her innocence with a ruse, her mother pretends she knows who the father is to see how her daughter reacts. After the marquise passes this test, her mother tearfully reaffirms her faith in the marquise's innocence. Her mother arranges the reconciliation with her father, the commandant, a scene that has stimulated lots of discussion because of the prolonged passionate kissing between father and daughter.

When the day arrives to meet the baby's father,

all are astonished that the count walks in. Lambasting him as a devil, the marquise takes to her bed with a fever. Her parents' pleas for her to marry the count fall on deaf ears. Only after he promises to fulfill all the duties of a husband, without enjoying any of his rights, does the marquise agree to this marriage-in-form-only. The count lives apart from her while the baby is born and afterward for about a year. Then the marquise and he joyfully celebrate a second, real marriage.

## MICHAEL KOHLHAAS

**First published:** 1810 (English translation, 1844)

**Type of work:** Novella

*A horse dealer's attempts to obtain justice, which are frustrated by misunderstandings, government corruption, and popular pressure, finally bear fruit, though it costs him his life.*

It was this novella that originally established Kleist as a major writer. Its focus is a sober and determined Michael Kohlhaas, who struggles to pursue justice in a thicket of complicating circumstances and conflicting jurisdictions of power. The historical chronicle that Kleist used includes the unfair confiscation of Kohlhaas's two horses, the difficulties Kohlhaas has in obtaining legal redress, his meeting with Martin Luther, and the attempt to burn down Wittenberg. Many other realistic details are anchored in sixteenth century German politics and feudal society. The enigma the story poses is: How can a decent, honest man become a robber and a murderer?

The first segment of the story shows how an innocent upstanding citizen, like Kohlhaas, is susceptible to unfair treatment by noblemen, despite his circumspection and patience. Junker von Tronka acts arbitrarily and cruelly by abusing Kohlhaas's horses and severely beating Kohlhaas's loyal groom. Kohlhaas demands justice publicly because many others have, like him, suffered under this junker's misrule. Getting no satisfaction in the Saxon courts, Kohlhaas appeals to the elector of Brandenburg. The first case is dismissed because of the intervention of powerful aristocrats; the second is handled by a chancellor, who, since he was

related to the junker by marriage, takes no action. In both instances, Kohlhaas is advised not to pursue this issue any further in the courts.

In the next segment, an increasingly angry Kohlhaas decides that his rights are a matter of existential importance: Although the world is in disarray, his quest gives his life order and meaning. The death of his wife while delivering a petition on his behalf deflects his aim towards vengeance. Resorting to illegal means, he burns the Tronka castle to the ground, calls on men to take up arms against Tronka, and instructs his private army to burn down parts of Wittenberg and Leipzig because they do not surrender the junker. Kohlhaas claims he is waging a just war.

Violence escalates, as the popular mood begins to favor Kohlhaas, and his confederates defeat the forces sent out to capture him. Luther, who issues an edict damning Kohlhaas, insists that the blame lies not with the rulers of Brandenburg and Saxony but rather with lowly functionaries. In a personal meeting, however, Luther admits there is justice in Kohlhaas's demands. Although the elector accepts Luther's advice to grant Kohlhaas amnesty, the latter rejects Luther's plea to forgive his enemies.

After disbanding his men, Kohlhaas goes to Dresden in Saxony, where his case at first gets a sympathetic hearing. However, a decline in popular sympathy for his cause, combined with the Tronka family's machinations, result in him being condemned to death. Discovering a miscarriage of justice by one of his ministers, the elector of Brandenburg requires that Kohlhaas be extradited from Dresden to Berlin. The final leg of the story delays the action while a hunting party of the elector of Saxony is described, and the fantastic element of a mysterious gypsy resembling Kohlhaas's late wife is introduced. Kohlhaas eventually wins his restitution case in the Brandenburg court, which gives him great satisfaction; but, paradoxically, he loses the imperial case, which means he is publicly executed for breaking the peace of the empire.

## SUMMARY

Given the fragile order in society and uncertainty of human knowledge in Heinrich von Kleist's works, neither consistent rational plans nor passionate abandon, neither hesitation nor single-minded pursuit, are guaranteed to succeed. How-

ever, Kleist seems to admire those who risk all and who disregard boundaries set up by societies or governments. Trust, forgiveness, and understanding can allay disaster in Kleist's comedies. In the epic struggle between the unusual individual hero and the world, moral judgments are problematic, and subjective experience gives the key to understanding.

## DISCUSSION TOPICS

- What gives rise to conflicts between the individual and the state in *Michael Kohlhaas* and *Penthesilea*? What, if any, political criticism is implied?
- What elements in Heinrich von Kleist's works point to a moral ambiguity that makes it difficult to assess particular characters?
- How do gestures or other body language convey feelings that are not directly expressed by Kleist's characters? To what themes do specific gestures point?
- In what ways do Kleist's characters transcend traditional gender roles or appear to be constrained by them? How does this affect relationships between men and women?
- To what extent does unexpected information at the close of a novella or play by Kleist provide new perspectives on the main characters?
- How does Kleist's irony create distance or intensify tragic or comic moments?

## JOY KOGAWA

**Born:** Vancouver, British Columbia, Canada  
June 6, 1935

*A novelist and poet, Kogawa has preeminently expressed the trauma and betrayal experienced by Japanese Canadians because of their forced internment during World War II. She has become a powerful voice for peace and the healing power of community.*

### BIOGRAPHY

Joy Kogawa (koh-gah-wah) was born Joy Nozomie Nakayama in Vancouver, British Columbia, in 1935. Gordon Goichi Nakayama, her father, was an Anglican clergyman; Lois Masui Yao Nakayama, her mother, was a musician and kindergarten teacher. Kogawa's very early childhood in Vancouver was secure and full of wonder; she later spoke of loving the fun of the city, with Christmas lights and escalators, and being surrounded by a warm family circle. A gathering danger, however, was the fact that her parents were second-generation Japanese immigrants. Although loyal Canadian citizens, like all Japanese Canadians on the country's West Coast, they were subject to laws hastily enacted after the attack on Pearl Harbor, which ordered all residents "of Japanese ancestry" to be relocated inland. In 1942, some 21,000 people, most of them Canadian citizens, were forced to leave their homes near the Pacific coast. Their property was confiscated, many men were sent to labor camps, and the rest, including whole families, were resettled in ghost towns in interior British Columbia.

The Nakayama family ended up in Slocan, an almost deserted mining town amid the wooded mountains of inland British Columbia. They spent the World War II years there, living in a shack with newspaper walls. Kogawa attended school there and read everything she could find, although her

choices in this ghost town were limited. The Slocan internees did retain features of community, however. Enough Japanese Canadians were living there to start stores and a school and to maintain some traditional customs.

When the war ended in 1945, the Canadian government inexplicably refused to let Japanese Canadians return to their West Coast homes. Instead, they were offered two choices: to move farther east to the prairies or to be "repatriated" to Japan. Kogawa and her family settled in Coaldale, Alberta, where their living conditions were even more primitive than before. Kogawa completed high school there and spent one year studying at the University of Alberta. She then took a job teaching elementary school in Coaldale. In 1955, she moved to Toronto and studied music at the Anglican Women's Training College and Conservatory of Music.

She finally returned to Vancouver in 1956 and enrolled at a music academy in that city. It was there that she met David Kogawa, whom she married in 1957. The couple had two children: Gordon, born in 1957, and Deidre, born in 1959. The Kogawas moved to Toronto in 1957 but lived in various Canadian cities, including Vancouver, Saskatoon, and Ottawa, before divorcing in 1968. During the 1967-1968 school year, Joy Kogawa returned to school, studying at the University of Saskatchewan.

Kogawa started writing in 1957. Her first published short story, "Are There Any Shoes in Heaven?" appeared in 1964. It was about a little boy and conveyed Kogawa's own unease with the prairie landscape and longing for the mountains. From that time on she mainly considered herself a

freelance writer, although she did hold some paid positions which involved writing. From 1974 through 1976, she was a staff writer in the office of the prime minister in Ottawa. In 1978, she served as writer-in-residence at the University of Ottawa.

Early on, she turned her major focus from stories to poetry. She published her first poetry collection, *The Splintered Moon*, in 1967, followed by *A Choice of Dreams* (1974), *Jericho Road* (1977), and *Six Poems* (1978). Although each volume's major focus varied, each combined evocative images from dreams, memories, and personal and historical events with a lyric poet's voice.

In 1979, Kogawa settled permanently in Toronto. The shadow of her family's World War II internal exile emerged in the writing of a semiautobiographical novel, *Obasan*, first published in 1981. She describes herself as writing it "unconsciously" as the story poured out of her own memories and her poet's craft.

The novel's first printing of three thousand copies sold out immediately, and it went on to win the Books in Canada First Novel Award for 1981 and many subsequent awards. The first fiction to deal with the Japanese Canadians' internment, it remains unequalled for its artistry and multileveled treatment of the experience. *Obasan* later became part of the required curriculum for Canadian secondary schools.

Its publication both coincided with and invigorated the Japanese Canadian redress movement, which in 1988 eventually won an apology and reparations of \$21,000 per person from the Canadian government. Against her original intention, Kogawa was drawn into participation in this movement. Her novel *Itsuka*, published in 1991, reflects this political and inner struggle, as it takes *Obasan*'s protagonist to Toronto, where she joins the redress movement. A more straightforward narrative, this novel has not received the immense critical attention of its predecessor.

Kogawa's interests as an author and an activist have continued to expand to other issues of justice, cross-cultural identity, and human rights, especially women's rights. Her 1995 novel, *The Rain Ascends*, deals with a daughter's reaction to discovery of her clergyman father's sexual abuse of boys. The poetry collection *A Song of Lilith* (2000) reimagines the mythical figure of Lilith in poetic form and from a feminist perspective; another po-

etry collection, *A Garden of Anchors*, appeared in 2003.

The Land Conservancy of British Columbia has spearheaded a campaign to save the Vancouver house where Kogawa spent her earliest childhood. She has been awarded the Order of Canada and the Order of British Columbia.

## ANALYSIS

Joy Kogawa's dual cultural heritage as a Japanese Canadian has given her an extraordinarily rich array of images and concerns that inform her writing. *Obasan*, her most acclaimed work, is threaded with evocative images. Symbolic objects loom large in the memories and dreams of the narrator, Naomi, as well as in the events of her life. They almost always have other levels of meaning beyond the simple chain of cause and effect that powers a novel's narrative.

Among the novel's most persistent motifs is that of stone. "Stone" is mentioned at least three times in the short prose poem that introduces the novel; its silence and density hides secrets, and it represents a spell of unknowing cast over Naomi's life. Stone also appears at the book's end in a reconciliation with Naomi's past and a subliminal connection with her dead mother's spirit: "the moon is a pure white stone. . . . The reflection is rippling in the river—water and stone dancing."

In the body of the story, stone images appear many other times, usually as an emblem of silence and passivity. Even Uncle Isamu's "stone bread," so hard it is almost inedible, is baked in silent protest against losing his real vocation, boat-building. Yet underlying the stone-as-silence metaphor is another subtext—the tradition of the Japanese rock garden. Such stone gardens create serenity, beauty, and coherence out of the most unlikely materials. As Naomi re-creates her family's ordeal by memory and discovery, a similar pattern emerges out of the cold, unpromising Canadian soil.

Also significant is the opposition of silence and speech woven throughout the novel. In Naomi's life there is silence about the important things. Japanese culture views silence as a positive quality, especially for women; silence holds overtones of attentiveness, discretion, and the unasked-for meeting of needs. *Obasan*, Naomi's aunt, has this virtue. It is not that she does not talk at all; rather, she does not speak of anything important in their lives. Her

comments are a sort of undecipherable shorthand to her thoughts.

Silence can protect when things are too dangerous or painful to speak about. Yet when silence masks the events of one's life, it can also prevent healing or growth. Naomi's other aunt, Emily, is a "word warrior" who prizes speech. Her research, letters, and petitions, she says, are necessary; without work such as hers, facts will never be revealed and suffering can never be redeemed. Naomi's natural inclination is to silence, but before the novel ends, she realizes the value in both approaches. Without the "telling," she could never know her mother's fate or accept the fact of her eternal absence.

Kogawa's own journey as a writer and public figure parallels Naomi's. She speaks of her writing as a "tool for the journey." If speech is necessary for justice to be done, her fiction and poetry are a good, indirect way to use it. They encompass some of the indirection that served *Obasan* so well.

The themes found in *Obasan* inform Kogawa's other works as well: bigotry and its poisonous fruits, personal and national identity, justice, the maternal bond and its jeopardy, memory, and silence. Her other works of fiction venture into new subject areas, but each shows a multileveled awareness at odds with the simple black and white of issues advocacy. In *Itsuka*, even after Naomi "goes political," there is still conflict between Japanese Canadians who want to forget the past and those who keep fighting. *The Rain Ascends* shows a daughter's dilemma, when she discovers that her father, a "good man," is also a child molester.

Kogawa's poetry foreshadows most of the themes of her fiction, but also includes many lamentations and realizations on identity and marriage. Especially noteworthy are the poems written after a 1969 visit to Japan and published in *A Choice of Dreams*. Hiroshima, ancestors' graves, and her mother's girlhood revealed in items saved in a trunk are all subjects that speak poignantly of the author's rich dual heritage and offer readers a window into it.

## OBASAN

**First published:** 1981

**Type of work:** Novel

*A little girl, torn from her parents by the Canadian government's dispersal of citizens of Japanese ancestry during World War II, suffers privation and prejudice.*

Five-year-old Naomi Nakane's secure life in her Vancouver home is shattered by a series of events far beyond her control. First, a neighbor lures her into an episode of abuse, leaving her with a guilty heart. Then her mother leaves for Japan to help nurse an ailing grandmother. Her Aunt Emily comes to visit, and Naomi overhears frantic, whispered conversations, which she does not understand. The culmination comes when Naomi, her older brother Stephen, and their Aunt Aya (Obasan of the title) are sent to live in Slocan, a near-deserted mining town in the mountains of interior British Columbia. Naomi's father does not go with them; he is sent to a work camp.

Their assigned home is a sagging, two-room log cabin on the edge of the woods. It is crowded and primitive, even more crowded when an aged aunt and Obasan's husband, Isamu, arrive, but Obasan's and Uncle's efforts soon make it livable. The family group settles in to live there for an unknown duration.

Most of the adults in Slocan have suffered the forced loss of their property, homes, and occupations, but even so a community emerges. Naomi and Stephen do not have a school, except for Sunday School, until May, 1943. Stephen, however, has his music, and Obasan keeps Naomi busy making scrapbooks of the royal family. Naomi has a close brush with death when she jumps off a log raft into a murky lake. Rescued by Rough Lock Bill, a local resident, she ends up in the hospital but learns that not all white Canadians are like her scary Vancouver neighbor.

When the war is over, there is hope of returning to Vancouver. Unfortunately, it is not to be. Naomi's father comes for a short visit. He is greeted joyously, but obviously his health is precarious. When the family is removed once again, this time to work in the sugar beet fields of Alberta, he is hospitalized with tuberculosis. Naomi never sees him again. Nor is there ever any word from her absent mother.

Life and work in the beet fields are even more miserable than life in Slokan. The family's house is a battered one-room chicken coop full of cracks and insects. The work is dirty, exhausting, and dehumanizing. There is no time or energy for anything but working, eating, and sleeping. Later, Naomi explains "I cannot tell about this time, Aunt Emily. The body cannot tell." Silence and memory loss is necessary here for self-preservation.

Still, school offers some escape for the children. Stephen throws his whole heart into his music, distancing himself from everything Japanese as best he can. Once out of high school, he goes east to a brilliant musical career that has no room for his family or heritage. Naomi becomes a quiet, emotionally repressed schoolteacher in a town a few hours' drive away from Granton, where Obasan and Uncle, now in their eighties, still live.

Framing this tale is Naomi's adult journey, wrapped around it as if sheltering a secret. The novel opens with Naomi and Uncle walking on a coulee, a vast expanse of grass that they visit once a year. Naomi thinks Uncle Isamu likes to go there because it reminds him of the sea, which he loved. One month after this visit, Naomi receives word that her uncle has died. She drives to Granton and tries to console her aunt, who seems shell-shocked. Obasan keeps saying to herself, "Too old" and "Everyday someone dies," coded mantras reminiscent of the cryptic sayings that she once used to turn away the child Naomi's uncomfortable questions.

However, there is a package of old documents among Obasan's many belongings, and as Naomi looks at them for the first time, memories begin to unfurl. It takes more than one hundred pages before the "main story" of the internment years begins. Meanwhile, Aunt Emily's letters and clippings reveal much about the rationale behind the internment policy and its devastating effect on families and individuals.

At the end of the internment narrative, it seems

the worst has been revealed, but there is more. From an old letter written by Grandma Kato, her maternal grandmother, Naomi learns about their fate. Her mother and grandmother had gone to Nagasaki to help care for a cousin's two orphaned children on that fateful day of August 9, 1945, when the atomic bomb blasted the city. Both were grievously injured, but they survived, at least for several years. Naomi's mother was so ashamed of her disfigurement that she begged Obasan, Uncle, and Aunt Emily not to tell "for the sake of the children." They kept their silence, even after Naomi's mother died in 1949.

With the worst secret revealed, Naomi is now free to begin the long process of reconciliation with her past. Now understanding Uncle's agitation the first time they went to the levee—it was just after receiving Grandma Kato's letter—she returns there in the predawn quiet. She lets her grief and emptiness play out and listens for "the song that is left," the beginning of healing.

## JERICHO ROAD

**First published:** 1977

**Type of work:** Poetry

*As on the biblical Jericho Road, the setting of the Good Samaritan parable, the issues of justice and mercy are illuminated through vignettes and imagery in this collection of poetry.*

The collection's title poem is short but cutting, evoking the power of words to hurt the vulnerable, but also the ambiguous function of silence. The linking of a silent reply with a donkey image softens the sharpness while underlining the biblical connection.

The collection is evenly divided between two sections: "Poems for My Enemies" and "The Wedlocked." At the end, a stand-alone piece, "Poem for Wednesday," is a long cry of anticipated grief.

The identities of the "enemies" are never made quite clear. Is Kogawa referring to the nameless old man in the library, subject of the poem "Old Man in the Library," who is struggling to turn his newspaper pages? Is she referring to orange-haired old woman in the poem "Orange Hair," whose totter-

ing across the beach makes others' eyes seek refuge in a book?

Perhaps she is. Certainly, age is a felt enemy here, along with the demanding serpent of success ("The Success Ladder") and even insomnia, compared to a procession of bugs swarming over the body ("Or Poor Coordination"). "Office Toads" evokes the rarity of trust in the workplace. "Faucet Sounds" envisions marital discord in terms of dripping faucets and plumbing bills. "In the Almost Evening" flings out a lament about abandonment. The "tiny blue eraser baby boy" of "Erasure" brings an unbearable poignancy to remembrance of an abortion.

"The Wedlocked" poems plumb the hurts and careful avoidances of marriage in symbols ranging from "blue eels" to "tumbleweed." Not only the wedded but also the formerly wedded can find an uneasy resonance with their own experience. This section is one of personally centered poems, their focus very different from Kogawa's usual, larger themes.

"Poem for Wednesday" starts with flashes from a hospital: a report, white walls, a "steady metallic endless November of nurses." Cascading into memories, the vigil becomes a flood of images

bright and dark. In its allusions, this is probably one of the most Canadian of the author's poems, with its evocation of forests, the "leaping shadows of small animals," and an "ice-locked ark." Urban images also appear, and both return to the despair of the hospital vigil. A defiance of the deity—"if I refuse to cry now refuse to play in your wind-up world"—fades away in the inevitable approach of death. It is a heartbreaking meditation on the limits of mortality and love.

Kogawa's poetry is lyrical, dense with images, and yet accessible to most readers. This collection is less political than most of Kogawa's work, but it speaks of humanity's shared experiences.

## SUMMARY

Joy Kogawa's portrayal of the damage done to Japanese Canadian citizens by their forced removal and internment pricked the nation's conscience and led to her further concern with righting past injustices. Themes of justice, cultural identity, gender, and the meanings of silence infuse her work, making it a unique part of the contemporary Canadian canon.

Emily Alward

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

*Obasan*, 1981

*Itsuka*, 1991

*The Rain Ascends*, 1995

#### POETRY:

*The Splintered Moon*, 1967

*A Choice of Dreams*, 1974

*Jericho Road*, 1977

*Six Poems*, 1978

*Woman in the Woods*, 1985

### DISCUSSION TOPICS

- Would measures like the summary internment of Japanese-heritage citizens be likely to recur in the United States or Canada? Why or why not?
- Is Joy Kogawa accurate when she labels silence a Japanese virtue and "word warrioring" or truth-telling a Western trait?
- What are some other natural elements that Kogawa uses, as she uses stone, to convey emotion or states of being?
- In *Obasan*, close family ties are a source of strength and survival. In Kogawa's poems, marriage usually means pain for the partners. How do you explain the difference?
- When Rough Lock Bill tells the children the town's name, Slocan, came from Indians chanting "Slow can go," was he trying to tell them something else?

## MILAN KUNDERA

**Born:** Brno, Czechoslovakia (now in Czech Republic)  
April 1, 1929

*Kundera is an internationally acclaimed Czech émigré writer whose novels have used experiments in form to examine fundamental existential questions through explorations of the role of sex and politics in the lives of his characters.*

### BIOGRAPHY

Milan Kundera (koon-DEHR-uh) was born on April 1, 1929, in Brno, Czechoslovakia (now the Czech Republic), to Ludvík and Milada Janosikova Kundera. He grew up in the provincial capital of Brno and then went to Prague to attend Charles University and the Film Faculty of the Prague Academy of Music and Dramatic Arts. In 1947, he joined the Communist Party. Like the majority of his compatriots, he initially celebrated the Communists' rise to power after World War II as a victory of the future over the past; like them, he soon regretted this decision and found himself at odds with the party. In 1950, he was expelled for "ideological differences" and left Prague to work as a laborer and jazz pianist in the provinces. In 1956, he was reinstated in the party, and two years later he became an assistant professor at the Institute for Advanced Cinematographic Studies of the Academy of Music and Dramatic Arts.

In 1963, he became a member of the central committee of the Czechoslovak Writers' Union. Between 1963 and 1968, Kundera's poetry, plays, and fiction made him one of the most important literary figures in Prague. His collections of short stories, entitled *Směšné lásky* (1963, 1970; partial translation as *Laughable Loves*, 1974), were immensely popular and were awarded the Czechoslo-

vak Writers' Publishing House Prize. His first novel *Žert* (1967; *The Joke*, 1969, revised, 1982), which was finally published unchanged after a two-year battle with the censors, quickly went through three editions and received the Union of Czechoslovak Writers' Prize. With other prominent writers, such as Ludvík Vaculík and Ivan Klima, Kundera used his stature in the Writers' Union to press for "socialism with a human face" and thereby helped to usher in the Prague Spring of 1968.

When Soviet tanks rolled into Czechoslovakia and crushed this reform movement, Kundera and these other writers were immediately classified as enemies of the state. His books were removed from libraries and bookstores, his plays were banned, he was fired from his teaching position and denied the right to publish in his own country. Consequently, although he would write his next five novels in Czech, beginning in 1970 the first editions of his books were all foreign translations. Between 1970 and 1975, he was both forbidden to work in Czechoslovakia and prevented from traveling abroad. At one point, to support himself he wrote several thousand horoscopes for Prague clients and published a monthly astrology column under a pseudonym.

At the same moment that Kundera was denied publication in his own country, an international readership began to discover him. *The Joke* was quickly translated into a dozen languages. His second novel, *La Vie est ailleurs* (1973; *Life Is Elsewhere*, 1974; in Czech as *Život je jinde*, 1979), was awarded the French Prix Médicis; his third novel, *La Valse aux adieux* (1976; *The Farewell Party*, 1976, revised as *Farewell Waltz*, 1998; in Czech as *Valčík no roz-*

loučenou, 1979), received the Italian Premio Mondello. Philip Roth enthusiastically introduced his works to American readers by publishing both *The Farewell Party* and *Laughable Loves* in his Writers from the Other Europe series.

In 1975, the Czech authorities finally permitted Kundera and his wife to leave the country so he could accept a visiting professorship in comparative literature at the University of Rennes. He arrived in France, at age forty-five, with two suitcases, a few books, and some phonograph records. *Le Livre du rire et de l'oubli* (1979; *The Book of Laughter and Forgetting*, 1980; in Czech as *Kniha smíchu a zapomnění*, 1981) both established Kundera's place in contemporary world literature and led to the revocation of his Czech citizenship. In 1980, he moved to Paris to become a professor at the École des Hautes Études en Sciences Sociales, and in 1981 President François Mitterrand made him a French citizen. He wrote two more novels in Czech, *L'Insoutenable légèreté de l'être* (1984; *The Unbearable Lightness of Being*, 1984; in Czech as *Nesnesitelná lehkost bytí*, 1985) and *Nesmrtelnost* (1990; *Immortality*, 1991). After experimenting with writing in French in his play *Jacques et son maître: Hommage à Denis Diderot* (1981; *Jacques and His Master*, 1985), a series of widely read and frequently quoted essays on the history and fate of central Europe, and a collection of his essays and interviews entitled *L'Art du roman* (1986; *The Art of the Novel*, 1988, revised 2000), he has written all of his subsequent works in French and identified himself as a "Franco-Czech novelist." These later works include the essay collections *Les Testaments trahis* (1993; *Testaments Betrayed: An Essay in Nine Parts*, 1995) and *Le Rideau: Essais en sept parties* (2006; *The Curtain: An Essay in Seven Parts*, 2007) and the novels *La Lenteur* (1995; *Slowness*, 1996), *L'Identité* (1997; *Identity*, 1998), and *La Ignorancia* (2000; *Ignorance*, 2002). Some of his other honors include the Commonwealth Award (1981), the Prix Europa (1982), the Jerusalem Prize for Literature on the Freedom of Man in Society (1985), and the Jaroslav Seifert Prize; he is also regularly mentioned as a candidate for the Nobel Prize in Literature.

## ANALYSIS

"I tried a lot of things" before turning to fiction, Kundera has said. "[C]inema, painting, music, poetry, criticism, theory, aesthetics. But none of it was

serious; I think of all that now as a kind of prehistory." Intellectually and artistically, he has repeatedly emphasized, "I am attached to nothing apart from the European novel, that unrecognized inheritance that comes to us from Cervantes." As Kundera sees it, that inheritance is a record of both an extraordinary sequence of discoveries and a series of roads not taken. With English novelist Samuel Richardson, he argues, the novel discovered psychological realism, and, ever since, most novels have followed the nearly inviolable standards of that tradition. In the second half of the twentieth century, Kundera notes, it has often been argued that the novel is dead. He disagrees, insisting instead that, since Richardson, the novel has ignored many of its possibilities. One of the most important of those unexplored possibilities, he argues, is the one suggested by Laurence Sterne's *The Life and Opinions of Tristram Shandy, Gent.* (1759-1767) and Denis Diderot's *Jacques le fataliste et son maître* (1796; *Jacques the Fatalist and His Master*, 1797): the idea of the novel as a game rather than a representation of reality.

After Sterne and Diderot, Kundera owes his aesthetic of the novel to the examples of central European novelists and artists of the past century—especially to Hermann Broch and to the Czech composer Leoš Janáček. He shares Broch's view that every serious novel must discover something that the novel—and no other form—can discover. He has also experimented with several of the formal ideas contained in his favorite Broch novel, *Die Schlafwandler* (1931-1932; *The Sleepwalkers*, 1932): The novel's traditional unity of action can be replaced by a unity of theme; the musical technique known as polyphony—the simultaneous presentation of two or more voices or melodic lines that are both bound together and independent—can be adapted to enrich the form of the novel; such novelistic polyphony can allow the author to combine radically different nonnovelistic genres within the text. From Janáček, his favorite composer, Kundera learned to upset technical conventions through ellipsis: to replace traditional transitions with harsh, abrupt juxtapositions, to replace repetition with variations, to eliminate the superfluous.

For Kundera, then, "a novel is a long piece of synthetic prose based on play with invented characters. These are the only limits." By "synthetic," he told Philip Roth, he means the novelist's desire to

grasp his subject from all sides and in the fullest possible completeness. Ironic essay, novelistic narrative, autobiographical fragment, historic fact, flight of fantasy: The synthetic power of the novel is capable of combining everything into a unified whole like the voices of polyphonic music. The unity of the book need not stem from the plot, but can be provided by the theme.

A novel, he believes, should search for and pose questions. The questions that his own works pose are existential: Who am I? What is a self? To what extent do I define my self, and to what extent is it defined by others? Do my choices define me, or does chance? What does life, living, being a human being, really mean? The fact that Kundera can explore such weighty questions in novels that are also witty and entertaining is an essential aspect of his art and his appeal.

In each of his novels, from *The Joke* to *Ignorance*, his exploration of these existential questions is structured around a series of key words (or themes) that appear and reappear from book to book. In his novel *Immortality*, he wrote that he would have called the book *The Unbearable Lightness of Being* if he had not already used the title. All of his novels, he told an interviewer, might have been called *The Joke* or *Laughable Loves*. Moreover, each is a book of laughter and forgetting.

## THE BOOK OF LAUGHTER AND FORGETTING

**First published:** *Le Livre du rire et de l'oubli*, 1979 (English translation, 1980; in Czech as *Kniha smíchu a zapomnění*, 1981)

**Type of work:** Novel

*A novel in the form of variations on the themes of laughter and forgetting, this work examines both the lives of a series of characters in Prague and Paris and the implications of history and memory, for individuals and nations.*

*The Book of Laughter and Forgetting*, like all of Kundera's Czech novels except *The Farewell Party*, is divided into seven parts. Several of the parts have the same titles—two are entitled “Lost Letters,” two are entitled “Angels”—to underline the idea that

the novel is a series of variations on a set of themes. Two parts focus on a young woman named Tamina, but each of the other five focuses on unrelated characters who appear only in that part. Each of the seven parts combines several genres, such as traditional novelistic narrative, autobiography, philosophical essay, dream, political commentary, linguistic analysis, realistic description, and fantasy. The parts are not linked by a single plot, but by their direct or indirect relationship to Kundera's exploration of the meanings that he attaches to words such as “laughter,” “forgetting,” “angels,” the “circle,” “lost,” and “border”; by his reflections on Czech history; and by his voice and presence as the authorial “I.”

They are also connected—to one another, and to all of Kundera's other fiction—by their exploration of the interrelationship of public and private life. In Kundera's work, the threat that the border between public and private life will disappear—the fear that it already has—is the nightmare that lies behind all the verbal and sexual high jinks. Most often, this threat is expressed as an invasion of private life by public life, seen as a distortion of the sexual by the political. In Kundera, sexual relations are an arena where the politically powerless exercise power, where the oppressed oppress, where public tragedy begets private comedy. Yet they are also the sphere where character reveals itself most fully. One of the paradoxes at the heart of his novels is that, in their most intimate moments, his characters are both most themselves and most the product of the external forces acting upon them.

The first part of *The Book of Laughter and Forgetting* perfectly demonstrates Kundera's novelistic method. Each of its sections presents private and public variations on the theme of forgetting. The love story of Mirek and Zdena is intimately connected to both their individual political histories and the history of their country. Mirek's desire to forget his former love, Zdena, to “airbrush” her out of the picture of his past and his life, is a private

reflection of the public effort of the Czech people to erase the past deed that *they* would like to forget—their support of the Communists in 1947 and 1948. The Communist Party is also engaged in an effort to forget when it seeks to eliminate its own past mistakes by airbrushing Clementis from the photograph described on the novel's first page. The bare space on the wall where Clementis once stood in the photograph is tied to the bare space in his history where Mirek's memories of Zdena should be. Zdena's passionate love of Mirek is presented as both a product of, and the impulse behind, the passionate single-mindedness that also made her a loyal party member; Mirek's decision to become a political dissident is connected to his desire to forget the embarrassment of his youthful relationship with Zdena. The hat on Gottwald's head is an emblem of all the personal and public pasts that cannot be erased.

Similar variations on the theme of forgetting continue throughout the novel, joined by new themes that are introduced with their own variations in each of the succeeding parts. The novel, Kundera writes, is "about Tamina. . . . She is its main character and main audience, and all the other stories are variations on her story and come together in her life as in a mirror." In other words, the parts devoted to Tamina—the fourth and sixth parts, which are the parts that repeat the titles of the earlier parts "Lost Letters" and "Angels"—are the heart of *The Book of Laughter and Forgetting*. There, the novel's themes echo and reverberate in a story that combines sex, love, exile, memory, forgetting, laughter, the circle, angels, politics, and borders in both startling and extremely subtle ways. There, they come together in a story that also introduces the thematic notes upon which Kundera's next novel would be composed. To Tamina, the unbearable lightness of being represented by the island of memory-less children is the ultimate nightmare: a world in which meaning disappears and nothing matters. Like Tereza (even their names echo each other), Tamina clings to meaning, to memory, to mortality—and to the existential burden of spiritual heaviness that comes with them—because, for her, that is what it means to be human. The alternative, Kundera seems to suggest in the novel's final section and coda, is a freedom without meaning and a life without purpose.

## THE UNBEARABLE LIGHTNESS OF BEING

**First published:** *L'Insoutenable légèreté de l'être*, 1984 (English translation, 1984; in Czech as *Nesnesitelná lehkost bytí*, 1985)

**Type of work:** Novel

*This novel explores the nature of responsibility and identity through the story of two romantic triangles set before, during, and after the Russian invasion of Czechoslovakia in 1968.*

In many ways, *The Unbearable Lightness of Being* is a more traditional novel than *The Book of Laughter and Forgetting*. It, too, mixes genres and is tied together by variations on a series of themes: lightness and heaviness, body and soul, vertigo and eternal return, the Grand March. It also tells several clearly related stories about four fully developed characters: the waitress/photographer Tereza, the doctor Tomas, the painter Sabina, and the professor Franz. This novel does not follow the conventions of the realistic novel: The fact of the main characters' deaths is revealed long before it occurs, thereby undermining the plot's suspense; a major character is introduced toward the end of the novel and then disappears; and a section is told from the point of view of Tereza and Tomas's dog. It does, however, create and resolve a central conflict among these characters, and it does occur within a recognizable social and historical context.

The main characters are carefully paired, both romantically and thematically. Tereza and Tomas, Tomas and Sabina, and Sabina and Franz are each involved in love affairs. Tereza and Franz are both associated with the theme of weight and heaviness; Tomas and Sabina, with the theme of lightness. Weight and heaviness are associated with the soul, commitment, seriousness, responsibility; lightness, with the body, betrayal, infidelity, and selfishness. Through Tereza's influence, in the course of the novel Tomas makes

the moral journey from lightness to heaviness. Sabina and Franz remain largely unchanged.

Tereza first comes to Prague from the country because of her love for Tomas, a man whose personal life is dominated by his numerous sexual conquests. When they and Sabina join the flood of émigrés after the Russian invasion and arrive in Switzerland, Sabina finds Tereza's counterpart in Franz. When Tereza feels adrift in Zurich and returns to Czechoslovakia, Tomas follows her, although he has lost his position at the hospital and is forced to become a window washer. Although his commitment to her is real, he continues to spend every free moment in dalliances with other women until his love for Tereza finally leads him to agree to leave the city and its temptations for a collective farm. There, they eventually die together in a truck accident. Sabina rejects Franz's desire for commitment and becomes a fashionable artist who travels throughout Europe and America. Franz joins a group of European leftists who travel to Cambodia, drawn by the idea of the Grand March of international revolution, which he sees as somehow related to his love for Sabina; there, he is fatally injured.

As Kundera tells the story, the personal and sexual lives of these four characters are intimately bound up with the social and political realities of Czechoslovakia before and after the Russian invasion. He presents vivid glimpses of the Prague Spring, of the Russian invasion, of post-1968 life in Prague, of the immigration of Czechs to the West, and of Western political attitudes toward émigrés and toward the idea of revolutionary change. Moreover, in spite of his many comments about the unreality of fictional characters, in *The Unbearable Lightness of Being* he creates four believable and interesting characters whose fates matter to the reader. As a consequence, perhaps, this work has been the most widely read and highly praised of his novels.

## IGNORANCE

**First published:** *La Ignorancia*, 2000  
(English translation, 2002)

**Type of work:** Novel

*After twenty years living in the West, two Czech émigrés return to Prague to find that the home they have remembered with nostalgia is gone.*

In *Ignorance*, Kundera treats themes that could not be more personal and, at the same time, more universal. After the Eastern bloc fell in 1989, he chose not to return to Czechoslovakia. Because Kundera is one of the most visible and admired artists his country has produced in the twentieth century, his choice was controversial in Prague and led to his being publicly, repeatedly, and harshly criticized by many of his former friends. Furthermore—or, perhaps, consequently—in the fiction he wrote in the 1990's, Kundera seemed to be consciously focused on escaping the dissident and émigré identity that had previously defined him in the eyes of many of his readers.

All of his novels since *The Joke* have been informed by a cosmopolitan and philosophical sensibility; he has said that “in our times we must consider a book that is unable to become a part of the world's literature to be nonexistent.” However, a striking shift occurs with *Immortality*, his first novel to appear after 1989. Most of the contemporary characters and the setting in *Immortality* are French. His subsequent novels, *Slowness* and *Identity*, are written in French, located in France, populated by French characters, and nearly totally devoid of the political themes that had been an essential element of his previous fiction. *Ignorance*, therefore, comes at the end of a decade in which the conflict an émigré feels between the claims of past and present, native and adopted language, first and later home, former and current culture, old and new friends—all of which had appeared in earlier works, especially *The Unbearable Lightness of Being*—had become an even more insistent concern for Kundera.

To investigate these conflicting claims in *Ignorance*, he once again turns to Czech characters, sending them back to Prague in his stead. This

time, “nostalgia” joins “memory” and “forgetting” as the key words his novel explores. Irena, a widow who has lived in France for twenty years, and Josef, a widower who has lived in Denmark for the same period, are drawn back to Prague by nostalgia, which Kundera associates with Odysseus and defines as “the suffering caused by an unappeased yearning to return.” The question the novel poses is whether there can ever really be such a return, and its answer is no. Although Irena and Josef can fly from Paris to Prague, can walk streets, see friends, and recall encounters and earlier selves that they have thought longingly of in their exile, because nothing and no one—including them—remains as they remembered, the “yearning to return” can never be appeased.

When Irena brings her friends together for a dinner where she serves them good French wine, they prefer to drink Czech beer and are totally uninterested in learning what has happened to her since she left. They had “amputated twenty years from her life,” she thinks. Josef looks at sights he has cherished in his memory and finds that “during his absence an invisible broom had swept over the landscape of his childhood, wiping away everything familiar.” Ultimately, Irena and Josef’s memories of an earlier encounter of their own turn out to be just as disappointing and irreconcilable. The

choice they are left with is the exile’s dilemma: to return to the land of their birth and leave behind self, life, and experience of their time spent abroad, or to return to their adopted land, where all the years and places that first shaped them no longer matter to anyone but them.

## SUMMARY

Milan Kundera has often objected to political readings of his fiction, emphasizing that his novels are about the existential dilemmas of his characters and complaining that Western readers have too often been drawn to the work of writers from “the other Europe” for the wrong reasons. He has often written of his ideas about the novel, the fate of central Europe, and the role of central Europe in the culture of the West. His interviews, essays, and comments are required reading for anyone who is interested in any of these matters. Finally, however, Kundera will be remembered for the power and accomplishment of his novels themselves. Together with those of his contemporaries from central, Eastern, and Western Europe and North, Central, and South America, his works amply demonstrate that the contemporary novel is anything but exhausted or dead.

## DISCUSSION TOPICS

- Milan Kundera has written that, "Ideology wants to convince us that truth is absolute. A novel shows you that everything is relative." How does his fiction reflect this belief?
- The form of Kundera's novels is not only unusual but also distinctive. What is that form and what does it add to or detract from the experience of reading his work?
- How do Kundera's works treat sexuality and relations between men and women?
- Kundera is often described as a comic writer. What kinds of comedy does his work contain?
- How important are politics to Kundera's artistic vision and/or a reader's response to his writing?
- Kundera has described "the spirit of Prague" as involving "An extraordinary sense of the real. The common man's point of view. History from below. A provocative simplicity. A genius for the absurd. Humor with infinite pessimism." How does his work display, or not display, this spirit?
- Kundera often places a version of himself in his fiction, as a first-person narrator or as a character. What effects does he achieve by doing this?
- What elements of fiction—plot, character, setting, language, narrative voice, and theme—seem to be most important in Kundera's work?
- Kundera has said that, "The novel's spirit is the spirit of continuity; each work is an answer to previous ones." With which previous work(s) does one of his novels seem to be in conversation?

## JEAN DE LA FONTAINE

**Born:** Château-Thierry, Champagne, France

July 8, 1621

**Died:** Paris, France

April 13, 1695

*La Fontaine is famous for his Fables, in which he used the plots and characters of his sources to produce poems characterized by great formal sophistication, a deceptive simplicity, and transparency of language and content that hide profound social and philosophical commentary.*

### BIOGRAPHY

Jean de La Fontaine (lah fohn-TEHN) was born on July 8, 1621, in the town of Château-Thierry northeast of Paris, the son of the supervisor of local domains belonging to the king of France. This solid, middle-class background allowed him to become well educated and aspire to a life of some leisure. It is also said that the long hours spent in the forests that were under his father's supervision made La Fontaine especially familiar with and fond of animals, but this may well be part of the myth that later developed around him of someone who preferred nature and quiet contemplation to human society.

His family sent him to a Paris seminary to study theology at the age of twenty, in the hope he might become a priest, but he left after one year. From 1645 to 1647, he studied law in Paris, although academic work was a much lower priority than his growing enthusiasm for literature and his friendships in literary, artistic, and aristocratic circles. Some of these friends were members of the entourage of King Louis XIV's superintendent of finances, Nicolas Fouquet, who would later become the first important patron in La Fontaine's career.

In 1647, La Fontaine married the daughter of a respectable family, Marie Héricart, who was fourteen at the time. Like many upper-class weddings

in this historical period, its purpose was to consolidate two family fortunes, not to unite two people in love. The spouses remained on good terms but were fairly distant throughout their marriage, even to the point of becoming separated. They did, however, have a child, Charles, born in 1653.

In 1658, La Fontaine's father died, leaving behind debts that his son inherited, along with his government office. From this time onward, financial problems were to be a constant worry. Fortunately, the rich and powerful Fouquet took him under his protection. La Fontaine wrote songs and poems for his patron, including a long poem in honor of Fouquet's famous château of Vaux-le-Vicomte, *Élégie aux nymphes de Vaux* (elegy for the nymphs of Vaux), published in 1661.

This happy time did not last long, however. The king's closest adviser, Jean-Baptiste Colbert, was jealous of Fouquet's wealth and power and asked Louis to have him arrested. The king, who had been traumatized as a child by the Wars of the Fronde (1648-1652), a short-lived and ultimately unsuccessful revolt led by magistrates and aristocrats, was always looking for ways to cut down rivals for his absolute power, and he happily complied.

La Fontaine spent the rest of his life seeking other patrons who would provide him with the necessary means to continue his literary career. Unlike many of his contemporaries, such as the playwrights Jean Racine and Molière, he was never able to obtain the good graces of the king, who perhaps never forgave his connection to Fouquet and was

probably aware that many of La Fontaine's fables satirized aspects of his reign. La Fontaine had the difficult task of finding protectors who were willing to risk the displeasure of Louis XIV by their association with him. In 1664, this role was filled by the duchess of Orléans, who supported La Fontaine until her death in 1672, despite financial difficulties of her own. This was a crucial period in his career, during which he published his very successful tales, *Contes et nouvelles en vers* (1665, *Tales and Short Stories in Verse*, 1735), followed by *Deuxième Partie des "Contes et nouvelles en vers"* (1666; *Part Two of "Tales and Short Stories in Verse,"* 1735), and the first six books of his *Fables choisies, mises en vers* (1668-1694; *Fables Written in Verse*, 1735; commonly known as *Fables*).

Another patron, Madame de la Sablière, supported La Fontaine from 1673 until her death in 1694, and La Fontaine became the guest of the financier Barthélemy Hervart during the last year or so of his life. His most important literary productions during this period were the last six books of the *Fables*, published in 1678, 1679, and 1694. In 1683, he was elected to the French Academy, a body founded in 1635 for the purpose of gathering forty of the most prestigious living writers, whose responsibility was to supervise and regulate the French language and compile a dictionary. Since the number of academicians remains constant, one can be elected only after a current member has died. It is ironic that the academician whose seat La Fontaine finally inherited had belonged to none other than his old nemesis, Colbert.

As his health declined during the last years of his life, La Fontaine experienced a rebirth of his Catholic faith. Told by his confessor that his *Tales and Short Stories in Verse* would be considered blasphemous, he repudiated them. When he died on April 13, 1695, he was wearing a *silice*, a kind of shirt made of coarse haircloth worn as a form of penance.

## ANALYSIS

In order to understand the significance of La Fontaine's work, one must start with his audience. In seventeenth century France, the literary world was dominated by salons, groups of artists and intellectuals who would meet at the homes of wealthy aristocrats. This intersection of the wealthy, social upper crust with some of the most talented figures

of the period created a culture that prized not only beauty and intelligence but also the qualities of good conversation, such as creativity, originality, style, wit, and repartee. La Fontaine's work is strongly influenced by that culture, and his poems were in turn very well received by the aristocratic intellectuals who exercised great power over the process of publication.

There has been over the years a tendency to view La Fontaine's work as divided between sophisticated, even licentious works, such as the *Tales and Short Stories in Verse*, intended for adults, and the simpler, more naïve *Fables*, intended for children and adolescents. Nothing could be more mistaken. This misapprehension was reinforced by the fact that the models for his fables, the works of Aesop, Phaedrus, and others, often were indeed written for the education of young children, a tradition La Fontaine seems to reinforce by dedicating his first book of fables to the young dauphin, who was the heir to the throne. In addition, the relatively simple Greek and Latin texts by Aesop and others were commonly used during La Fontaine's time as a means of teaching these classical languages to young people.

Finally, it must be pointed out that La Fontaine's poetic fables have been used in French primary education from the eighteenth century to the present as a way of teaching basic moral principles, as well as instilling a love of poetry through the exercise of recitation. To this day, though not as much as in the past, French schoolchildren are often required to learn several of his most famous poems by heart. As Jean-Jacques Rousseau and many others have pointed out, however, the "morality" of many of La Fontaine's fables is much closer to the cynical, dark, and fatalistic worldview associated with the *Réflexions: Ou, Sentences et maximes morales* (1665-1678; *The Maxims*, 1706) of one of La Fontaine's contemporary influences, François de La Rochefoucauld, than it is to any kind of pious or otherwise benign philosophy.

Furthermore, La Fontaine's use of conventional pastoral settings, rural colloquialisms, and a pseudoconversational style overshadows the fact that the poems are extremely complex metrically, linguistically, and in terms of content. La Fontaine is considered the greatest pure poet of his century, and his literary reputation is at least equal to those contemporaries who contributed to the more ele-

vated, “respectable” genres of tragedy, such as Jean Racine, didactic verse, such as Nicolas Boileau, oratory, such as Jacques Bossuet, and other writers.

## FABLES

**First published:** *Fables choisies, mises en vers*, 1668-1694, 12 volumes (English translation, *Fables Written in Verse*, 1735)

**Type of work:** Poetry

*These more than two hundred verse fables, many based on earlier sources ranging from Aesop to stories written in sixth century India, are characterized by a highly original and complex form and a playfully ambiguous, often satirical, content.*

La Fontaine’s *Fables* include some of the most famous poems—perhaps the most famous poems—in the French language. Two such poems are the opening pieces in book 1, “La Cigale et la fourmi” (“The Cicada and the Ant,” often translated as “The Grasshopper and the Ant”) and “Le Corbeau et le renard” (“The Crow and the Fox”). The fame of these poems is due primarily to the fact that they have been learned by heart and recited in class by millions of schoolchildren in France and the French-speaking world. They have been fundamental to the teaching of French to children and to developing an appreciation of literature because of their formal beauty, and they also instill in children the practical morality that they illustrate.

In “The Cicada and the Ant,” for example, the cicada comes to the ant begging for food because she spent all summer long singing instead of preparing for winter. This fable clearly teaches children the importance of planning for the long term, an essential life skill. If it were as simple as that, however, La Fontaine would be regarded as a fine didactic poet, and nothing more. Even in this very first poem, however, something emerges that undermines, and even contradicts, the healthy “moral” implied by the cicada’s unhappy fate. Quite simply, what are readers to make of the ant? Instead of agreeing to share her food with her “friend,” the cicada, she dismisses her without a thought: “So you were singing, were you? Isn’t that nice! Well then, now you can dance.”

Is this the sort of altruistic behavior one wants to encourage in children? Certainly not according to Christian morality, which promotes charity, forgiveness toward others for their sins, and empathy for their misfortunes. Furthermore, the ant is not only un-Christian in her attitude, she expresses her feelings in a cutting, witty manner. Readers therefore have examples of two recurring themes of La Fontaine’s poetry: Success in life goes to those who look after themselves and know how to bend others to their will; and those who are able to manipulate language in an effective, witty manner, regardless of the negative consequences, are to be admired. Finally, it is clear that La Fontaine would have identified with the cicada: His entire career was spent asking rich people to support his artistic endeavors.

The second poem contains a similar “antimorality” hidden under the surface. A hungry fox sees a crow holding a piece of cheese in his beak. He flatters the bird by first saying how beautiful his feathers are, although everyone knows that crows’ feathers are not impressive. The fox then says that if he could sing like the crow, he would most certainly be “the phoenix of the denizens of this forest.” Even though crows cannot sing, the proud bird opens his mouth to sing, the cheese falls to the ground, and the fox makes off with it. Does this poem teach that “Every flatterer lives at the expense of the one he flatters,” which is the explicit “moral” given in the poem, and that one should therefore never have an inflated opinion of oneself? Or does it teach that the way to get by in life is to exploit other people’s weakness of character? These are simply the most obvious examples of a fundamental ambiguity that underlies the majority of La Fontaine’s poetic fables.

Both opening fables are also excellent examples of the subtlety and complexity of his style. Directly contravening many of the established poetic rules of his era, La Fontaine experimented with short verses, such as some poems of less than twelve syllables, which is the length of the standard, classical

French Alexandrine verse. He also combines verses of various lengths within a single poem, makes frequent use of enjambment, mixes high and low levels of discourse, and combines mythological and realistic subject matter, just to name a few of his pioneering techniques, some of which directly influenced not only his peers and disciples but also avant-garde poetry of the nineteenth and twentieth centuries.

Among the other famous fables in book 1 is “Le Loup et le chien” (“The Wolf and the Dog”), in which the wolf envies the dog’s comfortable lifestyle until he learns that he lives constantly in chains; “Le Loup et l’agneau” (“The Wolf and the Lamb”), in which the lamb reasons with the wolf and explains why he should be spared, but is eaten anyway; and “Le Chêne et le roseau” (“The Reed and the Oak Tree”), in which the oak boasts of his size and strength to the reed, only to be knocked down by a powerful storm, while the reed, by bending to the will of the wind, survives. In each case, the simplistic plot and moral of the original fable is transformed into a rich narrative tale, with hidden allusions to contemporary society, and conveyed in a seemingly casual, conversational style that upon closer inspection shows itself to be exquisitely composed and artificial.

The fables in books 2 through 6 tend to be less well known, though they do include poems that many native French speakers would recognize, such as “Le Lion et le rat” (“The Lion and the Rat”) and its famous moral that “one always needs someone littler than oneself” (book 2); “Le Renard et les raisins” (“The Fox and the Grapes”) the famous “sour grapes” fable (book 3); or “Le Lièvre et la tortue” (“The Tortoise and the Hare”) (book 6). Books 7 through 12 were all published later in La Fontaine’s career and tend to be based on a wider variety of sources, including Asian ones, such as the fables of the sixth century Indian storyteller Pilpay, whose texts were translated into French in the mid-seventeenth century. The later fables also have a darker, deeper, and more satirical character than the others.

Book 7 opens with one of the most famous poems that is not learned in primary school, partly because of its length and partly because of its content, “Les Animaux malades de la peste” (“The Animals Sick with the Plague”). In an apocalyptic world, where animals everywhere are falling sick and dying of the plague, the Lion holds a meeting of the animals in which he decides that they need to sacrifice one of themselves in order to placate God’s wrath. However, he adds that they should choose the one among them who is most guilty of sin as their victim. He sets the example by confessing to have swallowed many innocent sheep, and even a shepherd. The others tell him that is no sin and his victims should have felt honored to be devoured by such an important animal. Other animals confess, with similar reactions. Finally, the donkey admits that he once ate some grass that did not belong to him. Everyone immediately agrees that he is the worst among them, and they tear the donkey limb from limb.

#### SUMMARY

Jean de La Fontaine wrote in a wide variety of genres and styles, but he is known today primarily as the author of the *Fables*, his greatest work. Written for an educated and wealthy audience, the fables are full of stylistic subtlety and of satirical, as well as philosophical, content. Because fables traditionally are intended for educating children, and because La Fontaine’s poems have been recited by heart by generations of schoolchildren, the ambiguity and complexity of his work are often ignored. While scholars have always considered him one of France’s greatest poets, people who know him less well still think of him as a clever, witty, but superficial and frivolous writer. It is only necessary to read the texts themselves—there are many good English translations, including one by the great American poet Marianne Moore—to understand that there is far more depth in his beautifully constructed verse than many people are aware.

## DISCUSSION TOPICS

- Compare one of Jean de La Fontaine's poems with a different version of the same fable, such as an English translation of Aesop. What differences are there in the story? What differences are there in the moral of the fables, whether it be implicitly or explicitly expressed? How do you account for these differences?
- Many of La Fontaine's fables satirize French society under the reign of the absolute monarch Louis XIV. By doing research on courtly life at the palace of Versailles, or on the political and social life of France at the time, find examples of the behavior and attitudes that La Fontaine is satirizing.
- How does La Fontaine mimic the conversational style in his poems? What aspects of this conversational style are you not likely to find in an actual conversation, and why?
- Eighteenth century philosopher Jean-Jacques Rousseau was one of many people who noted that there is an amoral, and even immoral, aspect to many of La Fontaine's fables. Find evidence of this paradoxical aspect in his fables. Why do you think La Fontaine emphasized the amoral potential inherent in these stories?

*Placing his literary artistry within the modernist context, Lagerkvist set the example for the modernization of Swedish literature.*

### BIOGRAPHY

Pär Fabian Lagerkvist (LAH-gur-kvihst) was born on May 23, 1891, in Växjö, a small town in a province of Sweden that appears to have been named Småland (slight land) because of its unpromising soil and relatively low agricultural productivity. The stony soil of Småland had been improved through the labor of its inhabitants by the time of Lagerkvist's youth, but steady emigration from the area is indicative of its pronounced bleakness. This atmosphere was to provide a tone for Lagerkvist's prose, poetry, and drama. There was bleakness, too, in the formidable, humorless Protestantism that constituted Lagerkvist's religious environment.

Pär was the youngest of seven children. Anders Lagerkvist, his father, was a railroad station employee, and he lived with his family above the railway station's restaurant in Växjö. The bleakness and transience of human existence and vain expectations of divine favor later became Lagerkvist's literary themes. Life with a sternly religious family in a little railway station in a poor landscape may have contributed to Lagerkvist's choosing these themes.

His first publication, at the age of fourteen, was a letter to a newspaper: He protested the differentiation, by social class, of schoolchildren. Indignation of this kind colored much of his early poetry and

essays. Evidence of his early dedication to a literary career includes poems and essays in observation of life's unprivileged people and the dignity with which they cope with life. It also includes his contributions to journals and periodicals with which his ideals of social democracy coincided. His poem "Min Gud" (1912, my God) identifies his God as his authentic self; such a bold, existentialist statement is indicative of Lagerkvist's determination to have the independence of mind he needed to be a writer. *Människor* (1912, people), his first novella, shows his disdain for the academic world. The novella appeared after his single term at the university in Uppsala in 1911.

His artistic school and the end of his isolation were the artistic worlds of Paris, where he devoted his creative powers to the furtherance of cubism, and Copenhagen, where he immersed himself in theater. His first marriage, to the Danish Karen Sörensen, lasted from 1918 to 1925, during which time Lagerkvist fully established himself as a poet, critic, short-story writer, and dramatist. His second marriage, to Elaine Hallberg, a Swede, took place shortly after his divorce from Karen. The new marriage was happy and lasted until Elaine's death in 1967.

With a stable marriage and with, beginning in 1930, a permanent residence in Lidingö, a suburb of Stockholm, Lagerkvist developed in stature as one of Sweden's great twentieth century writers. His travels to Palestine and Greece in 1933 and 1934 engendered a group of essays published under the title *Den knutna näven* (1934, *The Clenched Fist*, 1982), in which he confirmed the humanist

ideals of his youth by comparing the liberating spirit of Greek humanism with the inhibitive spirit of the Judeo-Christian religious tradition.

More than three decades after writing *Människor*, which Swedish readers and Lagerkvist himself had left to obscurity, Lagerkvist published his first novel, a genre by which he would gain international recognition and acclaim. *Dvärgen* (1944; *The Dwarf*, 1945) is a novel about evil, love, religion, and humanism. This was followed in 1950 by *Barabbas* (English translation, 1951), his most famous work. The enigmatic humanism expressed in these two very successful novels, more than a dozen plays, nine books of poetry, and numerous essays and short stories, brought him the Nobel Prize in Literature in 1951. To *Barabbas*, in which the crucifixion of Christ is the point of departure, Lagerkvist added, as the work of his maturity, four novels as sequels and one as a prelude. He remained reclusive during his years of celebrity, refused to grant interviews about his work or to exploit his fame, and confined his statements largely to the content of his literary publications. Literary fashion turned away from him, and critical approval of his later novels waned, but he maintained his artistic principles until his death on July 11, 1974. In 1991, the centenary of his birth was celebrated in Sweden.

## ANALYSIS

The one artistic movement to which Pär Lagerkvist publicly lent his support was cubism. This support took the form of his praise, in his criticism, of cubist art and his relation of cubism to literature. His approval is detailed initially in two works that he published in 1913. The first is his monograph, *Ordkonst och bildkonst: Om modern skönlitteraturs dekadens, om den moderna konstens vitalitet* (*Literary Art and Pictorial Art: On the Decadence of Modern Literature, on the Vitality of Modern Art*, 1982). The second is his review of Guillaume Apollinaire's *Peintres cubistes* (1913; *The Cubist Painters*, 1944). Two movements to which he never gave his blessing or commitment—expressionism and existentialism—are nonetheless reflected in his work and are entirely consistent with his artistic aims. Expressionism was in vogue when Lagerkvist entered the literary scene. Like cubism, it emphasizes individuation and a reorientation of artistic perspective. This emphasis is consistent with the existentialist emphasis

on authentic individualism and personal responsibility. A chronological reading of Lagerkvist's works discloses his passage from expressionism to cubism and existentialism.

The socialist fervor of his earliest poems and sketches finds a receptacle in the rebelliousness of expressionism. His first novel is expressionistic in its abruptness of transitions and its interjectional style. His first play, *Sista människan* (1917; *The Last Man*, 1989) is as expressionistically somber as *Människor* and shares its concern with the inner evil of human beings, but it is more conventional in plot and dialogue than the German expressionist drama of the time. *Den svåra stunden* (1918; *The Difficult Hour I-III*, 1966) is closer to German expressionist drama. The three one-act plays that constitute *The Difficult Hour I-III* produce a multiple perspective on the human experience of the moment of death, and the setting of each act is cubist in its disregard of spatial logic.

Structurally, cubism informs much of Lagerkvist's drama, poetry, and fiction of the five decades of his mature work. He provided literature with an equivalent of the cubist translation of four-dimensional reality into a two-dimensional plane. In *The Dwarf*, for instance, he translates the complexities of the human world into the dimensions of evil and love, represented by, respectively, an evil dwarf and the model for Leonardo da Vinci's *Mona Lisa*. The characters, like the segmented and rearranged units of a cubist canvas, display the fragmentation of human intentions and emotions. The dwarf, who cannot love, murders the only man whom the Mona Lisa can love; he also engineers the deaths of a pair of teenage lovers who are reminiscent of Romeo and Juliet. The varieties of love and the subjectivity of evil are placed within the context of a simple narrative, much as different points of view are integrated on one visual plane in a cubist painting.

Da Vinci appears in *The Dwarf* as Messer Bernardo, an artist and scientist committed to the studious observation of those who love or do evil, or both, without any predisposition in himself to do either. In this regard, Messer Bernardo is an existential hero; he maintains his integrity by accepting that he is without an innate destiny. All of Lagerkvist's later fiction exhibits his affinity for existentialist thought.

*Barabbas* is the first novel in what became a cycle

of five, the narrative of each of which focuses on the event of Christ's crucifixion. The cycle of novels presents, through the characters of Barabbas, Ahasuerus, and Tobias, the human quest for a spiritual satisfaction that is tenable only to the extent that the individual releases the inner self to the object of the quest. The release, achieved by Tobias, corresponds to Martin Heidegger's *Gelassenheit* (1959; *Discourse on Thinking*, 1966), which, as contact of the inner self with the realm of conceptualization, is the highest degree of thought, the spiritual level at which the thinker is at one with being. Tobias finds the Holy Land to be the *Gelassenheit* of his pilgrimage.

## THE ETERNAL SMILE

**First published:** *Det eviga leendet*, 1920  
(English translation, 1934)

**Type of work:** Novella

*A group of the dead in eternity learn in the course of their pilgrimage to God that the value of life is its conceptual uniqueness.*

The eternal smile is the smile of the skull, or the grin of the death's head, as well as the expression of deity in its indifference to the living humankind from which it always distances itself. It is, in other words, something that in divinely preceding or physically surviving human life has nothing to do with actual human life. Life is its own unsmiling conception of itself. It encompasses human beings within its conceivability; the intensity of an individual human life is directly proportional to the individual's experience of this conceivability.

As the dead in the story compare their previous existences, twenty-six brief biographies unfold. One of the dead who had been quite satisfied with earthly life is an old man, who took a menial job, handing out paper in a subterranean restroom, as a stopgap until he could find his real vocation. He discovered with the passage of years that the menial job was in fact his real vocation, so he determined to perform his task with perfection, and this resulted in his finding happiness in life. Collectively, the biographies invite the inference that life is its own, and the only, value.

The twenty-first tale is the most significant. A man relates his love for a woman who learned that her destiny was to die after she had borne a child. After she gave birth to his child and died, the man held the newborn infant to his breast, and as he did so he gained a sense of meaning—the realization that life means but has itself no meaning: "Life has no love for you, tree; life has no love for you, human; for you, flower; for you, swaying grass, except when it means precisely you. When it no longer means you, it loves you no more and annihilates you." Life has no abstract or absolute meaning that can be apprehended by inquiry; instead, life means each existing individual. To live is to be meant by life.

The residents of eternity are perplexed. They contemplate the peace of all-becoming-one and find it empty. They take no pleasure either in the prospect that life's purpose may be only the perpetuation of life. They seek out God, who turns out to be an old man sawing wood by lantern light. Identifying themselves as the living, they ask God to account for the vagaries and disappointments of life. He tells them that he had not meant life to be anything extraordinary, adding: "I have done the best I could," and, later: "I meant only that you should never need to content yourselves with nothing."

## THE DWARF

**First published:** *Dvärgen*, 1944 (English translation, 1945)

**Type of work:** Novel

*A malevolent dwarf is the personification of the evil inherent in every human being.*

Like the Freudian id or the stunted troll, Lagerkvist's dwarf, Piccolino, represents the dark side of human life—"a person's dwarf is really the person's self," and one "cannot do without one's dwarf for long." This is to say that human life is basically evil: Instead of attempting to deny or to eradicate one's evil, which is, in fact, one's instinct to survive, one should be constantly aware of it. The antithesis of evil, in this context, is not good but love, which directs the energy of one's self toward the betterment of another. To be evil and to love is to become good—that is, good at being human. Evil and love

are moral integers; goodness is a functional integer.

Piccolino serves a prince, clearly patterned after Niccolò Macchiavelli's exemplar, Cesare Borgia. The prince dallies sensually with the courtesan Fiammetta; his wife, Princess Teodora, is in love with Don Ricardo (suggestive of the historical Francesco Orsini, an admirer of Petrarch's poetry). Angelica, daughter of the prince and Teodora, is in love with Giovanni, the son of the prince's enemy, Lodovico Montanza il Toro (historically, Ludovico Sforza il Moro). Messer Bernardo (Leonardo da Vinci), who has painted *The Last Supper* for Montanza in the refectory of Santa Croce (Santa Maria delle Grazie), is now painting a portrait of Princess Teodora (the *Mona Lisa*). The time of the events is probably 1502 to 1503, when Macchiavelli and Leonardo da Vinci were both in Cesare Borgia's employ. Boccarossa, a ferocious mercenary soldier in the hire of the prince, may be based upon the historical Ramiro d'Orco.

The prince poisons Montanza and his retinue at a banquet falsely given over to a peace settlement. Piccolino, complicit in the poisonings, arranges on his own for Don Ricardo to be among the victims. Earlier, the dwarf had beheaded Angelica's pet kitten. Subsequent to the treachery of the banquet, Piccolino leads the prince to the bed in which Angelica and Giovanni are engaged in premarital love. The prince beheads Giovanni. Angelica awakens to discover the horror and later drowns herself. Princess Teodora, unable to abide the deaths of her beloved Don Ricardo and her precious daughter Angelica, languishes in the company of the dwarf and dies during a period of plague. Fiammetta also succumbs during the plague. The prince has Piccolino incarcerated and chained in a dungeon, and the dwarf appears to be ignorant of the reason for his prince's disfavor. He is confident, however, that his prince will not be able to do without him for long.

Throughout the novel, love is repressed or destroyed before it can check the evil that is both the

spark of life and, untended or without attenuation by love, the fatal conflagration of human existence.

## BARABBAS

**First published:** 1950 (English translation, 1951)

**Type of work:** Novel

*Barabbas, haunted by the mystery of the man who died in place of himself, strives to achieve belief in the man's divinity.*

Barabbas is the criminal whose release was contingent upon the death sentence of Jesus. In Lagerkvist's novel Barabbas witnesses the Crucifixion and senses that his life and newly gained freedom are defined by a world of darkness and an impulse toward death. He is puzzled by the faith of Jesus' followers and disturbed by their certainty that Jesus is the son of God. He tries to embrace and experience their faith but he cannot.

He detects a curious distance in three persons who were close to Jesus. Jesus' mother does not weep at her son's execution and seems to reproach him for dying in innocence. Peter, a big, red-haired, blue-eyed disciple, has denied Christ and needs reassurance. Lazarus, whom Jesus resurrected, is not happy in his resumed life; his gaze is empty, and in answer to Barabbas's question about what death is like he replies: "The kingdom of death is nothing. But for those who have been there, everything else is also nothing." Many years later, Barabbas envisages Lazarus dead for the second time, his skull grinning in the eternal darkness.

Two persons who are close to Barabbas, a hare-lipped young woman and a man named Sahak, have faith that Christ is their savior, and both die as martyrs. The hare-lipped woman was the mistress of Barabbas. Sahak was his fellow prisoner and slave in the Cyprian copper mines. Both loved Barabbas, and both appear to fulfill their lives, not so much in the secure anticipation of eternal life as in realizing Jesus' doctrine of mutual love. Peter also seems to find his great peace more in his love of Christ and of his fellow Christians than in the prospect of eternal life.

Lagerkvist established his preference of love to eternity in “The Eternal Smile” and in his essay “Stridsland, Evighetsland” (1934; “Land of Conflict, Land of Eternity,” 1988). In the essay he says this explicitly. Like his Barabbas, he does not believe in the divinity of Jesus; like his Barabbas, he looks at the kingdom of the dead and finds that “there is nothing there” for him: “My inner being rises up in pain, because I am alive; my spirit tries to break its shackles, my thought to find an answer to something about which it can only ask questions, something which it is given the power to agonize and brood over.”

The brooding Lagerkvist has his Barabbas brood over the kingdom of death, first as Lazarus describes it and then as it appears to him in the copper mines of Cyprus and in the catacombs of Rome. On the point of entering death’s realm—Barabbas is crucified, along with Peter and other Christians—he makes his death his own, existentially, by making the only choice left to him. He

identifies himself with his death. He exemplifies as well the authentic refusal to blame anyone but oneself for what befalls one, including one’s death.

Lagerkvist’s Barabbas is a recipient of love. That he himself has the capacity to love is shown in his respectful care for the corpse of the harelipped woman and in his vigil at the death of his crucified friend, Sahak. That he does not realize this capacity

is clear in his failure to close the distance between himself and those who love him, until it is too late, and in his inability to understand the commandment, “Love one another.” It remains for Lagerkvist’s pilgrim, Tobias, to realize that love is the foundation of being human.

Lagerkvist followed *Barabbas* with his novel *Sibyllan* (1956; *The Sibyl*, 1958), in which the wandering Jew leaves the Crucifixion scene and seeks the meaning of life and death. The wandering Jew finds his great peace in Lagerkvist’s novel *Ahasverus död* (1960; *The Death of Ahasuerus*, 1962), the first novel in the Pilgrim Trilogy, also known as the

Tobias Trilogy. The other novels in the trilogy are *Pilgrim på havet* (1962; *Pilgrim at Sea*, 1964) and *Det heliga landet* (1964; *The Holy Land*, 1966).

## HEROD AND MARIAMNE

**First published:** *Mariamne*, 1967 (English translation, 1968)

**Type of work:** Novel

*The incompatibility of King Herod and his wife Mariamne is aggravated by her inability to love him and his inability to love anyone but her.*

In *Herod and Mariamne*, the last of Lagerkvist’s fictional works published in his lifetime, the concept of love is examined in a lyrical prose narrative of austere simplicity. The novel tells of the relationship of Herod the Great and his second wife, Mariamne. Their tempestuous marriage ends with Herod’s murder of Mariamne. Lagerkvist pares the biblical account down to a short, melancholy song of contrasts.

In the story, the huge, coarse, brutal soldier and reigning tyrant, Herod, is subdued by his love for Mariamne, who is beautiful, gentle, and self-contained. After their marriage, Mariamne requites his sexuality but never his love. She is his bedmate, never his soul mate. His is a desert soul, in need of a temple; she is her own force of life, her own temple. Frustrated by his inability to possess her completely, Herod predisposes himself to his ultimate act against her, ordering her to be executed for conspiracy with her people, the Hasmonians, whose resurgence he has been quelling. The last years of his life are punctuated by his repeated calling out of her name, by his slaughter of the innocents after the birth of Jesus, and by his slowly succumbing to a painful and horrible disease.

Lagerkvist appears to have wanted *Herod and Mariamne* to serve as both prelude and postlude to his cycle of five Crucifixion novels. It is historically a prelude, leading up to the birth of Jesus. It is thematically a postlude, qualifying the love that Tobias experiences as he finds the Holy Land within his heart. Love is not a simple thing: It embraces all human life, and it is directed to another individual, with whom one identifies one’s self. General love, without particularity, becomes the love of human-

ity in the abstract; and the abstraction becomes God, who is not humanity. Particular love, without generality, becomes possessiveness and, ultimately, the love of an object, not a person. Human love, as the foundation of being human, is manifest in both the general and the particular, not merely in one unchecked by the other.

Herod's love of Mariamne is particular; Mariamne's love of people is general. Herod softens a little toward his subjects, and Mariamne becomes moderately sensitized to Herod's sexuality, but there is no full coalescence of the two manifestations of love; they remain at odds.

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

- Människor*, 1912 (novella)  
*Det eviga leendet*, 1920 (novella; *The Eternal Smile*, 1934)  
*Gäst hos verkligheten*, 1925 (novella; *Guest of Reality*, 1936)  
*Bödeln*, 1933 (novella; *The Hangman*, 1936)  
*Dvärgen*, 1944 (*The Dwarf*, 1945)  
*Barabbas*, 1950 (English translation, 1951)  
*Sibyllan*, 1956 (*The Sibyl*, 1958)  
*Ahasverus död*, 1960 (*The Death of Ahasuerus*, 1962)  
*Pilgrim på havet*, 1962 (*Pilgrim at Sea*, 1964)  
*Det heliga landet*, 1964 (*The Holy Land*, 1966)  
*Pilgrimen*, 1966 (collective title for previous three novels)  
*Mariamne*, 1967 (*Herod and Mariamne*, 1968)

#### SHORT FICTION:

- Två sagor om livet*, 1913  
*Järn och människor*, 1915  
*Onda sagor*, 1924  
*Kämpande ande*, 1930  
*I den tiden*, 1935  
*The Eternal Smile, and Other Stories*, 1954  
*The Marriage Feast, and Other Stories*, 1955  
*Prosa I-V*, 1956  
*The Eternal Smile: Three Stories*, 1971

#### POETRY:

- Ångest*, 1916  
*Den lyckliges väg*, 1921  
*Hjärtats sånger*, 1926

## SUMMARY

Pär Lagerkvist's contribution to literature is a unique combination of structure and theme. The structure entails a cubistic elimination of non-essentials as a means of giving lyrical voice to a multiplicity of spatial, temporal, and spiritual perspectives. The theme is an examination of the existentialist authenticity by which individuals expect no more from life than the fullness of living.

Roy Arthur Swanson

## DISCUSSION TOPICS

- What is Pär Lagerkvist's view of deity? Is his notion of God thoroughly negative? Explain.
- What elements of existentialism coincide with Lagerkvist's writing?
- How may *The Dwarf* be seen as a cubistic novel?
- What is the difference between the idea of "the meaning of life" and Lagerkvist's concept of "life meaning"?
- How does Lagerkvist deal with the Christian message of love?

## SELMA LAGERLÖF

**Born:** Mårbacka, Värmland, Sweden  
November 20, 1858

**Died:** Mårbacka, Värmland, Sweden  
March 16, 1940

*The author of novels that combine the Swedish folk tradition with realistic descriptions of country life, Lagerlöf was the first woman to win the Nobel Prize in Literature.*

### BIOGRAPHY

Selma Ottiliana Lovisa Lagerlöf (LAH-gur-lurv) was born at Mårbacka in Värmland, Sweden, on November 20, 1858, the daughter of Lieutenant Erik Gustav Lagerlöf, member of a landed family, and Louisa Wallroth Lagerlöf, whose father was a well-off ironmonger. Selma was the fourth of five children. The large Lagerlöf household also included an aunt and a beloved grandmother, who was always telling stories to the children gathered around her. Although Selma was only five when her grandmother died, she was to write of that loss as the profoundest sorrow of her life.

At three, Selma was struck by what was probably infantile paralysis. For some months, she was unable to walk, and despite two periods of therapy in Stockholm, she was permanently lame.

In most respects, however, Selma's childhood was a happy one. She had the affection of her parents, the companionship of her brothers and sisters, and the friendship of an appealing young governess. Encouraged by her father, Selma spent a good deal of time reading. She also liked to wander around the estate, responding to its natural beauty, learning about country life and country people, and hearing the legends of Värmland which were to inspire her works.

At the age of seven, Selma announced her intention of becoming an author. Before long, she was

telling stories to others, just as her grandmother had done. By the time she was twenty, Selma had become an accomplished writer, particularly of poems for special occasions. Clearly, she needed to continue her education; however, there was no money for her to do so. Over the years, the family fortunes had declined, and her father's ill health and his problems with alcohol had brought the family to the brink of financial disaster.

Fortunately, in 1880, after hearing Selma read one of her occasional poems at a wedding, the feminist Eva Fryxell took an interest in the talented young woman, suggesting that Selma enroll in the Royal Women's Superior Training College in Stockholm, a teacher training institution whose standards were almost as high as those of a university. Selma took her advice, borrowing the money to do so.

At school, Selma divided her time among attending lectures, studying, and writing poetry. Although she knew that she was on the way to becoming an author, Selma was not sure of her subject matter until a momentous day in 1881, when a story about Värmland cavaliers suddenly came into her mind. Soon Lagerlöf had begun her first novel.

Meanwhile, Lagerlöf's family continued to suffer reverses. Three years after her father's death in 1885, they were forced to sell Mårbacka. Fortunately, Lagerlöf had finished her studies and could support herself. The year of her father's death, she began teaching at the Girls' High School in Landskrona, Sweden, where she was to remain for ten years.

In 1890, five chapters of Lagerlöf's novel, sub-

mitted as a novella, won first place in a contest being conducted by the periodical *Idun*. Taking a year's leave of absence from her school, Lagerlöf completed *Gösta Berlings saga* (1891; *The Story of Gösta Berling*, 1898; also as *Gösta Berling's Saga*, 1918). By 1895, Lagerlöf's work was selling so well that she could resign from her position and become a full-time writer, as she had always wanted to do.

During the years that followed, Lagerlöf published one book after another. Although she brought out several collections of short stories, such as *Osynliga länker* (1894; *Invisible Links*, 1899), and *Kristuslegender* (1904; *Christ Legends*, 1908), she was best known for novels of various kinds. There were serious works, such as *Antikrists mirakler* (1897; *The Miracles of Antichrist*, 1899), inspired by Lagerlöf's travels in Italy, and the two-volume work *Jerusalem I: I Dalarna* (1901; *Jerusalem*, 1915) and *Jerusalem II: I det heliga landet* (1902; *The Holy City: Jerusalem II*, 1918), based on the author's conversations with some ill-fated Dalecarlian peasants who had migrated to the Holy Land, believing that the world was about to end. There were also lighter books like *Liljecronas hem* (1911; *Liliecrona's Home*, 1914), a story about Lagerlöf's own grandmother and her wicked stepmother, which is especially appealing to young readers.

Lagerlöf also wrote fiction of other kinds, including a story designed for children, the two-volume work *Nils Holgerssons underbara resa genom Sverige* (1906-1907; *The Wonderful Adventure of Nils*, 1907, and *The Further Adventures of Nils*, 1911), and what can best be classified as autobiographical works, *Mårbacka* (1922; English translation, 1924); *Ett barns memoarner* (1930; *Memories of My Childhood*, 1934); and *Dagbok, Mårbacka III* (1932; *The Diary of Selma Lagerlöf*, 1936).

As early as 1904, when she was awarded a Gold Medal by the Swedish Academy, Lagerlöf was nominated for the Nobel Prize. As a result of petty politics, however, she did not receive the award until 1909. In 1914, Lagerlöf was further honored by being elected the first woman member of the Swedish Academy. One result of her success was that she was able to buy back first the house at Mårbacka, and then the land around it. For the last three decades of her life she lived there, ran the estate, wrote, and entertained her admiring public. Lagerlöf died at Mårbacka on March 16, 1940.

## ANALYSIS

When Selma Lagerlöf accepted the Nobel Prize in Literature on December 10, 1909, she surprised the audience of notables by responding not with the lecture they expected, but with a story. In an imagined encounter with her dead father, which she related with great charm, Lagerlöf was able not only to thank everyone who had made her success possible but also to sum up the essence of her work. When she expressed her indebtedness to those who had filled her youth with folktales and legends, Lagerlöf was suggesting the extent to which her realistic writing is colored by fantasy. Like the peasants at Mårbacka, Lagerlöf's characters are unworldly people, living close to nature and to natural creatures; at the same time, however, they dwell on another level, in a world of gentle saints and beguiling devils, ghosts and trolls, visions and dreams, human passion and divine judgment. What skeptics might call the world of the imagination is very real to them, and it becomes just as real to Lagerlöf's readers.

For example, in *Jerusalem*, Lagerlöf shows how certain some Dalecarlian peasants were that they had been called by God to make a pilgrimage to Jerusalem. She does not mock their spiritual experience; indeed, by revealing her characters' inner conflicts, the anguish they feel as they tear themselves away from their homes and their fields to set out for an alien land, she gives them heroic stature. Although the pilgrims prove to have been misled by their voices, and though in the Holy Land they become less than holy, this does not diminish the importance of what Lagerlöf sees as an eternal struggle: To be human, one must live in two worlds, the natural and the supernatural, even though in the process one may well be destroyed.

The tension between the natural and the supernatural is also illustrated in *The Miracles of Antichrist*. While the novel is set in Sicily, rather than in Sweden, Lagerlöf describes the natural surroundings with the same loving detail that in other novels she devotes to her native landscape. Similarly, though her own people are Lutherans, she treats the Catholic beliefs of Sicilian peasants with obvious respect. At the same time, just as in *Jerusalem*, Lagerlöf tells a story of faith gone wrong. The more accustomed people are to believing in the unseen, the more likely they are to follow false gods. In this case, the new faith is socialism, which, ironically,

destroys the very spiritual sensitivity that enabled it to win converts.

If receptivity to the supernatural can bring human beings to destruction, it can also save them. For example, in *Liliecrona's Home*, evil, in the form of the wicked stepmother, is defeated only when she is exposed; once she is known to be a troll, she must disappear. Similarly, Lagerlöf's one story for children shows how the magical transformation of Nils Holgersson into a nonhuman creature results in his becoming a better human being.

The complexity of Lagerlöf's fiction is clearly illustrated by the work which has been called Lagerlöf's finest novella. *Herr Arnes penningar* (1904; *The Treasure*, 1925), is a fictional retelling of a real event. In the sixteenth century, Scottish raiders attacked a Swedish coastal settlement and massacred the residents, except for a single witness. In Lagerlöf's story, this witness, a young girl, later encounters a handsome Scot and falls as desperately in love with him as he insists he is with her. If she will go with him to Scotland, he says, he can give her high rank and immense wealth. Then, typically, Lagerlöf introduces the supernatural. The protagonist is visited by the ghost of her foster sister, who identifies the Scottish lover as one of the murderers. When the young girl accuses her lover, he decides to escape by using her as a shield. She thwarts him by killing herself. In what must be interpreted as divine intervention, the harbor then freezes, holding the ships in place until the murderers can be removed and punished.

In *The Treasure* can be found all the elements of Lagerlöf's works: a realistic setting; an exciting plot, often, as here, inspired by a historical incident; psychological veracity, in the description of her characters' inner conflicts; the presence of the supernatural; and an ending in which good triumphs over evil. This final characteristic of her work must be seen in the context of Lagerlöf's own subscription to the Christian faith. For her, a happy ending is one in which a human being becomes more nearly what God expects him or her to be. This may result in a better life, as in the case of Nils, or in a triumphant death, as in *The Treasure*, in which the unhappy girl gives up her love and her life for the sake of justice and, presumably, goes to her reward in a world as perfect as this one is imperfect.

Interestingly, the fusion of the real and the mag-

ical, which from the publication of her first novel so enchanted Lagerlöf's readers, aroused the anger of critics. They approved of her believable peasants and her vivid descriptions of country life, which were consistent with the tenets of realism, the literary movement to which most writers and critics were then fully committed. When she introduced fantastic or supernatural characters and episodes into her fiction, however, these literary critics believed that she was attempting to bring back the earlier Romanticism, which they believed had been discredited and which they hoped was extinct. Only when the insightful Danish critic Georg Brandes defended her work as something original and new rather than as a return to an earlier convention did she receive general acceptance from the literary establishment. By insisting on being herself, rather than writing in a predetermined formula, Lagerlöf performed one of her greatest services to her art. Undoubtedly she cleared the way for other writers, who could now find the courage to rebel against realism and naturalism, as their predecessors had against Romanticism, and to express themselves creatively, directed by their own imaginations rather than by the expectations of others.

## THE STORY OF GÖSTA BERLING

**First published:** *Gösta Berlings saga*, 1891  
(English translation, 1898)

**Type of work:** Novel

*At a nineteenth century country manor, good and evil battle for human souls.*

*The Story of Gösta Berling*, Selma Lagerlöf's first published novel, has been the subject of more scholarly articles than any of her other works. Despite its defects, such as the looseness and the episodic nature of the plot, this book continues to be much admired by critics, many of whom consider it Lagerlöf's masterpiece.

The novel is set in a fictional area resembling Värmland. The time is the 1820's, in a country manor house where life is at its most luxurious. So wealthy are the upper classes that someone like the

Mistress of Ekeby, who in addition to her estate owns seven foundries, can support a dozen hedonistic, penniless cavaliers. These men acquire a leader when their patroness takes in the title character, a drunken and now defrocked priest, who himself is easily charmed by the rich ironmaster Sintram. This malevolent figure appears sometimes to be either a devil or a human being who has sold his soul to the devil and at other times a madman who is acting out his satanic fantasies.

In any case, the cavaliers make a pact with Sintram. He will enable them to take over the Mistress of Ekeby's property if during their year in power they manage to do nothing worthwhile. The results are catastrophic not only for the Mistress of Ekeby, who is driven from her property, but for all of those in any way associated with the cavaliers and for the entire area, which succumbs to moral and economic collapse. At the end of the year, when he sees the results of his actions, Gösta Berling has a change of heart. The Mistress comes home to die in peace, and Gösta devotes the rest of his life to others.

In this book, one can see the pattern that Lagerlöf followed throughout her career: the rural setting, the use of folklore, and the revelation of character, from both a psychological and a moral perspective. While it is ev-

ident that Lagerlöf has no doubt about the existence of God and Satan, good and evil, as an artist she understands that human beings have a need to express themselves freely and to enjoy life's pleasures, even though they must also discipline themselves and submit to rules in order to lead meaningful Christian lives. She could empathize with her

cavaliers and with Gösta Berling himself; in fact, at the end of her novel Lagerlöf leaves him at the beginning of his quest. She suggests that it make take him the rest of his life to discover how one can be both happy and good.

## THE WONDERFUL ADVENTURES OF NILS AND THE FURTHER ADVENTURES OF NILS

**First published:** *Nils Holgerssons underbara resa genom Sverige*, 1906-1907 (English translation, 1907, 1911)

**Type of work:** Children's literature

*A disobedient boy, changed in shape and exiled from humanity, learns from the birds and animals with whom he lives.*

Selma Lagerlöf's two-volume story for children, translated as *The Wonderful Adventures of Nils* and *The Further Adventures of Nils*, was originally written for use in schools. The Swedish National Teachers' Society commissioned the work, with the idea that Swedish schoolchildren could more easily learn about the geography of their country by reading stories set in various regions. It was Lagerlöf who decided to place the information she collected within a unified framework, and her suspenseful story about a boy who flew over Sweden with a flock of geese became one of her most popular works, not only in her own country but throughout the world as well.

Lagerlöf's protagonist is a fourteen-year-old boy, an only child, who is lazy, nasty, and disobedient. When he is left home alone after refusing to go to church with his parents, he is magically transformed into a tiny imp and sent to live with the animals. Befriended by a flock of wild geese, he flies on gooseback over Sweden, into Lapland, and finally back home. He does not see his country only from the air. When the geese land to eat and to sleep, Nils visits nearby places of interest and learns about local customs. Lagerlöf thereby is able to include a great deal of factual material in her account.

There is also a strong didactic element in Lagerlöf's story. From an eagle, a raven, a stork, and a moose, as well as from the geese, Nils learns such values as courage, loyalty, compassion, and self-sacrifice. In Smirre, the wily and predatory fox, Nils sees an uncomfortable reflection of the selfish boy he had been, and by opposing Smirre, in order to protect the geese, Nils clearly forswears his old self. Nils also learns an important lesson from two chil-

dren he encounters during his travels. Motherless, defenseless, and half-starved, Osa and Mats are wandering in search of their father, never complaining, never losing hope. Observing them, Nils cannot help contrasting their behavior with his own ingratitude when he was a pampered human child, and if he ever returns to his family, he promises to do better.

Like Gösta Berling, Nils does get a second chance. He is finally adjudged worthy to resume his human form, and he goes back home, a wiser and a better person.

Ironically, some educators found fault with Lagerlöf's book, essentially because of her highly original approach. Fortunately, the final judgment did not rest with the pedagogues. Translated into forty languages, the story of Nils was read by children and adults throughout the world. The book was so highly regarded in Lagerlöf's own country that in 1950, when an annual award to a Swedish children's author was established, it was named the Nils Holgersson Award, in honor of the author and of her bad-boy-turned-hero.

## MÅRBACKA

**First published:** 1922 (English translation, 1924)

**Type of work:** Autobiographical novel

*Childhood on a Swedish country estate is filled with family stories, folklore, and high adventure.*

*Mårbacka* is the first of three autobiographical volumes that are often classified as nonfiction. In all of them, however, Lagerlöf assumes a persona, so they also can be described as fictional works. The third of these books, *The Diary of Selma Lagerlöf*, was certainly a work of the imagination; in it, the seventy-year-old author pretended to be a fourteen-year-old girl, describing a visit to Stockholm and, even more important, confiding her thoughts and her feelings to her diary and to her readers. In *Mårbacka*, Lagerlöf maintains her distance in another way. Using the third person, rather than the first, she makes Selma Lagerlöf a character in a novel.

Lagerlöf divided *Mårbacka* into five sections, each of which represents a subject, rather than a chronological section. The first, "The Strömstad Journey," is the closest to ordinary autobiography. In it, Lagerlöf describes Selma's terror at being struck by paralysis and the subsequent expedition to the seashore when, either because of her treatment or through divine intervention, the child finds herself able to walk again. The second and third sections of the book are filled with family stories and legends. Then, in "The New Mårbacka," Lagerlöf sympathetically describes Lieutenant Lagerlöf's vain attempts to fulfill his father's dreams for the estate. The final section, "Workdays and Fête Days," recalls games and pranks, daily rituals and family celebrations, including the elaborate annual observation of the Lieutenant's birthday.

Appropriately, the book ends with a touching postscript, written on the hundredth anniversary of her father's birth, in which Selma Lagerlöf expresses the sense of loss she feels not only because so many people she loved are no longer living, but also because their way of life is gone forever. While it has been said that *Mårbacka* is more concerned with a place than with the author's own life, in this collection of memories one can find not only many of her sources, but also the atmosphere and the attitudes that created Lagerlöf the writer.

## SUMMARY

Selma Lagerlöf broke free of the literary conventions of her era to write works that she believed reflected country life as she knew it. Her rural characters may depend for their survival on hard work in the everyday world, but they are keenly aware of the power of the unseen, the supernatural, the spiritual. The lasting popularity of Lagerlöf can be attributed in part to her skill as a storyteller, as seen in her accuracy in the minutest matters, in her adeptness in plotting, and in her ability to develop vivid characters. Her works are also valued because of their underlying optimism. When many writers lament that life is meaningless, it is refreshing to read about human beings who, despite their shortcomings, can be transformed and redeemed through the efforts of a merciful God.

Rosemary M. Canfield Reisman

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

*Gösta Berlings saga*, 1891 (*The Story of Gösta Berling*, 1898; also as *Gösta Berling's Saga*, 1918)

*Antikrists mirakler*, 1897 (*The Miracles of Antichrist*, 1899)

*Jerusalem I: I Dalarne*, 1901 (*Jerusalem*, 1915)

*Jerusalem II: I det heliga landet*, 1902 (*The Holy City: Jerusalem II*, 1918)

*Herr Arnes penningar*, 1904 (*The Treasure*, 1925)

*En saga om en saga*, 1908 (*The Girl from the Marshcroft*, 1910)

*Liljecronas hem*, 1911 (*Liliecrona's Home*, 1914)

*Körkarlen*, 1912

*Kejsaren av Portugallien*, 1914 (*The Emperor of Portugallia*, 1916)

*Bannlyst*, 1918 (*The Outcast*, 1922)

*Löwensköldska ringen*, 1925-1928 (collective title for the following 3 novels; *The Ring of the Löwenskölds: A Trilogy*, 1928)

*Charlotte Löwensköld*, 1925 (English translation, 1928)

*Löwensköldska ringen*, 1925 (*The General's Ring*, 1928)

*Anna Svärd*, 1928 (English translation, 1928)

*Höst*, 1933 (*Harvest*, 1935)

#### SHORT FICTION:

*Osynliga länkar*, 1894 (*Invisible Links*, 1899)

*Drottningar i Kungahälla*, 1899 (*From a Swedish Homestead*, 1901; also in *The Queens of Kungahälla, and Other Sketches*, 1917)

*Kristuslegender*, 1904 (*Christ Legends*, 1908)

*Troll och människor*, 1915, 1921 (2 volumes)

#### NONFICTION:

*Zachris Topelius*, 1920

*Mårbacka*, 1922 (English translation, 1924)

*Ett barns memoarner*, 1930 (*Memories of My Childhood*, 1934)

*Dagbok, Mårbacka III*, 1932 (*The Diary of Selma Lagerlöf*, 1936)

#### CHILDREN'S LITERATURE:

*Nils Holgerssons underbara resa genom Sverige*, 1906-1907 (2 volumes; *The Wonderful Adventures of Nils*, 1907, and *The Further Adventures of Nils*, 1911)

## DISCUSSION TOPICS

- Has criticism of Selma Lagerlöf been influenced by antifeminism?
- Consider the ways in which Lagerlöf's difficult early life became a boon to her as a writer.
- Contrast Lagerlöf's stories of Nils with works recommended for American schoolchildren today.
- What makes a work such as *Mårbacka*, much concerned with "place," succeed as autobiography?
- What are the roots of Lagerlöf's optimism?

## PHILIP LARKIN

**Born:** Coventry, England

August 9, 1922

**Died:** Hull, England

December 2, 1985

*A major English poet of the post-World War II era, Larkin is admired for crafted, readable poems that speak honestly, with sad wit and irony, of the modern isolated life.*

### BIOGRAPHY

Philip Arthur Larkin was born in Coventry, England, on August 9, 1922, the son of Sydney and Eva Emily Day Larkin. His bookish father was city treasurer. Larkin tended to dismiss his Coventry childhood as uneventful but recalled that during the 1930's he "wrote ceaselessly," both prose and verse, while attending King Henry VIII School. As a youth, he kept booklets of his writings—a practice he followed throughout his life, later using typescripts—and published poems in his school magazine, *The Coventrian*. At St. John's College, Oxford, he earned the B.A. with distinction in English literature (1943) and then the M.A. (1947). He failed his physical for military service in World War II. Close friends at Oxford encouraged his literary efforts, and in his mid-twenties he published the novels *Jill* (1946, 1964) and *A Girl in Winter* (1947). Though Larkin at first wanted to be a novelist and much later said he found novels "richer, broader, deeper, more enjoyable than poems," poetry proved to be his real vocation. Influenced by the English poet W. H. Auden and, after 1943, by the Irish poet William Butler Yeats, Larkin published verses at Oxford and brought out *The North Ship* (1945, 1966), poems that revealed a solitary persona and gained little notice. Larkin later "disowned" the book but allowed its reissue.

Larkin's poems from the late 1940's were the first in his new, representative voice—"less poetic," he said, and "freer of the late Mr. W. B. Yeats also." From 1949 onward, his notebook texts show careful, laborious revision, sometimes extending over months or years. Alternating scarce and fruitful periods were the norm throughout the poet's life.

In 1951, Larkin, by then a gainfully employed librarian, had one hundred copies of a volume titled *XX Poems* printed in Belfast and circulated privately, with little effect. Pressed in 1943 by the Ministry of Labour to find employment, Larkin had found his first job at the public library in Wellington, Shropshire, where, in his reading of the English poet and novelist Thomas Hardy, he found ironic and sober views compatible with his own. Larkin worked at academic libraries in Leicester and Belfast before taking over in 1955 as librarian at the University of Hull, England, a growing institution that thereafter demanded much of his professional energy. Larkin's reclusive and unassuming lifestyle earned for him the epithet the "Hermit of Hull." As his fame grew, he consistently shunned the limelight by giving few readings, interviews, or lectures.

In Larkin's *The Less Deceived* (1955), his now-familiar poetic personality emerged. Thrusting Larkin into prominence among critics and a growing readership, the book brought numerous formal recognitions—the Queen's Gold Medal (1965), other awards, and offers of honorary degrees and fellowships. Behind Larkin's apparently sudden emergence in his thirties as a major poet lay more than a decade of serious effort. *The Whitsun Weddings* (1964) confirmed and broadened his reputation. The title poem, begun in May, 1957, like others in the book combines social observation with a strong personal voice. (The poet's reading of this widely acclaimed poem on radio in 1973 was a "first and last" concession to public demand that his voice emerge from hiding.)

From his youth onward, Larkin was a jazz buff.

Features he wrote for the London *Daily Telegraph* were collected as *All What Jazz: A Record Diary 1961-1968* (1970).

As editor of *The Oxford Book of Twentieth-Century English Verse* (1973), Larkin took on a large, prestigious task that had been Yeats's before him. The results led some to charge that Larkin had inordinately favored traditional forms and minor poets. "At any rate," he said, "I made a readable book. I made twentieth-century poetry sound nice."

In the year that Larkin moved from his "high windows" flat to another residence in Hull that was to be his last, his final volume, *High Windows* (1974), appeared. Photographs from mid-life onward show Larkin bald, with heavy dark-rimmed glasses, inscrutable and impish. He traveled little and never married. After 1974, he made only eight poems public, including slight occasional pieces. An interview in *The Paris Review* appeared in 1982. *Required Writing: Miscellaneous Pieces, 1955-1982* (1983) assembled prose pieces that add to an understanding of his career.

The year before his death, Larkin refused the offer of the laureateship, Britain's highest honor for poets, reportedly on the grounds that he found his previous decade too unproductive of poetry to make him worthy. Larkin, a smoker, died in Hull, England, on December 2, 1985, after surgery for throat cancer. His *Collected Poems* (1988) was a surprise best seller in England.

## ANALYSIS

The list of contemporary literary luminaries responding in the media to Larkin's *Collected Poems* helps suggest the stature as a modern English poet that Larkin achieved during his lifetime. Seamus Heaney, Stephen Spender, Howard Nemerov, Ian Hamilton, and Derek Walcott figure among Larkin's many admiring reviewers. Some discussion focuses on whether the canon of Larkin's poems should exceed what the poet himself chose to include in the four slim volumes he published—the 115 poems collectively constituting *The North Ship*, *The Less Deceived*, *The Whitsun Weddings*, and *High Windows*. Even the thirty poems of his first volume are marginal, since Larkin allowed that book's reprinting in 1966 "with considerable hesitation"; Larkin's characteristic style and voice, the collective features that give him his uniqueness, appear definitively in the last three volumes. Still, editor

Anthony Thwaite salvaged 242 poems that Larkin wrote, mostly between 1946 and his death, with a few from 1938 through 1945. "Aubade," written in November, 1977, and published on December 23 in *The Times Literary Supplement*, is an important, previously uncollected poem from Larkin's late period, during which his nonproductivity led him to think himself unworthy of the proffered laureateship and to reject it. The "morning song" of an aging insomniac who wakes before "all the uncarving/ Intricate rented world begins to rouse," "Aubade" is vintage Larkin: "I work all day, and get half-drunk at night," he starts. "Being brave/ Lets no one off the grave," he concludes.

In variants of just such an authoritative yet self-demeaning voice, Larkin speaks to his readers, sharing calmly depressing, undogmatic glimpses of postimperial (and especially working-class) Britain. In what poet/biographer Alan Brownjohn calls a "vigorous colloquial mode"—language both ordinary and formal, serious and witty, figurative and literal—the Hermit of Hull himself seems to come through, at once thoughtful, intimate, wry, sad, and playful. Poems in Larkin's voice accumulate the collective features of the Larkin persona, a detached and bemused, sometimes misogynistic bachelor. Modestly ranging themes include choice and its fated limits, work, aging, the elusiveness of personal happiness, marriage and singleness, and, in general, the ordinary experiences of unpretentious people, lucidly and often tenderly rendered.

The notable regularity with which Larkin's small volumes appeared—exactly one a decade—says much about his craftsmanship. External evidence of painstaking revision supports the feel that his best poems have of having ripened thoughtfully. ("The Whitsun Weddings," for example, was begun in May, 1957, resumed in 1958, reworked through twenty-three pages, and finished later that year.) Though "quietly English," Larkin's poems after 1960 often show diction—and graphic concerns with sex and bodies—sure to make shy readers redden. Still, a gentleman's formality always remains. Irregularized meter, stanza, and rhyme undergird even the most random-sounding of Larkin's verses.

The paradox of colloquial formality, of course, is not unique to Larkin and in fact has a long history in English poetry. Larkin's underpinning of talk with the organizational structures of traditional verse thus creates frequent random echoes

of John Donne and the other Metaphysical poets, of Robert Browning's artfully "natural" monologues, of T. S. Eliot (the Prufrock persona is never far out of hearing distance), of Lord Byron (especially in the witty rhymes), or of Alexander Pope (with his parallels and wordplay). As to the poet's worldview, the sardonic pessimism of Thomas Hardy is the important influence that Larkin acknowledged.

Since Larkin invented no genuinely new formal mode for writing poems, the impulse to link him not only with earlier poets but also with contemporaries is strong. An association between Larkin and "The Movement" in English letters began soon after the appearance of *The Less Deceived*. The collective tendencies of this loose "school" include a rejection of both Romanticism and the extreme principles of modernist experimentalism. Movement writers think that common sense, honesty, clarity, realism, and empiricism should govern art. Robert Conquest's anthology *New Lines* (1956) epitomized features of The Movement.

The Larkin persona, of foreground interest in most poems, is also often an unenthusiastic witness to life. Thus Larkin is both social critic and realist. His ordinary people marry and start their lives ("The Whitsun Weddings"), go to weekend fairs ("Show Saturday"), play cards, visit bars, get sick ("Ambulances"), and die ("The Explosion"). Meanwhile, the empire's soldiers come "home/ For lack of money" ("Homage to a Government"), and England's omnipresent churches stand as taunting residues of a dying religion ("Church Going"). Larkin's social concerns appear as early as the novel *Jill*, a bellwether among postwar British novels for its working-class hero; his poems persist in showing something of the novelist's sense of place and situation. One risks equating poet with persona to say that Larkin's foiled plan to become a novelist seems but one more ironic instance of his "falling short."

Larkin's poems of wistful isolation show sadness and failure and treat the mundane and mediocre; however, they also imply persistent communal values. In "Show Saturday," for example, a weekend fair reveals "something [people] share/ That breaks ancestrally each year into/ Regenerate union. Let it always be there." Young lovers in "High Windows" or "The Whitsun Weddings" find at least brief pleasure in each other, even as the

speaker is excluded. Indeed, there is everywhere in Larkin's poems the sense of a "perfect happiness/ I can't confront" ("Mother, Summer, I").

A Larkin dichotomy that reminds posterity of his successes, not his failures, sounds in a later poem that begins "The daily things we do/ for money or for fun/ Can disappear like dew/ Or harden and live on."

## "TOADS"

**First published:** 1955 (collected in *The Less Deceived*, 1955)

**Type of work:** Poem

*The speaker, after berating himself for letting "the toad work" spoil his life, decides that he is fated for an unromantic existence.*

Memorable among the poems in *The Less Deceived* (1955) that brought Larkin his first fame, "Toads" is a comically exaggerated, self-directed harangue whose speaker seems easily identifiable with the Hermit of Hull. The poem's work-driven man trades six days of his week for economic security, meanwhile giving up "The fame and the girl and the money" that "windfall" types might get with their "wits" or "blarney." The strong sensory impact of the opening rhetorical question makes the poem hard to forget: "Why should I let the toad work/ Squat on my life?" In nine quatrains of rough dactyls, the persona goes on to reach a partial, chilling answer: "something sufficiently toad-like/ Squats in me, too;/ Its hunkers are heavy as hard luck,/ And cold as snow."

The poem's main image provides an "objective correlative"—to use the term suggested by the Anglo-American poet/critic T. S. Eliot—for oppressive daily work that suppresses the life of which the individual dreams. (A pun in "toady" as "fawning underling" lurks under the conceit.) The other life that the speaker decides is not for him, the unrealized romantic alternative to a workaday world, gives the poem its main contrast. The word "Toads" rules the poem as image, witty symbol, personification (or animation), metaphor, and analogy; but the text engages many other "poetic" devices. A second rhetorical question, echoing the first, heightens its animated little comic drama with

simile: “Can’t I use my wit as a pitchfork/ And drive the brute off?” (“Wit” is echoed later as “wits” and finally identified with “blarney.” Since the poet as crafty talker is at work in the poem, the foils of librarian and happy-go-lucky poet may be partly what the speaker imagines.) The phrases “skinny as whippets,” “Toad-like,” and “heavy as hard luck,/ . . . cold as snow” show other similes that sharpen the imagery. Further details sketch manly risk-takers living “up lanes/ With fires in a bucket,” eating “windfalls and tinned sardines.” The Popean wit of this last image (technically called *zeugma*) derives from Larkin’s pairing of things intangible and sensibly concrete, both objects of the verb “eat.” Hyperalliteration in the third stanza, especially, reinforces the poem’s comic tone, even as the catalog “Lecturers, lispers,/ Losels, loblollymen, louts” is congruent with the mock-epic, one remote model for the poem.

The speaker’s mention of the inaccessible “stuff/ That dreams are made on,” echoing William Shakespeare’s *The Tempest* (pr. 1611, pb. 1623), helps set up the poem’s romantic foil. In this detail, the text is reminiscent of Eliot’s “The Love Song of J. Alfred Prufrock,” where Prufrock thinks of the inimitable actions of Hamlet as the obverse of his own. Ultimately, in fact, it is hard not to compare Larkin’s resigned persona with Prufrock, for both are timid men whose “love songs” go unsung. Like Eliot and others, Larkin shows skill at using startling conceits to make the “stuff” of his poem memorable. While Prufrock’s mind drifts toward the genteel (and Eliot’s toward free verse), Larkin’s speaker stanzaically envisions a downscale society where something chancier would replace propriety.

Formally, the quatrains of “Toads” exemplify rowdy versions of the four-line “common meter” stanza, long serviceable in English verse. The dactylic meter is an “oomppah-pah” that blusters on. Half-rhymes typify the *abab* scheme: In fact, no exact rhymes occur. Such pairings as “poison/ proportion” and “bucket/ like it” are clever in the manner of Lord Byron. Larkin’s conversational “blarney” also employs colloquial diction, disruptive dashes, exclamations, italicized phrases, and contractions. The phrase “All at one sitting” is a pun full of irony, given both the toad’s “squatting” stance and the nonsedentary life needed for one to get fame, love, or wealth. Dialectal words help indi-

vidualize Larkin’s speaker, who speaks of “losels” (worthless persons), “loblollymen” (louts), “nippers” (children), and “hunkers” (haunches), and who says, “*Stuff your pension!*”

Unlike the rest, the poem’s last stanza is obscure; the pronouns are ambiguous, the antecedents remote. The verb “bodies” seems vaguely transitive. Probably “one” and “the other” (and “either” and “both”) refer to the “two toads” previously mentioned—one squatting “on my life,” the other squatting “in me, too.” The plural title seems to be a main clue that helps identify these two referents. Thus “one bodies the other/ One’s spiritual truth” means that the outward tendency to be a workaholic, symbolized by the outward “toad,” is an emblem of one’s inner reality. If the first “one” is the squatting toad and the second “One” the man on whom it sits, the idea may be that work gives an individual his or her “spiritual truth.” The fact that the speaker rejects the affirmation he asserts makes his last pontification doubly gnomic. Here the pedantic librarian’s voice supplants the breezier blarney that dominates the poem—though wit is a common denominator in both modes. However one reads its end, the poem’s serious theme is that a fatal temperamental workaholicism, while paying the bills and securing the pension, fails to bring such footloose fulfillment as one can fancy.

## “CHURCH GOING”

**First published:** 1955 (collected in *The Less Deceived*, 1955)

**Type of work:** Poem

*An English cyclist’s weekday visit to an empty church provokes his serious, skeptical reverie on the appeal, and future, of Christianity.*

Written the same summer as “Toads,” “Church Going” also first appeared in Larkin’s remarkable little book *The Less Deceived*. Each of the two much-admired poems illustrates the book’s emphatic focus on relative disillusionment. The punning title “Church Going” is typically Larkinesque, implying both “attending church” and “the vanishing church.” A further irony is that Larkin’s “church goer” is a sole drop-in to whom the empty edifice is alien and puzzling, not supportive or enlightening.

As sobriety varies from playfulness, the persona of “Church Going” varies from that of “Toads.” Yet the loneliness and dissociation from human company that one perceives in the speaker and the recognition that he contemplates an important modern dilemma tie him to the “toad-dominated” worker. One added strength of “Church Going” is its firm grounding in a concrete setting and situation, allowing Larkin’s skeptical preachment about the irrelevance of the church to occur without much offense, from the ironic opening phrase onward: “I am sure there’s nothing going on/ . . . inside.” Eventually the speaker wonders “who/ Will be the last, the very last, to seek/ This place for what it was.” Imagery of a church in ruins dominates the poem at its climax: “Grass, weedy pavement, brambles, buttress, sky.” (Conjured images of Tintern Abbey, or other stereotypically English ruins, here summarize the coming fate of churches in England that the speaker sees.) The balanced melancholy of the poem finds the church, though a “place . . . not worth stopping for,” to be nonetheless “A serious house on serious earth” that pulls people toward it, a place “proper to grow wise in,/ If only that so many dead lie round.” The imaginative range of the poem, moving as it does from the concrete to the abstract and universal, from “disbelief” to a future time when even that may be a forgotten human stage, gives it distinction and significance.

Formally “Church Going” is like an ode, a stanzaic lyric poem that develops and explores a serious topic at some length. Each of its seven stanzas comprises nine iambic pentameter lines—the numerology seeming, like religion itself, to tap into the prerational. A complex stanzaic rhyme scheme, *ababcadcd*, employs full and approximate (half or slant) rhymes freely. Skill with subtle metrical variations—trochaic substitutions, caesuras, enjambments, feminine endings—keeps the lines flowing like talk, much in the manner to which readers of Robert Browning’s monologues, or of Larkin’s lyrics, are accustomed. As usual Larkin’s

speaker is syntactic, at once colloquial and formal in his assertions. His sharp imagery draws the church interior in the first two stanzas: “sprawlings of flowers, cut/ For Sunday, brownish now; some brass and stuff/ Up at the holy end; the small neat organ.” The “musty, unignorable silence” has “Brewed God knows how long.” When the man reads “Here endeth” to an empty sanctuary, “The echoes snigger briefly.”

As in “Toads”—and following the lead of his disavowed mentor Yeats—Larkin has his speaker engage in questions, a useful device for exploring alternatives: “Shall we avoid [churches] as unlucky places?” “And what remains when disbelief has gone?” and “I wonder who/ Will be the last . . . to seek/ This place for what it was?” “Some ruin-bibber, randy for antique,/ Or Christmas-addict?” In such an inquisitive context, the speaker’s varied assertions hold their ground: “Power of some sort or other will go on,” “It pleases me to stand in silence here,” or “someone will forever be surprising/ A hunger in himself to be more serious,/ And gravitating with it to this ground.”

In this serious meditation on the post-Christian age, Larkin’s witty glints lighten the tone. As the persona, for example, wonders if in future eras “we shall keep/ A few cathedrals chronically on show” and “let the rest rent-free to rain and sheep,” his word “chronically” plays on “perpetually” while suggesting something like a lingering illness, and “let” as “lease” introduces a playful figurative situation, with sheep as renters. The “crew” of cathedral-hounds who “tap and jot and know what rood-lofts were” are mildly satirized as the eventual last “church goers,” just as the phrases “this accoutred frowsty barn” (where “frowsty” means unkempt and musty), “randy for antique,” and “Christmas-addict” all trigger weak smiles. The mild self-denigration that occurs in various details, hinting that the biker is a bit of a perplexed bumblehead, likewise entertains.

The speaker’s “serious” view is clearly that the church is irrelevant and “obsolete,” appeals to superstition, plays a riddling power game, and is destined to fade into vague memory, even as so many church structures in England already have. Nonetheless, nostalgia for inaccessible certainties remains. In that tangential respect, the speakers in “Church Going” and “Toads” are alike: Each looks wistfully at a pattern of living that he seems consti-

tutionally unsuited to embracing and suffers an emotional isolation that seems to be his fate. As in Hardy's poems and novels, there is no possibility that by strength of will the persona can remake himself into something he is not. The final lines hint bleakly that one "grows wise" only in the company of the dead.

### "THE WHITSUN WEDDINGS"

**First published:** 1964 (collected in *The Whitsun Weddings*, 1964)

**Type of work:** Poem

*Taking the train down to London on a Maytime Saturday, a man observes newlyweds boarding at successive stations and contemplates the convergent pattern.*

Written in October, 1958, and published as the title poem in Larkin's 1964 volume, the odelike poem "The Whitsun Weddings" bears formal and thematic resemblances to "Church Going" but shifts its focus away from the Larkin speaker and toward the collective social event that he witnesses, voyeuristically, while making "A slow and stopping curve southwards" from Hull to London. The poem is thus only partly "about" the speaker, whose presumed bachelorhood serves as foil for the "dozen" wedded couples who, at stop after stop, board the train to journey with him toward their separate and communal destinies. The details of the poem that focus on the speaker seem little more than a cumulative medium for framing what he sees: "I was late getting away;" "At first, I didn't notice what a noise/ The weddings made/ Each station that we stopped at;" and, near the end, "I thought of London spread out in the sun,/ Its postal districts packed like squares of wheat." Through much of the poem the speaker says "we," including others on the train with himself and—incrementally—all the couples who join their microcosmic ride.

The poem seems provocative and mildly fatalistic in its conclusions about what the observed phe-

nomena mean. The ironic sense that the couples are wrapped in their own excitement so as to be unaware of participating in any larger pattern governs the poet's conclusion, where "none/ Thought of the others they would never meet/ Or how their lives would all contain this hour." Several details in the poem underscore how destiny operates in ways no person among the passengers can understand: "There [at London] we were aimed," "it was nearly done, this frail/ Travelling coincidence," and finally, "there swelled/ A sense of falling, like an arrow-shower/ Sent out of sight, somewhere becoming rain." In the moment lives a sense of "all the power/ That being changed can give." The train ride becomes finally a metaphor for life as it moves onward, propelled by a common stream of marriages. Mutability, the inevitable pattern of change that governs life while remaining so unsusceptible to understanding or governance, is one large theme here.

Much of the poem's appeal lies in its snapshot social realism. In minutely observed if mildly satiric detail, Larkin's observer represents the working-class wedding parties: men "grinning and pomaded, girls/ In parodies of fashion, heels and veils," "mothers loud and fat;/ An uncle shouting smut," young girls who "stared/ At a religious wounding," imagining some bride's impending surrender. The note that "each face seemed to define/ Just what it saw departing" is precise in its relativism. Images of "short-shadowed cattle" and "the reek of buttoned carriage-cloth" vivify the witnessed drama. Meanwhile, unobtrusive figures enrich the poem's texture: "tall heat that slept," a typical personification, and the similes of the last two stanzas are examples.

Formally "The Whitsun Weddings" is much like "Church Going." Its eight stanzas are each ten lines long, all lines but the second (which is two-stressed) showing the elegantly "natural" iambic pentameter that Larkin managed with such skill. The *ababdecde* rhyme scheme suggests that the poet conceived of his stanza as quatrain-plus-sestet, the latter in the manner of Italian sonnets; enjambment, however, usually blurs the division, and run-ons in syntax between stanzas occur often.

## “HIGH WINDOWS”

**First published:** 1974 (collected in *High Windows*, 1974)

**Type of work:** Poem

*Eying a young couple lasciviously, an aging man thinks of his youth before imagining blank “high windows.”*

“High Windows,” finished in 1967 and included as the title poem in Larkin’s last volume, shows modest departures in method and new symbolic in-directions. Though the windows are no doubt symbols, literally they are sashes set high in a wall (perhaps in a tall building) so that one looking out “the sun-comprehending glass” from inside sees only “the deep blue air, that shows/ Nothing, and is nowhere, and is endless.” These apertures onto heaven, but not into eternity, are clouded over with a Larkinesque nihilism, an agnostic’s philosophical nothingness. The image of the windows occurs to the speaker “Rather than words,” suggesting the skeptic’s truth that what lies beyond cannot be stated. Thus the poem’s epiphany, its moment of revelation, reveals “Nothing”; the parallelism with “*No God any more*,” occurring earlier, heightens the figurative message. The hint in “high windows” of cathedral panes doubles the irony.

This poem seems an aging man’s piece but also surely reflects something of the youth-led and freedom-intent 1960’s—with “Bonds and gestures pushed to one side”—in its relatively licentious language and loosened style. Like “Church Going,” the poem is a reverie on the absence of viable religion, but the method of exploration here is associative, not quietly rational and syntactic: Seeing the young couple and imagining their sex life makes the speaker think about his lost youth and how he might have appeared then. In turn, that thought triggers the image of the windows. (The cinematic technique of the skyward fadeout may lie in the background of the poem’s closing effect.) The

poem’s unbalanced three-part structure highlights its “middle” section with italicized type.

Formally, the poem is stanzaic but not metrical. Like “Toads,” it intentionally abuses “common meter,” settling into an *abab* rhyme scheme. A notable, witty irony is that “kids” and “diaphragm” are early nonrhymes.

Reading the poem with established notions about the “Larkin persona” overlaid on it, one thinks inevitably of the librarian of Hull in his university-owned “high windowed” apartment, aging and unmarried. Thus irony dominates—whoever imagined the young Larkin among the youthful “lot” that would eventually “*all go down the long slide/ Like free bloody birds*” surely misread things. Typically for Larkin, a set of foils operates: While the speaker can now imagine the young couple in “Paradise” and can think of “everyone young going down the long slide/ To happiness,” that destiny seems to have escaped him personally; even his early freedom from a fearful faith has not left him romantically happy or sensually fulfilled. The poem’s image of “an outdated combine harvester” that has “reaped” little is a quiet, innuendo-filled analogue for the poem’s persona.

### SUMMARY

Though an Oxford graduate and university librarian, Philip Larkin is not “academic.” Acclaimed by scholars and general readers alike, Larkin is a principal English poet of the post-World War II era. Formally conservative, his poems nonetheless adapt colloquial talk and explore contemporary life. His persona’s voice is sad, ironic, balanced, wise, witty, stoic, and capable of surprise. Missing access to the fulfillments of love or faith that others may have, the poet/voyeur looks out wistfully onto the world—but not far into the heavens. Critical discussion of Larkin after 1955 as a part of The Movement in English literature acknowledges his pragmatic rejection of the excesses of both Romanticism and modern experimentation.

Roy Neil Graves

## MARGARET LAURENCE

**Born:** Neepawa, Manitoba, Canada

July 18, 1926

**Died:** Lakefield, Ontario, Canada

January 5, 1987

*Laurence contributed to the development of Canadian fiction, and particularly to themes relating to women's experiences, through her creation of the Manawaka Cycle, five books based on a fictional Canadian town.*

### BIOGRAPHY

Margaret Laurence was born Jean Margaret Wemyss on July 18, 1926, in Neepawa, Manitoba. Her ancestry was a mixture of Scottish and Irish-Canadian. She was an inveterate reader as a child and began to write stories in her childhood. She wrote stories for the school magazine; by the age of thirteen she had imagined a fictional town of Manawaka, clearly based on Neepawa. Later she would portray that town of Manawaka as the context for her heroines' varied experiences.

Laurence's father, Robert Wemyss, was a lawyer, and her mother, Verna Simpson, was a musician. Her maternal grandfather was a cabinetmaker and became the town undertaker. Laurence's youth was marked with tragic losses and remarkable adaptations on the part of her family. When Laurence was four, her mother died suddenly, and her aunt came to live with her father and her. This aunt, Margaret Simpson, married Laurence's father a year later, and the couple had one child, Robert. Laurence and her stepmother developed a close relationship that persisted throughout Laurence's formative years. Tragedy struck again four years later when Laurence's father died. Laurence's stepmother faced an uncertain future since she was a woman rearing two children alone. Help arrived in the person of Laurence's maternal grandfather, eighty-two years old and also recently widowed,

who came to live with them. The grandfather was in good health and became a strong influence in Laurence's life. Although her stepmother often became engaged in bitter conflicts with her stubborn grandfather, the two provided a stable environment for Laurence and her brother.

Laurence went to college in Winnipeg, Manitoba, and continued to write. In 1947, she was graduated and became a reporter. That same year she married an engineer, Jack Laurence, and the two moved to England in 1949. The next year the Laurences moved to Somaliland, then a British protectorate in East Africa, where Jack built dams to retain rainwater for villagers. Two years later the Laurences moved to the British colony that became Ghana. The Laurence's two children, Jocelyn and David, were born there. Her first book, *A Tree for Poverty: Somali Poetry and Prose* (1954), was a collection of Somali literature that she edited.

In 1957, the Laurences moved to Vancouver, British Columbia, where Laurence began to write about her African experiences from a fictional perspective. The outcome was *This Side Jordan* (1960), a novel that reflected the turbulent era of emerging independence of the Ghanaian people. She also wrote about her African experience in stories that she published in Canadian magazines from 1954 to 1962. The resulting collection, *The Tomorrow-Tamer*, was published in 1963, a year after Laurence separated from her husband and moved with her children to Buckinghamshire, England. She lived in England for twelve years.

During that period she composed the primary

body of works that secured her reputation as one of Canada's foremost novelists. The year 1963 also saw the appearance of *The Prophet's Camel Bell* (published in the United States as *New Wind in a Dry Land*, 1964), based upon her experience a decade earlier in Somaliland. In 1968, *Long Drums and Cannons: Nigerian Dramatists and Novelists, 1952-1966* appeared. In 1969 she divorced Jack Laurence.

Five works published between 1964 and 1974 are the basis of her fame. These five books, called the Manawaka Cycle, begin with *The Stone Angel* (1964) and *A Jest of God* (1966). Both novels introduce heroines who live in Manawaka, a small prairie town in Canada, and who struggle to gain insights into their families and their identities. In 1969, Laurence completed *The Fire-Dwellers*, which draws upon autobiographical elements and treats the experiences of a sister of the main character in *A Jest of God*. The fourth book in the cycle, *A Bird in the House: Stories* (1970), is largely autobiographical and focuses on Laurence's childhood. Her body of work was acknowledged in 1971, when she received the honor of Companion, Order of Canada. In 1974, Laurence returned to Canada to live in Ontario. In that year *The Diviners* (1974), the last novel in the Manawaka Cycle, appeared. A year later, Laurence was honored again with the Molson Award.

The five Manawaka books were the climax of her writing career. She wrote four children's books from 1970 through 1980; *Heart of a Stranger*, a book of travel writings based on her African experiences, appeared in 1976. After *The Diviners*, she published no more fiction for adults. She became chancellor of Trent University in Ontario in 1981; she died in 1987 in Ontario.

## ANALYSIS

In an autobiographical essay, "Books That Mattered to Me" (1981), Laurence recalled that in college she discovered Canadian writers who were striving to understand what it meant to be Canadian. From her exposure to these writers, Laurence learned that as a writer she would have to "write out of my own place, my own time, my own people." This declaration serves as a good starting point for understanding Laurence's strengths as a Canadian author. She is first and foremost Canadian in her identity and in her values. Readers of her books will

gain insights into the ways in which the vast Canadian landscape affects the choices and struggles faced by individuals and by families. When Laurence discovered her roots, she also discovered her strengths. In doing so, she set the foundation for her finest writing.

The importance of that sense of "place" and its relationship to a character's identity and values is best reflected in her creation of a specific fictional town she called Manawaka, based to a great extent on her hometown of Neepawa, Manitoba, Canada. Her creation of Manawaka reflects also the primacy of the autobiographical elements of Laurence's fiction. All the heroines in the Manawaka novels and short stories can trace their backgrounds or roots in some way to the fictional Manawaka. Often Laurence used specific settings, such as the town cemetery, her grandfather's funeral parlor, the dance hall, or the junkyard, as symbolic settings in which her characters could interact. Just as William Faulkner did in his creation of Yoknapatawpha County (the county seat of Jefferson is based in part on Oxford, Mississippi), Laurence transformed the townspeople and the literal settings to serve the purposes of her art. It is impossible to separate the meanings of Laurence's characterizations, conflicts, and themes from the sense of place that is generated by her blending of autobiography and fiction.

Her experiences in Somaliland and Ghana in the 1950's certainly were formative ones in her career as a writer. The works based on her African experiences reflect the struggles of individuals from diverse cultures trying to communicate with one another and accommodate one another's needs. Similarly, these works concern the problems faced by a country preparing itself for independence. Many of her stories emphasize the outsider's point of view, perhaps reflecting her own status as a Westerner living in an alien culture.

Laurence was acutely aware of the theme of the insider/outsider. She was able to empathize with the plight of people who lived under the domination of colonial powers and thus were, in many respects, outsiders in their own lands because they were subject to oppression. As a Canadian author, she understood that feeling of being outside the main political and economic power base in the Western Hemisphere. As a woman, she was aware of the struggle of women to free themselves from

the domination of men. In her creation of the town of Manawaka, she was identifying with the conflicts that arise between the narrow-minded citizens of a small town and the outsiders who dare to challenge the security of the status quo. Laurence gave voice in her characters to a diverse set of ideas that challenged old assumptions.

Whereas men were the dominant characters in her African stories, women are the dominant characters in her Canadian fiction. Each of the Manawaka books features the experiences of a separate heroine. Four of the women are from Manawaka; the fifth, Morag Gunn, is an outsider who seeks to escape from the town after she has become part of its fabric. Morag is also a novelist and thus perhaps most closely represents the viewpoint of someone who, like Laurence, had to stand on the outside in order to portray objectively the experiences of Manawaka natives. In many respects Laurence is a feminist author. Her women are engaged in a process of reflection and self-discovery. They resist the domination of men and seek insights into their own strengths (and even failings) of character.

Many of her novels and stories portray problems of communication between individuals. Laurence suggests that although people seek closeness and understanding in relationships, they often undermine successful relationships because of deep-seated personal conflicts that remain hidden from them. In Laurence's fictional world relationships are fragile, sometimes fleeting, but always complicated. Characters necessarily have difficulty relating to others when they do not know themselves fully.

## THE STONE ANGEL

**First published:** 1964

**Type of work:** Novel

*An old woman's struggle with cancer stimulates her to reevaluate her life.*

Hagar Shipley, ninety years old, dominates the action in *The Stone Angel*, the first of Laurence's five books that treat the experiences of women whose lives intersect with the fictional town of Manawaka, Manitoba. Hagar tells her story in the first person,

and a review of her past life is woven into the narrative. Hagar was born in Manawaka; her mother died giving birth to her. Hagar has never accepted this loss. She associates any weakness on the part of others as symbolic of the weakness of her mother, who was not able to survive childbirth. To compensate, Hagar has always been a stern, unrelenting judge of others. She has lost touch with the sensitive side of herself.

Laurence provides a compelling symbol of Hagar early in the novel. The town cemetery is dominated by the statue of a stone angel placed there in her mother's honor. In an ironic twist of fate, the carver did not add the eyes of the angel, and the author suggests that this symbolic "blindness" is reflected in Hagar's view of herself, her relationships with her father and her brothers, her marriage to Bram Shipley, and her attitudes toward her two sons, Marvin and John. Hagar has never seen herself for who she truly is. Reared by a maiden aunt, Hagar was dominated by her father, who had a narrow conception of how a young woman should act and what role she should fulfill. Hagar tries to escape her father's domination by

marrying Shipley, an uncouth farmer who shows little promise for managing his property. Before long, Hagar and Bram argue constantly; soon they live separate lives even though they live together. Eventually, they separate when Hagar leaves with their younger son, John.

Hagar invests all of her emotional energy in her son John. She rears him alone and becomes blind

to his character as it develops in a direction similar to that of Bram. John becomes all that Hagar desires that he not become. He defies her just as she defied her father and just as Bram defied her. John even falls in love with a woman whom his mother considers beneath him. Unfortunately, Hagar cannot see and accept the deep affection the two feel toward each other. John and his lover die a tragic death, the result of another defiant act on John's part. Hagar never forgives herself for driving him away and, in her mind, indirectly causing his death.

The day she sees her dead son in the hospital is the day her grieving heart turns to stone.

The image of stone is an important part of the symbolic meaning of the stone angel. If stone is a common symbol of the heart numbed forever by grief, stone also represents what is cold, hard, and unforgiving in the human heart. Hagar's judgments throughout the novel are unrelenting and enduring. She refuses to change her mind once she has made a decision, and this behavior leaves her isolated from the warmth of human contact.

Hagar lives with her son Marvin and his wife, Doris. These caregivers are in their sixties and finding it increasingly difficult to live in harmony with a quarrelsome old woman. Laurence ably treats the theme of adult caregivers facing the limitations of old age while trying to provide adequate care for an older parent. Added to these concerns is Marvin's long-standing unresolved relationship with his mother. John was always her favorite son. Although Marvin has cared for Hagar for more than twenty years, she has never recognized him for being a good son. Near the end of the novel, when Hagar enters the hospital to receive treatment for the symptoms of advanced cancer, she does acknowledge Marvin's devotion to her. Laurence treats their interaction ironically, however, for when Hagar releases Marvin from his burden, she does so as an act of kindness toward him, not because she believes what she tells him. In fact, she calls her recognition of Marvin's efforts a "lie"; but then reconsiders by saying that it was "not a lie, for it was spoken at least and at last with what may perhaps be a kind of love."

Although Hagar's interaction with Marvin reflects ambivalent feelings on her part, it reflects one of the few times in the novel that she seizes an opportunity to communicate honestly and openly with another person. An important theme in the novel is that of missed opportunities for communication. When Hagar's brother dies, she misses the chance to share her feelings with her other brother; she never tells her father what her needs are; she never tells her husband how much she loves him; she never acknowledges Marvin's appeals for affection when he is a boy; she never tells her son John that it would be all right to see his girlfriend in the house whenever he wants to see her.

Laurence suggests that lost opportunities for communication are related to excessive pride and

a fear of dependency or loss of control. In old age, Hagar begins to realize what she has lost; before she dies, she realizes that what she has always wanted was to experience joy and fullness of life. Yet her need for privacy, her rigid exclusion of contrary points of view, and her pride held her back.

Hagar is an enigma to the end. The epigram for the novel is an excerpt from Dylan Thomas's famous poem "Do Not Go Gentle into That Good Night." Hagar lives out the imperative that the narrator makes to his father in that poem. Hagar "rages" from the beginning to the end of this novel. She rages against the loss of control she feels as the object of caregiving; she rages against her aging body and the cancer that afflicts her; she rages against the lack of communication between the generations; she rages at the failed choices she has made throughout her life; and she rages against God for not making the terms of communication between people more accessible and easy to follow.

## THE FIRE-DWELLERS

**First published:** 1969

**Type of work:** Novel

*A woman overcomes feelings of self-doubt, struggles to resolve ongoing conflicts with her husband, and discovers untapped sources of strength in her character.*

*The Fire-Dwellers* is the third in the series of Laurence's five Manawaka books. Its heroine, Stacey MacAindra, is the sister of Rachel Cameron, the heroine in the second novel in the series, *A Jest of God* (1966). Whereas Rachel seemed doomed to spend her life in the narrow confines of the small town of Manawaka, her sister Stacey escaped the town and moved to Vancouver, British Columbia, at the age of nineteen. At twenty-three she married Cliff MacAindra, a salesman. Now thirty-nine, Stacey is not happy with her life. She feels unattractive, trapped by the pressures of motherhood, confused by her husband's lack of communication with her, and frustrated with her husband's decision to begin a new job working for a man who appears to be a manipulative and overbearing charlatan.

Laurence tells the story through Stacey's eyes, using the form of interior monologue as the character reacts to events in the present and reflects upon events in the past. Stacey's world is dominated by her responsibilities as a mother of four children, each of whom is an individual with unique needs. At first Stacey feels she has reached an impasse as a caregiver. The burden of responding to the children's diverse requests seems too much to bear. Stacey retreats into a private world. At one point she laments that she is neither a good mother nor a good wife.

In time, Stacey's experiences contradict this declaration. She survives several crises facing her children. At the end of the novel she feels her strength of will renewed. Finally, she declares, "I used to think there would be a blinding flash of light someday, and then I would be wise and calm and would know how to cope with everything and my kids would rise up and call me blessed. Now I see that whatever I'm like, I'm pretty well stuck with it for life." She realizes that she is a good mother and possesses an internal reservoir of strength and determination.

The strains in the relationship between Stacey and her husband reflect Laurence's interest in the theme of the fragile nature of human communication. Stacey complains that Mac will not share his thoughts or fears with her. Initially, she concludes that his lack of disclosure reveals his lack of caring; eventually, she understands that his reticence masks his

fears that he will not be able to take care of the family's financial needs and that he is inadequate at his job. As soon as Stacey grasps the true state of her husband's crisis, she is empowered to act on his behalf against all odds. By the end of the novel, she demonstrates skills for reconciliation, adaptation, and a willingness to take on new challenges on behalf of her family.

Stacey's personal struggle to regain a sense of her own identity reflects Laurence's abiding concern with the process of reflection and self-discov-

ery in women's lives. Stacey constantly seeks answers as to who she is, what her purpose in life should be, and what suitable roles she can fulfill. In despair at her inability to communicate with her husband, Stacey meets a young man by chance and begins a love affair with him. Although Stacey gains a sense of fulfillment from this affair, she does not know how to resolve her relationships at this point.

Eventually, several crises occur that propel her toward a resolution of all relationships. Stacey decides to stay with Mac after he begins to share some of his fears; she does not return to her lover; and she decides to take care of Mac's father after the old man has a bad fall. Mac escapes his intimidating boss when the latter is promoted to a position in Montreal. Stacey cannot help but marvel at the workings of fate and human will. At the end of the novel, Laurence emphasizes a newfound harmony in their relationship after both survive respective periods of self-imposed isolation and introspection. Now the two have each other, not as each would like the other to be but as each accepts the other despite imperfections and limitations of character or will.

In a sense, Stacey has always wanted her husband to speak to her in her language—articulate, expressive, sharing openly, willing to disclose any and all feelings. Yet he cannot speak this way. After one of many family emergencies is overcome late in the novel, Stacey recognizes that Mac and her oldest son speak the same language, a language in many respects foreign to her own. Finally, she comes to accept this difference in how communication works within this family. To Stacey, the world will always be a dangerous place. Everyone is a "fire-dweller"—Stacey's experiences in the novel reflect innumerable close calls and crises. Yet Stacey finally learns to accept the uncertainties and risks associated with the future.

## SUMMARY

Margaret Laurence was always faithful to her Canadian roots as a writer. Her depiction of life on the harsh prairie landscape, particularly her creation of the fictional town of Manawaka, which functions as the setting for four of her novels and a short-story collection, is an integral part of the sense of place in her works. Her creation of strong women characters and her treatment of themes relevant to

women's experiences place her in the forefront of feminist writing. Laurence portrays women who overcome problems of identity, limited roles, the complexities of motherhood, and the perils of marriage relationships. Laurence probes the nuances of communication in human relationships and exposes the difficulties faced by individuals who seek to uncover secrets about their pasts and about themselves.

Robert E. Yahnke

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

*This Side Jordan*, 1960

#### LONG FICTION (MANAWAKA CYCLE):

*The Stone Angel*, 1964

*A Jest of God*, 1966

*The Fire-Dwellers*, 1969

*The Diviners*, 1974

#### SHORT FICTION:

*The Tomorrow-Tamer*, 1963

*A Bird in the House: Stories*, 1970 (part of Manawaka Cycle)

#### NONFICTION:

*The Prophet's Camel Bell*, 1963 (pb. in U.S. as *New Wind in a Dry Land*, 1964)

*Long Drums and Cannons: Nigerian Dramatists and Novelists, 1952-1966*, 1968

*Heart of a Stranger*, 1976

*Dance on the Earth*, 1989

#### CHILDREN'S LITERATURE:

*Jason's Quest*, 1970

*The Olden Days Coat*, 1979

*Six Darn Cows*, 1979

*The Christmas Birthday Story*, 1980

#### EDITED TEXT:

*A Tree for Poverty: Somali Poetry and Prose*, 1954

## D. H. LAWRENCE

**Born:** Eastwood, Nottinghamshire, England  
September 11, 1885

**Died:** Vence, France  
March 2, 1930

*A major British author of the twentieth century, Lawrence probed with great intensity and occasional audacity themes of human sexual psychology and questions of moral behavior.*

### BIOGRAPHY

David Herbert Lawrence was born in Eastwood, a coal mining town in Nottinghamshire, England, on September 11, 1885. His father, Arthur John Lawrence, was a gregarious, hard-drinking collier whose marriage to Lydia Beardsall, formerly a schoolteacher of genteel refinements, was a continuous struggle for mastery. D. H. Lawrence was the third son born into this household, along with two sisters. A gentle, studious, sissified boy, Lawrence was sometimes scorned by the more robust colliers' sons of the town; shunning their athletic games, he enjoyed instead the company of his sisters or of their young female friends, whom he charmed with his skill at charades and games of mimicry. Above all, he enjoyed excursions in the Derbyshire countryside not far from the grimy mines, near the lush Sherwood Forest area surrounding Eastwood, a retreat that Lawrence once called "the country of my heart."

Although he did not enter school until he was seven, he made rapid progress when he was enrolled in the Beauvale Board School, and at the age of twelve he was awarded a North County Council scholarship to Nottingham High School, eight miles from his town. After he left high school in 1901, he was briefly employed in Nottingham at the office of a surgical supply factory. At sixteen, he suffered from a severe bout with pneumonia and

required a long time to recuperate. Earlier in 1901, his older brother, Ernest, had died of respiratory illness; frantic, his mother began to focus all of her attention on her convalescent son. So intense was the affectionate relationship between mother and son that Lawrence later came to believe that it had diverted his sexual development from a more normal path.

Some time before his illness, during the summer of 1901, Lawrence had met Jessie Chambers, then fourteen, who was living at the Hagg's farm, three miles from Eastwood. In the convivial household of the Chambers family, so different from his own, Lawrence enjoyed a friendship, especially with the brothers, that was relaxed and spontaneous; with Jessie he enjoyed a deeper, more intimate relationship, although his mother disapproved of the girl.

In 1902, Lawrence was a pupil-teacher at the Eastwood British School, where he taught both in Eastwood and at Ilkeston, Derbyshire, until September, 1906, when he entered Nottingham University. Having placed in the first division of the first class on the National King's Scholarship Examination, he was admitted to a two-year academic program leading to an arts degree. Qualified as a teacher in 1908, he became a junior assistant-master at the Davidson Road School in Croydon, a suburb of London. He worked there until November, 1911, when a second severe attack of pneumonia forced him to take a leave of absence.

Yet as early as 1905 Lawrence had begun writing, and with Jessie Chambers as his sounding board, he experimented in fiction and poetry. When his

mother died in January, 1911, he suffered a terrible emotional blow, yet in that year he published his first novel, *The White Peacock*. Reviewed favorably by most critics—one compared Lawrence as a regionalist to Thomas Hardy—the novel established a thematic pattern that would become fairly typical for the author. Narrated by a Lawrence-like character, the book treats the mating choice of a young woman for one of two suitors, one overcerebral and overcivilized, the other an earthy, vital man. The novel also urges the need for honesty, for naturalness in the relationships between men and men, as well as between men and women.

Lawrence's second novel, *The Trespasser* (1912), based upon the experiences of his friend Helen Corke, was less successful. Yet with the publication of *Sons and Lovers* in 1913, his reputation began to grow. Along with the publication of his first book of poetry in the same year, the novel marked a major advance in his professional career. A year earlier, in April, 1912, Lawrence's personal life had also changed dramatically. After a month's courtship, he had eloped with Frieda von Richthofen Weekley, mother of three small children and wife of a professor of French at Nottingham University.

With Frieda by his side (the couple was not to marry until 1914, when her divorce became final), Lawrence traveled the world extensively—usually in self-imposed exile from England. In the midst of packing and unpacking, seeking warm places more favorable to his tuberculosis, he continued to write major fiction, such as *The Rainbow* (1915), *Women in Love* (1920)—generally regarded as his masterpiece—and *Lady Chatterley's Lover* (1928). Lawrence also published other novels, including *The Lost Girl* (1920), *Aaron's Rod* (1922), *Kangaroo* (1923), *The Boy in the Bush* (1924), and *The Plumed Serpent* (1926). In addition, Lawrence published collections of novellas, numerous volumes of poetry, several volumes of short stories, four volumes of travel sketches, and other collections of essays and plays. By 1928, following the publication of *Lady Chatterley's Lover*, Lawrence's health began to fail. After staying a month at a sanatorium, he insisted upon being moved to a villa at Vence, near Cannes, France. There on March 2, 1930, with Frieda at his side, he died. After burial, his body was later reinterred at Taos, New Mexico.

## ANALYSIS

In an essay entitled "The State of Funk," Lawrence discusses his moral vision as an artist:

My field is to know the feelings inside a man, and to make new feelings conscious. What really torments civilised people is that they are full of feelings they know nothing about; they can't realise them, they can't fulfil them, they can't live them. And so they are tortured. It is like having energy you can't use—it destroys you. And feelings are a form of vital energy.

In Lawrence's worldview, people either possess or lack vital energy—that is to say, *anima*, or spirit. Those whose vital spark fires into passionate energy are truly alive; the rest—those whose natural feelings are dulled by the mechanical routine of "civilization," so that their responses are cerebral, not instinctive—might as well be dead, no matter how successful they may appear to be, no matter how attractive or wealthy or powerful they may seem.

Lawrence's novels, short stories, poems, and miscellaneous writings advance the same moral vision: that men and women (indeed, whole cultures) must discover their true selves, a quality epitomized in *Studies in Classic American Literature* (1923) as the "IT." The IT, or essential self, was once, among primitive cultures, celebrated as a life force of vital energy. When Lawrence visited sites of Etruscan culture, in *Etruscan Places* (1932), he half described, half invented an archaic world during a period when its people took passionate pride in the human body, when they exulted the sacredness of the whole living universe. According to Lawrence, Etruscans and other old civilizations regarded the universe as an organism, a living whole, to which all living things, and even seemingly inanimate things, belong. Now, Lawrence believes, human beings have lost sight of their interconnectedness with the organic universe; they have lost their connection with *anima*, the vital spirit. Through constant mechanical repetition, their feelings, even their sexual feelings, have grown dull, repetitious, lacking spontaneity or natural warmth.

Rejecting the scientific positivism dominant in twentieth century philosophy, Lawrence urges instead a "religion of the blood," a primitivistic belief in the power of instinct rather than mind. For him, the "dark gods" of the blood, of the subconscious

intuitive self, not the light of cerebral rationality, must rule human conduct.

Yet how can modern men and women, forced to work in a mechanized, technologically complex world, tap their deepest feelings? For Lawrence, reared in a mining town that symbolized for him the mechanical horrors of a rigid, artificial, inhuman universe, the answer was both simple and complicated. On a simple level, they must learn to reeducate their native instincts, almost stultified by the repetitions of work, almost blighted by meaningless social intercourse.

To renew these instincts, Lawrence as an artist would educate the sensibility of people, so that they might confront their secret hearts. Typically, his stories concern confrontations or encounters in which characters discover their true sensual identity and either achieve fulfillment or fail. Because the sexual urge, in Lawrence's view, is the last powerful human feeling that resists the mechanization of intellect, he usually shows how characters can reeducate their passionate selves in order to become authentic human beings. Thus, sex—usually identified in the public mind as the writer's central theme—is actually the means, not the end, of vital education. Lawrence once complained bitterly about the vulgar image of him as a "lurid" propagandist for sexuality. His theme, indeed, is not sex, but love. In a sense, Lawrence is the most "romantic" of major twentieth century writers, for he believes not only in the redemptive powers of love but also that human beings have a narrow choice: They will either love or die—they will either become part of the vital flow of energy, or they will dry up, shrink in heart, and become part of the living dead.

If Lawrence's moral vision is simple (or, to his detractors, simplistic), his purposes as an artist are often complicated. Although his plots are generally direct enough—he brings two or three major characters into direct confrontation—the means by which characters confront one another are calculated to expose their intrinsic psychological urges. Commonly, Lawrence will structure a plot around the conflict of three persons in a triangle confrontation. In this pattern, a woman has a choice between two suitors. One is inhibited, "civilized," meticulous to a fault, often limited by a weak or ambiguous sexual drive; the other is virile,

healthy, unaffected, but often coarse in manner. Stories such as "The Old Adam" and "A Modern Lover" are typical. Sometimes the pattern is varied, with a fastidious male character forced to choose between a prim, gentle, sexually undemanding (or unresponsive) potential mate and a more earthy, vital, but sexually assertive female, as in "The Witch a la Mode" and *Sons and Lovers*.

A second common pattern of Lawrence's plots involves the mating of two couples, one seemingly more compatible or "lucky" in its robust sexuality, the other experiencing a serious, early complication in its romance. In this pattern, Lawrence usually shows how the members of the "lucky" couple actually are ill-suited to each other, whereas the problematic couple resolves its difficulties to achieve a measure of happiness as in "Love Among the Haystacks" (1930) and *Women in Love*.

Forced to confront their authentic natures, Lawrence's characters either come to terms with their "blood," their subconscious psychological urges, or fail—usually because they attempt to dominate their lover. For Lawrence, love's psychology is inextricably connected with the psychology of mastery, the urge to control another person. When the impulse toward dominance is stronger than that toward eros, as in "The Prussian Officer," the character will fail to achieve vital fulfillment. When one character succeeds in achieving ruthless domination over the other in spite of the partner's resistance, the result is also tragic, as in *The Fox* (1923). Only when Lawrence's love-partners acquiesce to a passionate relationship that is both sexual (phallic) and tender, is the pattern perfected in mutual love, as in *Lady Chatterley's Lover*.

As for characters who fail to achieve any vital connection with another human being, they are either humiliated, as Bertie Reid is in "The Blind Man," or, like expiring vampires, decompose, as Pauline Attenborough does in "The Lovely Lady." For Lawrence, the human vampires, those who feed off the vital energy of others to maintain a semblance, but not the reality, of life, are among the living dead. Lawrence's characters are not so much good or evil as they are alive or dead, either life enlarging or life limiting, either those who worship the dark gods or those who worship the gods of machinery and of money.

## SONS AND LOVERS

**First published:** 1913

**Type of work:** Novel

*In this famous psychological novel, a sensitive Midlands youth cannot reciprocate the love of women of his class because of his Oedipal attraction to his mother.*

*Sons and Lovers*, Lawrence's third book, is an apprenticeship novel that, in many respects, defies the conventions of its genre. Among early twentieth century English apprenticeship novels that preceded Lawrence's work, the main character usually undergoes an "education" or "apprenticeship" toward a meaningful life experience. As part of his (or, rarely, her) apprenticeship, the protagonist begins with innocent, often mistaken notions about the nature of reality; only after some painful experiences does he grow to mastery in the game of life. Specifically, he learns valuable lessons about himself, especially his limitations and illusions, but by the completion of his youth he often can answer three questions: What is the nature of love? What vocation is appropriate for me? What is the meaning of life?

In contrast with the main characters in earlier apprenticeship novels or in subsequent ones, Paul Morel, Lawrence's protagonist, fails to find answers to any of these questions. By the end of his life apprenticeship, he has learned only that he is incapable of intense sexual feelings to sustain a relationship with a young woman, that he lacks a true vocation for his considerable talents, and that he cannot fathom the "meaning of life," except narrowly in terms of his own sensibility.

Grappling with a modern version of the classic Oedipal problem, Paul loathes his father, the hard-drinking but convivial miner, Walter, and he attaches himself emotionally to his mother, Gertrude. As a result of this psychological conditioning, in Freudian theory, Paul has been crippled emotionally. Following his mother's death from cancer, Paul is a "derelict," isolated from all meaningful emotional contact with women. His proposal of marriage to Miriam Leivers, whom he had earlier seduced, is merely formalistic, and she rejects him. He turns back Clara Dawes, his paramour, to her husband, Baxter, for he knows that

he cannot give her the fullness of love that she deserves.

Yet the clinical phrase "Oedipal complex" does not quite get to the heart of Paul's dilemma. As Lawrence understands his protagonist, Paul has indeed been crippled in his vitality through his mother's excessive love for him, for her identification of soul with his soul. In Lawrence's variation on the Freudian paradigm, Paul has invested his vital force, his *anima*, so deeply into identification with his mother that they are truly one. He has no more vital energy to surrender to any other woman. Gentle, passive Miriam threatens him because, in his imagination, she wishes to absorb his soul, to destroy what is left of his independence. Although he loves her on a spiritual level, he subconsciously fears her physical sexual presence. His "test" on her sexuality has really been a test of his own capacity to feel erotic emotion through her stimulus—and he fails. His love affair with Clara, sexual enough to satisfy him physically, lacks a dimension of the spirit. In either case, he shrinks from being absorbed—from losing his independence through love with either a passive or an assertive woman.

Even as he fails in his quest for love, Paul also fails to discover a life's vocation. Although he has dabbled in painting, has worked as a spiral clerk at a surgical supply factory, and has taught school briefly, he concludes his youth without ever selecting a foundation for his future labors. His vocation, by the end of the novel, is not to work at all, at least not to work at mechanical, dehumanizing tasks. In a sense, his work at Jordan's—which symbolically manufactures artificial limbs and prostheses—prepares him for the larger world beyond Nottingham. He learns that every person is crippled to some degree, some obviously, like the hunchback, Fanny, others emotionally, like Paul.

Finally, he fails to solve the great mystery of the meaning of life. By the end of the novel, he has made only one crucial decision: to go on living. He

has decided not to follow his mother in death, presumably by his own suicide. Yet this decision, considering the great emotional stress that Paul has endured, is no small victory of the spirit. The lights of the town that urge him onward are symbols of his renewed spark of vital force. By moving toward these lights “quickly,” he shows the reader that he accepts the challenge eagerly.

## WOMEN IN LOVE

**First published:** 1920

**Type of work:** Novel

*In this novel treating the mating of two sisters with their lovers, one couple is relatively successful, while the other concludes its relationship in tragedy.*

*Women in Love*, begun as early as 1913, was tentatively entitled “The Sisters,” then later “The Wedding Ring.” As the sprawling manuscript began to take shape over the next two years, Lawrence published the first part as *The Rainbow* (1915). With considerable revisions and a complete rethinking of the material, he published a second Brangwen novel in 1920. In its final form, *Women in Love* is less a continuation of *The Rainbow* than an altogether different novel. To be sure, Ursula and Gudrun Brangwen persist in their quest for happiness. Yet the Gudrun of *The Rainbow* was a minor figure; in *Women in Love*, she is a major protagonist, with a fully developed psychology. Ursula’s change is even more dramatic. In the earlier novel, she was a woman of passionate independence, whereas in *Women in Love* she is subdued—less impulsive, less heroic, more nearly domesticated.

Their lovers, Gerald Crich and Rupert Birkin, complement the sisters’ essential temperaments. Like the fiery, strong-willed Gudrun, Gerald is a controlling, domineering sensualist—one as habituated to subduing horses to his iron command as to overworking his laborers in the coal mines. In contrast, Rupert (a Lawrence-like personality) is sensitive, introspective, emotionally fragile in spite of his intellectual vitality and his charm.

Unless one reads Lawrence’s canceled prologue to *Women in Love*, a chapter that can be examined in the author’s posthumous volume *Phoenix II: Uncol-*

*lected, Unpublished, and Other Prose Works* (1968), one cannot fully understand the reason for Rupert’s timorousness as a lover. Yet this prologue is an essential key to perceiving what follows in the novel. Even as Rupert was pursuing with dutiful but passionless zeal his affair with Hermione Roddice, he was attempting to put behind him a far more satisfactory emotional friendship with Gerald. Whether the men’s earlier relationship had become one of physical homosexuality is not entirely clear, although Lawrence seems to exclude the physical element. Nevertheless, Rupert is erotically stimulated more by men than by women and certainly not by Hermione, in spite of his frantic love-making or his earnest wishes to love her with tenderness:

He wanted all the time to love women. He wanted all the while to feel this kindled, loving attraction toward a beautiful woman, that he would often feel towards a handsome man. But he could not. Whenever it was a case of a woman, there entered in too much spiritual, sisterly love; or else, in reaction, there was only a brutal, callous sort of lust.

As the novel itself begins, a reader ignorant of this complication in Rupert’s psychosexual orientation may not fully understand why the character experiences so much trouble in his relationship with Ursula. The couple, after all, seems to be well suited culturally, intellectually, even emotionally. The two share a similar background in education and social class, are both intelligent, sensitive, tolerant, and certainly “love” each other. Yet their love must be tested and refined. Many readers will wonder at the lengthy disputations between Ursula and Rupert—the continuing, often circular debates over the meaning of love, the subtle defining of roles that each partner must adopt to make the relationship work. Precisely this test is the core of Ursula and Rupert’s mating, for it results in compromises that make it possible for the couple to marry.

Ursula wisely and lovingly diminishes Rupert’s secret fear that women will dominate him sexually. He is actually more comfortable with the embraces of a man. In the chapter “Gladiatorial,” Rupert and Gerald release their tensions (and sublimate their repressed eroticism) by wrestling; more than that, for Rupert the touching is a sign of hope for

“blood-brotherhood,” a deep friendship and binding between the males. When Gerald dies, Rupert is a broken man. Although he has mated successfully with Ursula and loves her as deeply as ever he can a woman, he regrets the loss of another form of fulfillment: bonding for life with a male friend.

If Ursula’s vacillating relationship with Rupert ends at last with bitter-sweet success, Gudrun’s passionate affair with Gerald concludes in tragic failure. Yet their love had seemed at first to be grounded firmly on their similar temperaments.

Both are controlling, emotionally vehement, erotically charged persons. Yet their seeming “luck” in discovering passion so easily is, in fact, a cause for failure in love. Even as Gerald exerts despotic and capricious force to control his miners, so he tries to subdue the strong-willed Gudrun. Yet she is as defiant, independent, and proud a person as he: She battles him sexually for dominance, so that their lovemaking assumes the qualities of a battle, without tenderness or consideration for the other partner. Less cruel than Gerald, she is nevertheless as perverse in diminishing his self-confidence. Near the conclusion of the novel, his suicide seems inevitable.

Yet how can one explain Gudrun’s infatuation with Loerke, a physically unattractive homosexual? Why should this sexually vital woman follow after a man who seems to contrast with Gerald’s powerful, athletic virility? The answer is that Loerke is also, like Gerald, a willful, controlling, arrogant brute. He attracts Gudrun through both his magnetism and his dedication to art; in his drawings and sculpture, he achieves works that are mechanical, starkly industrial, rather than human. Through her servant-to-master role with Loerke, Gudrun will complete her destruction (in Lawrence’s image, her reduction), eventually to become as mechanical as Loerke.

For Lawrence, Gerald’s tragic fate is caused partly by Gudrun’s reductive energy, which corrodes his vital spirit, and partly by his own self-

destructive egoism. In contrast, Ursula and Rupert are “lucky” in love because they nurture, rather than diminish, the vital energy of their partner. Artists such as Loerke—clever, manipulative, independent—may survive with their ego intact; but unless their lives, as well as their art, are established on human principles, they too fail to reach fulfillment.

### “THE HORSE DEALER’S DAUGHTER”

**First published:** 1922 (collected in *England, My England*, 1922)

**Type of work:** Short story

*In this modern psychological fairy tale of rebirth, a desperate woman and her rescuer are redeemed by love.*

“The Horse Dealer’s Daughter,” resembling such fairy tales or folktales of transformation as “Cinderella” or variations on themes of “The Ugly Duckling,” treats a sullen country girl whose condition is wonderfully altered from humble (or ugly) to attractive and marriageable. Mabel Pervin’s transformation also resembles that of tales concerning Princess Aurora or of Snow White, in which a maiden and her world are cast under a spell (or curse), only to revive, along with the revival of life everywhere, upon the magic of a lover’s kiss. As a psychological tale, Lawrence’s story also resembles coming-of-age rituals, in which the protagonist moves from sexual latency to mature fulfillment, from sterility to fecundity, from passivity to vitality.

At twenty-seven, with a fixed expression on her face described as “bull-dog,” Mabel first appears to be an unattractive spinster; worse, she suffers from a depression that brings her to the verge of suicide. Her mother dead, her father and her brothers indifferent to her, she is the drudge of an otherwise all-male household. The men enjoy a vital, jovial connection through their drinking and hearty companionship. Yet Mabel, symbolized by the draught horses tied head to tail, is as captive as a brute animal, in spite of her slumbering, subdued animal strength. Like the horses, she seems to be asleep—helpless to demonstrate her vitality.

When Dr. Jack Ferguson, a friend of the Pervins, especially of Mabel's boisterous brothers, views her wading into the water moments before she submerges into the turgid, "dead" pond, he perceives at once that she wishes to end her life. He rescues her not simply as a physician but also as a concerned human being. In sinking beneath the cold water, he nearly drowns. In a sense, he has saved two persons, Mabel and himself. Yet the immersion, resembling baptism, is a renewal of life—from near death to rebirth—so that both persons are symbolically "reborn."

Mabel's confused words, when she discovers that Ferguson has removed her muddy clothing, challenge him: "Who undressed me?" Certainly it was the doctor, who had in mind only the welfare of his patient. Her next challenge, striking to the heart of her deepest yearning, arouses in him a response that is equally authentic: "Do you love me, then?" For many readers, this challenge appears to be illogical, even absurd. Before the incident, Ferguson had never indicated to her any feeling of love. Yet his response is affirmative. He is compelled to love her, not because of any particular quality in the woman, but because of his need to love. In a sense, his existence has been heretofore as devoid of vital force as hers. He, too, had been dying to his passional self, although he had not been aware of this reduction. In a leap of intuition, he "connects" with Mabel's elliptical meaning. If he does not love her, she might as well be dead. Without intellectual reflection, he knows instantly, subconsciously, that his case is the same.

Ferguson's insistence that the woman marry him at once, the next day if possible, is appropriate to his heart's deepest needs, even as it is to Mabel's. She fears only that his intense, fierce desire will overwhelm her. When she speaks of her "horrible" qualities, she is only human. To Lawrence, all people fear that they are "horrible" despite their exterior attractiveness or charm; only the power of love redeems them from their fears of incapacity. In this most explicitly romantic of Lawrence's stories, his theme must be understood directly, without reading into it any sense of implied irony or satire: Lawrence truly means that Mabel and Jack must either love or die. Awakened into life by the enchantment of flowing vitality, these lovers, like those of fairy-tale romance, successfully complete their ritual of rebirth and are saved.

## "SNAKE"

**First published:** 1921 (collected in *Birds, Beasts, and Flowers*, 1923)

**Type of work:** Poem

*From his encounter with a snake, the narrator confronts on a symbolic level his attitudes toward sex.*

"Snake" can be understood on two levels, as narrative and as symbol. On the simpler level, a Lawrence-like speaker encounters a snake at "his" water trough. Rapt by nearly hypnotic fascination, he allows the snake to drink, without taking action. Soliloquizing like Hamlet, the speaker wonders whether he is a coward not to kill the snake, because in Sicily the gold snakes are venomous. The snake continues to drink until, satisfied, it climbs the broken bank of the wall face, puts its head into "that dreadful hole," and withdraws "going into blackness." At this point, the speaker throws a log at the water trough yet fails to hit the snake. Immediately, he regrets his "pettiness" and wishes that the snake would come back, for it seemed to be like a king. The speaker has missed his chance with "one of the lords of life."

On the narrative level, the poem is perplexing because a reader cannot fathom why the speaker expresses his internal debate with such vehemence over the question of killing the snake. One is not necessarily a "coward" in avoiding a poisonous snake, nor is one "perverse" in longing to talk to one. What "voices" of his education demand that he kill the snake? Are they the voices of Judaic-Christian tradition concerning the serpent in the Garden of Eden? Are they the voices of scientific rationalism that define a venomous snake as dangerous? Moreover, why should the speaker feel such regret at the act of throwing a log at the snake? After all, the snake had escaped the blow. Why should the snake seem to the speaker to be "like a king in exile, uncrowned in the underworld"? To be sure, in non-Western cultures the snake (or, in ancient Egypt, the crocodile) is often worshiped as a divine symbol of fertility. In India and in Mexico among the ancient Aztecs, the snake has been revered as a god of sexuality and life. Yet why should a twentieth century European speaker suppose that the snake is "due to be crowned again" as a lord of life?

Answers to these questions can best be determined by analyzing the symbolic structure of the poem. The snake is clearly a phallic image—at least to the speaker. When the snake first emerges, reaching down from “a fissure in the earth-wall,” the speaker perceives, on a subconscious level, the male organ emerging from the female. Lawrence uses the vulva image of “fissure” or “earth-lipped fissure” deliberately. When the speaker, almost trancelike, stares at the snake “withdrawing into that horrid black hole,” he imagines on a symbolic level the act of sexual intercourse. As a result of his “education,” he has repressed his sexuality; his fears of the woman are expressed by the word “horrid.” By throwing a phallic-shaped log at the disappearing snake, he has suddenly snapped the tension. Now he regrets the voices of his “accursed human education.” Even as the Ancient Mariner in Samuel Taylor Coleridge’s poem suffered guilt after slaying the albatross, so the speaker feels guilt at his “mean” act. For the snake, in Lawrence’s symbolism, is indeed a lord of life. Like Pluto, who in Greek mythology ruled the underworld, the sexual force (phallus) rules the subconscious and is “due to be crowned again,” this time as king of the dark gods of the blood—of vitality. Because the snake inhabits two worlds—that of light and of darkness, of the consciousness and of the subconsciousness—it represents to Lawrence (as do “Bavarian Gentians”) a union or wedding of the opposing ele-

ments of the universe into a single symbol of the life force.

## SUMMARY

In “The Rocking-Horse Winner,” D.H. Lawrence makes clear his belief that the only “luck” that a person ever achieves in life is the good fortune—or capability—to love. Yet not all forms of love are life enhancing. As a moralist, Lawrence urges his readers to discriminate between incomplete, self-involved, or perverse love and love represented by phallic tenderness. In *Lady Chatterley’s Lover*, particularly, he shows how good sex (which is natural, spontaneous, springing from tender feelings toward one’s partner) renews life, whereas, bad sex (which is cerebral, mechanical, springing from self-involvement and the urge to dominate another human being) results in emotional sterility.

In his essay “Why the Novel Matters,” Lawrence wrote that “the novel is the book of life.” By that he did not mean simply that the novel provides a reader with vicarious experiences that resemble life. Instead, he meant that the novel actually gives the reader life, because the novelist transmits part of his life force to the reader. As a novelist and as a writer of different genres, Lawrence is generous in providing not only the simulation of life but also life itself.

## DISCUSSION TOPICS

- How does D. H. Lawrence make his "problematic couples" happy?
- As a critic, Lawrence expresses many of his literary convictions. Observe some of them in his book *Studies in Classic American Literature*.
- Do we learn more about the Etruscan culture or about Lawrence in *Etruscan Places*?
- Are Lawrence's unsuccessful lovers primarily failures or victims of forces beyond their control?
- Lawrence's poetry often attempts to capture a revealing moment. How is this true of "Snake"?
- What are the chief pitfalls of equating Paul Morel and his creator?

## STEPHEN LEACOCK

**Born:** Swanmore, Hampshire, England (in the Isle of Wight)

December 30, 1869

**Died:** Toronto, Ontario, Canada

March 28, 1944

*Although Leacock wrote authoritatively on political economics, the profession for which he was trained, he became Canada's finest writer of parody and burlesque.*

### BIOGRAPHY

Stephen Butler Leacock (LEE-kahk) was born at Swanmore, Hampshire, England, in the Isle of Wight, on December 30, 1869, the son of W. P. Leacock and Agnes Butler Leacock. He was taken in 1876 to live on a farm near Lake Simcoe in Ontario, Canada. Leacock was educated at Upper Canada College in Toronto, where he was head boy in 1887. He graduated from the University of Toronto in 1891 and earned a Ph.D. in economics from the University of Chicago in 1903. He then began a distinguished academic career that was to last until he was past sixty-five years of age. From 1891 to 1899, he taught at his old preparatory school and found the job of schoolmaster deeply depressing. He joined the faculty at McGill University in Montreal as a temporary lecturer, however, and eventually became professor of political economy. He was named head of the department of economics and political science in 1908 and taught at the university until 1936.

Leacock was widely known for his professional writings, publishing many learned studies in economics. *Elements of Political Science* (1906) was an early academic work, and *Economic Prosperity in the British Empire* (1930) was a major late work. Their author whimsically observed that he hoped that no one would ever have to read them. Certainly, the larger reading audience knew him as the author of

humorous essays and burlesques. In fact, so enormously successful were his books of humor and his lectures that, in time, his scholarly writings may have been unjustly neglected.

Leacock made his appearance as a humorist in *Literary Lapses* (1910). This well-received collection was followed in rapid succession by *Nonsense Novels* (1911), *Sunshine Sketches of a Little Town* (1912), and *Arcadian Adventures with the Idle Rich* (1914). Volumes with similarly playful and alliterative titles are *Moonbeams from the Larger Lunacy* (1915) and *Frenzied Fiction* (1918).

Works from the latter half of Leacock's career are *Laugh with Leacock* (1930), *Afternoons in Utopia: Tales of the New Time* (1932), *Mark Twain* (1932), *Charles Dickens: His Life and Work* (1933), *Humor: Its Theory and Technique* (1935), and *Funny Pieces: A Book of Random Sketches* (1936). His books on Twain and Dickens are studies of other writers who made liberal use of humor in their work. In *Humor: Its Theory and Technique*, the college professor brings his analytic powers to the study of comic writing. Books from the prolific writer's last decade are *Laugh Parade* (1940), *Our British Empire: Its Structure, Its History, Its Strength* (1940), *My Remarkable Uncle, and Other Sketches* (1942), *How to Write* (1943), *Last Leaves* (1945), and *The Boy I Left Behind Me* (1946).

The sketches in *Literary Lapses* were actually written between 1891 and 1899, Leacock's period as an unhappy schoolmaster, and had appeared in various periodicals. When he offered them to the publishers of his *Elements of Political Science*, they did not

take the proposal seriously. He then printed the sketches at his own expense and, using a news company as distributor, sold three thousand copies in two months. Soon thereafter, the book was published in more conventional form, and Leacock's career as a popular writer was launched.

In August, 1900, Leacock married Beatrix Hamilton of Toronto at the Little Church Around the Corner in New York City. He joined the University Club and, as he became more prosperous, established a summer home in Orillia, Ontario, Canada. Leacock's humor is gently teasing (as opposed to the blistering satire of Twain, to whom he is often compared), but the residents of Orillia were deeply offended by *Sunshine Sketches of a Little Town*. In August, 1915, his only son, Stephen Lushington Leacock, was born. Leacock's wife died in 1925. Gradually, Leacock accumulated a host of honorary degrees: Litt.D., LL.D., and D.C.L.

Leacock's comments on himself are usually so playful and self-mocking as to warn the reader against taking them at face value. For example, in the preface to *Sunshine Sketches of a Little Town*, he offers his membership in the Political Science Association of America, the Royal Colonial Institute, and the Church of England as a proof of his respectability. He goes on to say that he is a member of the Canadian Conservative Party but has failed utterly at politics, since he has never been awarded a contract to build a bridge or anything else.

Following a throat operation, Leacock died in the General Hospital at Toronto on March 28, 1944. He was seventy-four years of age and left behind four chapters of his autobiography.

## ANALYSIS

Leacock has often been compared to Mark Twain. Perhaps it is inevitable that any North American humorist who has won a wide reading audience and whose work is not largely urban and ethnic in nature will be compared to Twain. Moreover, it is true that superficial similarities between the two writers do exist. Both are at their best in the sketch or self-contained episode, and their books, even Twain's novels, are usually collections of short pieces. Both gave humorous lectures that showed them to be skilled performers, as well as writers. Both use a prose that depends little upon quaintness or wordplay. The style of each is simple and straightforward, allowing the comedy to flow from

the closely observed absurdities of daily life rather than from verbal pyrotechnics. Finally, of course, Leacock expressed his fascination with Twain by becoming his biographer.

The differences between the two writers, however, are as marked as the similarities. Twain's satire, from his first book onward, is often characterized by antipathy and disgust for his subjects. Leacock's dominant mood, on the other hand, is one of amused tolerance. Twain is more truly a writer of fiction. Leacock's pieces are not usually short stories in the sense in which that term is traditionally applied. They are fictional to be sure, in that the reader has no illusions that those anecdotes featuring Leacock himself as protagonist recount actual occurrences. The author-narrator usually represents himself as a naïve bumbler, a persona belied by the skill of his storytelling. Apart from such anecdotes, the bulk of Leacock's humor is parody. He wrote many hilarious spoofs of the romantic novels, detective stories, and theatrical melodramas of his day.

It could be argued that all humor is aggressive, that every joke is on someone. Humor is the result of someone's embarrassment, discomposure, loss of status or control, however slight. The ways in which Twain and Leacock express this aggression mark the major difference between them. Leacock writes often about Prohibition in the United States, an undertaking by which he was both amused and bemused. Had Twain lived to see the enactment of the Eighteenth Amendment, the reader can easily imagine the virulence with which he would have assaulted the fools, scoundrels, and hypocrites who would abridge the freedom of others through such a high-handed measure. Leacock, however, greeted the noble experiment of the Americans (and similar laws enacted in some Canadian provinces) with a feigned amazement and a gentle skepticism.

Leacock alludes obliquely to the professional stresses created by his books of humor. To his professional colleagues, he was first and foremost a political economist. To those most closely associated with him, he was the department head—the man who determined teaching assignments, who recommended raises in pay and promotions in rank. In the previously mentioned preface to *Sunshine Sketches of a Little Town*, Leacock complains that many of his friends believe that he writes humor-

ous trifles only in those hours during which he is too weary to perform his true work. He protests that the truth is the exact opposite of this notion, that his academic writing is easy, while his imaginative work is arduous and succeeds only upon occasion. He concludes that he would rather have written *Alice's Adventures in Wonderland* (1865) than the entire *Encyclopædia Britannica*. There, Leacock compares himself, by implication, not to Twain but to Lewis Carroll, another gentle humorist and university professor. Leacock attests to the seriousness with which he approached the writing of humor in *Humor: Its Theory and Technique* and *How to Write*.

In typically self-deprecating fashion, Leacock writes that, immediately after he had lectured extensively on imperial organization throughout the British Empire, the Union of South Africa came into being, and riots and wars threatened the empire elsewhere. These events, he says with mock seriousness, will give the reader some idea of the importance of his addresses. The admirer of Leacock's comic writings, however, should not make the same error in reverse that the author attributes to his academic colleagues. Leacock's serious works are not insignificant.

In 1930, while putting together a collection of Leacock's best comic pieces up to that time, the humorist's editor writes that he polled more than a dozen of the wittiest minds of the day regarding what the selections should be. The single most requested piece was not humorous at all. It was a discussion of present-day education under the title, "Oxford as I See It." Even though the volume is to be called *Laugh with Leacock*, the editor says that he is obliged to include this shrewd analysis in the collection. The presence of "Oxford as I See It," surrounded by parodies, burlesques, and pieces of inspired nonsense, suggests a nice metaphor for Leacock's work—the gift of wisdom and common sense found within the extravagantly wrapped package.

## LITERARY LAPSES

**First published:** 1910

**Type of work:** Short stories

*This little book is a mixture of fanciful short stories, literary parodies, and mock-serious essays by an eccentric persona.*

*Literary Lapses* is Leacock's first book of humor. It is not an easy volume to classify. Russel Nye calls it a collection of essays, but only a handful of the sketches are truly essays. It is composed of twenty-six short pieces, ranging from short stories to burlesques of severely condensed romantic novels to essays that solemnly develop mad premises. Leacock's typical narrator is established in the very first sketch, "My Financial Career." After several ludicrous missteps, he succeeds in opening his first bank account; then, because of the bank's intimidating ambiance, he inadvertently draws a check for the total amount of his deposit. Thereafter, he keeps his savings in a sock.

The literary parodies, although comprising only a fraction of the text, appear to give the volume its title. "Lord Oxhead's Secret" is subtitled "A Romance in One Chapter." The peer's daughter, Gwendoline, is a beautiful "girl" of thirty-three who is being courted by the dashing Edwin Einstein of Oshkosh, Wisconsin. At the climactic moment, as the father and the unsuitable suitor come face to face, Lord Oxhead falls dead, taking his secret with him to the grave. It is too complicated to be of interest anyway, concludes the narrator. In "Getting the Thread of It," the narrator's friend Sinclair attempts, by fits and starts, to familiarize him with the plot of the historical novel that Sinclair is reading. It is set in Italy in the time of Pius the something and features such characters as Carlo Carlotti the Condottiere and the Dog of Venice. "A Lesson in Fiction" is a sort of quiz on the modern melodramatic novel. The reader is asked to predict the behavior of the hero, Gaspard de

Vaux, boy lieutenant, and is able to do so at every juncture of the plot. The critic in “Saloonio: A Study of Shakespearean Criticism” is Colonel Hogshead who, after amassing a fortune from cattle trading in Wyoming, has turned to the study of William Shakespeare. Unshakably fixed in his head is the idea that a character named Saloonio is central to the action of *The Merchant of Venice* (pr. c. 1596-1597, pb. 1600). This notion meets such spirited resistance from the narrator and others that Colonel Hogshead is actually driven to reading the play. The fact that no Saloonio appears in the text, the Colonel finds unpersuasive—the book in hand, he insists, is unlike those that he consulted in Wyoming.

The short stories often have absurdly tragic endings. In “The New Food,” Professor Plumb of the University of Chicago has invented a highly concentrated form of food. A happy family is gathered around the small pill that represents their 350-pound Christmas dinner, when baby Gustavus Adolphus snatches the pill and swallows it. The distracted mother gives him water, a fatal error. After the explosion, only the smiling lips of a child who has had thirteen Christmas dinners remain. In “Borrowing a Match,” the passerby of whom the narrator asks this favor eventually throws away all of his possessions and rips his clothing to shreds in search of the requested item. He finally extracts from the lining of his coat—a toothpick. The narrator pushes him under the wheels of a trolley car and runs. In “An Experiment with Policeman Hogan,” as the officer walks his beat in front of the *Daily Eclipse* at two o’clock in the morning, journalist Scalper is at work in the office above. Scalper writes a column in which he delineates the character of readers by examining their handwriting. As he moves from one sample of handwriting to the next, he drinks from a dark bottle, which he shares with Policeman Hogan by periodically lowering it to the street on the end of a string. Scalper’s analysis of each sample coincides suspiciously with the degree of his progressive inebriation, so that by five o’clock in the morning he is telling Emily, a timid maiden in her teens, that she is on the verge of delirium tremens and that her liquor habit is so advanced as to preclude all hope.

A few of these pieces are dated, but it is a testimony to Leacock’s understanding of human nature and to the subtlety of his style that the public

found sketches written twenty years earlier still fresh and amusing. Indeed, a century after their composition, most are still fresh and amusing.

## SUNSHINE SKETCHES OF A LITTLE TOWN

**First published:** 1912

**Type of work:** Short stories

*A deadpan narrator amusingly describes the character types and the folkways of a fictional Canadian town.*

The episodic plot of *Sunshine Sketches of a Little Town* is developed through a conversation between Leacock’s chatty narrator and another resident, or former resident, of Mariposa. The reader takes the part of the former resident, whose responses are minimal and are recorded only occasionally as the narrator repeats them. Mariposa is a sunlit town of five thousand, according to the Canadian census, or ten thousand, according to the natives, lying along a hillside next to little Lake Wissanotti. The narrator is extremely proud of the progressive nature of Mariposa, the showplace of Missinaba County. He purports to take every occurrence at face value, never challenging the way that the characters represent their actions or their motives. The discrepancy between the interpretations of the narrator and those of the reader account for much of the book’s humor.

Leacock presents a fine gallery of small-town characters. Josh Smith is a hotel keeper who possesses an imposing size and manner, as well as a shadowy past. Some of his business practices are sharp almost to the point of criminality. He is also the deus ex machina of the novel. When, during the Knights of Pythias’s Excursion Day on Lake Wissanotti, the *Mariposa Belle* sinks (in six feet of water), it is Mr. Smith who raises her. When the heavily mortgaged (and insured) sanctuary of the Church of England

burns to the ground, it is Mr. Smith who saves the rest of Mariposa. Evidence that Mr. Smith was seen earlier carrying a can of kerosene through the streets is quite sensibly dismissed by Judge Pepperleigh, who immediately finds for the Church of England and against the insurance company. In the novel's penultimate chapter, Mr. Smith stands as the Conservative candidate from Missinaba County. He finds his inability to read and write no true impediment and, by means of his usual skillful maneuvering, defeats the long-entrenched Liberal member, John Henry Bagshaw.

Other residents of Mariposa are Jefferson Thorpe, barber and speculator in mining stocks; Golgotha Gingham, undertaker and longtime Liberal, who announces on the day of Mr. Smith's election that he supported Bagshaw only with the deepest misgivings; Peter Pupkin, heroic junior bank teller who, along with Gillis, the caretaker, foils a robbery of the Exchange Bank at three o'clock one morning—both men fire at the intruder, and Pupkin is slightly wounded when the robber fires back (although, strangely, only two shots are heard by witnesses); and Myra Thorpe and Zena Pepperleigh, beauties who quicken the pulses of young Mariposan males. One of the most appealing characters is the elderly Dean Drone. The dean's poor head for arithmetic has sunk his church deep into debt. He insists that the fault lies with the mathe-

matical professor at the Anglican college who, fifty-two years earlier, stopped the lesson right at the point where the book discussed logarithms.

The final chapter in the book is an equal mixture of humor and nostalgia. The reader has become a rich businessman in the city. At the Mausoleum Club, he nods and dreams of returning to the little sunlit town of his birth. Yet, of course, he never has—and he never will.

## SUMMARY

Stephen Leacock published almost a book for each year between the appearance of his first collection of humor, *Literary Lapses*, and the posthumous *The Boy I Left Behind Me*. He wrote in a number of genres: scholarly studies in his academic specialty, humor, literary biography, literary theory, and autobiography. At the time of his death in 1944, he was regarded as one of the finest writers in Canada and the foremost humorist of North America.

His fame has diminished with the passage of time, and newer Mark Twains have been put forward by the critics. Still, the droll persona of his narrator, the tolerance and generosity of spirit that soften his satire, and the simplicity and clarity of his style have not lost their appeal.

Patrick Adcock

## DISCUSSION TOPICS

- Examine the device of self-deprecating humor in Stephen Leacock's work. How does he keep readers from taking this self-deprecation too seriously?
- What is the difference between Leacock's parody and burlesque?
- Contrast the use of nonsense in Leacock's *Literary Lapses* and the Alice books of Lewis Carroll, which Leacock admired.
- Why should gentle humor, like that in *Sunshine Sketches of a Little Town*, infuriate the people of the town on which it is based?
- Why has Leacock's reputation declined, while those of Carroll and Mark Twain have not?

## JOHN LE CARRÉ

**Born:** Poole, Dorsetshire, England  
October 19, 1931

*Le Carré wrote spy novels that were more realistic and intelligent than those that previously typified the genre, thereby demonstrating that they could be serious literature.*

### BIOGRAPHY

John le Carré (luh kah-RAY), the pseudonym of David Moore Cornwell, was born in the town of Poole in Dorsetshire, England, on October 19, 1931, the son of Ronald Thomas Archibald Cornwell and the former Olive Glassy. His mother deserted the family when John was a little boy; his father had numerous mistresses who created emotional confusion in the boy's life by serving as unreliable transient mothers. The early loss of his mother may explain why betrayal is the major theme of all le Carré's fiction. Le Carré's semiautobiographical novel *A Perfect Spy* (1986) paints a picture of a lonely, hypersensitive boy whose father was a philanderer, a heavy drinker, and a flamboyant con artist who once served a term in prison for fraud. Le Carré was sent to prestigious English boarding schools but felt out of place because he did not belong to the same social class as the majority of the students. His father caused him humiliation by paying the tuition with bad checks. His precarious situation left him with ambivalent feelings toward the upper class; he was taught to share their values but did not identify with them. These feelings are evident in many of his novels, but particularly in *A Perfect Spy*.

Le Carré attended Berne University in Switzerland for a year, where he perfected his knowledge of German. He has stated that "the strongest literary influence was all that German literature that I

devoured either compulsorily or voluntarily." Because he was fluent in German, he spent his obligatory period of military service as an intelligence officer in occupied Austria in the aftermath of World War II. Le Carré became a retiring and secretive man, reticent about his activities as an intelligence officer; many broad hints of his former life are given in *A Perfect Spy*, which is the most comprehensive source of information about his life. After his period of national service, le Carré attended the University of Oxford, where he specialized in modern languages. Upon graduation, he obtained a position as a German instructor at Eton. He was not happy there. He never really liked the English upper class and made his feelings apparent in many of his novels.

After quitting his post at Eton, le Carré engaged in somewhat ambiguous pursuits. Many people have claimed that he was working for a branch of the British Secret Intelligence Service. He himself says, "I have always tried to deny it and keep away from the subject, and I intend to go on doing so." On the strength of his knowledge of European languages, le Carré joined the British Foreign Service in 1960, and it is widely believed that he continued to work as a spy, using his diplomatic cover to recruit agents in foreign countries.

Le Carré was still employed by the Foreign Office when he wrote his first three novels. He was required by department rules to use a pseudonym, and he chose the name John le Carré. His first two novels, *Call for the Dead* (1960) and *A Murder of Quality* (1962), feature a protagonist named George Smiley, who acts more as a private detective than as a secret intelligence officer. Both books were well reviewed but had only modest sales. It was not until

le Carré published *The Spy Who Came in from the Cold* in 1963 that he became famous in both Great Britain and the United States and began to earn enough money to devote his full time to writing.

Since 1964, he has been one of the world's most successful writers. Many of his novels have been made into motion pictures, including film adaptations of *The Little Drummer Girl* (1983), starring Diane Keaton, *The Russia House* (1989), starring Sean Connery, *The Tailor of Panama* (1996), starring Pierce Brosnan, Geoffrey Rush, and Jamie Lee Curtis, and *The Constant Gardener* (2000), starring Ralph Fiennes and Rachel Weisz. The most faithful and the most aesthetically satisfying adaptations were the British productions of *Tinker, Tailor, Soldier, Spy* (1974) and *Smiley's People* (1980), both starring Sir Alec Guinness as George Smiley.

Le Carré, a tall, distinguished-looking man, is an accomplished raconteur and mimic. His two marriages produced four sons. He settled in a secluded home in Cornwall, England, with his second wife.

## ANALYSIS

John le Carré does for the spy novel what Raymond Chandler did for the detective novel in works such as *The Big Sleep* (1939) and *Farewell, My Lovely* (1940). Le Carré demonstrates how a popular genre can be used to explore serious issues in a realistic manner. His first two novels, though they are impeccably written, are rather inhibited and conventional detective-type novels. It was with the publication of his third novel, *The Spy Who Came in from the Cold*, that he found himself as a writer.

Before le Carré's time, most spy thrillers featured impossibly patriotic, courageous heroes who were always getting involved in violent action. The hero's country was always right and the other side always wrong. The hero used ethical methods and acted in self-defense, while the villains could be counted upon to use murder and fiendish physical and psychological torture. One of the rare exceptions was W. Somerset Maugham's intellectual spy-hero, who appeared in a series of short stories collected under the title *Ashenden: Or, The British Agent* (1928). These realistic stories attempted to show spies and counterspies as real human beings. Other exceptions to the stereotypical romantic spy thriller, and another major influence on le Carré, were the thrillers or "entertainments" of Graham Greene. Greene's brooding, paranoic *Stamboul*

*Train: An Entertainment* (1932; published in the United States as *Orient Express: An Entertainment*, 1933), *A Gun for Sale: An Entertainment* (1936; published in the United States as *This Gun for Hire: An Entertainment*, 1936), and *The Confidential Agent* (1939) still make excellent reading after more than half a century. A third important influence on le Carré was Joseph Conrad, who was known primarily as an author of sea stories but turned out one memorable spy story in his novel *The Secret Agent* (1907).

The best representative of the romantic spy-heroes before le Carré's time is the famous James Bond. While the Bond stories such as *From Russia, with Love* (1957) and *Dr. No* (1958) have given readers and filmgoers many hours of escapist entertainment, even their own author, Ian Fleming, never took them seriously. Le Carré had plenty of exposure to the unpleasant realities of espionage in his years of government service. Just as Raymond Chandler wanted to show how real cops and real crooks talked and acted, le Carré wants to show how real spying is conducted and what sort of people are involved. In *The Spy Who Came in from the Cold*, le Carré reveals to the reading public what Phillip Knightley has called "the sordid world of espionage with its easily bought loyalties, loose morals, mind-boggling complexities, and, if it were not for its murderous consequences, comic inanity."

That novel is impressive in its characterization and apparent authenticity; however, it still has unmistakable traces of the old-style spy thriller, with its action-oriented hero taking on the whole Communist world single-handedly and throwing his life away in a final romantic gesture. *The Spy Who Came in from the Cold* was only le Carré's third novel. He had started writing fairly late in life; he was still struggling to find the right creative groove. It is obvious from his writings that le Carré's own personality is more cerebral than athletic and that his experience as a secret agent must have involved more organizational work than derring-do. He finally found the right formula for his spy fiction by focusing on the character of George Smiley and giving Smiley a formidable counterpart on the other side of the Iron Curtain.

Smiley is the least heroic hero ever featured in genre fiction. The character he most closely resembles is the sedentary, hyper-intellectual Sherlock Holmes. While James Bond was appropriately por-

trayed on the screen by the handsome, dynamic Sean Connery, George Smiley was portrayed equally appropriately by the pudgy, soft-spoken Sir Alec Guinness. While James Bond is a man of action, Smiley is definitely an intellectual. Bond is an extrovert and Smiley is an introvert. Bond likes high-powered cars and exotic weapons; Smiley does not like to drive at all and never carries a gun. Bond is famous for his affairs with beautiful women, while Smiley is extremely shy with both men and women and is married to a woman who is outrageously unfaithful. Bond represents the kind of man the average male reader would like to be, while Smiley represents the kind of man the average armchair spy suspects himself to be.

*The Quest for Karla* (1982)—a trilogy consisting of *Tinker, Tailor, Soldier, Spy* (1974), *The Honourable Schoolboy* (1977), and *Smiley's People* (1980)—represents the high point in le Carré's career. Besides George Smiley, the three novels contain other memorable characters. The Lenin-like Karla becomes one of fiction's great characters even though he remains offstage until the last chapter of the third book. The rivalry between these two strong-willed, brilliant antagonists resembles nothing in literature so much as the classic rivalry between Sherlock Holmes and Professor James Moriarty ("The Final Problem," 1894). It took an author with le Carré's intelligence, creativity, and insider knowledge to capture in fictional form the essence of the worldwide ideological, propagandistic, diplomatic, economic, technological, and military struggle called the Cold War. With the spy-heroes of Conrad, Maugham, Greene, and Fleming, the reader is confined to the agent level of espionage; with le Carré, the reader is admitted to the highest levels of spying and diplomacy.

*A Perfect Spy* reads like an addendum to *The Quest for Karla*, dealing with a minor theater of the Cold War but focusing with revealing autobiographical detail on the personality of a British spy turned traitor. The hero, Magnus Pym, resembles George Smiley in being a man who relies on his brain and his powers of persuasion rather than on brawn and athletic ability. *A Perfect Spy* reveals the psychological stress experienced by the British, as well as the Europeans in general, and even members of the developing world, as they were crushed between the enormous economic, military, and ideological pressure being exerted by the United States and

the Soviet Union, with the threat of nuclear annihilation facing humankind for more than forty years.

What made le Carré's spy novels so engrossing was that they were set in the Cold War years, and the stories he told and the issues he raised were current and relevant and resonated with the reader. With the fall of the Berlin Wall and the demise of the Soviet Union, le Carré turned to other topics, and not always as successfully as in his Cold War novels and in the struggle between Karla and Smiley. *The Night Manager* (1993) centers upon a criminal conspiracy, and *The Tailor of Panama* is closer to Graham Green than to earlier le Carré in its non-Cold War and non-nuclear concerns, while *The Constant Gardener* depicts the greedy ambitions of the pharmaceutical industry and allied political and business interests. In *Absolute Friends* (2004), the moral ambiguity of the Cold War novels has vanished in the author's harsh political critique of America's war in Iraq. These later novels are readable, but they do not always reach the same level of psychological complexity and involvement that le Carré achieved in his earlier novels.

## THE SPY WHO CAME IN FROM THE COLD

**First published:** 1963

**Type of work:** Novel

*A British spy deliberately disgraces himself in order to get recruited as a double agent by the East Germans in a story of multiple betrayals.*

*The Spy Who Came in from the Cold* begins with a dramatic nighttime scene in which a British spy is shot down while trying to escape from East Germany. Alec Leamas, a British agent, harbors hatred toward Hans-Dieter Mundt, second in command of the Abteilung (East German intelligence service), who is responsible for the extermination of Leamas's entire spy network. Back in England, Leamas is recruited for a sting operation against Mundt. Leamas is dismissed from the "Circus" (a special department of the British Intelligence Service) and pretends to go through a period of moral disintegration in order to make himself seem like a good candidate for recruitment as a double agent. During this period he meets Liz Gold, a shy, lonely

librarian, who falls in love with him. She happens to be a member of the British Communist Party but is more interested in personal relationships than in causes.

Leamas is approached and agrees to betray his service for a price. He is taken into East Germany, where he meets Jens Fiedler, a brilliant Jewish intellectual deeply committed to Marxist-Leninist ideology. Fiedler is Mundt's chief rival in the Abteilung. Leamas disingenuously feeds Fiedler rehearsed information intended to make it appear that Mundt has been working for the British. The zealous and ambitious Fiedler accuses Mundt of treason, and a trial is staged with Leamas as the star witness. Leamas, however, learns that George Smiley and his associates at the Circus have been clumsily covering up his tracks in England. For example, it is brought out by Mundt's defense that Leamas had "friends" who paid his overdue rent and other bills.

Then Gold is called as a surprise witness. She has been lured to East Germany on a bogus tour for members of the British Communist Party. She reveals that men calling themselves friends of Leamas came to her apartment and gave her money. One had identified himself as George Smiley, well known to the Abteilung as a highly placed member of the British Secret Intelligence Service. Leamas cannot understand how Smiley could have been so clumsy but begins to realize that the whole scheme was concocted to make it appear that Fiedler has been involved with the Circus

in a conspiracy to destroy Mundt. That is exactly what the court decides is the truth. Fiedler is arrested and is certain to be executed as an agent provocateur. Mundt, a neo-Nazi and longtime British mole, is totally exonerated and obviously destined to become the most important figure in the Abteilung.

Leamas will probably be executed. Gold is heartbroken; she feels responsible for betraying her lover. The disgusted Leamas

tells Gold: "What do you think spies are: priests,

saints and martyrs? They're a squalid procession of vain fools, traitors too, yes; pansies, sadists and drunkards, people who play cowboys and Indians to brighten their rotten lives." Here le Carré is spelling out the theme that would serve to structure all of his future spy novels. In the Cold War, both sides are equally despicable. Human values are being outraged by the ideological clash of communism and capitalism.

Mundt proves the correctness of these conclusions by releasing Leamas and Gold and providing transportation to the Berlin Wall. Here is an echo of traditional spy novels, featuring daring escapes from enemy territory under a hail of bullets. Le Carré, however, deliberately violates the conventions of the genre by allowing hero and heroine to be caught in spotlights while trying to scale the Berlin Wall and dying within sight of freedom.

## TINKER, TAILOR, SOLDIER, SPY

**First published:** 1974

**Type of work:** Novel

*George Smiley is brought out of forced retirement in a desperate attempt to uncover a traitor in the British secret service.*

*Tinker, Tailor, Soldier, Spy* is the first novel in a trilogy that came to be called *The Quest for Karla*. The novels are set in different parts of the world but have in common the British protagonist George Smiley and the Soviet antagonist known only as Karla. Oddly enough, Karla actually appears only at the very end of the last novel; yet his powerful personality, his unbending will, and his fanatical disregard for human feelings are felt throughout the approximately one thousand pages that make up these three books. The novels were inspired by the most famous case of treason in British history. Kim Philby, an upper-class, Oxford-educated intellectual who rose to the top echelon in the British Secret Intelligence Service, defected to Russia and was discovered to have been a mole—a double agent who had been revealing ultrasensitive information to Moscow Centre for decades. What made Philby's treachery even more devastating was that he had been in close contact with the American

Central Intelligence Agency (CIA) and the Federal Bureau of Investigation (FBI) in Washington, D.C., and was in a position to betray vital American secrets as well. This treachery poisoned relations between the secret services of the two allies. The British and Americans were unable to have confidence in their informants or operatives anywhere in the world.

In *Tinker, Tailor, Soldier, Spy*, Smiley is brought back out of semiretirement on a mission of the utmost urgency and confidentiality. It has been learned through a Soviet defector that Moscow Centre has a high-placed mole in the Circus who has been taking orders directly from Karla for years and has been systematically sabotaging the Circus. The mole has caused loyal employees to be fired and probably has been responsible for hiring agents who are working for Moscow Centre. Since Smiley has no way of knowing whom he can trust, he has to act as a counterspy against his own organization. *Tinker, Tailor, Soldier, Spy* contains little overt action. Smiley spends most of his days and nights examining musty files, trying to trace people's movements and link them with significant events. He is greatly aided by one of le Carré's most interesting characters, Connie Sachs, an arthritic, asthmatic old lesbian with a brilliant mind and a photographic memory.

The shy, self-effacing Smiley discreetly interviews various individuals and eventually finds a pattern of activities that enables him to identify the mole. He sets up an elaborate trap to lure the traitor to a safe house for a supposedly secret meeting with a Soviet agent.

When the highly regarded Bill Haydon appears, he is caught red-handed and confesses that he has been the Soviet mole since his undergraduate days at Oxford. It is common knowledge within the Circus that Haydon had an affair with Smiley's aristocratic wife, Ann. Smiley is horrified and outraged by the realization that Haydon initiated the affair on Karla's orders because Karla considered Smiley his most dangerous opponent and wanted Haydon

to obtain confidential information through the unsuspecting Ann Smiley. George Smiley is reinstated and becomes acting head of the Circus with the awesome responsibility of repairing all the damage that has been done throughout the years.

Jim Prideaux, one of the men whom Haydon betrayed, murders this former friend and superior while Haydon is being held in custody. As a character, Prideaux exists in order to provide some physical action in this otherwise highly intellectual plot; however, his role is tangential to the story and mostly covered in flashbacks. On the other hand, in the sequel, *The Honourable Schoolboy*, le Carré attempts to create a role for a vigorous, sexually active young hero while retaining the sedentary Smiley in the vital role of master planner.

## THE HONOURABLE SCHOOLBOY

**First published:** 1977

**Type of work:** Novel

*George Smiley, now head of the Circus, sends an agent to war-torn Asia to capture a Soviet mole in the Communist Chinese government.*

In *The Honourable Schoolboy*, le Carré moves to a different theater of the Cold War, the Far East. Smiley learns that Karla has a mole in Communist China supplying him with information. Capturing this mole would help revive morale within the Circus and also help repair its relationship with its counterparts in the United States. It would also damage relations between China and the Soviet Union and secure badly needed information about what is going on inside mainland China.

Smiley sends a young agent named Jerry Westerby to Hong Kong to obtain information about a secret bank account into which Karla has been funneling American dollars for years. Westerby, posing as a journalist, spends much of his time drinking and womanizing. His investigations take him to various theaters of one of the bloodiest wars in history. Guerrilla armies in Thailand, Cambodia, and Vietnam, aided and abetted by the Chinese communists, are trying to topple the established governments, which are being held together only by massive military and economic support from the

United States. The descriptions of military action, streams of fleeing civilians, the total demoralization of the population, and the collapse of the Western presence on the Asian mainland represent some of the best writing le Carré has ever done.

In this novel, le Carré makes his anti-American sentiments more obvious than in any of his other works. He deplores the way in which the Americans are obliterating ancient cultures with napalm and other explosives dropped indiscriminately on innocent civilians. Le Carré is popular with American readers in spite of the fact that he has never treated American characters kindly and has never been successful in portraying them.

Westerby discovers that the mole inside China is Nelson Ko, brother of a powerful Hong Kong businessman named Drake Ko. On Smiley's orders, Westerby begins leaking such sensitive information that Drake realizes he must get his brother out of mainland China before he is exposed. Unfortunately, Westerby falls in love with Drake Ko's English mistress, Elizabeth Worthington, and nearly foils the entire Anglo-American plot by trying to make a private deal with Drake to exchange Nelson for Elizabeth. Westerby is killed by the Americans. Nelson is captured and taken to the United States for interrogation. Smiley's operation is successful, but he has been double-crossed by his own associates in the Circus, who have colluded with their American counterparts to force Smiley out and replace him with Saul Enderby, a stupid aristocrat who toadies to the CIA.

While the plot abundantly illustrates le Carré's favorite themes of betrayal and dehumanization, *The Honourable Schoolboy* is weakened by being broken into two widely separated points of view: that of Westerby in Asia and that of Smiley in England. When Smiley comes to Hong Kong in the final chapters to participate in the capture of Nelson Ko, it is an awkward attempt to tie the two separate plotlines together for artistic neatness. In *Smiley's People*, however, le Carré finally writes the perfect spy novel by making George Smiley both the thinker and the doer, the intellectual and the man of action, all in one central hero.

## SMILEY'S PEOPLE

**First published:** 1980

**Type of work:** Novel

*George Smiley organizes a complex multinational espionage operation to force his archenemy Karla to defect from the Soviet Union.*

*Smiley's People* brings to a satisfying conclusion the battle of wits that has been going on between Smiley and Karla for many years. Smiley is called out of retirement to help the Circus investigate the recent murder of a former Soviet army general living in exile in London. The general had been in contact with a Russian woman living in Paris who had recently been approached by Soviet agents with an offer to allow her daughter to leave Russia and move to France. Smiley deduces that the general was assassinated because the old man suspected that Karla was only using the woman's daughter to create a false identity for some young woman he wanted to send to France. Smiley goes to the European continent to investigate. Smiley appears as a major or minor character in many of le Carré's earlier novels, but *Smiley's People* is the first book in which the reader is able to develop a full appreciation of his talents as a secret agent. He is in grave danger because Karla can have people murdered by agents in any country of the world and would certainly eliminate Smiley if he suspected that the British secret service agent was trying to unravel his secret.

Karla had an illegitimate daughter named Tatiana who is now in her early twenties. Tatiana is a schizophrenic, and Karla has had her secretly moved from Russia to a sanatorium in Switzerland, where she can receive better treatment. The nuns who operate the sanatorium know virtually nothing about her. Karla sends money to pay for her treatment via a minor official named Grigoriev. Karla must keep this a dark secret because his enemies in the Kremlin could destroy him if they could show he was using the Soviet diplomatic and espionage apparatus to further his purely personal interests. Smiley gets damaging information about Grigoriev's adulterous affairs and forces him to become a double agent, promising him safe asylum in Australia. Through the terrified Russian diplomat,

Smiley sends a confidential letter to Karla, offering him a carrot-and-stick proposition: If Karla will defect to the British, he will receive asylum and Tatiana will continue to receive high-quality psychiatric care; otherwise, Smiley will expose him. Karla will be executed, and his daughter will become a charity case without money, friends, or even an identity.

At the appointed deadline, Smiley and his assistants wait in the fog. If Karla crosses the bridge into West Berlin, it will be the greatest triumph in the history of the Circus. They will be able to learn everything about Soviet internal and external affairs. Suspense mounts as minutes tick by. Finally Karla, disguised as a working man, crosses the bridge, hesitates, and then delivers himself into British hands.

Characteristically, Smiley is not exultant. He feels ashamed for using Karla's genuine paternal love to destroy his archenemy. One of le Carré's major concerns in all of his novels has been the destruction of human values by the clash of godless ideologies. Smiley realizes that he has not really defeated Karla because he has not proved that Western values are superior to those of Communism. Furthermore, Smiley cannot help but reflect that Karla destroyed his relationship with Ann, condemning him to a life of loneliness, and that in a sense Karla destroyed Smiley as a human being long before Smiley was able to do the same thing to Karla.

## A PERFECT SPY

**First published:** 1986

**Type of work:** Novel

*A high-ranking member of the British diplomatic corps reveals in a lengthy confession that he has been a double agent for many years.*

*A Perfect Spy* is the most autobiographical of all le Carré's novels. Since many of the facts about his life are obscure, it is difficult to determine exactly how much of the novel is factual and how much has been fabricated for dramatic effect. The central theme probably comes close to the truth about the author: His father was the most important influence in his life. Rick Pym, the father of the hero Magnus Pym, closely corresponds to what is known

about le Carré's own father. It was through Rick that Magnus learned how easy it is to deceive people if it is done with charm and on a lavish scale. Both the fictional and the real father expected the most of their sons but set for them bad moral examples.

In the novel Magnus Pym is a high-ranking diplomat who secretly manages espionage operations in foreign countries. He creates great alarm in government circles by disappearing without informing his wife about where he is going. The suspicion is that he has defected to the Soviet Union, in which case all the undercover agents behind the Iron Curtain who were known to him would be in immediate danger.

Pym is actually living in a private home on the Devon coast with an old woman who has no knowledge of his true identity. Miss Dubbers mothers him, and he treats her with kindness and generosity, revealing that he is a good man who had been led astray by circumstances beyond his control. His relationship with his landlady is central to the story. Like le Carré himself, Pym lost his mother at an early age and, because of his loveless childhood, was never able to relate to people in a normal manner.

Pym is writing an elaborate confession and suicide note in the form of a letter to his own son. This letter makes up much of the novel. He reveals how he began to take delight in secretly betraying people even as a boy in boarding school. His whole life has been a pattern of winning people's confidence, learning their secrets, and then betraying them. His only real friendship appears to have been with the brilliant Axel Hampel, whom he met while attending a university in Switzerland. Their relationship comes suspiciously close to being overtly homosexual, the type of thing at which le Carré often hints in his works but that he never explores in detail.

Eventually Axel becomes a spy for the Eastern Bloc, operating out of Czechoslovakia. He and Pym hit upon the scheme of exchanging secret information to advance their careers, and both are spectacularly successful for years. Then their superiors on both sides begin to deduce the truth. With the British secret service closing in on his pathetic foster home, Pym puts a pistol to his head and pulls the trigger.

The convoluted story leaps backward and forward in time and shifts to several different view-

points, most notably that of Jack Brotherhood, Pym's older, father-figure friend who is trying to track Pym down. In addition to being made up of many lengthy flashbacks, the story leaps about geographically, with scenes taking place in England, Germany, Czechoslovakia, Switzerland, and the United States. It is le Carré's most autobiographical, complex, experimental, and ambitious novel. It is only partially successful because it departs from the conventions of the espionage genre to some degree but does not do so completely; it is neither mainstream nor genre fiction.

## THE CONSTANT GARDENER

**First published:** 2000

**Type of work:** Novel

*After his social activist wife is murdered in Africa, a British diplomat pursues the reasons for her death.*

Justin Quayle is a British diplomat, a member of Her Majesty's foreign service, stationed in Nairobi, Kenya. Middle-aged and upper-middle-class, Quayle personifies Britain's traditional political and social establishment, and while conscientious enough in his professional duties, he devotes his free time to his garden, cultivating temperate flowers which grow well in Kenya's highlands. His much younger wife, Tess, is the opposite, a crusading lawyer who is very much the antiestablishment figure. Empathizing with the majority of Africans—poor and black—she is deeply committed to social justice. With Arnold Bluhm, a Belgium African doctor, she discovers that a major Swiss pharmaceutical firm, amorally pursuing profits, had, in connivance with other business interests and the Kenyan government, embarked on a campaign to distribute Dypraxa, a new antitubercular drug, to Africa's poor. The drug, while promising in the long run, has been released without sufficient testing and even with willfully inaccurate tests, and Africa's poor are to be the guinea pigs. Too many political and economic interests are threatened by Tess and Arnold's exposures, and they are brutally murdered. Justin is apparently intentionally unaware of the extent of Tess's involvement, spending his time tilling his garden.

British officials, such as Sandy Woodrow in Kenya and Sir Bernard Pellegrin in London, while superficially sympathetic to Justin's loss, do not want to jeopardize Britain's political influence or economic position in Africa and refuse to become involved in Tess's murder. Instead, they publicize the claim that Arnold, who was black, had murdered Tess, a white woman, in a fit of sexual passion, although in reality there was no sexual relationship and Arnold was probably homosexual.

Upon his return to London after Tess's funeral, Justin is advised to take a long leave, get some counseling, and recover from the trauma before accepting a new assignment. Instead, he makes the commitment to cultivate Tess's garden and discover where her campaign had led and what it had unearthed. He flees England with a fraudulent passport, first traveling to Italy, then to Germany and western Canada, and finally returns to Kenya, generally only a step or less ahead of the economic and political powers that have reasons to prevent his quest from succeeding. He does unearth the several conspiracies that led to Tess's death and mails his findings to sources in Britain, but when he visits the site of Tess's murder, he, too, is murdered. Whether his findings are going to have any ultimate effect on exposing the nefarious medical-economic-political bureaucracies and conspiracies is doubtful. After all, this is a le Carré novel, and his novels rarely have happy endings.

Le Carré is a brilliant writer, and his ability to take the reader into a place or capture the essence of a character in a few words is one of his strengths of *The Constant Gardener*. In addition to his portrayals of Justin and Tess, le Carré captures the duplicitous ambitions of Sandy and his wife, Gloria, Justin's diplomatic colleagues in Nairobi. The author's sense of place, such as the slums of Nairobi or an establishment London club, are uniformly excellent. However, the characters and the plot lack the murky moral ambiguities of his earlier Cold War works. Instead of the complicated amorality of many of his earlier figures, here people are either saints, such as Justin, Tess, and Arnold, or villains, many of whom are opportunists and self-servers, such as Woodrow or corrupt politicians both in London and Kenya. In this work, which reads as much as investigative journalism as a novel, an angry le Carré wears his idealism on his sleeve. In an era of increasing globalization, corporate

corruption is a legitimate issue, particularly when the poor and the powerless are victimized, but many of le Carré's "constant" readers found this novel less compelling than his Cold War efforts.

### SUMMARY

John le Carré's early experiences fitted him for a career as a spy novelist. He had the creative genius to see that the spy, living from day to day in paranoid terror, was the ideal symbol of the alienated modern individual living in the shadow of nuclear annihilation. Le Carré elevated the spy thriller to the level of enduring literature. His best novels will outlive many more pretentious contemporary literary works and will reveal to future readers more about the psychological and moral issues of the Cold War than any number of scholarly history books. His post-Cold War novels have not been as popular, neither among general readers nor among most critics.

*Bill Delaney; updated by Eugene Larson*

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

*Call for the Dead*, 1960

*A Murder of Quality*, 1962

*The Spy Who Came in from the Cold*, 1963

*The Looking-Glass War*, 1965

*A Small Town in Germany*, 1968

*The Naive and Sentimental Lover*, 1971

*Tinker, Tailor, Soldier, Spy*, 1974

*The Honourable Schoolboy*, 1977

*Smiley's People*, 1980

*The Quest for Karla*, 1982 (omnibus; includes *Tinker, Tailor, Soldier, Spy*; *The Honourable Schoolboy*; and *Smiley's People*)

*The Little Drummer Girl*, 1983

*A Perfect Spy*, 1986

*The Russia House*, 1989

*The Secret Pilgrim*, 1991

*The Night Manager*, 1993

*Our Game*, 1995

*The Tailor of Panama*, 1996

*Single and Single*, 1999

*The Constant Gardener*, 2000

*Absolute Friends*, 2004

*The Mission Song*, 2006

## DISCUSSION TOPICS

- Can George Smiley be considered an English patriot? Why or why not?
- What is John le Carré's attitude toward government bureaucracies in his Cold War novels? In his post-Cold War novels? Are there any differences, or does it remain consistent?
- What makes *The Spy Who Came in from the Cold* one of the iconic novels of the Cold War?
- What are the character differences between Smiley and Karla?
- In le Carré's novels, are his American characters as realistic and as fully developed as his British and even his Russian characters?
- Compare and contrast le Carré's George Smiley and Ian Fleming's James Bond. Which better reflects the reality of the Cold War, and why?
- Discuss the theme of betrayal in le Carré's novels.
- What are the possible explanations why le Carré's post-Cold War novels have been less popular than his earlier novels?

SCREENPLAYS:

*Dare I Weep, Dare I Mourn*, 1966

*The End of the Line*, 1970

*The Tailor of Panama*, 2001 (adaptation of his novel; with Andrew Davies)

TELEPLAYS:

*Smiley's People*, 1982 (adaptation of his novel; with John Hopkins)

*A Murder of Quality*, 1991 (adaptation of his novel)

## STANISŁAW LEM

**Born:** Lvov, Poland (now Lvov, Ukraine)  
September 12, 1921

**Died:** Krakow, Poland  
March 27, 2006

*Writing primarily in science fiction, a genre that is often dismissed as lacking artistry and has long been dominated by American and British writers, Polish science-fiction writer Lem achieved both international popularity and a sterling literary reputation.*

### BIOGRAPHY

Stanisław Lem (leh-m) was born in Lvov, Poland (now Lvov, Ukraine), on September 12, 1921. His father, Samuel, was a physician who served for a time with the Austro-Hungarian military. In 1915, during World War I, Samuel had been taken prisoner by the Russian army. He was nearly executed for being a class enemy but was saved when an old acquaintance interceded at the last minute.

After the war, Samuel Lem became a successful otolaryngologist in Lvov. By the time Stanisław was born, Samuel and his wife, Sabina Wollner, were very prosperous. Unlike many who lived in Poland between the world wars, the Lems had a fine home, where young Stanisław was cared for by a French governess and never lacked for toys. As a young boy, Lem's reading consisted largely of his father's medical books, at which his father forbid him to look. One of his prized possessions from this time was a science book that his father had given him and that cost seventy zlotys, the price of a suit of clothes.

According to Lem's own account of his life, he was a quiet and imaginative young boy. He preferred solitude to a life among friends, and to amuse himself he created fantasy kingdoms where he had great power and high prestige. Each element in his imaginary life was legitimized by a complete file of papers, including passports, diplomas, and certificates of various kinds. Although he ad-

mits that this love of fantasized power and reputation might indicate childhood insecurities, he remembers having had no such feelings.

In 1932, Lem began college at the Karol S. Szajnocha II State Grammar School, graduating in 1939. He went on to study medicine at Lvov University from 1940 through 1941, but his schooling was interrupted by the advent of World War II. During the war, Lem became aware of his Jewish ancestry as a result of the anti-Semitic measures introduced by the invading Nazis.

Despite the many hardships they endured, the Lems escaped confinement in the Jewish ghetto because Samuel had obtained false papers to hide the family's true identity. During the occupation, Lem worked as a mechanic helper and welder for a German company recycling raw materials. He visited the ghetto on occasion and performed acts in support of the resistance movement, but through a combination of careful planning and sheer luck he managed to survive the occupation, unlike many of his friends. His luck in living through the war made the element of chance an important theme in many of his later novels. He resumed his medical studies in 1944, when the Soviet army liberated Lvov.

In 1946, the Lems moved to a one-room apartment in Krakow. The family was now poor, having lost everything they owned during the war. Under these adverse conditions, Lem, then in his mid-twenties, began writing poetry for a weekly Catholic paper called *Tygodnik Powszechny*. He also wrote

his first novel, *Człowiek z Marsa* (the man from Mars), which was initially serialized as several episodes in a weekly dime magazine in 1946 and published as a book in 1994. His meager literary earnings helped to support his poverty-stricken family. He also enrolled at Jagiellonian University to continue studying medicine.

In 1947, he began to work as a junior researcher for Konwersatorium Naukownawcze. The founder of the organization, Mieczysław Cholnowski, liked young Lem and became his mentor, encouraging him to read widely. It was during this period, when Lem also worked as a surveyor of trends in world science and began writing for and editing a monthly state-financed magazine called *Życie Nauki* (the life of science), that he gained much of his understanding of genetics, cybernetics, and the several other scientific fields that influenced his fiction.

Lem ultimately stalled in his medical ambitions because he refused to accept the Soviet-sanctioned views of the now-discredited geneticist Trofim Lysenko. He credited his intensive reading during the postwar years with providing scientific depth and an augmented literary power to his works, particularly his novels *Eden* (1959; English translation, 1989), *Solaris* (1961; English translation, 1970), and *Niezwyyczajony i inne opowiadania* (1964; *The Invincible*, 1973).

In 1951, Lem and Roman Hussarski cowrote a play, *Jacht Paradise* (yacht paradise), which was produced by a theater group in Szczecin. He also wrote scientific articles for the weekly *New Culture* from 1952 through 1955. While continuing to write prolifically, Lem took time to attend to family matters. In August, 1953, he married Barbara Lesniak, a radiologist; the couple's son, Tomasz Lem, was born in 1968. Lem's father, Samuel, died in 1954.

The city of Krakow awarded Lem the Golden Order of Merit in 1955, the first of many accolades he would receive throughout his career. His books, which were translated into more than forty languages and sold more than twenty-seven million copies worldwide, earned him membership in the Polska Akademia Nauk (the Polish Academy of Sciences), Polska 2000, Polska Akademia Umiejętności, and the Polish Writers Association. He was made an honorary member of the Science Fiction Writers of America but was later expelled due to his outspoken disdain for most American science

fiction. In addition, Lem was named an honorary citizen of the city of Krakow; received honorary degrees from Wrocław Polytechnic, Opole University, the State Medical University of Lvov, and Jagiellonian University; and won a prize from the Polish minister of foreign affairs for popularizing Polish culture abroad, a literary prize from the Polish ministry of culture, the Polish State Prize, the Austrian State Prize for European Culture, the Austrian Kafka Prize for Literature, the Medal of the White Eagle, the Alfred Jurzykowski Foundation Award, several Nebula Award nominations, and a nomination for the Nobel Prize in Literature.

It was after the first award, according to scholar Richard E. Ziegfeld in his book *Stanisław Lem* (1985), that "Lem's period of mature writing began." During this time, he produced numerous works, including several science-fiction novels, ten collections of science-fiction short stories, a science-fiction play, and three television plays. He also composed *Summa technologiae* (1964), a 650-page treatise on cybernetic sociology.

In 1982, Lem and his family departed Poland for West Berlin, where he studied at the Wissenschaftskolleg on a one-year scholarship. The Lems then moved to Vienna, where they lived for the next five years. During this time abroad, Lem would write his last two science-fiction novels, *Fiasko* (1986; *Fiasco*, 1987) and *Pokój na Ziemi* (1987; *Peace on Earth*, 1994). During the 1990's, he primarily wrote magazine articles about futurology and contributed to the Polish edition of *PC Magazine*. His collected articles appeared in book form in *Tajemnica chińskiego pokoju* (1996), *Dziury w całym* (1997), *Bomba megabitowa* (1999), and *Okamgnienie* (2000).

On March 27, 2006, Lem died in Krakow after a long battle with heart disease.

## ANALYSIS

Lem wrote that his career could be divided into three phases: a period of utopian optimism compatible with Soviet standards of hopeful expectation for the human future, a period of exploration of existing science fiction and other literary forms for use in expressing a more complex and often darker vision of human life, and a period of experimentation with new modes of expression for many of these same complex themes. Although some overlap exists from one career phase to another,

the general movement of Lem's creative life has been from simplicity to complexity, from traditional to more experimental forms, and from a relative optimism to a satiric darkness.

The two works most closely associated with Lem's optimistic period are *Astronaucci* (1951; the astronauts) and *Obłok Magellana* (1955; the Magellan nebula), novels that helped establish his popularity in the Communist world but which he later repudiated and refused to reprint. Set in the years 2000 and 3000, respectively, these novels, according to Lem, have "nothing Communist Party about them" but "could evoke in a certain sense the communist utopia." His short-story collection, *Dzienniki gwiazdowe* (1957, 1971; *The Star Diaries*, 1976, and *Memoirs of a Space Traveler: Further Reminiscences of Ijon Tichy*, 1982), is a work of travel literature as well as science fiction, and its style and satiric tone have been compared to Jonathan Swift's *Gulliver's Travels* (1726). Centering on spaceman Ijon Tichy, these stories humorously portray a universe in which human attempts at heroism, communication, and control are frustrated by the baffling randomness of cosmic forces, the bizarre otherness of nonhuman intelligence (both organic and mechanical), and the general weaknesses of humanity. Although many of his later works are more somber in tone than *The Star Diaries*, Lem's various books about the adventures of Ijon Tichy and his stories about Pirx the Pilot and the robots Klappaucius and Trurl allow the author to display his genius for bizarre comedy.

*Eden*, despite its title, shows Lem's drift toward darker views of the human condition, but it is in *Solaris* that Lem gives definitive expression to the second phase of his artistic development. Kris Kelvin, the scientist hero of the novel, seeks to comprehend the mysteries of the oceanic intelligence that surrounds the planet Solaris, but he discovers instead that he has no real understanding of his own nature and the nature of others of his own species. *Powrót z gwiazd*, 1961 (*Return from the Stars*, 1980) continues the theme of the need for human-to-human communication and understanding and further warns of the dangers impending if the utopia envisioned by the technocrats is someday achieved. *The Invincible* attacks human technical arrogance in a different way, this time by having a product of technology, the ironically named spaceship of the title, wrecked by minuscule cybernetic

entities. *Głos pana* (1968; *His Master's Voice*, 1983) returns to the theme of the difficulty of human-to-human and human-to-alien communication as twenty-five hundred ego-driven experts attempt to decipher a message from the cosmos.

In his later novels, Lem attempted to transcend traditional science-fiction forms in order to examine his complex humanistic themes. Through the device of writing nonfictional commentaries on fictional books, either as prefaces or critical analyses, Lem discussed the relationship of the human to the nonhuman and explored the interactions of organisms with mechanisms.

## THE STAR DIARIES

**First published:** *Dzienniki gwiazdowe*, 1957  
(English translation, 1976 and 1982)

**Type of work:** Short stories

*The well-intentioned but sometimes inept Ijon Tichy experiences the bewildering challenges of life as a wandering citizen of the cosmos.*

Written over a period of approximately two decades, *The Star Diaries* constitutes a diverse collection of comic tales playing on the full range of world travel literature and of science fiction's reworking of that literature, while adding much that is Lem's own to an already rich tradition. Suggestive at one moment of Marco Polo's accounts of cultural discovery, at another of the pure fantasy of Sinbad's voyages, and at still another of the acerbic satire of Jonathan Swift's *Gulliver's Travels*, these tales exhibit a variety of styles and purposes reflective of Lem's multifaceted genius.

One story, "The Seventh Voyage," exemplifies the book's exuberant diversity. The story relates Tichy's attempts to repair the rudder of his spacecraft after an accident in the vicinity of Betelgeuse. Although traveling alone, Tichy discovers that the repair job requires the cooperative efforts of two people, an indication of technological human's lack of foresight. He finds himself with multiple opportunities to solve his problem, however, when he falls through one after another of the 147 gravitational vortices in the local space-time continuum and encounters diverse other versions of himself.

At each new encounter, Tichy exhibits a different way in which humanity's mixed rational and emotional nature prevents productive cooperation, and it is only when two child Tichys ignore the alternating violence and committee-directed stagnation of the adult Tichys that the repair work is completed. A brilliant parody of tales of paradoxical time travel, like Robert A. Heinlein's "All You Zombies," "The Seventh Voyage" is also a sly commentary on human social deficiency.

In "The Eighth Voyage," Tichy represents the earth at the General Assembly of the United Planets as humanity is being considered for membership. After nearly setting off an interplanetary confrontation by mistaking a diplomat from Rhohch for a soda machine, he ineptly attempts to help prepare humankind's case for galactic recognition by discussing the destruction of Hiroshima, explaining that most governmental funds are spent on the military, and running through an inventory of ingenious bombs. During the debate over Earth's admission, a knowledgeable alien gives an account of humanity's place within galactic taxonomy. Roughly translated, the nomenclature he uses labels humanity as "deviate screwheaded corpse-loving abominable howlmouthed stinking meemies," and much of what follows is an account of human bloodshed. The horrors of the human past turn out not to be humanity's fault, however, as a second alien reveals that two intoxicated creatures named Gorrd and Lod purposely set off the monstrous evolutionary process that produced humanity by dumping spoiled food on Earth, giving its molecules a twist to the left (etymologically, the "sinister" direction of evil), and then sneezing on the abominable mixture. Tichy suddenly awakens to discover that this voyage was literally a nightmare, but the dream vision framing device, common to much past theological literature, hardly lessens the satiric message of human brutality and pretensions to divine origin.

"The Twentieth Voyage" also takes up the theme of origins and suggests that, if there have, indeed, been good intentions behind the shaping of the cosmos and the directing of human destiny, those intentions have gone sadly astray. In this tale, a reluctant Ijon Tichy is recruited to head a project called THEOHIPPIP (Teleotelechronistic-Historical Engineering to Optimize the Hyperputerized Implementation of Paleological Programming and

Interplanetary Planning), in essence, a bureaucratic effort to undo the mistakes of history. Tichy and his colleagues put prodigious energy into their attempts to create perfection, but like the flawed God described in the final pages of Lem's novel *Solaris*, they botch the job. As they work to remake time and space, they set off ice ages, kill off the dinosaurs, destroy a planet and thereby create the asteroids, thrust the intelligent dolphin into its anomalous home in the sea, invent the biological ugliness of human sexuality, turn humans into hairless and superstitious carnivores, trigger the Diaspora and the beginnings of anti-Semitism, initiate the witch hunts of the Middle Ages, inspire the careers of Napoleon I and Adolf Hitler, cause the 1929 stock market crash, invent the atomic bomb, and in various ways become responsible for all the disasters of creation. So much for divine providence and the power of benevolent love to right every wrong.

## SOLARIS

**First published:** 1961 (English translation, 1970)

**Type of work:** Novel

*A space traveler attempts to cope with being psychologically manipulated by a powerful alien intelligence.*

The opening of Lem's best-known novel, *Solaris*, illustrates his capacity, reminiscent of Arthur C. Clarke's, to create believable accounts of futuristic technology, but the book's central concerns are with the psychological and the theological rather than the technological.

The novel begins with a meticulous description of cosmic adventurer Kris Kelvin's shuttle flight from the starship *Prometheus* to a research station on planet Solaris. The scientific verisimilitude of this introductory scene is followed by a mystical and claustrophobic tale of guilt and love by means of which Lem examines profound questions of identity, communication, creative thought, and divine power.

The central premise of the plot is that several generations of experimenters and theoreticians have attempted, without success, to comprehend

and make contact with the godlike oceanic life form that surrounds the planet Solaris, an effort which is continuing. In the past, much of the research, which Lem describes by using his frequently employed device of elaborate digression, has involved cataloging complex architectonic structures on the planet's surface and speculating on what thought processes might lie behind their appearance, evolution, and reabsorption. These speculations, a vehicle for conveying Lem's own meditations on the nature of creative thought, vary from attributing nothing more than a mechanical origin to the structures to seeing them as something akin to the imaginings of Aristotle's unmoved mover.

Most recently, a team of scientists has bombarded portions of the oceanic entity with high-energy X rays in the hope of eliciting a response. Ironically, the result is that the scientists themselves are experimented on by the intelligence they seek to understand. They exhibit the limits of their ability to comprehend and communicate with their own species. Gibarian, Snow, and Sartorius, the experimenters, have each been visited by neutrino replicas of people with whom they have had a past passionate entanglement, and each is driven to the brink of madness as he attempts to determine what his visitor is and how to behave toward it. By the time Kris Kelvin arrives and is haunted by his own companion, Gibarian has already killed himself and Snow and Sartorius are behaving bizarrely. Rheyra, Kelvin's visitor, is a nearly perfect replica of the beautiful young woman he had driven to suicide ten years earlier, and in relating to her, he must cope with the common science-fiction problem of how to treat an artificial human and the more original problem of how his past failed relationship with the replica's model should affect his relationship with the replica. At first, he treats the new Rheyra as a monster from whom he must escape, but gradually he accepts her individuality and refuses to abandon or destroy her despite the fact that he must remain on the planet to assure her continued existence. Although he sees her as a being separate from the woman he once wronged, by loving and protecting her he finds a way of expiating his past guilt, and she, in turn, frees him by accepting annihilation at the hands of the other scientists.

By the novel's end, the planetary intelligence,

which has put Kelvin in touch with his own humanity but at the cost of terrible torment to himself and others, remains as aloof from direct contact as always. His experiences on Solaris have suggested to Kelvin a paradigm for God, which solves the problem of the presence of evil in the world without attributing the creation of evil to God's conscious choice. Perhaps God, like the oceanic entity, is "limited in his omniscience and power, fallible, incapable of foreseeing the consequences of his acts, and creating things that lead to horror." Perhaps he is "sick" and driven by "ambitions" which "exceed his powers." Here as elsewhere in Lem's work, however, these suggestions are neither affirmed nor denied but simply left as tantalizing possibilities.

A film adaptation of the book was made in 1972 by Russian director Andrei Tarkovsky, and in 2002, Steven Soderbergh directed an epic Hollywood version starring George Clooney and Natasha McElhone.

## RETURN FROM THE STARS

**First published:** *Powrót z gwiazd*, 1961  
(English translation, 1980)

**Type of work:** Novel

*A space traveler returns from an interstellar voyage to discover that humanity has lost both its violence and its sense of adventure.*

In its use of time dilation to separate its hero from the culture that produced him, *Return from the Stars* is a disguised time-travel story very much in the tradition of H. G. Wells's *The Time Machine: An Invention* (1895).

The central character, Hal Bregg, has been away from Earth on a journey to Arcturus for a mere 127 years, hardly an instant in comparison to the hundreds of thousands of years crossed by Wells's time traveler, but Bregg experiences at least as acute a social disorientation. As a result of the relativistic time shifts associated with travel near the speed of light, Bregg has aged only ten years, but during his absence human civilization has undergone a transformation to passivity parallel to that which produced Wells's race of Eloi. A process called Betri-

zation has shorn humanity of its aggressions and, while rendering human beings incapable of intentionally killing or injuring one another, has also removed the urge for discovery that sent Bregg and his companions to the stars. The very technological progress that produced the star drive has tamed the human spirit and has also produced breakthroughs in robotics and parastatics, the latter a term indicating gravitation control that has provided humanity with an enslaving prosperity and protection from every potential bump and bruise.

Having refused more than token help from Adapt, the government agency intended to provide aid for returning space travelers, Bregg finds it nearly impossible to trace his way out of the spaceport where he has landed from Luna base. The vocabulary of the new world confuses him, and he finds the transportation system baffling. Once he discovers a bar, he makes the first of several human contacts that move him toward readjustment. With Nais, he learns for the first time of Betrization and becomes aware of the fear his non-transformation causes among his docile fellow humans. When Nais learns that Bregg has not undergone Betrization and is thus not susceptible to the calming properties of the "brit" she offers him almost ritualistically as he enters her apartment, she panics out of dread of what she falsely believes is her coming rape. Her helpless nonviolence is characteristic of most of the human race in the dystopian world into which Bregg has descended.

The next woman in Bregg's life, Aen Aenis, reacts differently to the dangerous side of Bregg, inviting him home with her in full expectation of a sexual encounter with this muscular primitive. Ironically called a "realist" because she acts in the "reals," Lem's futuristic version of the cinema, she embodies the false glamour of the world of entertainment, and she provides Bregg with even less sense of substantial connection with the new world than had Nais.

Next is Eri, whose name suggests both Eros, the goddess of love and beauty, and Eris, the goddess of discord, deities whose combined natures, for the ancients, symbolized the dynamic totality of life. Bregg meets Eri while he is renting a villa on the

sea, where he has come to rediscover his connections with earthly life. Having bought an automobile, an archaic machine long superseded by vehicles called "gleeds," he enjoys the thrilling speed of the mechanism he associates with his past, but he also enjoys the more timeless life-restoring waters of his pool and the sea. He then discovers Eri, who, with her new husband, is sharing the villa. The cosmic adventurer and the young bride are soon drawn to each other and become involved in a sexual encounter, at once both innocent and deeply impassioned, which renews his faith in the essential goodness of humanity and his sense of engagement with the human race.

Before accepting that he is, in fact, now an inhabitant of the new Earth, however out of place he may feel in a world made safe and prosperous at the cost of human aspiration, Bregg attempts to resume friendships with his fellow space travelers. For a time, he and his former boon companion Olaf reestablish their camaraderie, largely through bloody but invigorating fisticuffs, but gradually they drift apart, with Olaf seeking sanctuary in a hoped-for return to the stars while Bregg maintains his ties to Eri and his home planet.

The final scenes of the novel symbolically recapitulate the struggles of Bregg's life and underline the accommodation he has made with a disappointing future, but a future connected with the place of his roots. He climbs to a snowfield above his home valley, just as he had previously climbed to the stars, and looks down in mingled sadness and satisfaction, alone but not a stranger to Earth, on the scene below. Then, with light blazing above and shadows deepening below, he acts out the choice he has made, a choice between the stars and Earth, and descends in melancholy acceptance "to his home."

## FIASCO

**First published:** *Fiasko*, 1986 (English translation, 1987)

**Type of work:** Novel

*Space travelers from Earth seeking knowledge find a planet of aliens who have no wish to be contacted.*

If Lem's novel *Solaris* is preoccupied with the possibility of communicating with an alien species, then *Fiasko* is almost the polar opposite in that it shows how it may not be possible to communicate with alien life at all—especially if the aliens do not want contact.

*Fiasko* opens in the time of Pirx the Pilot on Saturn's moon, Titan. A man from that time has a mishap and is flash-frozen. He wakes up centuries later on the spaceship *Hermes*, heading to the planet Quinta, where the crew hopes to find knowledge and brotherhood with an alien life-form believed to be within a "window" of opportunity allowing for communication.

When they get there, however, there are no bipeds, no anthropomorphic aliens, no form of life that remotely resembles anything the humans recognize. Instead, they find a planet whose surface is marred by ugly mounds and weblike netting draped from poles and aliens with a totally different evolutionary history, as well as physical and psychological differences.

These aliens resemble the termites of Earth, a reference which is cleverly disguised as a novel within the novel, for the entertainment and edification of the crew.

The Quintans are embroiled in a planetary war between "hives." The battle has reached insane proportions. The space around the planet is bombarded with signal jamming and nasty nanomechanical weapons that attack anything entering that space.

Throughout the encounter, the crew of the *Her-*

*mes* is attacked in various insidious ways, and the crew members, rather than responding in either a reasonable way or retaliating, allow their primitive emotions and instincts, as well as a deep desire to achieve contact no matter what, to lead them deeper into Quinta's planetary madness. The struggle ends when the humans use their advanced technology, including a supercomputer named Deus (a bad pun referring to the theatrical device of the *deus ex machina*), which resembles the psychotic HAL from Arthur C. Clarke's novel *2001: A Space Odyssey* (1968), to obliterate the planet.

Interwoven throughout the novel are Lem's fascinating discourses on extraterrestrial civilization, artificial intelligence, and even future gravitational physics, displaying his remarkable ability to make up "information" that sounds realistic and scientifically plausible. He also includes fascinating details on the "hive" mind, a bit of history in the manner of the Spanish conquest of the New World, and interesting insights into the human psyche.

*Fiasko* could have been a fiasco. According to Lem's Web site, "In a certain sense this book was 'made to order' in a period when I emigrated from Poland after Martial Law. The publishing house Fischer made a tempting offer—a very high advance for a nonexistent novel. This was the only case in my career as a writer that I decided to accept such an offer. I didn't even know what the book would be about, except it would tell a story about a great cosmic enterprise that will lead to a spectacular fiasco."

The novel made the short list for the Arthur C. Clarke Award in 1988 and was Lem's last work of fiction.

## SUMMARY

Stanisław Lem's immense erudition allowed him to meditate on the present and future state of technological humanity with a fully informed authority. In his thematically diverse science fiction, he presents his speculations on the nature of God and the cosmos, the relationship between the organic world and the world of the machine, the mysteries of consciousness, the comical deficiencies of the human personality, and the possibility or impossibility of communication between intelligent beings. Indeed, his total body of work is thematically diverse; though he is best known for his science fiction, he also wrote an autobiography, book

reviews, cybernetic theory, detective fiction, fantasy fiction, film scripts, literary criticism, philosophical essays, poetry, radio plays, scientific essays, sociological essays, stage plays, and television scripts. All of his works are so stylistically and tonally varied that they seem to be the product of several writers rather than of one supremely gifted man and, as Richard E. Ziegfeld says in his book *Stanisław Lem*, “any reader intent on pigeonholing writers by genre will have a difficult time categorizing Lem works.”

*Pamela Kett-O'Connor and Robert O'Connor;

*Księga robotów*, 1961

*Bajki robotów*, 1964 (partial translation in *Mortal Engines*, 1977)

*Cyberiada*, 1965 (*The Cyberiad: Fables for the Cybernetic Age*, 1974)

*Ratujemy kosmos i inne opowiadania*, 1966

## DISCUSSION TOPICS

- How is Stanisław Lem's medical background expressed in his fiction?
- How does living in former Eastern Bloc countries affect Lem's writing?
- Similarities have been suggested between Lem's work and that of H. G. Wells, Arthur C. Clarke, and Gregory Benford. Do you agree or disagree, and why?
- Does Lem's work differ significantly from other Eastern Bloc science-fiction writers, such as Boris and Arkady Strugatsky or Yevgeny Zamyatin?
- How is religion portrayed in Lem's fiction, if at all?

## MIKHAIL LERMONTOV

**Born:** Moscow, Russia  
October 15, 1814

**Died:** Pyatigorsk, Russia  
July 27, 1841

*In his native Russia, Lermontov is widely considered the greatest Russian poet after Alexander Pushkin; he also distinguished himself as a playwright and novelist.*

### BIOGRAPHY

Mikhail Yurievich Lermontov (LEHR-muhn-tawf) was born in Moscow, Russia, on October 15, 1814. He was the only child of retired army captain Yury Petrovich Lermontov and Mariya Mikhaylovna Arsenieva, whose wealthy family strongly disapproved of the marriage. The Lermontovs moved to Tarkhany, a country estate 350 miles from Moscow owned by Mariya's strong-willed mother.

When Mariya died three years after Mikhail's birth, Elizaveta Arsenieva took custody of her grandson. Crucial to his future development as a writer, she took him with her on journeys to the Caucasus Mountains to take the waters at the spa town of Pyatigorsk. The Caucasus was the wild frontier of the Russian Empire. The native mountain tribes were waging a guerilla war against the czar's occupying troops. With its atmosphere of bravado and intrigue, the Caucasus made such an impression on Lermontov that it became central to his literary work and to his tragic death.

When he was fourteen, Lermontov was admitted to a Moscow school with a renowned literary tradition. He excelled in writing and translating poetry, and learned enough English to read the works of the English Romantic poet Lord Byron. He felt a deep affinity with Byron, whose life and attitudes in many respects paralleled his own.

Two years later, in 1830, Lermontov entered the

University of Moscow. He continued to write lyric poetry and verse plays, including an autobiographical melodrama, *Stranny chelovek* (wr. 1831, pb. 1935; *A Strange One*, 1965). Lermontov fell in love with Varvara Lopukhina, the model for Vera in his semiautobiographical novel *Geroy nashego vremeni* (serial, 1839; book, 1840; *A Hero of Our Time*, 1854). He never got over the betrayal he felt when, in 1835, Varvara married a wealthy man twice her age.

Lermontov's disillusionment extended beyond personal to political issues, fostered by the aftermath of the revolt in December, 1825, against the repressive regime of Czar Nicholas I. The revolt, led by liberalist nobles, had been ruthlessly quelled and a severe secret police regime instituted. The spirit of opposition was kept alive by the young intellectuals of Moscow University. Lermontov developed his passion for freedom there, along with a cynicism that sprang from frustrated idealism. In 1832, Lermontov entered the military academy in St. Petersburg. He was assigned to the Life Guard Hussars, a cavalry regiment composed of the social elite.

In 1837, he achieved instant literary fame and political notoriety with his poem about the death of Alexander Pushkin. The poem included a scathing attack on courtiers whose malicious gossip had led to Pushkin's death in a duel. As soon as the authorities discovered who the author was, Lermontov was arrested and exiled to the Caucasus.

Lermontov was delighted to find himself once more in his spiritual home. He wrote to a friend: "I would gladly remain in this place and watch its scenery to the end of my days." The exile marked

the beginning of his maturity as a poet. Later in the year, Lermontov was recalled and was soon back in St. Petersburg, where he was lionized as Pushkin's successor. Before long he again incensed the authorities by duelling with a Frenchman. In April, 1840, he was exiled to the Caucasus for the second time.

Ignoring his official assignment, Lermontov asked to join the forces attempting to capture the Caucasian prophet-warlord Shamyl. Lermontov saw action in the Caucasus, and distinguished himself in hand-to-hand battles. He was recommended to receive a gold saber inscribed "for courage," but the czar crossed his name off the list, and he received no decoration. Lermontov's second exile produced his greatest works, set against the romantic backdrop of the Caucasus.

After a leave in St. Petersburg, Lermontov returned to the Caucasus in April, 1841, taking the waters at Pyatigorsk. There, he met Nikolay Martynov, a retired major whom he had known for years. Martynov was in the habit of wearing exaggerated native dress, for which Lermontov mercilessly taunted him.

The offended Martynov insisted they fight. A duel took place on July 27, outside town, in an eerie replay of the duel in *A Hero of Our Time*. At the meeting, Lermontov declared that he refused to fire at "that fool," and made no attempt to shoot. Martynov, however, advanced and shot Lermontov in the heart, killing him instantly.

## ANALYSIS

Lermontov is often called Russia's only true Romantic poet. Several major themes run through his work: the tragic nature of love, demonism (the idea that one is fated to destroy what one loves), disillusionment, vengeance, a passion for freedom, and the longing for a return to original innocence.

He also displayed a sharp psychological insight into the workings of passion in human relationships. This insight is visible in early works and in the mature work *A Hero of Our Time*. It is further developed in another play, *Maskarad* (wr. 1834-1835, pb. 1842, pr. 1917; *Masquerade*, 1973), a reworking of William Shakespeare's *Othello, the Moor of Venice* (pr. 1604, pb. 1622), which examines the effect of jealousy on a marriage.

On a broader canvas, Lermontov's preoccupations extended to analyzing the tragedy of his gen-

eration in the 1830's, in the sad aftermath of the Decembrist revolt. The strengths and talents of this lost generation were denied expression and fulfillment by a regime so repressive that personal correspondence was inspected and artists and intellectuals were exiled for having "dangerous thoughts."

This political atmosphere gave a new twist to the common Russian literary character, the superfluous man, typified by Pushkin's Eugene Onegin. Superfluous men were men set apart by their superior talents from a mediocre society, doomed to waste their lives through lack of opportunity to fulfill themselves and also through lack of inner purpose. In *A Hero of Our Time*, Lermontov suggests that superfluity is not only an isolated personal malady but a tragedy of his time, an inevitable epidemic fostered by an unhealthy regime.

Lermontov's work was influenced by other writers, especially the German playwright Friedrich Schiller and the poets Pushkin and Byron. When it came to creating his characters, however, Lermontov knew only one hero whom he repeatedly projected into his works—himself.

During his early writing career, Lermontov's preferred vehicle of self-expression was drama. He wrote his first play when he was sixteen. The play is a Schiller-influenced melodramatic demand for personal and social freedom, expressed in the authorial voice of an angry young man. Defiance and frustration in the face of repression is a theme that would run through Lermontov's work throughout his life, reaching a peak in his narrative poems, such as *Demon* (1841; *The Demon*, 1875).

The autobiographical element is also discernible in the melodrama *A Strange One*, a self-portrait of Lermontov during his years in Moscow, and in his lyric poems. In "Parus" (1841; "The Sail," 1976) the sailboat becomes symbolic of the poet's lonely soul, driven not by joy but by its quest for storms, "as if a storm could bring it peace." Lermontov was notorious for his tendency to seek out conflict with others, perhaps in an attempt to quell his sense of isolation. These Byronic traits—isolation and desire for conflict—link many of Lermontov's heroes, including the demon in *The Demon* and Pechorin, the protagonist of *A Hero of Our Time*.

Even when apart from the superficial evils of society, however, Lermontov was continually haunted by a powerful image of internal evil—the image of the demon. As a youth he wrote that he was, like the

demon of the poem, chosen for evil. The attraction of evil for Lermontov lay not only in its negative power but also in the intensity of the experience of damnation. Like his heroes, he identified the intensity of life with the intensity of torment. He sought it out as proof of his uniqueness and heroic status. Always with Lermontov, however, there is a polarization of opposites. On one hand there is the demon, absorbed in evil. On the other hand, there is the angel, or angelic woman, whose goodness he craves. The demon is balanced with an angel. This craving for what is good is always frustrated, however, since the demon figure always destroys whom-ever he loves. Tamara in *The Demon* and Bela and Vera in *A Hero of Our Time* are innocent women who fall in love with the demon figure, only to be destroyed by him. Such contradictions were externalizations of Lermontov's own divided personality, romantic by nature and yet cold and skeptical in his mind. Lermontov never reconciled the psychic divisions that gave his work such tortured energy. Instead, he idealized them in the tragedy of *The Demon*, and he finally analyzed them coolly in *A Hero of Our Time* as a malady that had to be faced and accepted.

### "THE NOVICE"

**First published:** "Mtsyri," 1840 (collected in *Narrative Poems by Alexander Pushkin and by Mikhail Lermontov*, 1983)

**Type of work:** Poem

*A novice monk, captured in the mountains as a boy by the Russians, lives confined in a monastery until he escapes.*

Lermontov found the subject matter for this narrative poem while visiting a monastery in the former Georgian capital Mtskheta on his way to exile in the Caucasus. A monk told Lermontov how as a boy he was captured by Russians in his native mountains. They wanted to take him to their own country, but he fell ill and was left with the monks of the monastery. The monks nursed him back to health and let him stay there. He became a novice,

but the memory of his free life in a mountain village haunted him day and night. He found his prisonlike existence so intolerable that he escaped. Trying to reach his village, he wandered in the forest until he lost his way. He was found, starved and exhausted, by the monks, who brought him back to his cell. The futility of his flight made him decide to stay in the monastery, where he remained ever since.

Lermontov made significant changes to this story. He concentrated all his poetic power on the novice's flight, as well as on the magnificent scenery in which it took place, leaving out the resignation with which the recaptured fugitive stayed on in the monastery. The poem thus embodied a spirited bid for freedom at a time when the very word "freedom" was banned in Russia. The novice's adventures in the virgin forest also distracted the censor from the symbolic significance of the poem.

One night, the novice meets a hungry panther, which he kills with his stick after a desperate struggle. This fight is among the finest passages Lermontov wrote, both in terms of the vividly sensual descriptions and the flowing music of the verse. After three days and nights, the sound of the familiar church bell tells the novice that instead of gaining freedom he has moved in a circle. Exhausted, he falls to the ground and only regains consciousness after he has been brought back, near death, to his cell by the monks, who have been looking for him.

The noble impulse that ends in frustration and suffering is an often-repeated theme in Lermontov's works, but also typical of Lermontov is his hero's resolute defiance. The novice, though defeated, remains proud and unrepentant to the end. Talking to his father-confessor, he tells him that his only regret is that his flight to freedom was abortive.

The poem contains no overt political allusions, but many readers must have identified the novice's prison with the political prison of Russia.

Readers of the poem in its original Russian will discover riches easily lost in translation, such as the brisk narrative rhyme scheme and the poem's musical rhythm, assisted by such devices as parallel grammatical constructions, alliteration, and assonance.

## THE DEMON

**First published:** *Demon*, 1841 (collected in *The Demon, and Other Poems*, 1965)

**Type of work:** Poem

*The Demon, a fallen angel, falls in love with a mortal woman but destroys her with his immortal's kiss.*

*The Demon*, originally circulated in manuscript in 1839, is Lermontov's best-known tale in verse. Like "The Novice," the poem is a piece of defiance and frustration, but on a grander scale. Once again there is a restless soul trapped in a prison, but instead of a monastery, the prison is the cosmos. The Demon sees in Tamara the same mirage of happiness that the novice sees in the mountains. Like the novice, the Demon fails to assuage his loneliness or escape his fate.

The Demon is symbolic of rebellion and isolation. Many critics see him as more closely connected with Lermontov's own nature than any of his other creations. He constantly reworked the poem from 1829 to the end of his life in 1841. Lermontov's Demon is a former rebel angel, expelled from paradise and doomed to roam eternally through the universe. A vindictive, sad exile, he sows evil wherever he appears. In the end, evil bores him. One day, flying over the Caucasus, the Demon sees the beautiful maiden Tamara, and falls in love with her.

The Demon feels his love for Tamara might reconcile him to God and the universe. He tempts her, and her guardian angel tries to intervene. The guardian angel soon gives up, and Tamara surrenders to the Demon's wooing. No sooner does he touch her lips with his immortal's kiss than she dies—an example of the Lermontovian theme of the lover-destroyer. Her soul is carried away by a good angel, while the Demon is doomed to dwell in loneliness till the end of time.

The chief problem in *The Demon* is its lack of dramatic tension. In contrast to the Demon, whose energy and persistence hold the reader's attention, Tamara remains passive. One wonders too at the passivity of the angel sent to protect her. Lermontov also passes up opportunities for conflict within his hero: The Demon, in love with Tamara and supposedly inspired to a new life of goodness, has no

compunction about having her bridegroom killed so that he can possess her totally. A struggle with his newly awakened conscience would have added depth to the story.

In spite of these weaknesses, the poem's glories are many: the musicality of the verse and the incandescent images. The description of the Caucasian landscape is matchless. The scene in which Tamara dances on the roof of her father's castle while far away her bridegroom is being treacherously killed on his way to the wedding has the ironic emotional intensity of which Lermontov was master.

## A HERO OF OUR TIME

**First published:** *Geroy nashego vremeni*, 1839, serial; 1840, book (English translation, 1854)

**Type of work:** Novel

*The book is a portrait of the life and character of a man who, Lermontov suggests, is typical of his age.*

*A Hero of Our Time* is one of Russia's greatest novels. All the characters, with the possible exception of Vera, are drawn with consummate art. In Pechorin, the novel's hero, Lermontov gave the first psychological portrait of the literary archetype, the superfluous man. Lermontov analyzes Pechorin as a victim of the conditions he was doomed to live in, hence the ironic label, "hero of our time." As a representative of the lost generation of the 1830's, Pechorin's creative genius finds no legitimate channel of expression and thus turns in on itself and grows destructive. In analyzing Pechorin, Lermontov analyzed the sickness of the age.

The first two of the five narratives, "Bela" and "Maxim Maximych," show Pechorin through the eyes of others. "Princess Mary" is in the form of Pechorin's diary, and "Taman" and "The Fatalist"

record some of his adventures in the Crimea and the Caucasus.

In "Bela," the bored Pechorin, stationed at a fort, becomes infatuated with the Tartar girl Bela, daughter of a local chieftain. He kidnaps her with the help of her own brother, whom Pechorin rewards with a horse stolen from the girl's Tartar suitor Kazbich. Bela, frightened at first, falls in love with Pechorin, whereupon he loses interest in her. One day, she goes for a walk outside the walls of the fort and is mortally wounded by Kazbich. The story is told by Captain Maxim Maximych, who has befriended Pechorin. The Captain is a kindly man who develops a fatherly affection and concern for Bela. He provides a counterpoint to the coldly manipulative Pechorin, who is largely responsible for Bela's death yet unmoved by it.

In "Maxim Maximych," Maxim is overjoyed at the prospect of seeing his old friend Pechorin once more. Pechorin shows little enthusiasm for the encounter, and when he does finally turn up, his manner is cool. Pechorin has for so long cultivated a mask of indifference that he can no longer discriminate between mask and self.

"Princess Mary" is a psychological analysis of Pechorin in the form of a diary. In the spa town of Pyatigorsk, Pechorin starts, from boredom, a love intrigue with Princess Mary, a young beauty courted by the poseur Grushnitsky. Once he is sure of Mary's love, he loses interest. Complications arise when Vera, his old love, enters the scene. Pechorin wreaks destruction on all around him:

He kills Grushnitsky in a duel, reopens an old wound for Vera, and breaks Mary's heart.

In a passage recalling "The Sail," Pechorin asks himself why he refused to tread on the road of gentle pleasures and peace of mind. He compares himself to a seaman born and bred on the deck of a pirate ship, who is so accustomed to storms and battles that on land he feels bored. The novel succeeds because Pechorin's actions—couched in an engaging black humor—are shown with unerring psychological truth. In Pechorin's own words, he is a vampire, his ego feeding off the suffering and joys of others. Unable to believe in any purpose, he is doomed to be an analytical observer or mischief-maker.

### SUMMARY

Mikhail Lermontov was the supreme psychological analyst of the superfluous man—the man isolated and exiled from society by virtue of his superior gifts and perceptions. Sometimes, as in *The Demon*, Lermontov idealizes this figure, while at other times, as in *A Hero of Our Time*, he puts the figure under the microscope and coolly examines his life and motives. Modern readers will find plenty to fascinate them in Lermontov's works. The mixture of alienation, strong passions, love of beauty and freedom, cold-blooded manipulation, iron will-power, and cynical humor embodied in his characters is as vivid and engaging today as it was in Lermontov's time.

Claire Robinson

**DISCUSSION TOPICS**

- What conditions of Russian life in the 1830's forestalled the appearance of major Russian Romantics other than Mikhail Lermontov?
- Compare Pechorin of Lermontov's *A Hero of Our Time* with Alexander Pushkin's Eugene Onegin as "superfluous men."
- What works of Lord Byron seem to have impressed Lermontov most?
- From Lermontov's descriptions, compose a short account of the Caucasus.
- Lermontov lived less than twenty-seven years. What deficiencies of his work would he most likely have overcome had he lived longer?

Ingrid Von Kruse

## DORIS LESSING

**Born:** Kermānshāh, Persia (now Bākhtarān, Iran)  
October 22, 1919

*A major post-World War II novelist, Lessing uses her craft to explore the educative value of human experience and to examine the effects of institutions, or collectives, on the human psyche.*

### BIOGRAPHY

Doris May Tayler Lessing was born in Kermānshāh, Persia (now Bākhtarān, Iran), on October 22, 1919, the daughter of Alfred Cook Tayler and Emily Maude McVeagh. As a soldier during World War I, Alfred Tayler sustained a serious injury that left him an amputee. While convalescing, he fell in love with his nurse, Emily McVeagh, and married her. After the war ended, they moved to Persia, where Alfred began working in a bank. Soon after the young couple were settled in Persia, financial incentives enticed them to try their luck in Southern Rhodesia, a recently established British colony in Africa. They made plans to relocate; by the time that Alfred and Emily were ready to move into their Rhodesian farmhouse, a daughter, Doris May Tayler, had been born. Once engaged in farming, Alfred and Emily Tayler found that the dream that they had pursued did not bring the promise of riches envisioned earlier. For one reason or another, their expectations for amassing wealth were never realized, and they were forced to accommodate themselves to a life that was disappointingly modest by local white standards.

As a young girl growing up in frontier country, Lessing did not feel the disappointment of her parents. The veld, bordering their farm, held for her an array of attractions. As an adolescent, she would take long solitary walks across the unspoiled countryside, often carrying a rifle to shoot small game.

Given unlimited opportunity to observe nature on the vast canvas of the veld and given countless occasions to pit her cunning and skill against the survival instincts of prey, she became unusually independent and introspective, traits that influenced greatly the paths that she chose to explore as a writer.

Lessing began her schooling in Salisbury, about one hundred miles from her home. She enrolled first in a Roman Catholic convent school and later attended Girls' High School. Although a lover of books, she increasingly grew to despise the regimentation of school life. At age fourteen, she dispensed with formal education and went to work as an au pair in Salisbury.

Two years later, Lessing returned to the family farm and began to write. Books by such nineteenth century realists as Fyodor Dostoevski, Honoré de Balzac, Stendhal, Anton Chekhov, Ivan Turgenev, and Leo Tolstoy helped her shape her ideas and learn the elements of good writing. She was also influenced philosophically by her reading of political and social tracts, which included Adolf Hitler's *Mein Kampf* (1925-1927; English translation, 1933) and the sexual studies of Havelock Ellis.

In 1938, Lessing yet again declared her independence and went to work as a telephone operator in Salisbury. The following year, she married a civil servant named Frank Wisdom. During their four-year marriage, two children were born. Finding the lifestyle of a suburban housewife constricting, she joined a Marxist group in 1942. Political and domestic conflicts probably contributed to the dissolution of her marriage and familial responsibilities in 1943. After resuming a single lifestyle, later that same year, she published her first pieces of short

fiction and poems in local journals. In 1945, she married a German refugee and fellow Marxist by the name of Gottfried Anton Lessing. This marriage produced a son, Peter. When it ended in divorce in 1949, Lessing (retaining her married name) decided to take her son and move to London, England.

Lessing was awarded the Nobel Prize in Literature on October 11, 2007, eleven days before her eighty-eighth birthday. She was the oldest person and the eleventh woman to win the literature award. In announcing the prize, the Nobel judges described Lessing as “that epicist of the female experience, who with scepticism, fire and visionary power has subjected a divided civilization to scrutiny.”

### ANALYSIS

The years spanning Lessing’s adolescence and her young adulthood provide seed plots for her five related novels, the Children of Violence series, which were written over a twenty-year span. The first novel in the series, *Martha Quest*, was published in 1952. It was followed by *A Proper Marriage* in 1954, *A Ripple from the Storm* in 1958, *Landlocked* in 1965, and *The Four-Gated City* in 1969. Between the appearance of these serial books, Lessing wrote two other novels, as well as a considerable number of plays and short stories. Her most significant work, written during an interval between the Children of Violence novels, is *The Golden Notebook* (1962), which first brought her world acclaim. More than any other work, *The Golden Notebook*, still considered her masterpiece, affirmed her reputation as a major talent. The five books in the Children of Violence series and the single most definitive of Lessing’s novels, *The Golden Notebook*, are representative of the author’s prolific body of fiction, in that they contain all the themes and dominant imagery appearing throughout her work. Her reworking of basic material reveals the variety of her narrative techniques, that is, her ability to rework ideas through different story lines with novel and engaging effects.

Lessing’s fascination with opposition may be traced to her early experiences on the veld, where she was first impressed with the majesty and wonder of nature, deriving her first inkling of the human capacity for reaching a state of harmony with the universe. The integrity of the veld presented a

sharp contrast to the divisions that she observed in her colonial community. Living in a divided society stratified by race and class caused her to develop an understanding of the opposition between the privileged and the oppressed. The cruelty of the collective that claimed her as one of its own not only sharpened her sense of morality but also sparked her intellect and instilled in her the drive to examine the system and its larger ramifications. Lessing, therefore, deliberately embarked upon a long process of self-education. At different times in her life, she became involved in most of the significant political and intellectual movements of her day: Jungian and Freudian psychology, Sufi mysticism, existentialism, sociobiology, futuristic scientific theories, Communism, and Marxism. Her narratives reflect the influence of all of these movements. In her stories, she uses insight gained from these various theories of the world to define and explore other opposites, such as the gap between the public self and the private self and the gap between the visionary and the pragmatic.

The reality of the ethical conflict that often exists between collectives and the commitment that one must make to his or her inner being is at the heart of Lessing’s fiction. On at least one occasion, she expressed surprise when critics, in their reviews of the first two books in the Children of Violence series, missed the point that she had written the series as a study of the relationship between individual conscience in opposition to the demands of the collective (*A Small Personal Voice*, 1974).

Lessing weaves her plots around a core of imagery that recurs in a number of key scenes throughout the novels. Visions of the veld, houses, and cities materialize at critical moments to represent conditions related to either the individual or the collective in different situations. The prevailing image of the veld comes straight from Lessing’s childhood experiences—the veld being the enduring reality that can be equated to unity and wholeness. The symbolic meaning of the veld as representative of the cosmic whole is contrasted with the compartmentalizations people make in their civilizing activities of building houses and cities.

Houses as images can represent one’s inner world or the socially constructed outer world at various times. For example, when Martha, the protagonist of the series, envisions herself in *Landlocked* as a house with many rooms but without a center to

hold the compartments together, she perceives the condition of her inner being and concludes that the space will have to be filled by some outside unifying agent, a man. When the image of the house appears in *The Four-Gated City*, however, Martha is herself the free agent wandering inside the divided, uncentered structure that represents the various duties imposed by collectives that she had neglected. At this point, Martha places herself inside the empty space to begin the healing process for her life. Also, in this final book, houses are used to represent the public world. The four houses that Martha enters during the course of the novel become, as Frederick Karl points out, a “microcosm” of British society, fragmented and out of harmony with nature.

The image of the city can also have both public and private applications depending on the situation in which the image appears. When the vision first comes to Martha Quest on the veld, it is not the *city*, but rather the *City*—a noble construction with “flower bordered terraces” and “splashing fountains.” It is a human-made place but still in harmony with nature. It is a place on the veld where all groups “smile with pleasure at the sight of children” and all races of children “walk hand in hand” (*Martha Quest*). Yet the city that Martha Quest encounters in England in *The Four-Gated City* and in *The Golden Notebook* is in opposition to nature. It represents nature compartmentalized by the collective mind.

Through her writings, Lessing expresses faith in the ability of humankind to transform both the individual and the world despite the proclivity of the collective mind to pervert nature and cause individuals to act often against their own best interests. Indeed, the abiding message of the author’s narrative, as she states in *A Small Personal Voice*, is: “though we may not be able to prevent evil, we are capable of reinforcing a vision of good and using it to defeat evil.” At the end of *The Four-Gated City*, Lessing’s optimism for humanity is summarized in her vision of evolution. She conceives of the future as belonging to a new kind of evolving individual—one who will transcend history and ultimately will be assessed by his or her ability to endure suffering and grow as a result of it.

## MARTHA QUEST

**First published:** 1952

**Type of work:** Novel

*In a complex, racially stratified society caught between two world wars, a confused young girl renounces the conventional prejudices of her elders and seeks fulfillment through a man.*

*Martha Quest*, the first book in the Children of Violence series, covers the years 1934 to 1938. The central character of the novel, Martha Quest, experiences an adolescence of disquiet, troubled by the turbulence of a world recently rocked by one world war and fast approaching a second. She is an intelligent observer of a world that seems to have gone awry. She feels at odds both with the awesome history of human beings acting in large collectives and with the reality of their petty pursuits in smaller social arenas.

From the time that Martha Quest notices discrepancies between the words people speak and their behaviors, she begins to feel displaced and unhappy. To allay despair, Martha turns to literature for ideas and spiritual support, usually borrowing books from two young Jewish intellectuals living in town. As she uses great books to structure her theory of the world, she is compelled to face the grim realities of her own life:

She was adolescent, and therefore bound to be unhappy; British and therefore uneasy and defensive; in the fourth decade of the twentieth century, and therefore inescapably beset with problems of race and class; female, and obliged to repudiate the shackled women of the past.

Hoping to escape her current misery and dismal prospect for her future, fifteen-year-old Martha decides to leave her provincial rural community and live in the nearby fictional city, Zambesia, South Africa.

Although Martha is learning to fear biological and historical entrapment, she ironically decides that her salvation has to include sexual relations with a man. Martha's search for self-expression and fulfillment through a romantic liaison leads her to make several unfortunate choices. Finally, she allows a Jewish musician, Adolph (Dolly, for short), to enter her life and become her first sexual partner. Martha chooses to have relations with Dolly not because she feels real passion for him but because the anti-Semitism directed toward him makes him seem more worthy than he actually is.

During the first two years of Martha's independent life, she becomes a regular with a loosely knit gang of irresponsible white semiadults from a variety of national backgrounds. Her time is divided between work and sundowner parties at local restaurants.

As the winds of World War II gather, Martha enters into a relationship with Douglas, a civil servant who is several years her senior. War fever causes a wave of marriages and pregnancies among Martha's contemporaries, and nineteen-year-old Martha is influenced by the tide, as well. She, like her friends, is carried along in a rush to the altar. Despite the fact that she does not love Douglas, Martha decides to legitimize her relationship; they marry. Martha is puzzled by her madness:

It was as if half a dozen entirely different people inhabited her body, and they violently disliked each other, bound together by only one thing, a strong pulse of longing; anonymous, impersonal, formless, like water.

The novel ends with Martha trying to persuade herself that what she feels overall for Douglas could pass for love, not merely sexual desire. Yet a nagging, unvoiced conviction makes her understand that this marriage will not last.

## A PROPER MARRIAGE

**First published:** 1954

**Type of work:** Novel

*Biology and history are portrayed as determining factors for the limitations that women face in life.*

*A Proper Marriage* covers the years 1939 to 1941 in Martha Quest's life. After leaving home and symbolically taking her life into her own hands, Martha is confused by the events that have placed her in a situation that is no more free than the one that she left. Lessing's ironic view of the gap between one's personal desires and the compelling power of collectives is brilliantly focused through the protagonist's inexplicable acts of self-sabotage.

The first few weeks of Martha's marriage to Douglas Knowell are marked by strange physical sensations, the early signs of pregnancy. When Martha recognizes the symptoms, she realizes that she must have been pregnant before her wedding. Immediately, she feels trapped. Feeling that her choices thus far have eliminated her options, however, she decides to suppress her repulsion toward pregnancy and to surrender to her maternal instincts. While concentrating on her pregnancy, she is uneasily aware that she is reenacting a basic process in evolution. Additionally, she fears more than ever that her future will become a replication of her mother's life. Although Martha recognizes the awful possibility, she still lets the fog of happiness envelop her as long as she can envision the eventual pleasure of regaining her own body.

Meanwhile, Martha is influenced by the patriotic hoopla surrounding the advent of World War II, and she enrolls in Sister Doll's Red Cross course. One day after starting classes, Martha suddenly realizes that all her recent actions have been drawing her closer to the repetitive circle of history. She now sees herself in her mother's position during World War I, when Mrs. Quest and her female contemporaries assisted in the campaign and lost their lovers to the machines of war. It now seems possible to Martha that Douglas could become her war sacrifice, and that she might carry his memory as her mother's generation of women was carrying its memories.

To be near Martha during her pregnancy, Mr.

and Mrs. Quest move to the city. Initially, Martha reacts negatively to their relocation. In her mind, their separation from the veld signifies severance of her childhood roots. Martha becomes reconciled to the change, however, after she impulsively joins another pregnant friend in a ritual-like mud bath on an open field one rainy night, symbolically merging herself and her unborn baby with the wholeness of the veld. Soon after this reconnecting event, Martha's daughter, Caroline Knowell, is born.

Meanwhile, Douglas becomes a soldier and leaves Martha alone for nearly a year. Upon his return, he and Martha resume conjugal relations, but Martha becomes fearful of another pregnancy. She is further harassed by Mrs. Quest, who tells her that she looks pregnant and criticizes her for allowing her servants too many privileges. While Martha silently rejects her mother, she gains sudden insight. She sees Mrs. Quest as a woman so disappointed in her own life that she needs to live vicariously through her daughter. Martha reasons that, in the light of Mrs. Quest's experiences, her behavior is "natural . . . even harmless and pathetic." Making a cognitive leap, she sees what may lie in store for her. She realizes that, if she continues to act against her own desires, by age fifty she could be like Mrs. Quest: "narrow, conventional, intolerant, insensitive."

Once Martha discovers that she is not again pregnant, she hastens to end her marriage. As the marriage dissolves messily, Martha finds direction for her life in the Communist Party. Communism seems to offer both the bases for the eradication of the family and an end to Martha's fear of repetition. Ironically, as Martha seizes communism as a means of liberation, she once again uses a man to lead the way. By the end of the novel, Martha is romantically entangled with William, a comrade in communism and a member of the British Royal Air Force.

## A RIPPLE FROM THE STORM

**First published:** 1958

**Type of work:** Novel

*After expending incredible amounts of energy working for the local Communist Party, Martha Quest is overtaken by a strange illness; after recovery, she sinks further into depression.*

*A Ripple from the Storm* covers the years 1941 to 1943. The portrayal of Martha Quest's emotional, personal life and her tenuous relationship to the mainstream society of white South Africa continues in this novel. Her deep involvement in the secret world of communism adds further complications to her life.

Following the example of her friend Jasmine, Martha—recently divorced and alienated from her mother and daughter—becomes the ideal hard-working communist. Believing that Russia has created the framework for an ideal society, Martha glorifies the country at every opportunity. Her worship of Russia, however, is assailed when Solly Cohen, Martha's childhood friend, informs her that Joseph Stalin is responsible for executing Red Army officers. Although she does not at first accept this information, subsequent corruption from within her local party forces her to see that comrades do not have an automatic claim to virtue.

As Martha continues to present herself as a willing tool for the good of the Communist Party, she reaches a point of physical breakdown and has to take extended bed rest. During her illness, she is nursed by Anton Hesse, leader of the local Communist group. As Anton guards Martha's well-being, her former lover, William, fades into the background. Martha allows Anton to take over her mind and body. Her lack of spunk also allows her to accept passively Mrs. Quest's accusation that she has abandoned Caroline, her daughter.

Despite the fact that she does not love Anton and realizes that they are sexually incompatible, Martha moves in with Anton after she recovers. Later, she marries him to save him from an internment camp. For a period of time, she allows herself to think that they can live together harmoniously because she truly respects Anton's mind and his position in the local party. Soon after the marriage, however, Martha sees that Anton wants to live with

a “real” wife, not a fellow communist; she grows to despise him. Still, she stays in the marriage so that Anton can remain in the country.

When the communist group dissolves, mainly because of Anton’s overbearing manner and snobbery, Martha is overwhelmed by feelings of futility. Nevertheless, she believes that the end results were inevitable. At this point in her life, she loses her faith in communism and despairs of ever finding her true self: “I am not a person at all, I’m nothing yet—perhaps I never will be.” Her journey toward self-identification seems to have ended in a blind alley.

## LANDLOCKED

**First published:** 1965

**Type of work:** Novel

*Suffering from a sense of self-division, Martha Quest seeks to unify her fragmented character by finding the right man and, in the process, learns something about the nature of self-destruction.*

*Landlocked* covers the years 1944 to 1949 in Martha Quest’s life. In an irrational world of organizational corruptions and personal frustrations, Martha enters a love affair and finds a temporary solace. Paradoxically, this relationship becomes both a balm for her troubled soul and the most profound emotional experience of her entire life. The visionary heights that Martha achieves through her sexual expression with her new lover reflect Lessing’s view that, from the release of intense feeling and passion, one can achieve a sense of connection and balance in the universe.

At the outset, Martha is offered a promotion at her law firm. Instead of being happy for the opportunity, she refuses the offer, believing further commitment to a collective that she does not esteem will only detract from her search for self. After refusing the job, she dreams that she is a “large house . . . with half a dozen different rooms in it,” but that in the center the house is empty, ready to be filled. She accepts the dream as an “image of her position” and reasons that a man is needed to fill her inner space.

Martha’s choice becomes Thomas Stern, a Polish Jew who escaped from Poland but discovered

later that the Nazis murdered all members of the family that he left behind. Thomas’s passionate outrage toward Nazis stirs Martha and alerts her to his potential for filling her empty center with emotions that could ignite her true self. Although Martha is still married to Anton Hesse, she has no reservations about becoming Thomas’s lover because the marriage is an acknowledged sham by both herself and Anton. She responds to Thomas in a way that she can compare only to pregnancy. With Thomas, her body becomes “a newly discovered country with laws of its own.”

Yet Thomas is a tormented man, having the “eye of an insane artist.” The lack of continuity in his life because of his loss of generations to the Holocaust proves too much for him to bear. Feelings of alienation lead him to “the long process of breaking down.” As Martha watches Thomas slip into madness, her imagination expands, and she starts to comprehend the incipient darkness that she knows will soon take him away.

By the end of *Landlocked*, Martha has ended her “in name only” marriage; she has abandoned her revolutionary dream; she is now suspicious that, in leaving Caroline, her daughter, she has not released her from being victimized by history; finally, she has lost the love of her life to a bizarre illness, which he has recorded in a final rambling manuscript. With these disappointments from the outside world heavy on her mind, Martha makes the decision to look inward and develop her inner self.

## THE FOUR-GATED CITY

**First published:** 1969

**Type of work:** Novel

*In continuing her self-development, Martha Quest works through the roles that she had shunned in the past, traveling a road to spiritual growth that takes her to the edge of madness and then to self-integration.*

*The Four-Gated City* covers the years 1950 through 1997, focusing centrally on Martha Quest’s middle-age years. The novel derives its title from the book of Revelation, but the title refers specifically to four types of houses that represent for Lessing the

human-made world. Martha's passing between the houses connects the gates of the houses in postwar London, which she depicts as violent and corrupt. It is little wonder that perfect sanity seems like insanity in such a world. The question of mental balance in an imbalanced world is one that Lessing undertakes in this novel.

Since Martha has severed all ties with the collectives that once had placed restrictions on her life, she now relinquishes her public self, Matty, and asserts her inner character, Martha. Soon after her arrival in London, she finds sexual communion with a man named Jack. During a critical sexual experience with him, she has a vision in which she sees the golden age of her youth on the veld and a picture of herself as a middle-aged woman living in a house filled with sad-faced children.

When financial necessity presses Martha to find a job, she accepts a position as secretary to an aristocratic English novelist, Mark Coldridge. Her duties expand as Mark's eccentric family life becomes more complicated. Soon, Martha is running the entire household, which consists of Mark's insane wife, Lynda, Mark's troubled, orphaned nephew, Paul, and Mark's own star-crossed son, Francis. Martha functions as a surrogate wife to Mark and as a surrogate mother for the two boys. When Mark's nieces, Gwen and Jill, enter the picture, Martha also extends herself to them.

In a central scene in the book, Martha walks through the Coldridge house announcing dinner and daydreams that the house has no center. While suspended in this surrealistic state, she loses part of her memory and then realizes that, like the house, she does not have a center; there is nothing to hold the pieces of her life together. This experience is followed by news that Mrs. Quest is coming to London to see her. The impending visit causes Martha to panic and sends her back to the psychiatrist, who tells her that she has to work through her troubled bond with her mother.

In preparation for Mrs. Quest's visit, Martha places herself mentally at the center of the Coldridge house. She becomes so attuned to members of the household that she can overhear what they are thinking. When Martha shares this information with Lynda, she learns that Lynda has the same sensitivity and that it was this ability that first caused society to label her insane. Martha wishes to learn more about Lynda's insanity, which she

now believes was induced by collectives in society. Through starvation and wakefulness, she descends with Lynda into the dark world of sound and begins to understand different psychic levels where people like Lynda can be trapped. Martha learns how to move through this frightening psychic world, developing resources that allow her to eradicate her guilty feelings about her mother.

At the end of the book, about the year 1965, Martha has put her life into focus, and she has reached a stage of self-integration. The futuristic appendix to the book takes the reader up to the year 1997 and charts events leading to some kind of nuclear holocaust. Survivors of the catastrophe are stranded in remote places, and the future of the world now seems to belong to the developing nations.

## THE GOLDEN NOTEBOOK

**First published:** 1962

**Type of work:** Novel

*A fragmented woman writer, seeking to avoid chaos, writes about different pieces of her life in four notebooks; during a breakdown, imagined reels of her experiences merge to make a coherent film, and she is healed.*

*The Golden Notebook* encompasses the years 1950 through 1957. It is divided into five sections called Free Women 1-5. The first four sections contain a part of the main story (the conventional novel) and excerpts from four differently colored notebooks. The fourth section of the novel also contains the golden notebook. The last section is a straightforward ending to the main story, which presents an integrated character who no longer needs to compartmentalize experiences. When the story begins, the central character, Anna Wulf, has already published a single successful book, "Frontiers of War," set in central Africa, detailing "colour-bar hatreds and cruelties." This 1951 novel was so successful that Anna has been able to live off the royalties from it for the next six years while she suffers from writer's block.

The main story line evolves around two women, Anna and Molly, who seem to be extensions of each other politically and responsively. Their common

enemy is Molly's former husband, Richard, a rich business executive who seems a perfect specimen of the British capitalist society. Richard continues to be very intrusive in Molly's life because they share a son, Tommy. Consequently, Richard assumes a relationship with Anna that is much like his relationship with Molly. Even Richard's second wife, Marion, becomes a part of the circle, vacillating, in an inebriated state, between Molly and Anna, trying to unburden herself of hurt feelings stemming from her bad marriage.

Once Tommy reaches the age when he should decide upon a career, he is torn between the idealistic world of his mother and Anna and the capitalistic world of tycoons. The "paralysis of the will" that Tommy suffers reaches its highest point when Tommy goes to Anna to have her confirm for him that her lifestyle, which seems to him morally superior, is truly viable. After reading Anna's notebooks, Tommy understands the chaos awaiting a person who tries to operate outside collectives; yet he cannot formulate the proper balance necessary for advancement. In a fit of depression, Tommy shoots himself in the head. Against the odds, he survives, though he is left totally blind. Ironically, he eventually leads the life of a successful businessman and joins forces with Marion, who leaves Richard to be with him.

At the end of *The Golden Notebook*, Molly decides to remarry, and Anna sees the end of yet another affair. Nevertheless, Anna has gained a better understanding of herself as a result of working through dark areas of her personality with a sexual partner who was in crisis himself during their relationship. He, too, is able to heal his life.

A brief description of the contents of each of the notebooks follows:

In the black notebook, Anna gives the African background for her novel "Frontiers of War." Although the first entry in this notebook is 1952, entries flash back to 1944. The story is a study of the cruelty of the colonial mind as seen through the eyes of the young idealist, Anna.

The red notebook is the contemporary notebook in which Anna records everyday events. It contains her present politics and gives an account of her disillusionment with the Communist Party. In it are a number of parodies of dedicated communists and newspaper clippings of such horrors as the testing of the hydrogen bomb, the bombing of Quemoy and Matsu, and the execution of the Rosenbergs in the United States.

The yellow notebook is a novel-within-the-novel. It contains Anna's fictional, unpublished second novel, called "The Shadow of the Third." The characters and actions in it are direct doubles for the main story.

The blue notebook is used by Anna as a diary. It contains commentary on her affiliation with the British Communist Party; details of the most intense love affair of her life, a five-year period when she truly loved a man named Michael; reports on her lengthy psychoanalysis with Mrs. Marks, whose therapy helps lead Anna into an emotional transformation when Anna has an affair with Saul Green, the man with whom she descends into chaos and learns how to self-unite.

*The Golden Notebook* symbolizes Anna's ultimate recognition that experience is fluid and connected. It is the notebook that both she and Saul Green want to use. They both contribute to it, and, through it, they give each other new beginnings.

## SUMMARY

Although Doris Lessing is a writer of a great narrative range, the themes that run throughout her work have been constant. Her concentration on such important extraliterary themes as colonialism, racial inequities, male-female relations, nuclear war possibilities, and the continuing evolution of humankind reveals her commitment to the betterment of humanity and underscores her belief in the serious role of the artist in society.

In reading a Lessing book, one soon realizes that the undertaking is essentially expansive, for the writer's intent is not only to engage the reader's imagination through a literary experience but also to enlarge the reader's concept of what it means to live in harmony with oneself, with the world, and with the universe.

Sarah Smith Ducksworth

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

*The Grass Is Singing*, 1950  
*Martha Quest*, 1952  
*A Proper Marriage*, 1954  
*Retreat to Innocence*, 1956  
*A Ripple from the Storm*, 1958  
*The Golden Notebook*, 1962

## DISCUSSION TOPICS

- In what ways did Doris Lessing's knowledge of the veld animate her fiction?
- Summarize Lessing's insights into the relationship between blacks and whites.
- Lessing's *Martha Quest* had a tendency to repeat some of her mistakes. What evidences of maturation do you see as her career develops?
- Compare the sexual attitudes of *Quest* and *Anna Wulf*.
- Does Lessing's career suggest a conviction that only by becoming a member of a collective or of a sexual relationship can one understand such relationships?
- Did the Nobel Prize in Literature awarded to Lessing in 2007 depend more on the short fiction than on her sequences of novels?

## PRIMO LEVI

**Born:** Turin, Italy  
July 31, 1919

**Died:** Turin, Italy  
April 11, 1987

*Esteemed and admired for his writings about the Holocaust, Levi brought the clarity of rational scientific inquiry to all of his work as a chemist and author, a trait enhanced by the humane integrity that informed everything he did.*

### BIOGRAPHY

Primo Levi (LAY-vee) was born in Turin, Italy, on July 31, 1919. His family had been living in the nation's Piedmont region since the early decades of the fifteenth century after leaving Spain because of the anti-Semitic policies of the Spanish monarchy. The Levi family was involved in financial practices until Primo's father, Cesare, took advantage of a more tolerant social situation to attend Turin's Royal School of Applied Engineering, graduating in 1901 with a degree in civil engineering. He met Primo's mother, Ester Luzzati, in 1915, when he returned from work in Hungary, and the Luzzati family gave the newlyweds the apartment in Turin, where Primo was born, as a part of their dowry.

Primo's name—from *primogenito*, or "first-born"—was not common in Italy but was in keeping with Jewish custom in a nonobservant family.

Cesare Levi was fond of buying or borrowing books from the bookstores in his neighborhood, and Primo was drawn to his scientific and naturalist volumes, particularly those with full-color plate illustrations. His sister Anna Maria, eighteen months younger, stated that Primo had learned to read and write by his fourth birthday, and he was eager to help her to read and learn other subjects as well. "My brother simplified mathematics for me," she recalled.

Primo was often the winner of various scholastic

awards, and he began to develop an interest in the natural world on mountaineering expeditions, pushing beyond his ability on hikes as a kind of a test of fortitude and adaptability. He joined the Avanguardia ski patrol in 1933 as a means of satisfying fascist public demands without supporting any of Benito Mussolini's fascist positions.

Levi's friendship with Mario Piacenza, a classmate, led to an interest in chemistry when both boys began to spend time in Piacenza's older brother's makeshift laboratory. Levi's choice of his vocation was made after he ordered, from England, the British Nobel physicist William Bragg's *Concerning the Nature of Things* (1925), and he was given a manual on microscopy by his father, who further encouraged his son with the purchase of a fine Zeiss instrument in 1934.

Although generally nonpolitical, Levi, who was now the coeditor of his school's literary magazine, was asked to contribute something to a rebel journal published in 1936 after the official magazine was censored. Levi's effort, his first published writing, was a poem, "You Don't Know How to Study!" which Levi biographer Ian Thompson describes as "mock-heroic doggerel and highfalutin allusions to botany," and which included parodies of one of Petrarch's sonnets and the work of the Swedish naturalist Carolus Linnaeus. Levi's courses in the humanities were built on a classical curriculum, which included the works of the writers Dante, Giovanni Boccaccio, and William Shakespeare. Although Levi was disappointed with his relatively mediocre scores on his final examinations, he had

been given, in biographer Thompson's estimation, "an excellent training in Italian literature."

By 1938, Levi was in his second year at the University of Turin and had become an outstanding student, recognized by his classmates and professors as intellectually spirited and devoted to and excited by learning. In July, 1938, Mussolini's government issued a decree that destroyed nearly a century of tolerance and cast Italian Jews—many of whom were supporters of his regime—as aliens. Through a series of further oppressive measures as World War II began, Italian Jews were subject to social humiliation and personal danger. Levi completed his degree in 1940 and was accepted as an intern by Nicolo Dallaporta, an individualistic non-conformist and antifascist, at the Experimental Physics Institute.

In June, 1941, Levi passed all of his exams, earning only the second first-class honors degree granted in twenty-five years. However, because he was a Jew, Levi was offered no fellowships to continue his work. With no other prospects, he accepted a position as a chemist at an asbestos mine, extracting nickel from the soil, working illegally under a non-Jewish pseudonym. He moved to Milan in July, 1942, to work on a project that attempted to develop synthetic insulin. As the Allied air forces began to bombard Italian cities, Levi responded to the destruction with his first serious attempts at poetry, capturing the moods of Italian citizens who hated the fascists while under siege from their adversaries. He also moved beyond his previous distant disdain for Mussolini's regime, joining the Action Party, an underground precursor of the active resistance forming throughout Italy, even though he was not fully aware of the genocide of Adolf Hitler's forces, remarking later, "Our ignorance allowed us to live."

On July 25, 1943, Pietro Badoglio was named premier of Italy as Mussolini's government fell, but the Germans recaptured the northern sections of Italy. Levi went into hiding with his mother and sister in the little town of Amay near the Swiss border and joined the Resistance in October, 1943. His small band was infiltrated by a fascist spy, who betrayed them to the Gestapo, and they were arrested on December 13, 1943. Levi was sent to a camp in northern Italy, which passed into German control in February, 1944. On February 22, Levi, with 650 other Jews, were placed on a train that carried

them to the Polish town of Auschwitz, where Levi survived in the concentration camp until the Germans fled the advance of Russian soldiers on January 25, 1945.

There was total chaos as the Russian troops gained control of the area, and it took Levi nine months to reach Italy on a circuitous route, passing through various Russian territories until he was repatriated. He arrived home in Turin on October 19, 1945. Driven by a need to recount what he had lived through, he turned toward poetry and his first attempts at short fiction. He found employment with the Du Pont de Nemours paint company in Milan in January, 1946, and began to make fragmentary notes of his time in Auschwitz. Following several rejections and considerable polishing, the manuscript of *Se questo è un uomo* (1947; *If This Is a Man*, 1959; revised as *Survival in Auschwitz: The Nazi Assault on Humanity*, 1961) was accepted by publisher Franco Antonicelli and issued by his firm in October, 1947, one month after Levi married Lucia Morpurgo.

Levi and Lucia moved into his family apartment with Levi's mother, Ester, where they lived for the rest of Levi's life. He found employment with Federico Accati's Società Industriale Vernici e Affini (SIVA), a firm making industrial varnishes and similar products, where he worked for the next thirty years. Although he had put aside an ambition to be a professional writer to concentrate on his work as a chemist, he wrote a dozen stories based on his colleagues at SIVA during the next four years. Levi represented the firm on trips to Germany, visiting Buchenwald, the site of a concentration camp, in 1954. In 1955, Giulio Einaudi offered to republish *If This Is a Man*, but financial difficulties prevented the book from reappearing until 1958. The following year, an English translation that Levi worked on with the Oxford historian Stuart Woolf was published by Orion Press in Great Britain and the United States under the title *If This Is a Man*, followed by a German translation in 1961. Levi had also begun to write science-fiction fantasies, but he was unable to convince writer Italo Calvino, an admirer, to endorse them for publication.

A further account of the months following his time in Auschwitz had been on Levi's mind since 1947, and in 1961, he began work on *La tregua* (1963; *The Reawakening*, 1965), patterned after

Homer's *Odyssey* (c. 725 B.C.E.; English translation, 1614), a hybrid combining fiction, allegory, and direct address to the reader. The book was published in 1963, and Levi's reputation as a European writer of importance was taking shape. In the United States, the book was translated as *The Reawakening*, and mostly overlooked by reviewers when it appeared in 1965.

In 1973, Levi turned to a book he had been thinking about for many years, a retrospective view of his life from 1935 to 1967, using some of the elements of the periodic table as emblems for interesting people he had known. Levi retired from his full-time position at SIVA in 1974, remaining as a consultant, which permitted more time for writing. This resulted in the publication of a volume of poetry, *L'osteria di Brema* (1975; the Bremen beer hall), as well as the completion of *Il sistema periodico* (1975; *The Periodic Table*, 1984), which was received with many enthusiastic reviews when it appeared in 1975 but did not win any of Italy's major literary prizes.

His prominence in European literary circles enabled Levi to continue work on larger projects, like a book on the world of work, *La chiave a stella* (1978; *The Monkey's Wrench*, 1986), while writing more than sixty articles during the late 1970's for the Turin paper *La Stampa*, pieces akin to *The New Yorker's* "Talk of the Town." *The Monkey's Wrench* was awarded the Strega Prize, Italy's most prestigious honor, in 1979, and Levi started work on a collection of essays about the Nazi death camps that was eventually published as *I sommersi e i salvati* (1986; *The Drowned and the Saved*, 1988). He also wrote a novel about partisan resistance somewhat based on his contacts with Yiddish culture in Auschwitz, *Se non ora, quando?* (1982; *If Not Now, When?*, 1985), which was awarded both the Viareggio Prize and the Premio Campiello, partially as compensation for overlooking some of his previous work.

The elevation of Levi's stature in the twenty-first century as one of the greatest writers of the previous century began with the initial publication in Great Britain and the United States of *The Periodic Table*. Raymond Rosenthal's translation for the American edition, which Levi especially liked, was instrumental in bringing Levi's work to a much wider audience than those who knew him from his writing about his incarceration. Levi was treated as a celebrity, which he appreciated but disliked, on

trips to the United States in 1985 and Great Britain in 1986. Unfortunately, his physical and psychological state was deteriorating rapidly, and his death from a fall in his apartment in 1987 resulted in a continuing controversy about the lingering effects of his struggles with Nazism to the detriment of an understanding of his full capacity as an artist and a man.

## ANALYSIS

The moral force of *If This Is a Man* and the unique style and insight of *The Periodic Tables* suggest that Primo Levi twice found a subject and form so perfectly suited to his style and sensibility that this convergence of author and material resulted in the production of two works whose creation was especially fortuitous. However, both of these books were born out of necessity. For *If This Is a Man*, it was the necessity of circumstance, as Levi felt that he must write about his experience in Auschwitz; for *The Periodic Table*, it was the necessity of inward reflection, as Levi came to realize that he was meant to write about the linkage of scientific scrutiny and its metaphorical resonance for revealing human character.

However, in spite of the enduring power of both of these books and the singular nature of each of them, to understand their strengths, Levi's life as a writer and a scientist must be seen as the intertwining of two disciplines, which developed concurrently and which he insisted were not incompatible. As he would often say to people who expressed surprise that he was both a chemist and a writer, it was because he was a chemist that he wrote. Still, from 1947 to 1958, he wrote only intermittently. His pattern of thinking in terms of written expression throughout his life did not come into full focus until the publication in 2007 of *A Tranquil Star: Unpublished Stories of Primo Levi* (that is, unpublished in the United States), which revealed how much he had thought in literary terms while he was earning a living as a working chemist.

One limiting factor was Levi's statements that after Auschwitz he had a need to tell what had happened—to "bear witness" in the now classic formulation—so strong that it was like "an immediate and violent impulse." After finding his way back to Turin, he felt impelled to relate to acquaintances, friends, and family members moments of his imprisonment and to make notes about it on almost

any available scrap or fragment of paper. He did this for sixteen weeks before launching the manuscript of *If This Is a Man*, which was written “in order of urgency.” However, as he later admitted, “the work of tightening up is more studied, and more recent,” as is clear from the differences between the initial publication in 1947 and the revised edition of 1958. *If This Is a Man* appeared when the full extent of the Holocaust was essentially unknown, and Levi was aware of the shock and horror that would accompany the revelation of what the Nazis had done. Consequently, his immediate concern was to avoid the overly emotional and to write with the careful, scrupulous exactitude of the true scientist determined to be accurate. For this reason, he prized directness and clarity and avoided adornments of style or hyperbole, seeing that the use of rhetorical devices to maximize dramatic impact was unnecessary and even destructive to his intentions. As he wrote, “My model (or, if you prefer, my style) was that of the ‘weekly report’ commonly used in factories; it must be precise, concise, and written in a language comprehensible to everybody in the industrial hierarchy.” However, this was not the totality of his personality, and the stories in *A Tranquil Star* indicate the range of his imagination, as does an examination of the ways in which he fictionalized the people who he included in various books, perhaps most notably *The Periodic Table*. His audience was both the “industrial hierarchy” of his peers and everyone else who was not equipped or inclined to think like a rational, trained scientist.

It is his more playful, less somber, sensitively emotional qualities that emerge in his stories and poems. As serious as he was as a scientist searching for a verifiable truth, and as determined as he was as an industrial chemist working on specific problems requiring applicable solutions, he was also fascinated by the “other” worlds he could explore in speculative fiction. His 1966 volume *Storie naturali*, attributed to “Damiano Malabaila” (“evil nurse” in Piedmontese dialect), is an ironic projection of the disparity between the ambitious claims of technologists and the reality of the frustrations humans encounter when actually using these devices, satirizing the priests of scientific prophecy for their misplaced confidence.

As writer Anita Desai contends, the stories in *A Tranquil Star* are directed by the ancient human

query, “What if?” The story “Nel parco” (1971; “In the Park”) has the delicious conceit of a kind of theme park for literary characters, including “Leopold Bloom, Kim, Moll Flanders, and Holden Caulfield,” who “can’t stand one another.” Conspicuously, there are unidentifiable characters with no face, who “don’t last long. They are unsuccessful characters. . . . They disappear in the space of a few months.” This turns out to be the fate of the protagonist. The theme of impermanence is common to the stories, as in “The Magic Paint,” which makes a person invulnerable, but comes off while bathing. Similarly, “The Fugitive” depicts a poet who writes the poem of his life, but cannot make it permanent because the copier fails, the copy paper disappears, and the poem seems to develop limbs and releases itself from the page. The mood of these stories is somewhat melancholic, though aspects of Rabelaisian extravagance tend to resist sadness.

Levi’s novel *If Not Now, When?* was criticized for static characters, melodramatic situations, and a shallow understanding of Yiddish culture. In his stories, however, Levi, unencumbered by any previous concepts of form, discovered his own manner of narration. The stories rarely have a tight conclusion, seeming to continue after the initiating action has effectively ended, a speculative future awaiting the characters.

His poems, which were composed throughout his life, are a register of his deep, abiding interest in language itself. The opening chapter of *The Periodic Table*, “Argon,” is, among other things, an investigation of the linguistic transformations that took place as Levi’s family moved from a Spanish region to Italy’s Piedmont. In an interview in 1972, Levi said, “Poetry is a mysterious necessity through all ages, all generations, and all human civilizations. It is a powerful language, natural and artificial at the same time, whose origins are more ancient than those of prose.” His own poetry permitted the entrance of emotion and instinct into the appealingly reasonable vision of a humane, sensitive man, as he understood that the method of the scientist was not sufficient for an examination of the psychological foundations of human behavior. The poems that Levi wrote are designed to have the riveting power of heightened language; he placed poems at the beginning of his most important books, like his version of the prayer from Deuteronomy 6:4-9, set be-

fore the first chapter of *If This Is a Man*: “I commend these words to you./ Carve them in your heart.”

The opening poem of *L'osteria di Brema*, his first poetry collection, carries a mood of resignation following intense experience resembling the Anglo-Saxon poem *The Wanderer* (c. 1000). The poem represents a man “like an extinguished flame,” who “fears nothing, hopes nothing, expects nothing,/ But stares fixedly at the sun,” a kind of postapocalyptic reflection by one who has seen a vision too awful to forget.

Levi chose a lyric mode less frequently, but his insistence on a Jewish identity without an acceptance of a deity led to the injunction in “Gedale’s Song”:

We are the sons of David, the stubborn of Masada,  
Each of us carries in his pocket the stone  
That shattered Goliath’s forehead.  
Brothers, way from the Europe of the graves:  
We will climb together toward the land  
Where we shall be men among men.

The optimistic echoes of the Israeli national anthem, “Hatikvah” (“The Hope”), and the spirit of Zionism prior to the founding of Israel are evident here. An exuberance not typical in his writing occurs in a celebration of vitality in “Cuore di legno” (“Wooden Heart”), where he playfully personifies a chestnut tree as a symbol of natural strength:

My next-door neighbor is robust;  
It’s a horse-chestnut tree in Corso Re Umberto:  
My age, but doesn’t look it.

The trials of existence are overcome, as the poem concludes:

Under the bark hang dead chrysalises  
That will never be butterflies.  
Still, in its sluggish wooden heart  
It feels, savors the seasons’ return.

The aspects of a self-portrait are apparent, as is the poet’s pleasure in the familiar. The poem demonstrates Levi’s inclination toward the positive, even as he carried the burden of speaking for all those lost in the Holocaust. As he ranged over the three decades of his productive life in *The Periodic Table*, his pride in his scientific powers and his capacity

for shaping language into a new element with special properties are combined in that book, which gave him the greatest pleasure to write. *The Periodic Table* is his strongest proof that the chemist and the writer were part of a conjunction of attributes rather than conflicting calls to his essential self.

## IF THIS IS A MAN

**First published:** *Se questo è un uomo*, 1947  
(English translation, 1959; revised as  
*Survival in Auschwitz: The Nazi Assault on  
Humanity*, 1961)

**Type of work:** Nonfiction

*Levi’s account of the ten months he was  
incarcerated in the Nazi death camp in Poland.*

The passage of time, the context of history, and even a familiarity with the awful facts of the Holocaust cannot shield the reader from or lessen the impact of Levi’s incarceration in what he called *Il buco nero*—The Black Hole—of Auschwitz. As he told writer Philip Roth in a revealing interview the year before his death, he wrote *If This Is a Man*, “struggling to explain to others, and to myself, the events I had been involved in.”

The gripping, heartbreaking intensity of his recreation of the human-fashioned hell that Levi, using a purposely paradoxical term, said he was “lucky” enough to enter, has the force of Walt Whitman’s proclamation about living through a world of degradation and death: “I was the man; I suffered; I was there.” Levi’s “luck” was part of the random process that enabled him to survive, not dependent on individual virtue or merit. “I have seen the survival of shrewd people and silly people, the brave and the cowardly, ‘thinkers’ and madmen,” Levi maintained. In addition, he described his time in Auschwitz as “in technicolor,” the remainder of his life in “black and white,” declaring that “I remember having lived my Auschwitz year in a condition of exceptional spiritness” as he strove to understand “an environment that is monstrous but new, monstrously new.”

The title chosen by Collier Books, the American publisher, *Survival in Auschwitz*, was an understandably commercial attempt to reach an audience, but it completely missed the point of Levi’s choice.

What he wanted to express was his naturalist's curiosity about the human beings who had built the death camp, who operated it, and who lived and died there. When he arrived, Levi was stunned by the nightmare world; in keeping with his scientist's orientation, after his identity has been reduced to a number inscribed on his arm, he begins a search for meaning, persisting in asking "Why?" even after a guard replies, "*Hier ist kein warum*," which Levi understands as "There is no why here." For a rational scientist, there is always an explanation, so amid the absurd and initially incomprehensible brutality of the concentration camp, Levi continues to try to understand why some live, some die, and why people behave and react as they do.

Amid the fear and pain, Levi's mind is keenly alert, to the point that he can analyze and reflect on himself as a specimen in a hideous experiment, noting physical signs of deterioration or recovery like indices on a laboratory chart. Similarly, conventional measures of time become pointless. Events like the beginning of air raids, the approach of the Russian army, and the incredible good fortune of being selected to work in a laboratory are not taken as signs of progress toward survival but as things in themselves, "the gift of good fortune to be enjoyed as intensely as possible and at once."

When Levi was released as the Germans fled from the Russian advance, he was as stunned by his survival as he had been by the staggering events of his arrival. "It is a miracle that I am alive," he wrote, but added, "It is not that I thank Providence, because if there really was a Providence, Auschwitz and Birkenau would never have existed." As Levi's biographer, Myriam Anissimov, explains, "With scrupulous honesty, he always spoke solely about what he himself had seen, but his voice was raised in the name of all of those—he called them 'the true witnesses'—whom the *Lager* [concentration camp] submerged." His mentor, Professor Dalla-porta, told him he "must write all this down," confirming his own feeling that he "returned from the camps with an absolute, pathological narrative charge."

It was all the more impressive, then, that his narrative is marked by composure without lessening its impact. The always sharp, observant eye of the scientist recorded the physical phenomena that the writer brought to vivid life in the evocative detail of a masterful stylist. The shy, decent man, who un-

derstood that an individual's personal survival always took precedence, never lost a sense of other people. The last sentence of the book contains the hope and humanity that was not crushed by the Holocaust. Referring to his friend Charles, he says, "We have exchanged long letters and I hope to see him again one day."

## THE PERIODIC TABLE

**First published:** *Il sistema periodico*, 1975  
(English translation, 1984)

**Type of work:** Nonfiction

*A personal history organized by a linkage between people and the basic elements of the tangible world that Levi knew intimately through his work as a chemist.*

Nearly thirty years after Levi had stepped out of the hell of Auschwitz, he felt that he was ready to write *The Periodic Table*, an imaginative map of the world that he loved. In an instance of inspiration, he planned a kind of memoir with interludes of fantasy in which elements arranged on the periodic table would operate as emblems of the personality traits of people who had mattered to him. The originality of his conception is evident, but he was working in an archetypal tradition that includes the medieval European idea of a man controlled by various "humors" based on different organs of the body.

His friend, Italo Calvino, called the book "a moral biography," since Levi celebrated the work he did as a chemist as a counter to the hideous parody of valuable work encapsulated in the notorious sign at the entrance to Auschwitz, *Arbeit macht frei* (work makes one free). At the start, Levi set his own motto, a Yiddish proverb, *Ibergecumene tsores iz gut tsu derseylin* (troubles overcome are good to tell).

The book is composed of twenty-one chapters,

each one under the heading of a particular element. The first one, “Argon,” is a capsule history of Levi’s family, a reclaiming of the heritage that the Nazis tried to wipe out. It establishes a tone of genial expectancy as Levi fondly recalls how a hybrid language developed from a convergence of Spanish, Italian, and Yiddish, as his family adjusted to the particularities of a new habitation. The metaphor that informs the chapter is the reluctance of inert gases to combine or change.

The direction of the narrative is controlled by the demands and challenges of working with the natural substances that a chemical engineer encounters, while the substance of the narrative is developed through an exploration of the inner consciousness of the people who dealt with these challenges. As Levi writes about Lanza, who is heating a boiler to distill sulfur, “the dance of thoughts and images” in his mind runs parallel to his careful attention to the pressure in the boiler. Shifting the perspective from Lanza’s consciousness to the narrator as amiable guide, Levi advises, “On your feet, Lanza, we have arrived at 180 degrees.” This is the way Levi keeps the reader involved with the people who are under scrutiny.

The chapters loosely follow Levi’s own experiences, from his first contact with Hydrogen as a novice experimenter, to his life as a young chemistry student in “Zinc,” to his meeting with a man of Iron who became a treasured friend. Then follows an interlude conceived as fable in which Lead and Mercury operate as allegories of involvement in which fixity and transmutation define character. Levi’s capture by the Germans is dealt with in “Gold,” the precious substance standing for the opportunities of life itself, and in “Cerium,” which depicts his use of his knowledge of compounds to procure a commodity that could be traded for food that kept him alive at Auschwitz.

After several chapters covering his exploits as an industrial chemist, “Vanadium” takes Levi back to his imprisonment, as he begins a correspondence with a German industrialist who, he discerns, was the man who managed the laboratory where he labored in Auschwitz. There is no resolution or satisfaction from this exchange, but no rancor either. In an extraordinary final chapter, “Carbon,” Levi traces the transformation of a carbon atom from its bondage in limestone through a series of changes to become a part of Levi’s mind, where it literally en-

ergizes the hand that writes the words, “to impress on the paper, this dot, here, this one,” a vital record of life that is a tribute to the continuance, in the face of hazard and peril, of the human soul and spirit.

## THE DROWNED AND THE SAVED

**First published:** *I sommersi e i salvati*, 1986  
(English translation, 1988)

**Type of work:** Essays

*Levi’s retrospective assessment of his experiences and their meaning, including some lessons to build on and the judgment that his life validates.*

Levi’s *The Drowned and the Saved* is the distillation of his experiences with the Holocaust, from his capture by the Germans to his eminence as a commentator on that tragic episode in human history. His essential theme in *The Drowned and the Saved*—a title he had used for one of the chapters of *If This Is a Man*—is how to measure the ways people dealt with the horrors of the Nazi program of genocide during its operation and since that time.

The title is designed to lead into an examination of what it meant to be saved in a spiritual context, since some who survived physically were lost in a moral sense, while some who died had by the example of their lives reached a level of salvation, which Levi celebrates. He concluded the book with letters he had received from German citizens in an effort to summarize and reconcile his own recollections of the Holocaust with the extensive historical studies that appeared since his first book, as well as with responses from Germans living at the time and from generations born after the war. In conjunction with this, Levi was determined to prevent the reoccurrence of anything like Auschwitz by making it impossible to forget or suppress the facts, by protecting and preserving memory without limiting discussion, by resisting those who tried to distort or shape a historical record for their own purposes, and by attempting to penetrate as far as possible the depths of the human psyche to try to understand how people could behave as terribly as they did.

Beyond the recapitulation of experience, it is his exploration of human motivation and insights illuminating character that make the chapters of the book so compelling. His lucid, vibrant, supple writing style—expertly conveyed by Raymond Rosenthal’s translation—establishes a voice that instills confidence, inviting the reader to follow on a dreadful journey in the company of a man who

can be trusted to tell the truth, to offer whatever enlightenment is possible, and who never loses a humane sense of compassion, even when casting judgment.

At the center of the narrative is the chapter called “The Gray Zone,” which considers the range of response of all those brought by the Germans to what he calls, with appropriately coarse terminology, the *anus mundi*, the “ultimate drainage site of the German universe.” Around this central chapter are variants of the title’s primary division, depending on such determinants as whether people

chose to speak or remain silent (“Communicating”), to rely on or refute religion (“Useless Violence”), or to conform to or defy expectations (“Stereotypes”). In each case, the primary separation is confounded and complicated by Levi’s subtle introduction of distinctions, which compel increasingly more complex contemplation. When he renders judgment about the Holocaust, it feels earned and appropriate.

## SUMMARY

Primo Levi set a quatrain from Samuel Taylor Coleridge’s *The Rime of the Ancient Mariner* (1798) before the text of *The Drowned and the Saved*, proclaiming:

Since then, at an uncertain hour,  
The agony returns,  
And till my ghastly tale is told  
This heart within me burns.

Like so many of the allusions and quotations within his work, it is an accurate and illuminating citation. For Levi, no matter what he achieved, the “agony” remained; the “ghastly tale” could never be forgotten, but the fire in the soul cast a light that brightened the dark passages of the human universe.

Leon Lewis

## DISCUSSION TOPICS

- Discuss the spiritual aspects of Primo Levi's writing with respect to his sense of himself as Jewish but neither observant nor doctrinal.
- Consider the ways in which Levi's writing style effectively conveys his fascination with the worlds of scientific certainty and human fallibility.
- Trace the rise in Levi's reputation from the initial publication of *If This Is a Man* to his final volumes and account for its shifts and alterations.
- How does Levi balance the positive and negative aspects of technology in his work?
- What are the particular qualities of *If This Is a Man* that have made it still stunning after the appearance of many other Holocaust memoirs?

## C. S. LEWIS

**Born:** Belfast, Ireland (now in Northern Ireland)  
November 29, 1898

**Died:** Oxford, England  
November 22, 1963

*An important scholar of English medieval and Renaissance literature, Lewis is best known as a novelist and religious apologist.*

### BIOGRAPHY

C. S. Lewis was born in Belfast, Ireland (now in Northern Ireland), on November 29, 1898, the younger son of Albert and Flora Hamilton Lewis. His pleasant childhood with his brother Warren ended at age ten when his mother died. Already Lewis had begun to compose stories of imaginary worlds, featuring talking animals. After their mother's death, both boys were sent to English boarding schools, a separation that permanently estranged Lewis emotionally from his father. The next six years were the worst of his life, as Lewis makes clear in *Surprised by Joy: The Shape of My Early Life* (1955). Finally, in 1914, Albert sent him to a tutor, W. T. Kirkpatrick, who had instructed Albert himself, to prepare for college. Kirkpatrick strengthened Lewis's atheism and his skills in language and debate.

In 1916, Lewis won a scholarship to University College, Oxford; he failed the university entrance examination, however, because of weakness in mathematics. He was permitted to attend in 1917 so that he could join the army through enlistment in the University Officers' Training Corps. He left for France in November, 1917, was wounded in April, 1918, and returned to England.

While he convalesced, Lewis maintained a friendship with the mother of an Oxford companion, Paddy Moore. Both had promised to care for the other's family should his friend be killed, and

Moore's death led Lewis to fulfill his promise. He supported Mrs. Moore and her daughter Maureen until Maureen reached adulthood; Mrs. Moore lived in his home until her death in 1951. Lewis's relationship with Mrs. Moore is unclear; he may have found a mother figure in her that replaced the loss of his own mother. She was not apparently sympathetic either to his academic work or to his later conversion to Christianity. During his convalescence, *Spirits in Bondage* (1919), a book of poems, was published.

Lewis returned to Oxford in 1919, graduating in 1922 with a B.A. while earning highest honors in classics and philosophy. Unable to find work, he continued his studies in English literature, completing the standard two-year program in less than a year with highest honors. A temporary teaching position led in 1925 to a post as tutor in English at Magdalen College, which he held until his election to Cambridge in 1954. His position involved weekly meetings with students to discuss readings and essays and college-wide lectures. In 1926, his poem *Dymer* was published. His friends in these years included fellow scholars such as J. R. R. Tolkien, who shared his love of Norse literature.

In 1929, Lewis's father died in Ireland. After selling the family home, the brothers purchased property in Headington, a suburb of Oxford, and moved there with Mrs. Moore and her daughter. Although they had never been close, his father's death struck Lewis very deeply. Over a number of months, Lewis was led to reflect on religious issues, and his friends Tolkien, Owen Barfield, and Hugo Dyson all discussed Christianity with him. His athe-

ism, representing fifteen years of his life, he abandoned by 1929. He described himself only as a theist, however, believing in a God, until in 1931 he became a convert to Christianity. Central to his conversion, as he wrote in *Surprised by Joy*, was his pursuit of “Joy,” a longing for something wonderful that this world cannot supply. He illustrated this quest in his allegorical narrative *The Pilgrim’s Regress* (1933). His scholarly reputation was made with *The Allegory of Love* (1936), although he was professionally active throughout his career. Other scholarly publications included *A Preface to “Paradise Lost”* (1942). Nineteen years of study resulted in *English Literature in the Sixteenth Century, Excluding Drama* (1954), a volume in the Oxford History of English Literature series.

He found support from a group of colleagues, known as The Inklings, who met twice a week to discuss works in progress. Tolkien’s *The Hobbit* (1937) was first read in this context. The group also heard Lewis’s first theological essay *The Problem of Pain* (1940); *The Space Trilogy*, three science-fiction novels (1938-1945); *The Screwtape Letters* (1942); and *The Great Divorce* (1945).

*The Screwtape Letters* established his popular audience. Originally serialized weekly in the newspaper *The Guardian*, when the letters were published together Lewis had a best seller. Subsequent speaking engagements produced the famous wartime radio addresses collected as *Mere Christianity* (1952). Later, his lectures linked teaching with values in *The Abolition of Man* (1943). From 1947 to 1960, he wrote three more works on Christian doctrine. In the same period, his children’s books, *The Chronicles of Narnia* (1950-1956), appeared.

Lewis’s life changed dramatically in the mid-1950’s. Professionally, his election in 1954 as professor of medieval and Renaissance literature at Cambridge permitted him freedom to lecture on topics of his choosing. Personally, it meant marriage. In the early 1950’s, he had met Helen Joy Davidman, the wife of William Gresham. The Gresham marriage was failing, and after her divorce, she and her sons moved from the United States to Oxford in 1955. Their friendship influenced his most mature novel, *Till We Have Faces: A Myth Retold* (1956). In 1956, they were married in a civil ceremony, in part to secure British citizenship for Joy and for her sons. Joy was shortly afterward diagnosed with bone cancer, and in March, 1957, while Joy was hos-

pitalized, they were formally married by an Anglican priest. Her almost miraculous recovery permitted them a honeymoon, and the next two years were the happiest of Lewis’s life. Her cancer returned, however, and she died in July, 1960. Lewis recorded his loss in *A Grief Observed* (1961).

In his last years, he published little original material beyond *An Experiment in Criticism* (1961). He remained active at Cambridge until, in 1963, in failing health, he resigned his position. He died at his home in Oxford on November 22, 1963.

## ANALYSIS

As a literary scholar, as well as a creative writer, Lewis was sensitive to issues of technique, style, and purpose in writing. In his essays, he suggested some of his preferences about literature generally. Published after he completed his science-fiction novels but before he began the Narnia stories, his essay “On Stories,” included in the anthology *Essays Presented to Charles Williams* (1947), illuminates some of these concerns. He distinguishes between exciting, suspenseful plots and the “whole world” of a novel. He rejects an adventure novel such as Alexandre Dumas père’s *Les Trois Mousquetaires* (1844; *The Three Musketeers*, 1846):

The total lack of atmosphere repels me. There is no country in the book—save as a storehouse of inns and ambushes. There is no weather. When they cross to London there is no feeling that London differs from Paris. There is not a moment’s rest from the “adventures”: one’s nose is kept ruthlessly to the grindstone.

Lewis’s critics occasionally fault his fiction for its conventional plot structure, similarity of characterization, and occasionally unnatural dialogue. In “On Stories,” however, he argues that to be preoccupied with character or plot is to miss an even more compelling element of the story. Plot, he suggests, is “a net” to “catch something else,” a sense of perceiving another world. Against Dumas, he cites David Lindsay’s science-fiction novel *A Voyage to Arcturus* (1920), where “physical dangers . . . count for nothing”:

He is the first writer to discover what “other planets” are really good for in fiction. No merely physical strangeness or merely spatial distance will realize that idea of otherness which is what we are

always trying to grasp in a story about voyaging through space. . . . To construct plausible and moving “other worlds” you must draw on the only real “other world” we know, that of the spirit.

Lewis sees stories, then, as opportunities to portray spiritual journeys, to discover “otherness.” All of his novels are conventional “quest” stories, involving tasks to be fulfilled and knowledge to be gained. In his first two science-fiction novels, the character Ransom is taken off Earth, undergoes psychological, physical, and spiritual trials, and returns with knowledge and faith that yield him a new perspective on his society. Common to these stories and to his children’s novels is the education of the spiritual innocent. Variety in his plots lies chiefly in the types of obstacles that confront characters and the means to overcome them. Often, a trial turns out to be quite different from its initial appearance, so that the protagonist’s intellect, as well as courage, is tested.

In the process, characters must often learn to see the world around them in radically new ways. The earliest example of this is Ransom, in *Out of the Silent Planet* (1938), who is unable at first to perceive the giant shapes around him on Mars as mountains, since they seem unnaturally tall because of that planet’s lighter gravity. “Reperceptions” can be physical or moral, as when Jane Studdock, in *That Hideous Strength: A Modern Fairy Tale for Grownups* (1945), discovers the existence of a moral hierarchy in which she is called upon to subordinate herself to God and to her husband. Similarly, her husband Mark sees his callous treatment of Jane and his selfishness as a moral and spiritual failure.

Occasionally, the novels appear static as characters are caught up in moral and religious argument, as in *Perelandra* (1943) and *The Silver Chair* (1953). In both novels, characters must defend the intellectual integrity of their beliefs. While Lewis was a well-known debater, and the scenes illustrate his concern for an intellectually informed faith,

they are rare in his fiction. Instead, where Lewis places his energy—in creating the “atmosphere,” the “weather” of another world—he is extremely successful. In creating Malacandra, Perelandra, or Narnia, he invests sensory details with a suggestion of the symbolic and the mythic. Narnia varies little from England in its plants and animals, yet it contains centaurs, dryads, and talking beasts. Its charm lies in part in its distance from mechanized England, so that time slows down and moments may be savored. Lewis’s only novel written about contemporary England, *That Hideous Strength*, points up the contrast: Only in Bragdon Wood, where the magician Merlin is buried, and at St. Anne’s, where Ransom is, are there moments of stillness and joy.

Lewis has been accused by some of writing allegory, particularly in the Narnia stories, in which Aslan the lion, creator of Narnia, appears to take on the qualities of Christ. He responded to the charge by describing the genesis of the stories in scenes recalled from dreams and commenting that the central figure, Aslan, suddenly intruded into *The Lion, the Witch, and the Wardrobe* (1950), the first story, unbidden. A distinction that Lewis made in *Perelandra* seems appropriate, that between myth, truth, and fact. In the sacraments, particularly in Holy Communion, participants eat bread and drink wine or grape juice, in *fact*; yet they participate in and reenact a *mythic* celebration, in which a man who said he was God offered himself for all humanity. Lewis’s fiction, then, has sometimes been described as “sacramental” in this sense; it is not allegory, which Lewis did use in *The Pilgrim’s Regress*. Allegory implies a simple retelling of a story with different names—England becomes Puritania, the church becomes Mother Kirk. Instead, characters in his fiction are called to act as Christ might have acted, or to act on His behalf, in their separate stories. This is as true of the human “patient” to be tempted in *The Screwtape Letters* as it is of the Pevensie children in Narnia.

## THE SPACE TRILOGY

**First published:** *Out of the Silent Planet*, 1938;  
*Perelandra*, 1943; *That Hideous Strength*,  
1945

**Type of work:** Novels

*Contemporary Englishmen discover that they  
are participants in a battle against spiritual  
powers seeking to enslave humanity.*

Lewis's science-fiction trilogy is sometimes called the Ransom Trilogy, after the central figure of *Out of the Silent Planet* and *Perelandra*. Elwin Ransom, a middle-aged linguistics professor at the University of Cambridge, grows in the course of the novels from a lonely independence to find relationships with others, maturing into a leader against hostile nonhuman forces. Lewis transforms a conventional science-fiction pattern by making his villains demoniac powers and his protagonists Christians literally on the side of the angels. While science fiction has frequently dealt with issues of religion, Lewis lays aside the typical dualistic "good against evil" plot for an explicitly Christian worldview. All three of the novels attempt to make believable the presence of a spiritual reality transcending the everyday life.

*Out of the Silent Planet* opens as Ransom, on a walking tour of England, falls in with two acquaintances, one an old friend from his prep school. His friend Devine and the scientist Weston kidnap Ransom, carrying him to Mars, or Malacandra, in Weston's spaceship. Late in the voyage, Ransom learns that the others were commanded to bring another human back as the condition of their return. When they land, Ransom escapes. The novel is so far entirely conventional: mad scientist, greedy assistant, innocent victim, threatening aliens.

Here, however, Lewis diverges from convention. Ransom finds Mars inhabited by three species of rational beings, all friendly. More, he finds present a fourth species, the eldila, something on the order of angels. After Ransom learns the Martian language, he is reunited with Weston and Devine, who have killed a Martian. Judged by the ruling eldil, the Oyarsa, all three are exiled to Earth. Ransom learns from the Oyarsa that Earth is the "Silent Planet" because of the rebellion of its Oyarsa millennia ago. It becomes clear to Ransom, already a

Christian, that the biblical story of the incarnation of God in Christ is historically true, one incident in a war that has left Earth isolated and dominated by evil powers.

Two elements of the story are particularly significant: first, the minimal place of "science" in the action, and second, the "reperceptions" that Ransom experiences. The "good society" of the Martians is almost Rousseauian in its rejection of technology, and the one species with which Ransom spends much time is a tribe of hunters and farmers. Ransom must repeatedly adjust his perception of the landscape, his understanding of culture, and his sense of what it is to be "human." He discovers a new sense of his own place and that of humanity in a universe of many intelligent species and a new humility, in that humankind is the sole species in need of redemption.

In *Perelandra*, Ransom is summoned to Venus to defend its inhabitants from an unknown threat. He discovers that only two "humans" have been created, the Adam and Eve of their race. Like Adam and Eve, they have a single commandment given them, which they must obey to show their love for God. Weston's sudden arrival in a new spaceship makes clear the nature of the threat. Proclaiming himself the servant of the demoniac Oyarsa of Earth, Weston begins a campaign of temptation against the unfallen Eve, the Queen.

Lewis's study of John Milton's *Paradise Lost* (1667, 1674) lies behind many of the novel's scenes; the temptation, for example, recapitulates Milton, not the Bible. Like Milton, Lewis faced the problem of portraying "goodness," unfallenness, in the Queen. The difficulty of successful characterization is enormous: She is simultaneously innocent, gracious, wise, and naked. At the same time, Lewis must portray the decaying personality of Weston as suggesting the sterility and misery of the Satanic.

Ransom matures in this novel, and at its climax he must physically battle Weston, in a scene recalling *Beowulf* (c. sixth century) or Homer's *Odyssey* (c. 725 B.C.E.; English translation, 1614). Before he can bring himself to kill Weston, however, his understanding of Christianity itself must change. Previously, his faith had been intellectual and passive; he discovers that as a Christian warrior he stands, for the moment, in the place of Christ defending innocence.

In treating the temptation that the Queen endures, for the first time Lewis focuses on the necessity of intellectual maturity in Christians. The twisted arguments Weston develops, suggesting the abuse and perversion of language itself, Lewis had foreshadowed in a comic scene in *Out of the Silent Planet*. In *Perelandra* and in *That Hideous Strength*, the intellectual theme of armament against evil is much more prominent.

*That Hideous Strength*, the only story set in modern England, Lewis subtitled *A Modern Fairy Tale for Grownups*. He seems not to suggest the simplicity of the traditional tale but its associations with magic intruding into everyday life. That is precisely what happens. The story is not told from Ransom's perspective but from that of an ordinary English university community. The protagonists, Jane and Mark Studdock, are a modern, well-educated post-war newlywed couple; Mark teaches sociology at Bracton College, and Jane is working on a degree in literature.

Both long for professional success and personal recognition. Neither realizes the selfishness these goals represent or what means they must use to achieve them. Mark, greedy for peer approval and power, joins a scientific and industrial combine, the National Institute for Co-ordinated Experiments (NICE). Behind the NICE, however, is a demoniac conspiracy to conquer England. Jane's latent psychic powers make her a desirable pawn to NICE, as well, and she eventually flees to sanctuary in Ransom's household.

In the previous novels, Lewis's criticism of modern life had been a minor element. Here, he sharpened his critique of Western culture, particularly its materialism and skepticism. Jane and Mark, in their self-enclosed worlds, are forced to reckon with a spiritual reality and authority their culture has denied. What eventually saves them is a core of genuine love for one another, which leads them to repentance. Many in the novel, however, never rise above a self-consuming self-love.

## THE SCREWTAPE LETTERS

**First published:** 1942

**Type of work:** Novel

*In a series of letters, a senior tempter advises a junior devil how to succeed with a patient.*

*The Screwtape Letters* made Lewis's popular reputation. An epistolary novel from a senior tempter, Screwtape, the letters advise his junior colleague and nephew, Wormwood. The narrative traces Wormwood's attempts to enslave the soul of a "patient," a human on Earth, so that he may end in Hell at his death. Over the course of thirty-one letters, set in contemporary England during the Blitzkrieg, Screwtape reviews strategies based on exploitations of human nature.

Lewis's purpose is frankly didactic, although his use of Screwtape as a narrator means that readers must often "invert" the truths he reveals. In the process, Lewis's satire ranges over much of modern life, for Screwtape is ironically aware of human failings invisible to humans. Yet Screwtape himself is satirized, too; at moments he appears confused, contradicting himself, admitting truths about God that he later denies. Lewis succeeds in creating both a character and an atmosphere: Hell is the mind-set in which selfishness becomes self-absorption.

Early in the novel, the patient experiences a religious conversion, permitting Screwtape to discuss how the Christian life may itself be perverted. This development becomes the major interest of the work, for the church is the real enemy of the demoniac. As Screwtape provides advice, Lewis is able to portray the Christian faith in opposition to those facets of modern life that are diabolical.

Over the course of the novel, Screwtape encourages Wormwood to promote four illusions held by moderns. The first is that total freedom and independence lie in casting off inhibitions and that God is somehow opposed to this. By contrast, Screw-

tape casually notes that God intends that humans grow to maturity and intellectual and emotional independence. God intends that they be free from whatever might enslave them, including themselves, and thus offers them the power of self-transcendence through the church. He lures them toward his freedom with joy and love, and to that end provides both in human life as shadows of what awaits those who love Him.

A second illusion lies in modern beliefs about the Christian church. Screwtape reveals that the church is, first of all, mostly invisible, for it includes all of its members in time and eternity. The church opposes modern culture in its emphasis on interdependence, while industrial life emphasizes competition. Screwtape notes that interdependent life in community can be maintained only by love, while selfishness motivates competition. Since Christianity demands love and condemns selfishness, competitive attitudes are a direct threat to it. Further, the church offers access to permanence and security, while modern culture perceives these as stodginess.

A third illusion is that emotions, rather than the intellect, are trustworthy. Lewis implicitly stresses repeatedly the role of reason in everyday life, especially for the Christian. Screwtape cautions Wormwood to confuse, rather than argue with, his patient, and especially to employ jargon or emotion-laden terms to motivate him.

Finally, Screwtape gives the lie to the belief that personal faith has no social implications. He urges Wormwood repeatedly to separate his patient's convictions, especially his religious faith, from outward conduct and habits. Because most men and women lack consistent intellectual and moral beliefs, they remain inactive when called to moral choice. To Lewis, a mature Christian life is one in which the central attitudes and beliefs work their way into every moment. Screwtape reviews a catalog of occasions to separate conduct from belief, including relationships within the family, moments under stress, attitudes toward Christians of differing faith, and relationships with non-Christian companions.

## THE CHRONICLES OF NARNIA

**First published:** *The Lion, the Witch, and the Wardrobe*, 1950; *Prince Caspian*, 1951; *The Voyage of the Dawn Treader*, 1952; *The Silver Chair*, 1953; *The Horse and His Boy*, 1954; *The Magician's Nephew*, 1955; *The Last Battle*, 1956

**Type of work:** Novels

*Into the parallel world of Narnia come a series of English children who meet the lion Aslan, confront evil, and grow to maturity.*

*The Chronicles of Narnia* traces the experience of a number of modern children in their encounter with a "medieval" world. Lewis apparently envisioned key scenes in the story when he was in his adolescence but may have had no thought of developing a series of stories until he was well into them. Into the stories flow memories of the works of authors such as Kenneth Grahame, E. Nesbit, and George MacDonald.

Each story portrays the growing maturity of the children who find their way into Narnia, and the plots are, in that respect, very similar. Each child must confront wickedness, spiritual evil localized in some individual, and overcome it. Perhaps more significant than the plot, Lewis creates settings that are richly described, in which magic is possible and everyday actions may have deeply symbolic value. If any of his fiction succeeds in creating that longing for "Joy" that he experienced in his own life, the Narnia stories do.

*The Lion, the Witch, and the Wardrobe* introduces the Pevensie children, Peter, Susan, Edmund, and Lucy, who discover Narnia, where the White Witch has brought a hundred-year winter without Christmas. Although the children enter Narnia apparently by accident, they are expected, and welcomed. Humans are meant to rule in Narnia, despite the fact that its chief inhabitants are talking beasts and creatures such as centaurs, satyrs,

nymphs, and dryads. When the children learn that a prophecy of their arrival means that humans may help to free Narnia, three enlist to fight the White Witch. Yet she has already enchanted Edmund into betraying them.

Christian truth is never far under the surface of Narnia, though children who read the stories may not notice it. Each story demonstrates the necessity of relying on Aslan, the lion who is a thinly veiled image of Christ. His entrance into *The Lion, the Witch, and the Wardrobe* transforms it from fairy tale to spiritual romance. Edmund is saved when Aslan offers himself to the White Witch to die as a substitution, and Lewis thus makes understandable to children the incarnation and Crucifixion of Christ. One of the novel's most effective scenes is Aslan's return to life the next morning. With his power, the children swiftly defeat the witch's army of monsters, and spring is renewed.

*Prince Caspian* returns the Pevensies to a Narnia again enslaved. This time the materialistic humans, the Telmarines, are at fault. Fearful of the talking animals and other intelligent Narnian creatures, they first drove them out to the forest and then in later years denied their existence. The Telmarine Caspian's battle on behalf of "Old Narnia" fails until he depends on Aslan, and the Pevensie children similarly must listen to Aslan and trust him before they can be effective. A comic element of the story is the failure of adults to recognize the moral authority of children when directed by Aslan.

*The Voyage of the Dawn Treader* brings together Caspian, Lucy, and Edmund. They return to Narnia, this time with their cousin Eustace Scrubb, an insufferably modern child. Caspian has resolved to find seven missing noblemen who sailed east from Narnia. At first glance, the story might simply be an adventure like any other children's novel. Again, however, Lewis develops lessons of religious truth through the children's adventures. The journey results in a literal transformation of Eustace, who must be freed from a physical enchantment and, simultaneously, from the enchantment of modern skepticism.

*The Silver Chair* returns Eustace to Narnia with a schoolmate, Jill Pole. They arrive in Aslan's country, escaping the persecution of schoolchildren at their "modern" school, and are dispatched to rescue Caspian's grown son, Rilian, kidnapped by a witch. The children and a companion eventually

defeat the witch's enchantment in what is explicitly a test of faith, of faithfully remembering Aslan's directions. At the novel's conclusion, Lewis includes the comic scene of Jill, Eustace, and Caspian, still in armor, terrifying the bullies who had persecuted Jill.

*The Horse and His Boy* is an episode from the rule of the Pevensie children during the time of the first novel. The story line reminds one of intrigue and mistaken-identity novels, or even of William Shakespeare's *The Comedy of Errors* (pr. c. 1592-1594, pb. 1623), and is the slightest of the stories in symbolic depth. Shasta, a young boy, though the son of the King of Archenland, near Narnia, had been kidnapped as an infant. Later, he escapes to Narnia with a Calormene girl, Aravis, and two Narnian talking horses. In the process they foil a planned Calormene attack on Narnia. Aslan appears to guide Shasta and disciplines Aravis, whose selfishness has resulted in suffering for others.

In the last two books of the series, Lewis completes the story of Narnia by narrating its creation and its final destruction. *The Magician's Nephew* describes how Digory and his friend Polly discover Narnia and inadvertently bring evil into it. Lewis's picture of the creation as spoken and sung by the power of Aslan's voice is a remarkable evocation of the biblical story in Genesis. The story accounts for several mysteries in the series, not the least of which is the source of evil in an unfallen world.

*The Last Battle* is Narnia's version of the book of Revelation. Narnia is overthrown; the servants of evil triumph; and Eustace, Jill, and the Narnian defenders are flung into a stable to die. What they find inside, however, is another Narnia, one so intensely real that the world outside the door seems a shadow. This is Heaven, and Aslan welcomes them and the Pevensies to their real home. When Aslan judges and unmakes the world, they see him retain in the new Narnia all the good things in the old. It is clear that Lewis focuses in this last novel on consolation, both for the fears children have about death and for their anxiety at the scriptural theme of the end of the world. Yet, as in *That Hideous Strength*, Lewis attacks the unbelief, decadence, and corruption of modern life, which make inevitable the final battle. Further, he shows the self-destructive nature of evil, for the triumph of evil is the occasion for Aslan to end Narnia itself.

**SUMMARY**

C. S. Lewis's fantasies center on the discovery of the reality of the supernatural. In an age when the "theology" of most fantasies is confused or dualistic, he employs the tools of fiction to awaken audiences to Christianity. One may fairly argue that Lewis never varies his essential plot—the story of individuals whose moral choices move them either toward themselves or toward God. He might have responded that all stories can, finally, be reduced to this. His real strength lies in the creation of fantasy worlds that are "desirable," in which audiences can sense the otherness that leads to a new perception of human life.

*Richard J. Sherry*

**BIBLIOGRAPHY****By the Author**

## LONG FICTION:

*Out of the Silent Planet*, 1938 (with *Perelandra* and *That Hideous Strength* known as The Space Trilogy)

*The Screwtape Letters*, 1942

*Perelandra*, 1943

*That Hideous Strength: A Modern Fairy Tale for Grownups*, 1945

*The Chronicles of Narnia*, 1950-1956 (collective title for the following 7 novels: *The Lion, the Witch, and the Wardrobe*, 1950; *Prince Caspian*, 1951; *The Voyage of the Dawn Treader*, 1952; *The Silver Chair*, 1953; *The Horse and His Boy*, 1954; *The Magician's Nephew*, 1955; and *The Last Battle*, 1956)

*Till We Have Faces: A Myth Retold*, 1956

## SHORT FICTION:

*The Dark Tower, and Other Stories*, 1977

## POETRY:

*Spirits in Bondage*, 1919

*Dymer*, 1926

*Poems*, 1964

*Narrative Poems*, 1969

## NONFICTION:

*The Pilgrim's Regress*, 1933

*The Allegory of Love*, 1936

*The Personal Heresy*, 1939 (with E. M. W. Tillyard)

*Rehabilitations*, 1939

*The Problem of Pain*, 1940

*Broadcast Talks*, 1942

*Hamlet: The Prince or the Poem*, 1942

*A Preface to "Paradise Lost,"* 1942

## WYNDHAM LEWIS

**Born:** Amherst, Nova Scotia, Canada  
November 18, 1882

**Died:** London, England  
March 7, 1957

*Lewis applied principles of the graphic arts to writing, promoted vorticism, and produced more than forty volumes, including novels, short stories, essays, poetry, autobiography, and criticism.*

### BIOGRAPHY

A beginning like Percy Wyndham Lewis's could hardly yield a conventional adult. Lewis first saw the light of day aboard the family yacht anchored off Amherst, Nova Scotia, Canada, on November 18, 1882, when his British mother, Anne Prickett Lewis, gave birth to him. Although his father, Charles Lewis, was an American who had attended West Point, been an army officer, and fought in the Civil War, the infant was officially a Canadian citizen, bearing for life the citizenship of neither parent.

When Percy Lewis was six, the family, which had lived in coastal Maine and on the Chesapeake Bay, resettled in England. The Lewis marriage was teetering and before long ended. Anne's finances were limited although Charles had sufficient means to live the life of a gentleman, having no pressing need to work. Young Percy, as he was then called, lived with his mother in genteel poverty.

The lad, nevertheless, was able to enter the Rugby School in 1897, supported in part by his father. Percy proved a disappointing scholar who ranked last in his class. At Rugby, however, he acquired the bearing and accent of a proper British gentleman; he was also encouraged in his art work, probably because art was the only pursuit for which he showed both an enthusiasm and an aptitude.

Lewis's mother encouraged the boy's painting. She used some of her meager resources every summer to take Percy abroad for as long as she could af-

ford to stay. He was regularly exposed to the art works of the Louvre and the museums at Luxembourg. It was natural that when Lewis finished Rugby, he would seek instruction in the one thing at which he was good. He entered London's Slade School of Art in 1898 and remained there for three years, receiving a scholarship to help finance his final year of study.

Slade was not the sort of school to push its students in daring artistic directions. Its teaching was traditional and conventional. Still, Lewis benefited greatly both from the regularity that the school's routine imposed and from the basic instruction that taught him something about form, graphic representation, and art forms that were practiced in other parts of the world. He also began associating with artists who were alive with ideas, among them Augustus John and William Rothstein, with whom he remained friends for the rest of his life.

Upon leaving Slade, Lewis traveled abroad extensively, financed by an allowance that his father settled upon him. He traveled to the Continent, haunting museums and formally studying painting in Paris, Madrid, Haarlem, and Munich, imbibing the best of the artistic techniques that these disparate cultures had to offer. During the seven years that he spent abroad, Lewis spent most of his time in Paris.

Although Lewis's stay in Paris occurred more than a decade before the literary excitement of the "lost generation" infected the city, the Paris of Lewis's day bristled with ideas and was a magnet to many literary figures. Lewis's first novel, *Tarr*

(1918, 1928), is based upon his life in Paris and on the artists and writers whom he knew there. During this period, Lewis strove to shake the conventionality of being the British gentleman that Rugby had sought to make him and became something of an enfant terrible, doing everything he could to be outrageous in an effort to attract attention and publicity.

When he returned to England in 1909, Lewis turned to his mother for support, although he was beginning to attract art commissions and was regarded as an important emerging painter. He was working on *Tarr* at this time and also tried unsuccessfully to market a trashy novel that he had written to make some quick money. It was during this period that Lewis began friendships and long associations with Ezra Pound, Rebecca West, William Butler Yeats, and Ford Maddox Ford. Lewis's first published story, "The Pole," appeared in Ford's *English Review*.

Lewis associated regularly with people trying experimental literary and artistic forms, including T. S. Eliot. Pound had moved a step beyond Imagism to vorticism, an art that emphasized detachment and geometric form. Before long, Lewis was viewed as the organizing force of the vorticists. In June, 1914, Lewis published the first issue of *Blast*, a journal devoted to cubism, futurism, Imagism, and other forms of modern art. Although this journal survived for just two issues, it marked a significant direction in painting and literature.

As World War I raged, Lewis volunteered for military service early in 1916. After training as a gunner and bombardier, he was commissioned in 1917 and sent to France, at the time that the serial publication of *Tarr* began in *The Egoist*. Avoiding combat, he survived the war and by 1919 was back in London, where he published *The Caliph's Design: Architects! Where Is Your Vortex?* (1919), a call for an ideal in architecture.

For the next six years, Lewis remained semiretired, painting, reading, and writing criticism. With the publication of *The Art of Being Ruled* (1926), he entered a highly productive period of writing. His political conservatism was now pronounced, and several of his books of the early 1930's diminished his reputation.

Lewis's *The Apes of God* (1930) satirized savagely the Sitwells and the Bloomsbury Group, causing much of London's genteel literary community to

eschew its author. To make matters worse, Lewis published *Hitler* (1931) the following year, casting his lot with the national socialism that the Nazis were spreading in Germany. His *Men Without Art* (1934) attacked Ernest Hemingway and D. H. Lawrence mercilessly, further alienating Lewis from segments of the literary community.

When World War II erupted, Lewis was lecturing in Canada. He and his wife remained in North America throughout the war, eking out an uncertain living on Lewis's lecture fees and painting commissions. At war's end, the Lewises were literally on the first passenger ship to leave Canada for England. Lewis's vision was failing; by 1953, he was totally blind. He continued, however, to write, producing eight books between 1948 and his death in London on March 7, 1957.

## ANALYSIS

Lewis was not good at school things and turned in a weak performance as a student at Rugby. It is interesting, therefore, to realize how, by cultivating the one field in which he had both an interest and an aptitude, he opened other opportunities for himself. Essentially, it is through his work as an artist that he developed his interest in literature and established himself as a productive writer and critic. That his writing often makes its impact through visual means suggests that it is the artist's keen eye and sensitivity to form that shaped it.

The intellectual ferment that Lewis experienced as an art student in Paris became a part of his life in London after he returned there in 1909. Meeting Pound was crucial in Lewis's life, because Pound was at that time emerging from his Imagist period, in which he sought to write precise, spare, visual poetry aimed at projecting single, vivid images and was moving toward vorticism, a literary and artistic movement closely connected to Imagism. Lewis, attracted to this new movement, became its reigning guru.

The overt art of the vorticist is a geometrical art of surfaces. It was this element of vorticism that affected Lewis's writing. He wrote of surfaces, not of substrata. He is not the penetrating psychological writer that Henry James was, because it would have been philosophically abhorrent to Lewis to write that way. In *Men Without Art*, he calls James a creator of "great disembodied romances," something he himself never could or would be.

Lewis spent his first thirty years trying to find himself. Just as he was finding his niche, World War I intervened. The society that he had created for himself was disrupted by the war. *Blast*, his greatest literary triumph to that point, was discontinued in 1915. Within the year, Lewis was in military service, although much of his service was as a member of the Canadian War Artists rather than as a combatant. He was involved in only one combat, the battle of Passchendaele; within a short time, he was reassigned to London to do two large war paintings. His war experience, however, left him bitter. He believed that it had robbed him of productive time.

Philosophically, Lewis had already revealed some of his feelings about Friedrich Nietzsche in *Tarr*; where the notion that artists must dominate women is a central theme. His association with Pound, Yeats, and Eliot confirmed his own elitist views and encouraged his political conservatism. Just as Pound became a voice for the Fascists in Italy, Lewis sided with Adolf Hitler's Nazi Party that was beginning to take hold in Germany in the late 1920's.

Although Lewis repudiated his earlier, pro-Nazi stand in two long essays, *The Hitler Cult* (1939) and *The Jews, Are They Human?* (1939), his image as a Fascist sympathizer was difficult to dispel. The same currents that underlay his pro-Nazi sympathies were reflected in much of his superbly written literary criticism, which, despite its excellence of style, was based upon such wrongheaded prejudices that it created a breach between him and some of the most notable intellectuals of his day.

Lewis's attack in *The Apes of God* on the Sitwells and the Bloomsbury Group was in a sense an outgrowth of the vorticism that he had earlier tried to promote. Satire is always cutting, but Lewis's satire has an acerbic quality beyond all expectation. This quality emerges again in *Men Without Art*, in which Lewis's attack upon Hemingway so infuriated the renowned novelist that he eventually retaliated by presenting a scathing portrait of Lewis in *A Moveable Feast* (1964).

Lewis's earliest writing was characterized by vigor, by strong visual imagery, and by striking use of stream of consciousness. All of these characteristics became hallmarks of his style as his writing progressed. He was a writer well in control of language and all of its effects. His juxtaposition of characters

creates the dramatic tensions that make his books bristle with excitement. The cutting satiric edge that discomfited some readers of Lewis's books is clearly evident in *The Art of Being Ruled* and *The Apes of God*, both of which are polemical. *The Lion and the Fox: The Role of the Hero in Shakespeare's Plays* (1927), *Time and Western Man* (1927), *The Childermass* (1928), and *Paleface: The Philosophy of the Melting Pot* (1929) are all products of the same approach to society, each of them addressing the ills of the world in heterodox ways.

Lewis's emphasis is usually on the place of artists in modern society. He examined the artists of his day—Pound, James Joyce, Virginia Woolf, Henry James, and others—and found them sometimes superficial and derivative, practitioners of style at the expense of ideas. He had unqualified kind words for few writers of his own period.

Along with his bitterness about the war, Lewis later cultivated a bitterness at not having received the recognition that he felt was his due. He turned against democracy, adapting an attitude quite like that of the American journalist and writer H. L. Mencken, whose term "boobocracy" coincided well with Lewis's view of government by the people. In Lewis's eyes, fascism offered artists greater hope than a government that had no elite class. He considered Hitler a man of peace and downplayed his anti-Semitism. The publication of his ill-conceived and badly researched *Hitler* in 1931 drew harsh condemnation and resulted in Lewis's losing a number of painting commissions.

Lewis's writing of the 1930's did not sell well. Additionally, Lewis suffered from continuing bouts of ill health, some of it related to venereal diseases contracted almost two decades earlier. He lived a financially precarious existence, which caused his bitterness to accelerate. The six-year exile in North America that World War II imposed upon him did little to assuage his feeling of alienation and neglect. When they returned to England, the Lewises found a nation in disarray. They endured food shortages and other inconveniences, but perhaps Lewis felt more at home in England now than ever before. His *Rotting Hill* (1951) is a collection of stories that depicts postwar Britain, and it has less invective than Lewis's earlier work. He entered into a period of intense productivity that continued until his death.

## TARR

**First published:** 1918

**Type of work:** Novel

*Lewis focuses on a group of artists in Paris before World War I, using the protagonist, Tarr, to espouse his own aesthetic and moral philosophy.*

Although *Tarr* is concerned largely with two artists, one English and one German, involved with the same woman, Lewis is concerned more broadly with reaching generalizations about the English and German temperaments and about the perceptions of life peculiar to each society. Frederick Tarr is a British artist who, not unlike Lewis, lives in Paris during the Edwardian period. Tarr, like Lewis, has no great fondness for Germans, although he is engaged to Bertha Lunken, a German art student. His need for her is largely physical, and once that need has been satisfied, he finds it inconvenient to have her around.

Bertha is a stereotypical German—that is, a German built on Lewis's personal, quite negative stereotype of Germans. Tarr wants to end his engagement because he finds Bertha tedious and uninteresting. His sexual attachment to her is also fading, a fact that he attributes to his devoting all of his creative energies and imagination to his art, leaving little for his sexual indulgences. Tarr clearly is plotting his break with Bertha in such a way that he will be perceived as taking the moral high road. He will sacrifice his personal relationship for the greater good: his art.

Tarr goes to Bertha's flat, decorated with egregious kitsch that offends Tarr's artistic and tasteful soul. He tells her as gently as he can that marriage is not in their future. Bertha makes a prototypically bourgeois retreat into heaving sobs, reinforcing the Irish author Oscar Wilde's observation that "tears are the refuge of plain women but the ruin of pretty ones." Tarr leaves, feeling quite the cad, but he promises to see Bertha soon again.

Meanwhile, Otto Kreisler, a German artist living on a pittance that his father doles out fitfully, returns to Paris from Italy. Kreisler four years earlier shed one of his paramours, who promptly married his father, leaving Otto's inheritance diminished. The father, a bourgeois German businessman, dis-

approves of his son's artistic pursuits and wants him to return home and do something worthwhile—to wit, go into business. Kreisler's allowance is late, and when he arrives in Paris, he is destitute. He tries to borrow from a well-heeled friend who had helped him in the past, but this friend, Ernst Volker, has tired of him and has replaced him with Louis Soltyk, a Pole. Ernst knows from experience that Otto never repays his debts.

Otto goes to a café to eat and there meets Anastasya Vasek, to whom he is greatly attracted. He pours out his woes to her in a sequence that shows how Lewis views German sentimentality as a commingling of love and sorrow. He accepts an invitation to a dance that he knows Anastasya will attend, but before it occurs, he comes upon Anastasya and Soltyk in a café. He is insulting to Soltyk and through much of the rest of the book seeks Soltyk out in public so that he can insult and humiliate him, obviously setting the scene for a duel.

Meanwhile, Otto meets the spurned Bertha on the way to the dance and uses her to humiliate the other guests. He and Bertha kiss quite publicly. When this is reported to Tarr, he writes to tell Bertha that he is returning to London. The day after the dance, Otto's overdue allowance arrives with a command from his father that he return to Germany. Otto replies that he will kill himself in exactly one month. Tarr does not actually go to England but merely moves to another part of Paris so that he can work without interruption. When he finally sees Bertha and Otto together, he befriends Otto because he thinks it is ironically appropriate that these two exemplars of German sentimentality be paired. Tarr now finds that he is attracted to Anastasya and has deep aesthetic conversations with her.

Meanwhile, Tarr observes Otto's increasing aggressiveness toward Soltyk. Otto several times rushes up to Soltyk in public and slaps his face. A duel is inevitable. When the morning of this encounter finally comes, their seconds try to effect a compromise. Suddenly, Otto agrees to forget the duel if Soltyk will kiss him publicly.

Solyk leaps upon Otto, pummeling him, while the seconds engage in their own combat. As they seek to lead Solyk away, he strikes out at Otto, who fires his pistol and kills him. Five days later, Otto is captured and jailed. He hangs himself in his cell, delivering on his promise of suicide.

Back in Paris, Tarr and Anastasya are having an affair as Tarr gradually ends his relationship with Bertha. When he learns, however, that Bertha is pregnant with Otto's child, he marries her out of pity. He continues to live with Anastasya. After two years, Bertha divorces Tarr to marry someone else. Tarr and Anastasya never marry, but Tarr fathers three children by another woman.

This novel, Lewis's first, is a satire on the decadence of the Edwardian era. Tarr's main function is to espouse Lewis's philosophy. Otto Kreisler emerges as a more fully developed character than Frederick Tarr. Realizing this, Lewis later admitted that perhaps he should have called the novel "Kreisler" rather than *Tarr*.

## THE REVENGE FOR LOVE

**First published:** 1937

**Type of work:** Novel

*This political satire views the political Left in Spain during its civil war and in London in the 1930's, making trenchant comments about politics and art.*

*The Revenge for Love* is generally regarded as Lewis's most successful novel. Despite its sometimes stinging satire, the book has a warmth and gentleness that distinguishes it from Lewis's other writing, particularly his writing of the 1930's. The novel is arranged in seven parts; Lewis is slow but calculated in bringing together its various characters and situations. The writing is vivid. The novel's visual effects are meticulous and detailed.

The setting of the first section is Spain during its civil war. Percy Hardcaster, a Briton who is in Spain as a Communist organizer, is in prison waiting to be tried. A verdict against him will result in his execution. Rather than await the outcome, Percy, with the help of a Spanish double agent posing as a prison guard, escapes. The guard, Serafin, is shot and killed; Percy is injured and loses his leg.

The novel then shifts to London, where Lewis introduces a number of leftist intellectuals and artists. Among them are Victor Stamp, an Australian painter, and his wife, Margot. They are impoverished, and Victor is losing confidence in himself as an artist. In the next section, Jack Cruze, a tax consultant, is introduced, along with a successful young painter, Tristram Phipps, and his wife, Jill. Jack is interested in Tristram because he paints nudes. He quickly falls in love with Tristram's wife and one day, accidentally seeing her nude, is totally inflamed with passion. By the next section, Jack and Jill are having a torrid affair (one inevitably recalls what happened to Jack and Jill in the well-known nursery rhyme).

The fourth section of the book is pivotal. It involves a party at the home of Sean O'Hara, a gun-runner. At the party, Lewis juxtaposes armchair leftists and committed leftists who fight for their beliefs. Percy Hardcaster represents the latter element. Jill, as a representative of the former, articulates her views, which Percy denigrates. Jack beats Percy up for insulting Jill. In this section, Lewis shows clearly his suspicion of the leftist views among intellectuals in London during the early 1930's.

In the next section, Victor Stamp and Tristram Phipps, who cannot support themselves on their art, become art forgers in an art factory that turns out old masters to order. Lewis comments satirically on artistic integrity and how it can be compromised in a society in which artists cannot support themselves legitimately. He had written about this problem much earlier, addressing it in his early essays in *Blast* and the *Criterion*.

Ultimately, Victor is persuaded to go back to Spain with Percy to run guns that the leftist Spanish forces will use against the Fascists. In the book's final section, Victor and Margot are in the Basque country on the French/Spanish border. Margot has had dire premonitions of what the outcome will be, but she cannot dissuade Victor from running the guns until the last minute, when she frightens him by telling him that he is soon to be arrested. The two strike out to cross clandestinely into France. Meanwhile, Percy is captured by the Spanish Civil Guard and imprisoned.

In prison, he reads of how Margot and Victor wandered off in the rain and fell off a cliff to their deaths. Percy's tears are both for the loss of his

friends and for the loss of ideals that he has held dear. *The Revenge for Love* is an anti-Communist manifesto of sorts. It reflects Lewis's intellectual conservatism and explains to an extent his flirtations with Fascism, which, in his eyes, offered artists more than Communism could.

This novel differs from Lewis's other works in that it is compassionate and, at times, warm. The characters are well developed and exceptionally well balanced against each other. The dramatic tensions both in Lewis's characters and in his basic situations are sustained and assure a high level of reader interest.

## SELF CONDEMNED

**First published:** 1954

**Type of work:** Novel

*History professor René Harding leaves England in 1939 for Canada to wait for the war to end and in so doing comes to realize the difference between history and reality.*

It is easy to read *Self Condemned* as an autobiographical novel, although to take it as point-by-point accurate autobiography would be a mistake. The book's protagonist, René Harding, and his wife, Hester, leave Britain for Canada in the year that World War II erupts and, like Lewis, settle around Toronto. Harding arrives in Canada with little notion of what he will do there, but soon he is employed at the University in Momaco, whose anti-British faculty members do not accept him and make him feel always the outsider.

The Hardings endure the cruel winters holed up in the Blundell Hotel, where the boring routine of their lives oppresses and depresses them. The news that they get from the radio is discomfiting, and the future seems tenuous at best. When the hotel burns down, the Hardings are further dislocated. Lewis writes of the fire as the Italian poet Dante wrote of the tenth circle of Hell. Fire and ice intermix in the cold Canadian night as firefighters pour water into the inferno.

When the hotel's manager finds that the owner set fire to the building to collect the insurance, Mr. Martin, the owner, murders her to avoid detection. Shortly after the fire, Harding is invited to teach in the College of the Sacred Heart, which offers a more hospitable environment than he found in Momaco. The priests, eyeing him as a possible convert, treat him with warmth and deference.

If Harding feels disembodied in Canada, his wife feels even more alienated. She becomes hysterical at times, and Harding tries to ignore her, retreating into his work. Hester suffers a breakdown and ultimately throws herself in front of a lorry, which squashes her, but spares her head. In the morgue, Hester's head seems strangely dissociated from her body, a heavy-handed indication of Lewis's separation of emotion from intellect. In this image, intellect prevails. Although affected by her death, Harding views it as her final attempt to derail him from his professional pursuits, but he will not allow that to happen. Emotionally spent, he accepts a teaching position at an American university, where he functions successfully even though he is thoroughly disillusioned.

In part, Lewis is pointing in *Self Condemned* to the dislocations that war wreaks upon a populace. More than that, however, he is pitting history against life's daily realities, questioning perhaps the validity of history or at least cautioning readers not to put absolute faith in it. The interplay of intellect and emotion is evident throughout the book both overtly and symbolically. The interplay of fire and ice when the Blundell Hotel burns is a major part of this symbolism, which is—in this case, quite consciously—derived from Dante's the *Inferno*, the first canticle of *La divina commedia* (c. 1320; *The Divine Comedy*, 1802).

The Hardings are involved in a marriage that has become pointless and is strained nearly to the breaking point by the exile into which the couple is forced. This exile, however, is the glue that holds the union together. The Hardings are in a trap. The husband finds his escape from that trap when he ignores his wife's excesses of emotion. She, however, pursues a more active course and, by her suicide, tries to regain her control of René from the grave.

## BLASTING AND BOMBARDIERING

**First published:** 1937

**Type of work:** Autobiography

*Lewis recounts the effects that the war had on his life from 1914, when Blast was first issued, to 1926, when The Art of Being Ruled was published.*

Perhaps *Blasting and Bombardiering* was an attempt at exorcism. Lewis was disenchanted with the role of the artist in society long before World War I erupted, but his war experiences deepened that disenchantment and added to it a cynicism that festered within him for much of the remainder of his life. The title of the book, of course, refers to Lewis's editorship of the avant-garde journal *Blast*, which, although suspended after two issues, made a significant artistic statement in its day, and to his training as a bombardier after he entered military service in 1916.

The book is divided into five sections, the first of which deals with the London literary scene as the war became a reality, focusing on the publication of *Blast*. The next two sections have to do with Lewis's entry into military service and with his service, first as a lieutenant in the Royal Artillery serving in France and later as a painter of war pictures attached to the Canadian army and stationed in London.

The next section deals with postwar England, a period when Lewis was semiretired, trying to find himself after the shock of the war. He was a dedicated womanizer and lived to a large extent on the patronage of various rich women with whom he had liaisons. The period from 1919 to 1926 was a fallow one for Lewis, although he was working regularly on his writing and published six important books between 1926 and 1929. These books were all in the formative stages during his semiretirement.

The final section focuses on Lewis's three closest literary associates: Ezra Pound, T. S. Eliot, and James Joyce. He regards Pound as brilliant and im-

portant for his influence on other writers, most notably Eliot. He discusses Pound less charitably in some of his other writing. Lewis thinks that Eliot was lackluster, with occasional moments of artistic brilliance. He considers Joyce idiosyncratic but extremely promising. His view of these three writers was tempered by the fact that war intervened in all of their lives, diverting them from their true courses, which would inevitably have led to a more classical art, to a detached literature.

Although *Blasting and Bombardiering* extends for nearly a decade beyond the end of World War I, the impact of that war is evident on every page. The central theme of the book has to do with the inroads that war (and by extension, philistine society) makes upon art and artists.

A valuable side benefit in this book is found in Lewis's thumbnail sketches of some of the intellectuals of his day, aside from those aforementioned. His comments about Nancy Cunard, Rebecca West, T. E. Lawrence, Augustus John, T. E. Hulme, Bertrand Russell, Alfred North Whitehead, William Butler Yeats, and others with whom he was closely involved as an artist and a writer are highly subjective and largely unsubstantiated, but they provide shrewd and sharp insights into these people.

### SUMMARY

Wyndham Lewis will likely be long remembered for his support of the Fascists in the late 1920's and early 1930's. His ultraconservative views during that time stemmed from his dislike of the Germans, who had plunged the world into World War I, and from his cynicism engendered by that conflict. Yet that is an oversimplification of a highly complicated personality whose cynicism cannot be laid to a single cause.

The fact remains that Lewis was prodigiously productive and that he had some of the keenest critical insights of his day. His own novels were well crafted. His essays, although often wrongheaded, were brilliant in presenting heterodox views of society. Lewis as a provocateur served a valuable function in his day, and his ideas continue to provoke contemporary readers.

R. Baird Shuman

## DISCUSSION TOPICS

- Explain how the artistic training of Wyndham Lewis helped generate and enhance his writing career.
- What were the principles of art that guided Lewis in both his visual and literary art?
- What values in such writers as members of the Bloomsbury Group, Ernest Hemingway, and D. H. Lawrence encouraged Lewis's satires of them?
- What validity is there in Lewis's assertion that Fascism was better for artists than communism?
- How much of Lewis's success can be attributed to the vigor of his attacks on literary contemporaries?

# Li Bo

**Born:** Xinjiang Uygur, China (now in Chinese Turkistan)  
701

**Died:** Dangtu, Anhwei Province, China  
December, 762

*Widely celebrated as one of China's greatest lyric poets of the Tang Dynasty (618-907), China's golden age of literature, Li Bo is equally legendary for his bohemian lifestyle.*

## BIOGRAPHY

Though legends about Li Bo (lee boh)—also known as Li Bai, Li Po, or Li Pai—abound, relatively little reliable biographical information about him has been preserved. Despite claiming an illustrious background, he, in fact, was born to an obscure family (the origins of which are impossible to trace, though it is variously thought to have been from Iran, Turkey, or Afghanistan) in 701, in Xinjiang Uygur, China (now in Chinese Turkistan). Wherever his birthplace, early in his life his family moved to Szechwan, a mountainous province in southwest China known for its sizable foreign merchant community; perhaps in that fact lies a clue to his family's occupation. His undistinguished origins meant that in the capital, where prominent family and political connections were critical, he had to rely on his own innate wit and talent; although he did so to great success, he seems always to have felt himself to be the outsider who had to prove himself.

In approximately 725, Li Bo left Szechwan, to which he never returned, and traveled for a few years, studying Daoist mysticism, one of his lifelong passions, as well as visiting noted poets, whose acquaintance he hoped could further his career. In 730, he settled down for a while and married the daughter of a minor provincial official of modest means. Evidence of Li's desire for illustrious connections, however, can be found in his declaration in a letter that he had married into a renowned noble family. This first wife eventually divorced him, and he married three more times; two of his wives died, and his fourth outlived him. His poetry suggests that he had at least one son and one daughter.

Within ten years of his first marriage, Li Bo left home to wander again and to attempt to better his fortunes. He had a stroke of luck in 742, when Emperor Xuanzong, an avid supporter of the arts, appointed him to a post at the Han-lin Academy in the capital city of Zhangan. Li found himself in eminent company: scholars, artists, entertainers—all of whom were privy to the emperor's inner court. His job was to write documents for the emperor, as well as poems for special court occasions. One thing that he refused to do after coming to Zhangan was take the civil service examinations, which were considered imperative for success in the capital; his refusal is difficult to explain, and it cost him the respect of some important people in the capital.

Perhaps he was one of the world's earliest practitioners of a public relations campaign, because he put considerable effort into promoting himself as both a poetic genius and a bon vivant. His time in the capital city and in the inner court circle provided numerous famous anecdotes of his free-wheeling life with his friends and of his drunkenness. Indeed, legends about Li Bo are much more numerous than facts. One tale that indicates his popularity with the emperor tells of Yang Guifei, the emperor's favorite concubine, holding Li's inkwell for him while he wrote; another tells of an important palace eunuch being forced to kneel and remove the drunken poet's slippers for him. Yet another anecdote tells of the emperor himself seasoning Li Bo's soup for him, but a less charming story tells of his drunkenly vomiting on the emperor's robes.

Still, he amused the emperor, who tolerated his

indiscretions and lack of regard for authority and decorum, though one famous story tells of Emperor Xuanzong putting him to the test. Once, when Li had been drinking all day, the emperor summoned him to the palace and insisted that he draft an important document, a duty that Li fulfilled even in his inebriated state. He had cultivated the public image of a cheerful, free-drinking poet who dashed off his works spontaneously rather than laboring over them, and he was able to prove his case in this instance. How much of Li Bo's behavior was genuine and how much was a cultivated persona is hard to say. His nickname, "Banished Immortal," acknowledges both his poetic genius and his occasionally outlandish behavior, implying as it did that he was a demigod who had been exiled from heaven for misconduct.

Li's job was secure only as long as he held imperial favor, and in 744 he lost or left his position in the Han-lin Academy. Stories vary as to whether he was dismissed following scandal or chose to resign, but he left Zhan-gan and wandered again, managing to make a living by his reputation as a popular poet and eccentric and by visiting old friends who held provincial posts. It was during his travels that he met fellow poet Du Fu, a young unknown who admired and emulated the famous older poet. Later generations were to venerate them as the two greatest poets of the Tang Dynasty, China's golden age of literature.

In 755, eleven years after Li Bo had left Zhan-gan, a rebellion occurred, and Emperor Xuanzong was forced to abdicate. Li once again gained court connections, this time in a minor position with Li Lin, prince of Yung, the sixteenth son of Emperor Xuanzong. Though the prince was supposedly fighting rebel troops, he apparently had thoughts of starting a rebellion himself. When the prince's army was destroyed, and he was executed, Li fled but was captured and imprisoned as a traitor. Eventually released and pardoned, he resumed his wanderings for the last few years of his life and embraced fully the Daoist mysticism that he had studied as a younger man and in which he had an abiding interest for most of his life. Once again, he hoped to find a place for himself in the government, but his hopes were not to be fulfilled, for he died in 762, in Dangtu, Anhwei Province, China. The legend of his death is in keeping with his life: He is said to have drowned when, inebriated, he

fell out of his boat while trying to embrace the reflection of the moon on the water.

## ANALYSIS

Although the Tang Dynasty saw the introduction of several new poetic forms, Li Bo was not an innovator. What he did accomplish was to raise tradition-bound lyric poetry to its pinnacle of beauty and power. Many of the approximately one thousand poems attributed to him continued the established verse forms and subjects of his predecessors. For example, he was apparently happiest with the ancient *shih*, a lyric form that employed a predominantly four-, five-, or seven-character (syllable) line, and the *yueh-fu*, ballads or folk songs with lines of irregular length. Even so, he occasionally ignored formal restrictions and wrote verse in irregular meter when it suited his purpose; some of his poems have as few as three or as many as ten or eleven characters. Critics believe that he was influenced in this usage by the popular music of his time.

Li Bo's work cannot be understood apart from the tradition from which it sprang. Many aspects of Chinese poetry distinguish it from Western poetry. For instance, Chinese poetry relies very little on the most common poetic devices familiar to Western readers such as symbolism, figures of speech (metaphor and simile), and personification. There again, however, Li Bo is unusual in occasionally personifying elements of nature.

Typically, Chinese poetry is spare and concentrated, implying and suggesting ideas through images rather than lavish description. (This feature of Chinese poetry has influenced modern Western poets, especially the Imagists.) Most often, these images are drawn from nature. Many of Li's subjects, too, were long established in Chinese poetry: the emperor's concubine hoping for her ruler's favor or, more commonly, lamenting the loss of it; the lonely wife longing for her husband, who is far away; friends celebrating their friendship or bidding farewell when parting; or a journey to visit a hermit, who turns out not to be at home. These subjects on which Li Bo wrote were very familiar to his audience since they had appeared in Chinese poetry since the fifth century B.C.E., when Confucius supposedly collected and first recorded China's earliest poetry in the *Shi jing* (c. 1066-541 B.C.E.; *Book of Songs*, 1937); that Li Bo knew the *Book*

of *Songs* by heart by the age of ten indicates its importance in Chinese culture. Li's reputation as one of the greatest poets of China stems, then, not from technical or thematic innovation, but from the great skill with which he managed to surprise his readers in presenting the unexpected within the familiar.

Li startled his readers by upsetting their assumptions that his poetry would follow fixed patterns of development. In a poem on the traditional topic of visiting a holy man in the mountains, for example, Li's reader would have expected him to establish the scene and the occasion, but instead he opens with the sound of a barking dog. Another of his poems begins with a wild cry of the poem's speaker. Repeatedly, he violated his readers' sense of decorum, and they loved him for it.

Another characteristic of Li's poetry is his playful wit, especially in his personification of natural elements, which goes far beyond a Daoist identification with nature. For example, he makes the moon his drinking companion, says that a star spoke to him, or claims that he and a mountain gaze long at each other without either becoming bored. Such humorous, fanciful images were most unusual in Tang poetry and contributed to his readers' surprised delight.

Yet another distinctive aspect of Li's poetry is the dream vision. Such poems concern fantastic voyages, his own or the gods', through the cosmos, riding the tail of a comet, pulled by a phoenix, or flying on one's own power. He catches sight of the Queen of the Skies in the light of a rainbow, climbs a cloud ladder, sees fairies, and hears dragons roar—then awakens in bed, filled with longing.

Li Bo is frequently compared to the European Romantics, whose lyric poetry and emphasis on the individual would seem to parallel his, and yet, for all that he did to promote his public image, his poetry itself contains little of biographical note. Thus, scholars have found it all but impossible to assign dates to his poems.

Many English translations of his work exist; perhaps some of the most famous are those in *Cathay* (1915) by twentieth century American poet Ezra Pound, who did not know classical Chinese but worked from the notes of a translator, who had himself studied Li Bo's works with a Japanese master. Thus, for all of their fame, they are more reflections of Pound's poetic genius than a faithful

rendering of Li Bo's originals. Because of the significant grammatical and syntactical differences between Chinese and English (nouns are neither singular nor plural but stand for the idea of the thing itself, verbs do not have subjects, verb tenses do not exist, for example), English translations of the same work can vary widely. Rhyme, substitution of words to preserve rhyme scheme, antiquarian diction or neologisms, contractions such as "twas"—all found in different translations of Li Bo's poems—do not preserve the integrity of the original lines.

Li Bo is the Chinese poet most widely known outside of China. Those only superficially acquainted with him sometimes think of him as the "bad boy" of Chinese poetry because of his popular reputation as a hard drinker who loved women and good times with his friends. It is true that he cultivated his reputation as a cheerful man who could never succumb to sorrow as long as there was a cup of wine to drink. To see him only in the light of that persona, however, is to miss the richness and complexity of his combination of established poetic forms and themes with his own humorous, sometimes mystical vision of the world.

### "IN THE DAI-TIAN MOUNTAINS"

**Written:** c. 718-720 (collected in *Li Po and Tu Fu*, 1973)

**Type of work:** Poem

*Wandering in the mountains in search of a reclusive holy man, the poet does not find him at home.*

In his poem "In the Dai-tian Mountains, Failure to Find the Wise Man," Li Bo addresses a topic very familiar to his Chinese audience. Many Daoist masters turned away from their society and lived simple, austere lives in the mountains, which the Chinese considered to be very spiritual places. While his topic may have been a conventional one, his presentation of it is somewhat unorthodox.

Li opens the poem with the sound of a dog barking, an indecorous beginning. His audience would have expected him, instead, to establish the occasion and set the scene; barking, if it appeared at all,

would properly have come later in the poem. Typically, however, Li Bo liked to startle his audience.

The poet moves from one sound to another—the bark is heard over the roaring of rushing water—and at last visual images appear: wet peach blossoms, deep woods, a deer. Ironically, the sound he could actually expect to hear is missing; at noon, he pauses in his journey and notices that no noon bell is struck.

The images leap forward as he climbs on through tall bamboo, green against a bright blue sky, to a waterfall, whose spray hangs in the air. There he expects to find the holy man, but no one knows where he has gone. The poet makes no direct statement about his feelings, and interpretations vary as to whether he is disappointed or content. The dreamily beautiful images have assumed an almost magical quality, so it is easy to believe that his is not merely a physical journey, but a spiritual quest that has not been in vain, whether or not he finds the hermit.

This poem brings together Li Bo's fascination with the Daoist recluses and his affinity with the mountains as places charged with the supernatural, where he could experience a mystical union with nature. As different as this poem is from his drinking poems, each represents equally a true love of Li Bo.

### **“MARBLE STAIRS GRIEVANCE”**

**Written:** c. 740 (collected in *Cathay*, 1915)

**Type of work:** Poem

*A palace lady waits hopefully for the emperor's visit, but as the night grows late she sadly realizes that he will not come.*

Li Bo's famous “Marble Stairs Grievance” is of that large body of Chinese poems that treat the subject of the palace lady, abandoned and forgotten by the emperor. The poems are always subdued but filled with longing and sadness. The poetry accurately reflected historical fact; many beautiful young girls were selected as the emperor's concu-

bines, and to be chosen brought honor both to the young woman and to her family. Many grew old and lonely at the palace, however, rarely seeing the emperor but considered still in his service. A subcategory of this subject is that of the mocking treatment of the older palace lady, who still adorns herself with makeup and finery and waits for the emperor's visit.

In the first stanza, the dew that has formed on the marble stairs indicates, on a literal level, the lateness of the hour, thus the fact that the emperor is not coming; but the dew could also refer to tears on the lady's face. Her beauty is suggested by her clothing in the reference to her silk stockings and in the smoothness of her marble (sometimes translated as “jade”) cheek. The fact that her stockings are now dew-soaked underscores the poignance of her long—and fruitless—vigil.

In the second stanza, she sadly lowers the curtain and looks at the autumn moon through glittering crystals. Beaded curtains made of rock crystal were used in the palace, so the reference could be taken literally, but again, the suggestion is strong that the clear, glittering drops are her tears. The specific naming of an autumn moon intimates that she is no longer a young girl.

In a brief scene contained in a two-stanza poem, Li Bo portrays the pathos of the cruel plight of the abandoned palace lady; without the attentions of her lord, her life is meaningless. Li conveys both her sorrow and the idea that she has waited and hoped many times—and will do so many more.

### **SUMMARY**

Contemporary readers often want a poet to enable them to see the familiar world afresh, but Li Bo's readers expected his work to reveal knowledge of ancient poetic traditions. He gave them what they wanted—and more. To the old familiar subjects and themes, he brought a fresh vision that charged his poetry with spontaneity. His unrestrained vitality gives a scattered, exuberant energy to many of his poems. The inebriation that is so often associated with the man and his work could serve as poetic metaphor; life and nature in his poetry come across as intoxicating.

## DISCUSSION TOPICS

- In the poem “In the Dai-tian Mountains,” is Li Bo affirming that the search for a holy man is more important than finding him?
- If Chinese poetry has influenced Imagist poets and yet seldom conveys symbolism, metaphor, or personification, what qualities does an Imagist poet convey?
- What must one know about Daoism to become a successful reader of Li Bo’s poetry?
- “Marble Stairs Grievance” is about an “older palace lady.” Would any Western figure resemble this lady, and can the poem tell us about her or him?
- Can a poet like Li Bo emerge more satisfactorily in a free translation, such as one by Ezra Pound, or in a more conventional translator’s version?

## CLARICE LISPECTOR

**Born:** Chechelnyk, Ukraine, Soviet Union (now in Ukraine)

December 10, 1925

**Died:** Rio de Janeiro, Brazil

December 9, 1977

*Lispector's lyrical narratives place her in the vanguard of the post-World War II experimental novel, both for her tradition-defying fiction and for her unique approach to women's writing.*

### BIOGRAPHY

Clarice Lispector (leh-SPEHKT-ur) was born in a tiny village in Ukraine, then a part of the Soviet Union. Pedro and Marian Lispector left Ukraine with their family as soon as possible after her birth and settled in northeastern Brazil, where they lived for eleven years. Although the family was more or less impoverished, Pedro Lispector being first a farm laborer and then a sales representative, Clarice was undiscouraged by hardships and directed her lively intelligence toward story-making. The future writer disguised her sorrows in merri-ness. She created, with a friend, a long story before they could read or write. At a young age, she wrote children's stories and sent them out to publishers who took children's work, but perhaps because even then she was an experimentalist, they were not published. In 1932, the Lispector family moved to Rio de Janeiro, and the city provided food for the young writer's intellectual development. Here she read major fiction writers Fyodor Dostoevski, Hermann Hesse, and Katherine Mansfield, as well as current Latin American writers. She decided to become a professional writer but she allowed herself to be persuaded to obtain a law degree at the National Faculty of Law, probably because her defenses of student rights made it clear to many that she would be an excellent lawyer. She did not, however, practice law, but instead worked for a newspaper, *A Noite*, and did editing work. Her first novel, *Perto do coração selvagem* (1944; *Near to the Wild Heart*, 1990), was published by the newspaper with the agreement that the newspaper would keep the profits.

This first novel, a richly symbolic psychological

portrait of a woman whose inner life contrasts drastically with her outer life, gained critical success for its daring violation of novel form. However, Lispector did not become known outside Brazil until her first collection of short stories, *Laços de família*, was published in 1960. It was translated as *Family Ties* in 1972. These stories of flashes of insight into women's inner worlds gained international attention. This growing respect for Lispector was increased by a novel, *A maçã no escuro* (1961; *The Apple in the Dark*, 1967). The novel describes the quest for identity of Martim, a man who is running away—from the authorities who are pursuing him for attempted murder and from his former self.

Other complex stories and essays written in the next few years continued to develop Lispector's tendency to undercut traditional narrative structures and to focus on the complex relationships between language and life. Two of these books were *A legião estrangeira* (1964; *The Foreign Legion*, 1986), a group of stories and essays, and the novel *A paixão segundo G. H.* (1964; *The Passion According to G. H.*, 1988). Perhaps her most popular novel is *Uma aprendizagem: Ou, O livro dos prazeres* (1969; *An Apprenticeship: Or, The Book of Delights*, 1986). This novel, closer than most of Lispector's other books to traditional novel structure, shows the psychological development of Lori, a girl who must accept her existential freedom before she can love Ulysses, a young philosophy teacher who is also learning how to live.

Lispector's last few years were marked by a flurry of publications, including several collections of short stories and a short novel, *A hora da estrela* (1977; *The Hour of the Star*, 1986). *The Hour of the Star*

is a metanovel in which a male narrator, Rodrigo S. M., describes the tragic, brief life of an impoverished young woman who is so lacking in self-awareness that she does not realize she is unhappy until a fortune-teller tells her so. When the young woman dies after being knocked down by a car, Rodrigo proclaims that he, too, is dead—"Macabéa has murdered me . . . I have died with the girl." The inseparability of the literary creator from his or her creation and the dependency of life on words are two of Lispector's most constant themes. *The Hour of the Star* was published in the year of Lispector's own death, and was possibly influenced by the onset of her final illness. That the author's life was rapidly approaching its end adds another dimension to the tangle of writer, subject, and text represented in this novel.

The years between Lispector's first novel and her international acclaim were mostly taken up with childcare and other family responsibilities. Lispector's marital life was relatively quiet. She married Mauro Gurgel Valente, a fellow law student, in 1943, and the couple had two sons, Paulo and Pedro. When her husband entered the foreign service, Lispector moved abroad; the family spent time in Italy, Switzerland, England, and the United States. Lispector raised her sons, took care of her many duties as a diplomat's wife, and still found time to write, although she always missed Brazil and felt displaced in other countries. After they returned to Rio de Janeiro in 1956, the couple divorced. The solitude Lispector had described and courted in her novels now became hers. She continued to write novels and newspaper essays until her death in 1977 from cancer.

## ANALYSIS

Clarice Lispector gives a woman's perspective on existential angst. This is the anxiety or uneasiness that comes from the sense that an individual is free to choose, and that what he or she becomes depends on these choices. To the existential thinker, one does not have an essential nature that is followed and fulfilled by the choices one makes, but rather one simply is, or exists, before being anything in particular. This sense of total freedom, the freedom, one may feel, of the void, causes nausea and paralysis. The existential thinker must get beyond this initial paralysis to take self-creative action. This notion is explored by the French writers

Jean-Paul Sartre and Albert Camus, among others. Lispector gives readers a woman's attempt at resolving the existential dilemma in *An Apprenticeship* and elsewhere. In *An Apprenticeship*, Lori, the main character, begins with feelings of physical nausea and mental paralysis, but she goes through various stages of enlightenment or self-awareness until she is free enough to have a love affair with Ulysses, her tutor. He is going through a parallel process of learning to live.

Another of Lispector's major themes is the tangled relationship between words and life. Many of her stories ask the question: Do the words of things alter their nature? The answer seems to be, to a greater or lesser extent, that yes, words affect their referents. In *The Hour of the Star*, the young woman Macabéa is on the lowest level of awareness because she knows so few words, and her rare moments of understanding come from words. Her creator Rodrigo is so entangled with the words of her existence that he claims he will not survive her. In *The Apple in the Dark*, Martim is running from the police—but the prison he finds himself in, the prison of self, has words for walls. Lispector uses innuendo and double meanings in ways that are difficult to translate. Language becomes both the means of self-awareness and the obstacle to it.

Allied with both these themes are Lispector's social and political concerns. Her novels and stories usually focus on the lives of women in a society that has clearly defined female roles. Her women struggle with their limitations and either transcend them or fall victim to them. Their success is often linked to their ability to use words powerfully, to articulate themselves—as the impoverished young woman in *The Hour of the Star* could never do.

Poverty and oppression are found in her stories and novels, too, sometimes in the margin, as in the references to the poor schoolchildren that Lori clothes as well as teaches in *An Apprenticeship*, and sometimes at center stage, as in the description of the poverty-stricken heroine of *The Hour of the Star*. The hardships Lispector observed and lived during her first years in Brazil were not forgotten.

What most sets Lispector's work apart is its style. Its violation of the conventions of fiction owes much to the French New Novel. In this revolutionary kind of antinovel, expectations of chronological development, consistent point of view, and clear causality in a coherent plot are intentionally

not met. The New Novel also tends toward a flat, emotionless surface. Words are subjected to punning and fracture. With intuitive leaps and a focus on moments of development within a consciousness, Lispector's work violates expectations of plot development. She emphasizes the free forming and reforming of self in her flowing, long sentences, in images of water and wind, and in violations of the conventions of punctuation. She also uses the pun, although her wordplay is diminished or lost in translation. In *The Hour of the Star* and other later work she also affects some of the flat tone of the New Novel, although usually if passion is not on the surface, it is evident beneath.

Lispector's novels are more flowing and unstructured than her short stories, which tend to conform more to tradition. In the typical Lispector short story, a moment of self-awareness comes to the female main character through the medium of a chance event. In the novels, the main characters, usually but not always women, reach self-knowledge in stages. Lispector's descriptions of a distinctively female consciousness through works structured according to intuition and laced with a rich symbolism make her a startlingly original writer.

### "THE SMALLEST WOMAN IN THE WORLD"

**First published:** "A menor mulher do mundo," 1960 (collected in *Family Ties*, 1972)

**Type of work:** Short story

*Everyone reacts differently to the reported discovery in a remote jungle of a tiny pregnant woman, and her discoverer feels a mixture of attraction and repulsion.*

"The Smallest Woman in the World," a story in the *Family Ties* collection, has a combination of realistic and surrealistic elements that is frequently called Magical Realism. Marcel Pretre, a French ex-

plorer, finds a tiny pregnant woman in the Congo. She is one of the remaining members of a race that has been almost completely destroyed by predators. There is a tension between the finder and his discovery, whom he names Little Flower. He finds her both attractive and repellent: repellent because of her strangeness and her primitive qualities and attractive because of her odd dignity.

The discovery, when reported in the newspaper, sparks a variety of responses, from the desire to make a pet of Little Flower to total rejection of her. Some readers are scientifically interested in her; others fear some element in her. The explorer is amazed to find her laughing: She laughs because she has not, as she expected, been eaten. She loves him because he did not eat her. He does not know what to do with the tiny woman's profound love.

At the end of this brief tale, the explorer is keeping his baffled feelings at bay by distancing himself with scientific observation. The other observers, those who look at the phenomenon only through the news stories, dismiss the marvel. They say such things as: "Well, as I always say: God knows what He's doing."

This story can be read as an allegory about oppressors and oppressed, and about the profound strangeness that people find in each other. It describes the process of otherizing—making a person into a thing—that people frequently substitute for an attempt at understanding. It makes a comment on sexism, too, as the little woman remains resolutely human and individual. She ends the tale in possession of herself, despite the odds against her.

Lispector's short stories are a good introduction to her work because they are clearly structured and direct. Many of her stories examine moments of discovery in the lives of women, mostly urban women, who come to positive or negative conclusions about themselves after the insight provoked by some incident. In "The Smallest Woman in the World," the expected unhappy exploitation of Little Flower does not take place; instead there is a positive recognition of her humanity and of the possibility of safety.

## AN APPRENTICESHIP: OR, THE BOOK OF DELIGHTS

**First published:** *Uma aprendizagem: Ou, O livro dos prazeres*, 1969 (English translation, 1986)

**Type of work:** Novel

*Lori, a young Brazilian grade-school teacher, must learn to accept her freedom to make choices before she can truly love Ulysses, her mentor, who is also an apprentice to life.*

*An Apprenticeship* may well be Lispector's most accessible novel, although it deals with some of the same issues as her more complex and difficult works. At the novel's beginning, Lori, the main character, is preparing to meet her suitor and mentor, the young philosophy teacher Ulysses. Waves of nausea overcome her and she feels she must cancel the appointment. Her nausea stems from feelings of vulnerability and powerlessness when she considers the vastness of being. She knows that her life has no determined shape, and that only she can give it shape, but this knowledge results at first in imprisonment in dread rather than liberation. She does not accept her freedom to shape her own life, and to give and accept love. Her predicament is symbolized by an event in her past when, lost in a foreign city, she did not remember the name of her hotel, and in a panic asked the taxi driver to keep driving, hoping that she would find her way back.

Lori does finally choose to keep the appointment, which is a first step toward freedom. Through a series of meetings with Ulysses, through meditating on what he says, and through prayer toward an undefined, impersonal god for courage to live, Lori draws closer to full participation in life. She learns to accept her body, and to live in it. She learns to take part in social occasions and withstand the gaze of the world, to enjoy the pleasures of natural beauty, and to give of herself. While Ulysses is courting her, he is also going through a parallel experience. Although Ulysses' apprenticeship seems to be more intellectualized, he, too, is learning to accept his freedom.

The final scene of the novel is the consummation of the affair between Ulysses and Lori. They are now ready for each other, and ready to give up what needs to be sacrificed for full participation in

a relationship. "Do you think love is a mutual gift of one's solitude?" Ulysses asks. Lori will say only: "... my search has come to an end." The novel ends with a colon, as Ulysses is about to speak.

*An Apprenticeship* is strikingly lyrical, moving along according to a series of epiphanies rather than according to chronological time. The reader goes from one crisis of realization within Lori's subjective experience to another. The recurrent motifs of water, of the breeze, and of moving vehicles suggest the flowing nature of Lori's experience and the natural quality of her development. This is a novel that allows the reader to watch Lori become herself as one might watch a fish take shape swimming upward toward the watcher.

## THE HOUR OF THE STAR

**First published:** *A hora da estrela*, 1977 (English translation, 1986)

**Type of work:** Novel

*The trials of Macabéa, a poor girl from northeast Brazil trying to survive in the city, are chronicled by a writer who becomes engrossed with his unattractive character.*

This brief, densely written novel explores the relationship between writer and work and subject and object in a way that casts doubt on traditional categories. The novel is about a man writing about a woman. The writer, Rodrigo, is educated, sensitive, and politically aware. The woman, Macabéa, is deprived, impoverished, and barely aware of her own existence.

The title refers to the writer's idea that at death everyone is a star, presumably since at death, the great mystery is revealed. Macabéa in her few short years experiences misery, desire, and rejection, and then after finally being made aware of her unhappiness by a fortune-teller, she is run over by a Mercedes and

killed. Lying in the street, she has her “hour of the star”: “She felt like vomiting something that was not matter but luminous. Star with a thousand pointed rays.” When she does die, her creator, tangled in her story, feels that in some sense he dies, too. Macabéa’s biographer is, however, still alive at story’s end, pondering: “Dear God, only now am I remembering that people die. Does that include me?”

Written just before Lispector’s death from cancer and published in the year of her death, this novel raises important questions about the meaning of death, the relationship between author and work, and the isolation of the individual, but it does not provide answers. It suggests, rather, that there are none. Its uncertainty is suggested by the fact that Lispector offers thirteen alternative titles for the novel. Some of the titles include suggestions of self-mockery, and there are strongly comic events that show the girl’s naïveté. Lispector also includes her signature in the list of titles.

*The Hour of the Star* also looks back to Lispector’s own childhood in its choice of heroine. Macabéa comes from poverty-stricken northeast Brazil, where Lispector spent her formative years. It is interesting to note the contrast between this heroine and that of *An Apprenticeship*. Macabéa, perhaps because she has no self-awareness to speak of, is doomed. There is no doom for the self-creating heroine Lori; she is able to choose her future.

## SUMMARY

Clarice Lispector’s work is noted for its stylistic innovations, its portrayal of the feminine consciousness, and for its addressing issues about the complex relationships between author, text, and body. Lispector’s flowing, lyrical narratives, with their subjective experience of time and their delicate probing at levels of awareness, reinvent reading by requiring a new kind of relationship between reader and text.

Janet McCann

**DISCUSSION TOPICS**

- Do Clarice Lispector's early children's stories suggest that an experimental writer can communicate well with young readers?
- How do women's existential dilemmas differ from those conveyed by writers such as Jean-Paul Sartre and Albert Camus?
- Does Lispector's failure to observe a consistent point of view confuse readers or stimulate them to a more challenging literary experience?
- Does an imaginative writer like Lispector have a better chance of overcoming "otherizing"—making a person into a thing—than, say, a philosopher or clergy member addressing the same issue?
- Does Lispector convince the reader that two apprentices, like Lori and Ulysses in *An Apprenticeship: Or, The Book of Delights*, can help each other learn to accept freedom?
- What sort of reader can benefit most from Lispector's challenge to "reinvent reading"?

# MALCOLM LOWRY

**Born:** Liscard, England

July 28, 1909

**Died:** Ripe, Sussex, England

June 27, 1957

*Famous only for his novel* Under the Volcano, Lowry fashioned its main character as a version of himself, representing in religious and psychological symbolism the self-destructive ambivalence afflicting him and his age.

## BIOGRAPHY

Clarence Malcolm Lowry (LOW-ree) was the son of a rich British industrialist, Arthur Osborne Lowry, and was supported meagerly by his father throughout his life. After his early years, Lowry lived among the poor; however, he was partly distinguished from his neighbors by his receipt of monthly paternal stipends—an alienating situation that he could not leave behind as easily as he eventually deleted his first name. Indeed, his alienation also had various roots in his childhood, including his being largely or wholly blind from nine to thirteen, occasioning much bullying by the other boys in the private schools where his parents left him from the age of seven onward. At eighteen, he sailed to the Far East as a cabin boy, teased by the other sailors because of his father's wealth. His most notable alienation, however, was that from the age of fourteen he remained a heavy drinker, to the horror of his Methodist father, a teetotaler. This alienation often expressed itself in physical and psychological wandering.

Lowry returned from his cabin-boy experience, first to German studies in Bonn, then to a writing apprenticeship with Conrad Aiken in the United States, and then for somewhat longer to Cambridge University, from which he vacationed by working on a Norwegian freighter in order to meet the pro-Communist novelist Nordahl Grieg, author of *Skibet gaar videre* (1924; *The Ship Sails On*, 1927).

The only relative success of Lowry's university studies was his thesis, the novel *Ultramarine*, published in 1933, but to indifferent reviews. That year,

he had a reunion with Aiken in Europe, where Lowry met and married Jan Gabriel, an American. This was a fairly productive period, with Lowry placing his short fiction in the American magazine *Story*. By 1935, however, his drinking had caused him to be committed briefly to Bellevue Hospital, and his marriage was floundering. In 1936, he tried unsuccessfully to save his marriage during a trip to Mexico, where he was inspired to begin the long process of writing *Under the Volcano* (1947).

In 1937, Lowry spent two months with Aiken, a reunion that also significantly influenced *Under the Volcano*, as well as Aiken's *Ushant: An Essay* (1952), where Lowry appears as the drunken character Hambo. Indeed, Aiken and Lowry drank much together. In the same year, Gabriel finally left Lowry.

The greatest influence on *Under the Volcano*—Lowry's long relationship with Margerie Bonner—began in 1939. Sister of the Hollywood star Priscilla Bonner, Margerie had acted in *King of Kings* (1927), *The Sign of the Cross* (1932), and *Cleopatra* (1934), but by the time she fell in love with Lowry, hopes of advancing or even continuing that career had faded. Because visa problems prevented Lowry from remaining in the United States, he went to Vancouver, British Columbia, where Margerie followed him, illegally. They lived in a squatter's shack. After Lowry's divorce from Gabriel was final, he married Margerie in 1940.

The next year, he began submitting a draft of *Under the Volcano* to publishers, but he returned to rewriting it after twelve publishers rejected it. In 1944, a fire cost him his manuscript "In Ballast to the White Sea," reportedly a longer, happier work

than *Under the Volcano*. After the loss of his manuscript and his shack, his drinking, for a while kept under control by Margerie, accelerated in the ensuing depression, even though she managed to save a draft of *Under the Volcano* from the flames. Along with Gabriel, Margerie was a model for the character of Yvonne in *Under the Volcano*; in addition, Margerie worked as an editor, helping Lowry with the novel day and night. Margerie also brought in money by writing the mystery novels *The Shapes That Creep* (1946) and *The Last Twist of the Knife* (1946), as well as by turning out radio scripts for the Canadian Broadcasting Corporation (CBC). Thus in 1947, thanks largely to her, *Under the Volcano* was at last accepted for publication. By then, Lowry had rebuilt the burned shack in Canada, but he had drifted to Mexico, from which he was deported. Later wanderings included New Orleans, Haiti, the Panama Canal, France, Italy, New York, Los Angeles, and Sicily, with long stays in Canada. By 1955, he was in London, undergoing psychiatric treatment. Two years later, he died in Ripe, Sussex, England.

Thereafter, Margerie authorized Conrad Knickerbocker to compose a biography of Malcolm, but Knickerbocker committed suicide during the writing. Nonetheless, Margerie increased the posthumous attention to Lowry by arranging for his remaining unfinished works to be edited and published.

## ANALYSIS

Lowry began writing at the same time as T. S. Eliot and James Joyce, when the fashion was to interweave bits of other authors' texts into one's own, a way of maintaining tradition in the midst of Jazz Age modernity. At his best, Lowry mixes allusions together into a heady tonic. His derivative-ness, however, limits the effect of all his works except *Under the Volcano*, whose success consists precisely in the style's being awash with the drunken flow of the main character's memories. Joyce, however, had already achieved such inebriated stream of consciousness in a long section of *Ulysses* (1922). The originality of *Under the Volcano* consists in its not reconciling contradictions, even as tentatively as Joyce's *Ulysses* or Eliot's *The Waste Land* (1922). Instead, Lowry's characters are dependent personalities, who need to lean on one another, but influenced by the mutually antagonistic diversities of

their world, they betray and thus destroy one another. Neither previously nor thereafter did Lowry ever again achieve this felicitous harmony of form and content.

His first novel, *Ultramarine* (1933, revised 1962), was nicknamed "purple passage" by Aiken because it presents Lowry's emotional sufferings in the merchant marine so pretentiously that it elicited more boredom than sympathy. His posthumously published works include the unfinished novella *Lunar Caustic* (1968), an account of his time in Bellevue; an unfinished novel, *Dark as the Grave Wherein My Friend Is Laid* (1968), a meditation on the trauma of having written *Under the Volcano*; and another unfinished novel, *October Ferry to Gabriola* (1970), a philosophically and psychologically elaborated recollection of a voyage Lowry took with Margerie. Some of his short stories have been collected in the volumes *Hear Us O Lord from Heaven Thy Dwelling Place* (1961) and *Malcolm Lowry: Psalms and Songs* (1975), while his *Selected Poems* (1962) and the *Selected Letters of Malcolm Lowry* (1965) have also appeared. An excerpt from his most fragmentary manuscript, "La Morbida," was published in *The Voyage That Never Ends: Fictions, Poems, Fragments, Letters* (2007). Because they are unfinished, his posthumous works are at best a tantalizing taste of what might have been, and they are often intuitions of how his meditative time in the beautiful Canadian wilderness could have begun to heal him if he had overcome his alcoholism.

## UNDER THE VOLCANO

**First published:** 1947

**Type of work:** Novel

*During twelve hours on November 2, 1938, ending with his murder, Geoffrey Firmin, a British consul in Mexico, drinks instead of working at that profession, or laboring on the occult book he wants to write, or reconciling with his estranged wife.*

In the most symbolically charged scene of *Under the Volcano*—a garden, with a snake, where Geoffrey keeps talking about Eden—he proclaims that ownership of property was obviously the original sin. This is, of course, not the only theme of the com-

plex book, but it is its core, holding together its social, religious, and literary vision. The fundamental problem of property takes many forms. For Geoffrey's brother Hugh, it includes his greedily plagiarizing others' songs as his own, even while stealing his publisher's wife. For Geoffrey's estranged wife Yvonne, it is memories of her lost material success as an actress, dragging her away from Geoffrey. For Geoffrey himself, it is his position as paid defender of British territories in the period when he had some complicity in German soldiers being burned alive. The different forms of guilt that the characters feel are variations of the way coveting or defending property divides people from one another.

By the final draft of the novel, Lowry's long fascination with the supernatural had brought him under the influence of the occultist Charles Stansfield Jones (also known as Frater Achad), whom Lowry met in Canada. Based on Jones's synthesis of various kinds of mysticism, including Jewish Kabbala, Lowry associated the divisive power of property with the metaphysical idea that, in the beginning, God's divine energy entered vessels that broke, with the tragic consequence being the multiplicity of the material world where there should have been divine unity. As Lowry explained in his preface to the French translation of the novel, Geoffrey should have been a prophet, whose consciousness was bringing the world back toward that unity. Being infirm instead of firm, Geoffrey, as broken as those vessels, fails as a prophet, occasionally glimpsing the future, but through an alcoholic haze. Lowry adds in that preface that Kabbala likens misused magical power to alcoholism (such as Geoffrey's drunkenness). Throughout the novel, Geoffrey keeps pretending that liquor brings a universal brotherhood, but the plot of the novel shows that, quite the contrary, as a material substitute for the divine, liquor provides only an illusion of sharing, sabotaging the reality.

*Under the Volcano* begins on the Mexican Day of the Dead in 1939, the anniversary of Geoffrey's death. Dr. Vigil and Jacques Laruelle, two of his friends, while themselves drinking, deplore the tragedy of the consul's alcoholism and demise. Such mournful thoughts are appropriate to the Day of the Dead, and the two feel some guilt for the consul's passing. Vigil was then focusing on his own problems rather than on what he diagnosed as

Geoffrey's sickness of the soul. More disturbingly, Laruelle had committed adultery with Yvonne, thereby undermining her marriage. Having lost his idealism, Laruelle, who once dreamed of improving the world through filmmaking, has declined into collecting Mexican "idols," material substitutes for the divine.

The locale of the novel is the Mexican city of Quahnahuac, described as "tortuous and broken." As Lowry often stated in later explanations of his novel, its twelve chapters (like the twelve hours of its main action) constitute a symbolic number, fitting with the many other symbolic numbers in the work, which together suggest that a fated drama is transpiring, with cosmic resonances.

The second chapter moves back to the previous Day of the Dead, in 1938, when Yvonne arrived in Quahnahuac to see if her marriage could be saved. Both through repeated references to Johann Wolfgang von Goethe's play *Faust: Eine Tragödie* (pb. 1808, 1833, pr. 1829, 1954; *The Tragedy of Faust*, 1823, 1828), whose protagonist is saved by the "eternal feminine," and through allusions to Kabbala, where God's saving presence, the Shekinah, is feminine, Lowry implies that Geoffrey's salvation depends on such a reconciliation. On entering Quahnahuac, Yvonne hears an ominous phrase about a corpse coming by express, a foreshadowing of how little time she will have before Geoffrey dies.

In chapter 3, as the consul walks with Yvonne through the garden, he imagines at his side some additional person, who interprets his tragedy as an alienation from nature. He and his wife almost make love, but he thinks of the cantina, the mood passes, and he takes up a whiskey bottle instead. Soon he is asleep.

Chapter 4 takes place the next morning, when Hugh sends a brief dispatch to London about how Germany is stirring up anti-Semitism in Mexico. Particularly given the importance of Jewish mysticism in his novel, Lowry probably intends Hugh and Geoffrey's generally pro-Semitic attitude as a redeeming quality. Having managed a small good

deed by sending the dispatch, Hugh is able to see Yvonne as a luminous being, standing in the garden, but his desire for her is adulterous and thus culpable. He is dressed like a cowboy, and therefore, because her material success was in Western films, Hugh plays a role comparable to the filmmaker Laruelle, whose attraction for Yvonne also reminds her of her cinematic career.

Chapter 5 begins with Geoffrey dreaming about India, the land where he was born. He is climbing a heavenly mountain, but at the thought of drink the scene turns hellish. He wakes with a hangover. Rather than visit his wife, he wanders into the garden, where he sees a sign in Spanish, urging people not to let their children destroy it. Geoffrey, however, mistranslates it as a warning that destroyers will be evicted. This begins a long sequence dominated by imagery of Adam's eviction from Eden. The chapter ends with Geoffrey suffering hallucinations of swarming insects and voices cautioning him.

Chapter 6 opens in Italian with the first line of Dante's *La divina commedia* (c. 1320; *The Divine Comedy*, 1802), about a middle-aged man's waking to find himself (except that the English swearword "bloody" is inserted in the quotation). Ironically, instead of rising to self-awareness, Hugh, approaching middle age, is dropping onto a daybed. He is recalling how he gave up music and went from ridiculous job to job, without widening his understanding of life. As Yvonne walks away with Laruelle, Geoffrey and Hugh look at a postcard from her that has just arrived after its wandering the world—a card that might have brought the couple together if it had come in time.

Chapter 7 develops the relationship between Laruelle and Geoffrey, the former once smaller than the latter, though now their standing is reversed because physically and otherwise Geoffrey stopped growing in late adolescence. Chapter 8 recounts a bus trip, the subject of the short story from which the novel grew. Geoffrey, Yvonne, and Hugh encounter an impoverished Spaniard, who robs a seriously wounded Indian—a theft likened to one source of World War II, when Italy stole Abyssinia while the world watched. The Spaniard's theft from a native Mexican also mirrors the original Spanish conquest of Mexico and is meant to show how complacently many people witness crimes. As in chapter 7, in which Geoffrey was compared un-

favorably to Laruelle, this chapter contrasts his amoral passivity (shared by most of the bus passengers) to Hugh's frustrated desire to intervene. Disconcertingly, in chapter 9, Yvonne feels cheered by Geoffrey's indifference, seeing it as a fortunate quality, which may help them to rise above tragedy together. She imagines their going to a shack in the wilderness (like the one where Lowry was writing this novel), but despite saying that he loves her, Geoffrey is heading toward another bar.

In chapter 10, Geoffrey drinks and talks about how countries are stolen. Chapter 11 sends Yvonne and Hugh out together. Instead of taking the right path, they choose a circuitous one that will allow them to visit more cantinas. A runaway horse, a connection to Yvonne's time in Westerns, kills her, and while dying she imagines that she is in that distant shack with Geoffrey, but it is burning (probably suggested by the building fire that occurred when Lowry was finishing the novel).

Chapter 12 begins with Geoffrey's ordering mescal and ends with policelike criminals shooting him and throwing him over a cliff, along with a dog. This ending alludes to the conclusion of Franz Kafka's *Der Prozess* (1925; *The Trial*, 1937), where the murder of the main character by court officials is likened to the killing of a dog. Lowry's conclusion also alludes to Goethe's *Faust*, in that Lowry connected the dog (referred to repeatedly in the novel) and the canine form of the devil in *Faust*. Without a redeeming reconciliation with Yvonne and without a sustained connection to God, Geoffrey dies screaming, falling downward, like the evil magician in Christopher Marlowe's drama *Doctor Faustus* (pr. c. 1588, pb. 1604)—another of the sustained metaphors throughout the novel. The closest the ending comes to a conciliation is when the trees near the site of Geoffrey's fall look like they are pitying Geoffrey, the overlooking trees embodying the positive quality that Lowry assigned to nature.

## SUMMARY

The writing of *Under the Volcano*, Malcolm Lowry's only significant literary accomplishment, was dominated by his ambivalence toward alcohol and most other aspects of his life, with the possible exception of his feelings for his second wife, Margerie Bonner. The novel evidences his love and hatred of Mexico, of his (burning) shack in Canada, of his

first wife, Jan Gabrial, of the material beauties of life, and of himself. Even his chief love, writing, is parodied in Geoffrey's futilely planning an occult book, as Lowry had been planning his own occult book for ten years. As a Kabbalist, Lowry might hope to draw his readers' attention to God, thereby helping to unite the world, but opinions differ on how serious he was about that grand design.

James Whitlark

## BIBLIOGRAPHY

### By the Author

#### LONG FICTION:

*Ultramarine*, 1933, revised 1962

*Under the Volcano*, 1947

*Dark as the Grave Wherein My Friend Is Laid*, 1968

*Lunar Caustic*, 1968 (novella)

*October Ferry to Gabriola*, 1970

#### SHORT FICTION:

*Hear Us O Lord from Heaven Thy Dwelling Place*, 1961

*Malcolm Lowry: Psalms and Songs*, 1975 (Margerie Bonner Lowry, editor)

#### POETRY:

*Selected Poems*, 1962 (Earle Birney, editor)

*The Collected Poetry of Malcolm Lowry*, 1992 (Kathleen Scherf, editor)

#### NONFICTION:

*Selected Letters of Malcolm Lowry*, 1965 (Harvey Breit and Margerie Bonner Lowry, editors)

*Sursum corda! The Collected Letters of Malcolm Lowry*, 1995-1997 (2 volumes; Sherrill E. Grace, editor)

#### MISCELLANEOUS:

*Notes on a Screenplay for F. Scott Fitzgerald's "Tender Is the Night,"* 1976 (with Margerie Bonner Lowry)

*The Voyage That Never Ends: Fictions, Poems, Fragments, Letters*, 2007 (Michael Hofmann, editor)

## DISCUSSION TOPICS

- How accurately does Malcolm Lowry depict the debilitating effects of alcoholism in *Under the Volcano*?
- Does Lowry's description of Yvonne rise above old-fashioned, unrealistic depictions of women as angels and/or demons?
- Does Lowry's style well represent the erudite, albeit wandering mind of the Consul?
- Is *Under the Volcano* optimistic or pessimistic about humanity?
- How seriously do you think Lowry intended his references to occultism?
- How well does Lowry evoke Mexico?
- To what extent is Yvonne a representation of Jan Gabrial (Lowry's lost wife) and to what extent is she a portrait of Margerie Bonner, who was editing the manuscript while he wrote it?
- How effectively does Lowry use foreshadowing?

## LU XUN

**Born:** Shaoxing, China  
September 25, 1881

**Died:** Shanghai, China  
October 19, 1936

*A great writer of the twentieth century, Lu Xun contributed significantly to the development of the modern short story, prose poetry, and personal essay genres.*

### BIOGRAPHY

Lu Xun (lew shewn; also known as Lu Hsün), whose real name was Zhou Shuren, was born on September 25, 1881, into a family from the gentry class in Shaoxing, China, a small town south of the Yangtze. In childhood, he received a solid education in the classics, and he loved ghost stories, fantasies, and folk art. When he was thirteen, his grandfather Zhou Jiefu, an editor at the Imperial Academy in Beijing, was charged with receiving bribes at provincial service examinations and was jailed for seven years. Lu Xun's father, Zhou Boyi, fell ill after his grandfather's imprisonment, remaining an invalid until his death in 1886. The family decline transplanted Lu Xun to the border world between wealth and poverty, sharpening his perceptive power. Lu Xun's mother, Lu Rui, the daughter of a scholar, had been brought up in the countryside but had taught herself to read. She had great influence on her son; Lu Xun adopted the word "Lu" in his pen name from his mother's name.

Lu Xun left Shaoxing in May, 1898. Under the influence of social Darwinism and Thomas Henry Huxley's scientific visions of evolution, he believed that science and technology could save China. Sent to Japan by the Chinese government after he graduated from the School of Mines and Railroads, he turned to medicine, not only because of his belief

that the impetus for Japan's Meiji restoration was the introduction of Western medical science but also because of his father's experience with illness. According to Lu Xun, his father was tortured to death, rather than cured, by quacks practicing traditional herbal medicine. While at Japan's Sendai Medical College, he saw a slide of a Chinese spy being beheaded by the Japanese military while many Chinese stood by, callously watching. Lu Xun suddenly realized that what was wrong with the Chinese was not their body but their spirit. He then decided to abandon medicine for literature, which he considered the best medium to change the spirit of the Chinese.

To promote literary innovation, Lu Xun wrote an essay promoting the Nietzschean concept of the superman. He also collaborated with his brother Zhou Zuoren in introducing foreign authors through translation, showing a personal preference for Russian and East European authors. In May, 1918, Lu Xun published "Kuangren riji" ("The Diary of a Madman," 1941) in *Xin qingnian* (new youth), a magazine that guided the New Culture movement. The story, with its innovative vernacular style and bold challenge to feudalism, shook the nation. Overnight, Lu Xun was recognized as a leader of a new literature. In the following eight years, Lu Xun wrote twenty-five stories, including the well-known novella *Ah Q zheng zhuan* (1921; *The True Story of Ah Q*, 1926), "Yao" (1919; "Medicine," 1954), "Zhufu" (1924; "The New Year's Sacrifice," 1954), and "Shang shi" (1926; "Regret for the Past," 1954). Before being forced to leave Beijing by the warlord government in 1926,

Lu Xun had also written *Yecao* (1927; *Wild Grass*, 1974), a collection of twenty-three prose poems, and *Zhongguo xiaoshuo shilue* (1923-1930; *A Brief History of Chinese Fiction*, 1959). In 1928, he founded the magazine *Benliu* (the torrent). When the China League of Left-Wing Writers was established in March, 1930, Lu Xun began his service as its chief leader, keeping his post until 1936. During the last dozen years of his life, Lu Xun focused on essay writing. His sixteen volumes of essays, written in his distinctive style of humor and satire, have proven him to be a pioneer thinker and a giant in China's cultural revolution. In 1925, Xu Guangping fell in love with Lu Xun and became his lifelong companion. On September 27, 1929, his only son, Haiying, was born. After a long, arduous fight with right-wing writers and with tuberculosis, Lu Xun died on October 19, 1936. More than ten thousand people attended his funeral. His coffin was covered with a white banner inscribed with the words "The Soul of the Nation." Lu Xun's works have been translated into more than fifty languages in more than thirty countries.

## ANALYSIS

Literature to Lu Xun was neither a political vehicle nor an aesthetic game, but a medium for promoting social change. Three questions that preoccupied Lu Xun throughout his writing career were What is wrong with China? What defects dwell in Chinese national character? and What blocks an individual's spiritual development? Although Lu Xun's essays, which have the lyrical fluidity of Roland Barthes's personal essays and the sarcasm of Henry Louis Mencken's satirical essays, form a large part of Lu Xun's writing, his short stories and prose poems represent the core of his literary creativity. "The Diary of a Madman" heralded the iconoclastic May Fourth movement. It diagnosed the disease of China as ubiquitous cannibalism. The protagonist finds, in his paranoid sensitivity, that China has a four-thousand-year history of eating people. All Chinese, including himself, he discovers, are participating in the game of eating and being eaten. This cannibalism cannot function without its victim's collaboration. Lu Xun urges the spiritual transformation of every Chinese. Lu Xun observed that the Chinese national character has been affected by China's being twice enslaved by barbarians. In *The True Story of Ah Q*, he repre-

sents what he considers to be the vices of every Chinese, which include egomania, self-deluding optimism, and a tendency to bully the weak and cower before the strong. In "Gong yiji" (1919; English translation, 1960), Lu Xun ridicules the inability of old intellectuals to adapt themselves to a changing society. In "Gudu zhe" (1925; "The Misanthrope," 1954), he warns intellectuals against collaboration with corrupted authority. In "Yijian xiaoshi" (1919; "An Incident," 1954), he examines the smallness of the self in contrast with the nobility of a rickshaw man.

Lu Xun gave special attention to the plight of women in his time. He actively participated in debates concerning women's liberation and published such famous essays as "Nala zouhou zenyang" (1924; "What Happens After Nora Leaves Home?" 1959) and "Wode jielie guan" (1924; "My Views on Chastity," 1959). In "The New Year's Sacrifice," Lu Xun portrays a country woman who is driven mad by the joint forces of feudal marriage, religion, superstition, and the gullibility of the villagers and herself. In "Regret for the Past," Lu Xun offers criticism against women's caging themselves and against men's abandoning women. Although the spearhead of his satire is always aimed at a larger system beyond the individual's power, the individual can still choose to act differently. For this reason, Lu Xun can, to some extent, be considered an existentialist.

Considering Lu Xun's social concerns, one may assume that his writing would fall into the category of realism. In fact, the styles of his writing are various and are influenced by writers whose works do not follow the tenets of realism. "The Diary of a Madman," for example, is influenced by Friedrich Nietzsche's subjectivity, Nikolai Gogol's irony, and Leonid Andreyev's psychological symbolism. The story established Lu Xun as the father of Chinese modern fiction and as the first Chinese writer in the Western modernist tradition. In "Medicine," Lu Xun employs what has been called symbolic narrative. In *The True Story of Ah Q*, he uses the form of a mock epic. In "Toufa de gushi" (1920; "The Story of a Hair," 1941), he uses a sustained monologue. In the collection *Gushi xinbian* (1935; *Old Tales Retold*, 1961), Lu Xun uses parody to rewrite Chinese myths and legends with modern ironic sensitivity.

Lu Xun's short fiction is famous for composite

characterization and humor. Although most of his protagonists represent individual types or even national types, they are extremely vivid and concrete. Ah Q is an example. The author's impressionistic eye captures, in blurred but emotionally accurate detail, a protean Everyman in China at the beginning of the twentieth century. The character's composite nature is manifested by the narrator's inability to trace a family name for Ah Q. Ah Q's spirit and psychology, however, not his appearance or rootlessness, make him a national type. Ah Q embodies the Chinese slave mentality. This diseased mentality produces a typically Chinese black humor that can turn any defeat into a self-deceiving, spiritually consoling, victory. This humor resorts to escapism for survival.

Lu Xun combined the prose and poetry of classical Chinese to invent the hybrid genre of prose poetry. The collection *Wild Grass*, which represents his most famous contribution to this genre, was written between 1924 and 1926, published in 1927, and published in English in 1974. In the face of severe censorship, Lu Xun had to "use rather ambiguous language" to paint "small pale flowers on the edges of the neglected hell." "Hell" refers to Chinese society and to the abyss of his psyche, with its ceaseless dark vision, pessimism, and despair. Lu Xun's prose poetry does not intend to make the reader share in his despair; instead, it reveals to the reader Lu Xun's struggle with the paralysis caused by the darkness or despair and encourages the reader to struggle together with Lu Xun for hope. His prose poetry is full of binary images of darkness and light, hope and despair, life and death. In "Si huo" (1925; "Dead Fire," 1974), he dreams that he revives a dead fire with his body warmth, setting the fire free even as he is crushed to death by a large stone cart. Such, in a metaphorical sense, was Lu Xun's self-sacrificing mission as a writer.

## "THE DIARY OF A MADMAN"

**First published:** "Kuangren riji," 1918  
(collected in *Call to Arms*, 1981)

**Type of work:** Short story

*A man who suffers from a persecution complex discovers ubiquitous cannibalism in Chinese society.*

The story contains thirteen fragments from the diary of a man who has lived in confusion for thirty years and suddenly gains spiritual insight from the moon. This lunatic sensitivity leads him to paranoia. Barking dogs, people's glances, children's stares, a mother's cursing words to her son, a brother's caring, and a doctor's treatment—all converge, in his mind, into a sinister scheme about eating him. On a sleepless night he reads through a Chinese history with "Virtue and Morality" written on each page but finds the words "eat people" between the lines. Then he discovers his brother's accomplice in the plan for eating him and realizes that his mother is also collaborating. He even discovers his unwitting involvement in eating his sister's flesh. The story ends with the madman's desperate cry: "Save the children." In addition to revealing the cannibalistic nature of four thousand years of Chinese history and its governing ideology and ethics, "The Diary of a Madman" exposes the ubiquity of such cannibalism and how everyone is an accomplice in the game of eating and being eaten.

Lu Xun uses realistic characterization to compose an intriguing story and symbolic realism to convey his moral concern. In a preface to the story that is fiction cloaked as nonfiction, the author states that he copied out a part of a patient's diary for the purpose of medical research. Lu Xun's previous study of medicine and his knowledge, in his own life, about a mad cousin undoubtedly helped him to portray convincingly a paranoid person's symptoms. In turn, the camouflage of framing the

story as a medical case history enables Lu Xun to be detached from the story, eliminating the burden of spelling out the point of the satire. The tongue-in-cheek preface is of vital importance to the story. First, it is written in classical Chinese, a foil to the vernacular style of the diary. Second, its explanation of the recovery of the madman and his acceptance of an official post gives the story a bitterly satiric irony. When the diary ends with the madman's realization of his own part in the cannibalism and of the urgency of saving the children, one expects him to change the system by changing himself as the first step. Instead, he not only denies the truth but also abandons the "madman" who discovered the truth. Many critics believe that this denial reveals Lu Xun's pessimism. On the other hand, the story's implicit denunciation of the cannibal/madman/government official exemplifies Lu Xun's hope in his readers' abilities to see and to change. Once the truth is revealed, it can never be fully covered up again. "The Diary of a Madman" was an overnight sensation in China largely because of its revelation of cannibalism. The diarist's surrender makes clear Lu Xun's deliberate warning to the reader against any collaboration with authority after learning the truth.

"The Diary of a Madman" was Lu Xun's first story. In the preface to the first collection in which it appeared (*Na-han*, 1923; *A Call to Arms*, 1941), Lu Xun compares China to an iron house with many people asleep inside. Although they will soon die of suffocation, if one cries out to wake a few up, one only makes them suffer more. Lu Xun nevertheless chooses to "call out, to encourage those fighters who are galloping on in loneliness, so that they do not lose heart." To Lu Xun, writing was an act of defiance against fate.

## "REGRET FOR THE PAST"

**First published:** "Shang-shih," 1926  
(collected in *Wandering*, 1981)

**Type of work:** Short story

*In the feudalistic world of early twentieth century China, two cohabitants meet their tragic fate.*

"Regret for the Past" is set in the 1920's, when Chinese youth felt lost in their quest for free love. Cohabitation, the boldest gesture of free love, often resulted in the lovers' being disowned by their relatives and in general ostracism. On December 26, 1923, Lu Xun gave a talk titled "Nala zouhou zenyang" ("What Happens After Nora Leaves Home?") at the Beijing Women's Normal College. His message, resembling Virginia Woolf's in *A Room of One's Own*, is that women must have economic rights. Without economic power, Nora, after leaving home, will either be a puppet in the hands of her sympathizers, die in poverty, or become a prostitute. Lu Xun's desire for radical social and political reform led him to consider the practical steps and basic obstacles between Chinese society as it was and how he would have it.

"Regret for the Past" tells of Zijun, the woman, and Juansheng, the man. Zijun experiences romantic love with "a childlike look of wonder." This naïve love, which enables the heroine, temporarily, to become her own mistress and defy her society, cannot survive long. Zijun escapes the fate of traditional marriage, but she falls into the cage of traditional married life. She becomes dependent on her man. She reduces herself to a housewife, devoting herself to waiting on him. Her fight with neighbors for her chickens and dog indicates how trivial her life has become. The dog, whose name means "Follow," mirrors the fate of Zijun. Zijun's body and mind are both vulgarized by poverty; ultimately, she fails to understand or follow her man. She is abandoned, as the dog is abandoned in a pit in the wilderness. The tragedy of Zijun lies in the fact that she does not have a profession with which to earn economic independence. Zijun, whose father takes her back into his home, dies, not from lack of livelihood but from the death of love. Without love she can no longer endure the sternness

and cold glances of her hostile world.

It may be argued that while Lu Xun pities Zijun for her foolishness in making love her whole existence and in falling into a second cage after breaking away from her first, his mockery of Juansheng is merciless. Juansheng is cowardly and hypocritical as well as self-righteous. He uses imitative romantic passion and beautiful words of sexual equality to procure Zijun's love. He constantly blames Zijun for her inability to communicate with him intellectually but never realizes that he has enslaved her and left her no room for growth. It never occurs to him that a woman should have a career or that they can fight together for survival. Instead, he treats Zijun as an obstacle to his starting a new life and even wishes her dead. The irony is that after Zijun's death, he still wants his fresh start in life and yet remains unable to act. The romantic love that gave expectancy, meaning, and happiness to Juansheng's empty life eventually leaves him in remorse. If he forgets Zijun and hides the truth, he will be doomed to eternal emptiness.

The subtitle of the story is "Juansheng de shouji" (Juansheng's notes). The narrative is pure male subjectivity, saturated with egotism.

## "REVENGE"

**First published:** 1924 (collected in *Wild Grass*, 1974)

**Type of work:** Prose poetry

*Describing two tableaux, the author satirizes the apathy of the onlooker and the thoughtless participant in cruelty.*

"Revenge" is written in the form of prose poetry—a subgenre of Chinese literature invented by Lu Xun. Lu Xun's prose poetry can be seen as a poetic interpretation of the essay. The conflict between the loner and the crowd is a persistent concern in Lu Xun's short stories. The loner is the writer, fighter, seer, madman, revolutionary, and revenger, while the crowd is the passersby, the onlookers, the cowards, the walking bodies without a

soul. The gullible crowd is made up of either indifferent and passive spectators or fierce and cruel persecutors. Lu Xun admitted in 1931 that "Revenge" was written out of revulsion at the number of bystanders in society.

"Revenge" has two parts. The first part is typical of Lu Xun's metaphorical lyricism. Visual images of thin, peach-colored skin with hot blood beneath convey the dualistic nature of human desire and revenge, forever locked in love and hate, or in embracing and killing. Lu Xun presents the reader with an allegorical tableau of revenge: "The two of them, stripped naked and grasping sharp knives, confront each other in the vast wilderness." In Lu Xun's short stories, the revengers always sacrifice their lives to gratify the passersby. In a symbolic twist, Lu Xun freezes the tableau. The two would-be fighters can neither embrace nor kill, and the passersby are reduced to an eternal standstill.

In part 2, he uses the story of the Crucifixion to expose the persecuting nature of passersby. The enemy's torture brings Him pain but the senseless complicity of the passersby gives Him the greater agony. "Those who reek most of blood and filth are not those who crucify the Son of God, but those who crucify the son of man," Lu Xun writes. The style of part 2 is quite different from that of part 1. It reads like a sermon, full of Biblical cadences, and is sensual, imagistic, and allegorical. Its fluid style and musical refrains make it a true prose poem. Its story, free from the restraints of realism, is timeless and metaphysical.

## SUMMARY

Lu Xun's moral ethos refuses to ignore either the moral failure of the individual or the moral failure of the group. Lu Xun's short stories and prose poems demonstrate his unique creative power and rare talent. In spite of his tragic vision and constant wrestling with despair, he was not a pessimistic writer. His works are a call to arms for a brighter future. His achievement in artistic experiment has not been surpassed by any writer of modern Chinese literature.

Qingyun Wu

## DISCUSSION TOPICS

- Which of Lu Xun's proposals for setting China right seems to make the most sense today?
- What is the basis of Lu Xun's assessment of China's "slave mentality," and how did he expect China to overcome it?
- What are the proportions of prose and poetry in Lu Xun's *Wild Grass*? What does the latter contribute to the former?
- In "The Diary of a Madman," can the reader successfully distinguish the character's insight from his mental confusion?
- Distinguish between Lu Xun's tragic vision and his optimism. How convincing is the basis of his optimism?

## COLLEEN McCULLOUGH

**Born:** Wellington, New South Wales, Australia  
June 1, 1937

*McCullough consistently excels as a storyteller able to evoke a sense of place and to combine elements of romance with a host of other genres.*

### BIOGRAPHY

Colleen McCullough (muh-KUHL-uhk) was born in Wellington, New South Wales, on June 1, 1937. Her father, James McCullough, was an Irish emigrant who arrived in Australia in the 1920's. His wife was a New Zealander with Irish Catholic roots. The family lived primarily in Sydney, Australia. The father, who was a sugar cane cutting contractor, was often absent. Colleen later described him as cold and disinterested in family. The household was expanded by Colleen's mother's nine brothers, who often lived with them during the 1930's and 1940's.

McCullough was educated as an Irish Catholic, attending parochial school for twelve years, then going on to Holy Cross College, and she graduated with honors in English, chemistry, and botany. She then intended to ensure her future financial well-being by attending the University of Sydney to study medicine. This plan was abandoned because of a lack of funds. After a stint away from school working as journalist, teacher, library worker, and bus driver, McCullough returned to the University of Sydney and obtained a degree as a medical technician specializing in neurophysiology. She worked in neurophysiology in Australia, London, Birmingham, and finally in the United States at the Yale University School of Internal Medicine.

While at Yale, McCullough decided to supplement her income by writing a novel. Using her evenings to work at a characteristically feverish pace, she finished ten drafts in three months and

emerged with *Tim* (1974). The next year she began to write *The Thorn Birds* (1977). At this time McCullough was still working full time at Yale and writing in the evenings. She spent such long hours at the typewriter that she wore surgical gloves to keep her arms from rubbing against the desk and support hose to relieve her legs and feet from swelling. She finished the entire work in one year. *The Thorn Birds* soon became a best seller and made publishing history by commanding the highest paperback reprint price to date at that time—\$1,900,000.

At the time of the success of *The Thorn Birds* McCullough was scheduled to begin nurses' training in London. Once publicity for the novel raised her to celebrity status, however, she changed her plans. As a new millionaire she felt she would have been too conspicuous in any hospital, and her presence would not have aided either the patients or her own research for future books.

McCullough's next work reflected her interest in nursing. *An Indecent Obsession* (1981) is the story of an Australian military nurse in a ward for mildly emotionally disturbed soldiers at the end of World War II. Critics considered it a more serious work than *The Thorn Birds*. McCullough considered it her whodunit.

At this point in her career McCullough decided that fame required a buffer and began to search for a more secluded place to live. She moved to Norfolk Island, a tiny bit of land off the coast of Australia with a policy which required that one be approved to live there. The remote location and absence of distractions allowed her to indulge her many hobbies, which have included reading, cookery, painting, gardening, and astronomy. She

wrote a book on Australian food called *Cooking with Colleen McCullough and Jean Easthope* (1982). In 1984, she married Ric Robinson, another Norfolk Island resident.

Once settled in her new life McCullough continued her literary efforts. To her offbeat romance *Tim*, her family epic *The Thorn Birds*, her mystery *An Indecent Obsession*, and her cookbook she added a futurist novel called *A Creed for the Third Millennium* (1985), and an altered fairy tale entitled *The Ladies of Missalonghi* (1987). The latter work elicited cries of plagiarism from some readers, who saw in it a distorted reflection of *The Blue Castle* (1926) by Lucy Maud Montgomery. McCullough's response to the allegations was to point out that both novels are basically retellings of the tale of Cinderella and both happen to be placed in similar settings and time periods. The heroines, however, have very different motivations and are quite distinct from each other. Since the two books were similar in concept but not execution the charges of plagiarism were not accurate.

McCullough's next foray was into the world of historical fiction with *The First Man in Rome* (1990). A painstakingly detailed account of the Roman republic before the time of Julius Caesar, it was the first book in Masters of Rome series. The series continued with six more novels: *The Grass Crown* (1991), *Fortune's Favorite* (1993), *Caesar's Women* (1996), *Caesar: Let the Dice Fly* (1997), *The October Horse* (2002), and *Antony and Cleopatra* (2007).

## ANALYSIS

McCullough's skill lies in her ability to tell a good story. She has been faulted for not being a serious literary stylist. Admittedly, her characters are sometimes stereotyped, their perceptions about each other tend to be too detailed and too accurate and her plots swing along on coincidences. Still, readers believe in the story and care about the people. She has the knack of weaving the reader into her tales to the extent that incongruous events become believable.

McCullough's work is decidedly old-fashioned. She places most of her stories in the past, she employs a straightforward narrative style, and her characters are embroiled in timeworn dilemmas of love versus duty, desire versus prohibition, and the importance of honor. Her women are strong, and the men are sympathetically drawn. Strength, how-

ever, does not buy happiness for her characters, although it may buy contentment.

Although *The First Man in Rome* is McCullough's first foray into the genre of the historical novel, she has consistently employed the technique of distancing events from the reader by setting the story in a different era. This provides a buffer between the reader and the events of the work, allowing the author to focus on the characters without having to factor in current events. While this "once upon a time" technique is a standard practice in romance novels, she saves her work from becoming mundane by her attention to her themes of duty, honor, and simple perseverance. The love affairs in McCullough's books are never easy. They involve, for example, an older woman and a young retarded man, or a young girl and an older priest. Events such as war, rigid social convention, droughts, and storms further complicate the characters' lives.

A persistent character in all of McCullough's work is the place where the novel is set. From Drogheda in *The Thorn Birds*, to the city of Rome in *The First Man in Rome* and its sequels, she constructs a picture of the setting so detailed that it takes on a life of its own and is a constant influence on the human characters. Even the futuristic United States depicted in *A Creed for the Third Millennium*, with its unending winter, is drawn convincingly and is the major motivating factor for the events of the story. Whether the book is set in a small tropical island in World War II or in ancient Rome, McCullough focuses not on the great, sweeping events of the time but upon the minute points of domestic life. The era is made real by descriptions of putting up corned beef for the winter, or sealing windows to keep out the unending cold, or the care of gardens in a Roman tenement building. Her imaginative and well-placed use of slang in dialogue adds an extra dimension to the characters.

Detail is an integral aspect of McCullough's work. Subtlety is not. Her characters are as sympathetic as real people because she surrounds them with details and problems. Plot, on the other hand, takes a definite back seat in importance. In order to move the story along or give the characters reason to perform an action or make a decision, coincidence abounds. The characters may simply sense they need to do something and follow that hunch. A nurse can simply look at a mental patient and see

that he is not really disturbed, that he is a strong person put into an unfeasible situation. McCullough's language often lacks polish and is even stilted in the style of romance novels, especially when McCullough is writing about something outside her field of experience. While this may mar the tale for a reader sensitive to such features, the author sweeps on and concentrates on her areas of expertise: character and place.

The charge of plagiarism attached to *The Ladies of Missalangi* may be a product of this lack of subtlety. McCullough asserts she set out to write a new twist on the Cinderella story. The plot of the Cinderella tale is standard romance fodder: An unhappy woman in a restrictive family situation is rescued by unlikely intervention and achieves life with Prince Charming. McCullough's work is set in a small town at the end of the nineteenth century. McCullough's primary focus is on the character and how she deals with her situation, not the situation itself.
